

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

THE BATTLE OF FREDERICKSBURG.

a, b, c, d, Pontoon Bridges.

ON Saturday, the 13th of December, the Federal troops, under General Burnside, sustained a crushing defeat. The only consolation which the North has is that the men did their duty nobly. They fought with a courage and obstinacy to which their rivals themselves bear witness. Nevertheless, it is obvious that the battle ought never to have been fought at all; and that the dispositions of General Burnside violated all the established rules of war. That officer acted more like a desperate gambler than a reasonable man. The strong probability is that the battle was fought because the civilians in the cabinet of Washington insisted that it should be fought, not because any officer considered success possible, except by a miracle. The Federal officers may have represented to President Lincoln that to carry the intrenched position occupied by the Confederate army under General Lee by assault, or to compel him to retire by an attack in flank, might be possible in six months. To this the President may have replied that delay was impossible, and that if anything were to be done, it must be done immediately. General Burnside certainly incurred a terrible responsibility in consenting to obey the orders of the Federal Cabinet against his own deliberate judgment. Now that the event has proved the correctness of his own judgment, he must lament that he did not follow the example of his predecessor M'Clellan, by declining to make an attack which could only end in disaster.

It may be remembered that as soon as Burnside was placed at the head of the army of the Potomac, he marched eastward down the north bank of the Rappahannock until he reached the heights above Falmouth, which stands upon that river. The numbers of his army have not been ascertained, though it is said that they amounted to 150,000 men. It was supposed that he would have crossed immediately; but the regular bridges were broken down, and the pontoons did not arrive for several weeks. Before they did arrive, General Lee had not only marched his whole army, amounting it is said to 100,000 men at the least, to the town of Fredericksburg, but he had occupied himself in forming several lines of intrenchments along the circle of heights which overhang the old Virginian city. Thus matters remained until Wednesday the 10th of December. The country on the north of the river is hilly and wooded, and completely overlooks the plain upon which Fredericksburg stands. The banks of the Rappahannock are lofty and precipitous, so that the river runs in a deep and narrow channel. About two-thirds of a mile south of the city the ground rises, so that a series of terraces are formed one above the other. On this ground there are numerous detached houses and stone walls, which form admirable shelter for troops. To the east of the railway there is, according to General Lee, a plain well adapted for the operations of cavalry.

Such being the theatre of operations, the Federals determined to assume the offensive; and for this purpose it was necessary to cross the river. It was expected that the Confederates would have opposed any such attempt; but General Lee found it impracticable. For he says, "the plain on which Fredericksburg stands is so completely commanded by the hills of Stafford, in possession of the enemy, that no effectual opposition could be offered to the construction of the bridges, or the passage of the river, without exposing our troops to the destructive fire of his numerous batteries." According to the Federal account, there were no fewer than 179 guns. General Lee, therefore, selected his position on the height, where he made ready to receive the Federals. Skirmishers were also planted in the houses of Fredericksburg which skirt the south bank of the river, so that they might interrupt the working parties of the Federals, who were preparing the pontoon bridges by which General Burnside's army was to cross. Even according to Federal accounts, the fire of these sharpshooters was so effective that the Federals were compelled to desist from their attempt. But on the 11th, the Federals opened a tremendous fire upon the city, in order to drive the skirmishers from their shelter, and succeeded. Under cover of their guns they effected a lodgment in the town. In the mean time, several pontoon bridges were completed, some above and some several miles down the river; and on Friday, the 12th of December, under cover

0901 .L858 v.6 ANNEX A

Digitized by Google

of darkness and of a dense fog, what General Lee describes as "a large force" passed the river and took position on the south bank. This force consisted of Sumner's corps, which was on the Federal right, and of Franklin's, which was on the Federal left. Hooker, who was in the centre, remained on the north side of the river, and in fact constituted the reserve. Opposite to Franklin stood the celebrated "Stonewall" Jackson; on the left was Longstreet, extending along the heights to the Rappahannock above Fredericksburg, and opposite Falmouth. The extreme right of the Confederates was occupied by General Stuart with two brigades of cavalry. The whole army was under the command of General Lee.

What the plan of General Burnside may have been it is difficult to make out. It is said that his intention was to pierce the enemy's centre; but this is improbable; for, considering the position occupied by the Confederates, to do so was practically impossible. Again, it is alleged that Franklin was to swing round his left and to take the Confederates in flank. But according to General Lee, the moment that Franklin's columns appeared through the fog, Stuart opened a fire from his horse-artillery upon their flank, which did them serious damage. At the same time it is admitted by both sides that Franklin gained some success. He drove back the first line of General Hill, forming the right of Jackson, upon the second line, but the Federals were ultimately compelled to retire. Such was the battle on the Federal left. On the right the plan of the Federals consisted in launching columns after columns against the Confederate intrenchments. But although these attacks were supported by the fire of guns on both sides of the river, they produced no sensible effect. At length night closed, and the Federals retired.

Thus the Confederates gained a complete victory with the slight loss of 1,800 killed and wounded; whilst the Federals, having totally failed, sustained a loss which, according to some accounts, amounts to 10,000; according to others, to 17,000 killed and wounded. The despatch of General Burnside to General Halleck proves conclusively how complete was the victory. Having recrossed the river on Monday, the 15th, he writes on the next day to say that he withdrew his army to the north side of the Rappahannock, "because he felt fully convinced that the position in front could not be carried, and it was a military necessity either to attack the enemy or retire. A repulse would have been disastrous to us under existing circumstances."

The battle of Fredericksburg has demonstrated once more the consummate ability of General Lee and the Confederate officers. Since he assumed the command of the army he has made only one mistake, and that was when he crossed into Maryland. Knowing the peculiar qualities of his troops, he had steadfastly stood upon the defensive. Neither the impatience of his men, nor the blatant criticisms of sensation writers, have been able to shake his resolution or to urge him into a single act of imprudence. When he found himself opposed to General M'Clellan, he dealt no blow until he could do so with crushing effect. When he found himself opposed to General Pope, he at once fathomed his shallow incompetency, and drove him back headlong without a moment's pause. As soon as M'Clellan resumed the command, he again assumed his cautious tactics; and in this last battle, which has just been fought, he showed his consummate prudence. Finding that he could not effectually oppose the Federal army in its passage across the river, he forced them to attack him in an impregnable position; nor even after their defeat did he attempt to follow the retreating columns. He no doubt had calculated the danger of such an attempt, and deemed this too great. He knew that if he came down from his position above the city, he would have once more to encounter the powerful batteries which lined the north side of the Rappahannock; and he therefore contented himself with the losses which he had inflicted upon his enemy on that fatal Saturday. No wonder that such a captain should have acquired the enthusiastic confidence of the men whom he commands. What may be the next phase of the campaign it is impossible to anticipate. In the mean time, it seems tolerably clear that the campaign is closed for the winter.

HOTEL REFORM.

ABOUT ten years since our powerful contemporary, the *Times*, tried its hand at hotel reform. It accused our English hotels of being exorbitant in their charges, and execrable in their accommodation; it denounced their coarse and ignorant cookery, their fiery port and sherry, their costly private apartments, their ill-savoured coffee-rooms, their lumbering and frowzy four-post beds, their slovenly and rapacious servants. It drew an unfavourable comparison between English and continental hotels, and warned their landlords that the main reason why people preferred foreign to home travel was the expense and the discomfort of English inns. The result of this well-merited reproof proved by no means advantageous to the public. The rapid extension of railroads had so enormously multiplied the number of travellers, that the leading hotels in our great towns were always full; and their landlords not unreasonably accepted that fact as a proof that the public were well satisfied with the accommodation provided for them, and with the prices usually charged for it. A trade meeting was, therefore, solemnly convoked at the London Tavern in the autumn of 1853, on which occasion a series of resolutions were unanimously carried, declaring that the hotel-keepers of England had been scandalously maligned by the *Times;* that their charges were fair and reasonable, and their accommodation excellent; and that the hotels on the Continent were in no one particular superior to them. The meeting finally decided that their resolutions should be published in the very paper which had attacked them, and that printed copies of the said resolutions should be framed and glazed, and hung up in a conspicuous position in every respectable hotel in the kingdom.

More than ten years have elapsed since this occurrence took place; the *Times* has long given up English hotel reform as a bad job, and, as may be supposed, no amelioration has taken place in our hotel system, which remains precisely what it used to be in the old days of posting and stage-coaches.

We are now staying at the Prince Albert Hotel at London-super-Mare, with our wife and child, and servant. We are paying six guineas a week for a small slip of a sitting-room, and two smaller bed-rooms, which scarcely suffice to hold the enormous beds which lumber them up. For our breakfast, consisting of very coarse tea, very thin milk, very bad butter and toast, we pay 2s. a head. We pay 1s. each for composition candles, which cost but 4d. in the shops. We pay 2s. a day for a coal-fire, in a grate scarcely large enough to warm our small room. Our dinner generally consists of some common fish—whiting, soles, or herrings,—mutton chops or veal cutlets, and a sixpenny apple-tart, for which we pay 5s. a head. Sherry and port, which our landlord, who is also a wine merchant, is glad to sell out of his hotel at 30s. a dozen, he retails to his inmates at 72s. a dozen. Medoc, which he advertises as a wine merchant at 24s. a dozen, he retails as an innkeeper at 60s. a dozen. For a bottle of soda-water, which the chemists sell for 3d., he charges 1s.; for a sandwich, 1s.; for three-penny-worth of gin and water, to dilute our evening cigar, 1s. Ladies and children not being admitted to take their meals in the coffee-room, we are compelled to breakfast and dine in the small closet dignified by the name of our private apartment, and to smell those meals for hours after we have swallowed them. Our servant's board costs us 6s. a day; and we are charged 6s. a day for attendance. These various items constitute a very formidable bill at the end of each week, no matter how frugally we live; but then we have the comfort of reflecting that we are staying at the very best hotel in London-super-Mare—indeed, some people go so far as to say it is the best hotel in England, and perhaps they are right. Its coffee-room is low, dark, and hot, and is pervaded by a chronic odour of cheese, and of the dinners of the day before yesterday; and the melancholy and silent guests who haunt it appear seldom to exceed a pint of the low-priced six-shilling fiery sherry at their meals, and to eschew carefully the curious vintages of claret, champagne, and Tokay, to which the wine *carte* on the mantelpiece pompously invites them at prices varying from 10s. to 24s. a bottle. Latterly the obliging landlord has condescended to supply the common wines of France and Germany, for which he charges but 48s. and 60s. a dozen; but they are of such a scourging and acrid quality, that no prudent man ventures upon them twice. On the wall hang the memorable resolutions arrived at by the confederate hotel-keepers of England assembled at the London Tavern in 1853, reminding their customers, and very opportunely too—for it might not otherwise occur to them—that the accommodation they are receiving is admirable, that they are not paying at all too

Digitized by Google

much for it, that at no continental hotel are they treated better or charged less than at the Prince Regent Hotel at London-super-Mare, and that the *Times* is a most calumnious and unprincipled journal.

As long as we have been staying at it, the Prince Albert has been full to overflowing; its magnificent *concierge* assures us that it is always full to overflowing, and that although the quality of its guests varies with the time of year, their numbers never vary. At some seasons, he tells us, it contains more lords than Jews, and at others more Jews than lords; but the house is always full. Indeed, it has been so often hinted to us that there are several distinguished noblemen and opulent stockbrokers anxiously waiting for the reversion of the three small closets which we occupy, that we do not dare to find fault with anything, and pay our modest bill every Saturday with simulated cheerfulness; for the air at London-super-Mare is very pure, its esplanade is clean, dry, and sunny, and our child is recovering satisfactorily from a long illness. We should probably not better ourselves were we to migrate to St. Leonards, or to Brighton, or to Dover, or to Folkestone; we should certainly meet at all those places with precisely the same small closets at six guineas a week; the same dingy coffee-rooms, flavoured with cheese and fried fish; the same fiery port and sherry at 6s. a bottle; the same meagre breakfasts; the same monotonous mutton-chop and veal-cutlet diet; the same preposterous charges for everything, great and small. And we should find hanging in all their coffee-rooms the same London Tavern resolutions, expressive of the perfect satisfaction of the Confederate English hotel-keepers with the existing state of things.

It is quite clear, therefore, from what we are experiencing at London-super-Mare, that, bad as English hotels are, hotel-keeping is a very good trade in England at present, and that no reform is to be looked for *from within*. But, from without, there appears just now to be a more cheering prospect. At Scarborough, at Ryde, at Brighton, and at London-super-Mare, enormous joint-stock hotels are in course of construction, and their prospectuses promise great things; far more, probably, than they will be able to perform, either for their shareholders or for the public. But some good they must do. They will at once create a certain amount of competition; they will illustrate the advantages to be derived from appropriately furnished bed-rooms, and from spacious and well ventilated coffee-rooms, from which ladies will be no longer excluded. Not being bound by the London Tavern compact of 1853, their managers will not be above taking a few hints from their continental brethren; they will compare the system of prices and the fare at such establishments as are to be met with on the Rhine, at Calais, at Boulogne, at Brussels, and at Paris, with those of the Prince Albert at London-super-Mare. They will discover, on trial, that good cookery is more popular than bad; that most people like good coffee and pure milk better than roasted beans and "sky blue;" and that it is more profitable to sell wines at reasonably remunerative rates than to affix to them prohibitive prices, which drive customers to pale ale and to brandy and soda-water. They will engage a superior class of domestics, and will charge more moderately for their services. And if they do all this—and we hope they will do it—we believe that before long the Conservative London Tavern manifesto of 1853 will disappear from the walls of old-established houses—like the Prince Albert—and be heard of no more, and that the proprietors of those benighted establishments, ashamed of having signed it, will see the necessity of relying in future for success in their trade rather upon good, intelligent, and liberal service, than upon a fast decaying monopoly, which the patience of the public can no longer endure.

THE POLITICAL CRISIS IN AMERICA.

THE battle of Fredericksburg has brought not only the campaign of the rival belligerents to an issue, but forms unquestionably a decisive crisis in the political situation of the Federal and Confederate fortunes. It has made apparent, and conclusive beyond question, the inability of the North to effect the final subjugation of the South. Some politicians, like Mr. Gladstone, may have desired to see this result precipitated; others, like Mr. Bright, may have been led by their sympathy to disbelieve in an event which they deplored. But to this complexion all have come at last, and, after the great defeat of Fredericksburg, no reasonable man can still cherish the dream of a restoration of the Union to be effected by force of arms. The courage and power of endurance of the South are fortified to an incredible degree by a victory so far beyond their expectation, and the spirit of the North must be inevitably in a great degree subdued by so tremendous a disaster.

It is perfectly true that the North have still an army, and that they have inexhaustible resources of population and of wealth. The forces of Burnside are probably sufficient to secure Washington from attack, and it is not impossible that in a few months more their losses may be repaired. But the defeat of their cause is not less certain or less irreparable. They are embarked in a game in which not to win is to lose. Every day that the authority of the Federal Government is successfully defied counts to the South as a fresh victory, every day in which it fails to impose its dominion must be reckoned as a new defeat to the North. Hitherto each successive failure has been excused by some plausible explanation. The preparations of the Government of Washington, we were told, were slow, but in the end they would prove sure. Their best officers had deserted to the ranks of Secession, but others would in the end be found to replace them. The Federal troops required time for discipline and consolidation, but in the end all would be right. Those who were not unfriendly to the North listened to these apologies for successive defeats with no incredulous ears. They were willing, like Charity, to hope all things and believe all things. But there must be a term even to the most partial credulity. We cannot be expected for ever to place confidence in the advance of a cause which is daily retrograding with visible rapidity. Nearly two years have now elapsed since President Lincoln undertook to assert the authority of his Government by arms, and having referred the question to the arbitrament of war, it must be admitted that the award has gone against him. Some may rejoice at the result, others may regret it: the duty of the journalist, as a contemporary chronicler, is simply to record it.

It is true, that by dint of their naval superiority, the Federal Government have the means of prolonging the struggle almost indefinitely. The blockade of the coast and the possession of the line of the Mississippi, give them ample means of harassing their opponents by tremendous privations. It appears to be certain that the weapon of a servile insurrection is not one which is available even in the hands of persons who might be so unscrupulous as to employ it. The tranquillity and inaction of the negro population throughout the whole of this deadly strife, in which their interests are so deeply involved, is one of the many features of this contest which, to many, seemed incredible. The North are not beaten, it is true, for in point of territorial dominion, they actually hold more at this moment than they did at the commencement of the campaign. But though not beaten, it is equally certain that they cannot win. To continue the struggle for the restoration of the Union, is to persevere in an object, which is plainly beyond their reach. From the moment that this had become evident, the protracting of the strife became not only a blunder, but a crime. The sacrifice of life in this short but bloody war has been beyond example. The expenditure of treasure has been profuse beyond all precedent in history. At the rate of interest at which the Federal Government have been compelled to borrow, the expenses of the war, even at the present moment, would involve a burthen not much less than half that which we have inherited from centuries of war. The exhaustion of the country from the disturbance of commerce and the interruption of agriculture, must be extreme, and will be felt long after hostilities shall have terminated.

If there be any truth in the reported resignation of Mr. Seward, it is plain that the true situation of affairs has forced itself even upon those who are most responsible for these disasters. We do not blame the Federal Government for taking up arms, in the first instance, to retrieve their outraged authority. We are not disposed to differ from the assertion of Mr. Bright that any other government would have done the same thing. No sovereign tamely submits to the dismemberment of his empire. And, in this respect, "cheap republics" do not differ from "costly monarchies." The prudence of the attempt depends on the relative force of the parties in the struggle, and the only justification in the commencement of a civil war is the certainty of success. England was right in putting down the Irish rebellion, and she was wrong in her war with the American colonies, principally because in the latter she failed, whilst in the former

Digitized by Google

she succeeded. For, after all, where parties choose to appeal to arms, there is no test of superiority but victory. For demerit and disaster in the conduct of affairs, the Cabinet of Abraham Lincoln will obliterate even the shameful memory of the administration of Lord North. Without inquiring very deeply into the original causes of secession, or the later miscarriage of the war, it is obvious to every understanding that the United States of America have fallen to pieces, because their affairs had passed into the hands of men who were wholly incapable of governing. Mr. Bright may indulge in his view of an illimitable empire stretching from sea to sea, of countless populations and incalculable wealth; but he omitted one consideration, which a politician of a less shallow intellect would not have overlooked; viz., that such an empire requires, above all things, and beyond all things, a governor, or at least a system of government, capable of wielding its destinies and controlling its passions. The human race cannot people the earth as a herd of buffaloes graze on the prairie. In order to understand the calamitous change which has taken place in the fortunes of the transatlantic Republic, it is only necessary to contrast the men who made its fortunes with those who have marred them. Let any man look back to the state papers which record the foundation of the United States, and its transactions with Europe, at the close of the last century, and compare them with the effusions of Mr. Lincoln and the despatches of Mr. Seward, and they will trace the clue to what might otherwise appear an incomprehensible enigma of a great catastrophe. The difference between Washington and Lincoln, between Jefferson and Seward, is a complete gauge of the decline and fall of the American republic. It is not without feelings of satisfaction that we are able to recall the fact that, while we lost America, at least we bred the men who made her what she was. We left her marble; it is she who has made herself brick. Washington, Jefferson, Franklin, Madison, Hamilton, Monroe, were names which England rued, but of which England may yet be proud; for it was under the shadow of her colonial system that these men grew up. At the same time it must be admitted that the position in which the Northerners were placed by the Secession was very peculiar. For the last eighty years the Government has been in the hands of the Southerners. The politicians of the North have had no experience in public affairs. Nor would it be easy to select a crisis in the world's history requiring greater intellectual qualities than that which is now come to pass in America. It is idle to assert that the peculiar institutions which prevail in America have had any connection with the degeneracy of her statesmen. A glance at the South is sufficient to prove that statesmanlike power is not extinct. Jefferson Davis and his cabinet are the same men who, until two years ago, filled the cabinet at Washington. And although as yet the North has produced no public men equal to the Confederates, there is no reason to despair that, under the stern discipline of adversity, a school of statesmen may yet arise worthy of the great people which they will have to govern.

ENGLISH AND IRISH MODE OF TREATING CONVICTS.

THE public have heard much lately of the different modes of managing prisoners sentenced to penal servitude in England and in Ireland,—the one under the direction of Sir Joshua Jebb, and the other under that of Sir Walter Crofton,—and of the signal and proved superiority of the latter. It is not often that anything is better done on the further side of St. George's Channel than on this; but the convict system presents an undeniable and startling instance, all the more curious, inasmuch as the Irish plan is the embodiment of simple good sense, and the English one comprises about every conceivable Hibernicism that could be collected together. We are aware generally that the former plan has succeeded, and that the latter has failed; but few know how signal is the failure, and how astonishing the success, or how clearly the failure and the success might both have been predicted at the outset. We shall endeavour to enlighten our readers, as briefly as possible, both as to the specific points of difference in the two systems of management, and as to the ascertained difference in the results;—taking the latter first, and discarding as cavalierly as they deserve both the fallacious statistics by which it has been sought to throw dust in the eyes of the public, and the subtle and ingenious arguments by which it has been endeavoured to explain away indisputable facts.

The *first* fact is this: that, though Sir Joshua Jebb takes great pains never to watch or trace the future career of a liberated convict, or to revoke his licence if he can possibly help it, and though Sir Walter Crofton, on the contrary, traces every *expiree* where he can, and never loses sight of a ticket-of-leave man till his period of entire freedom has arrived, and revokes his licence for the slightest disorder or irregularity—yet, as far as can be ascertained, one half of the English convicts return to prison on account of fresh crimes, and of these between sixty and seventy per cent. return *within one year after their liberation;* while in Ireland, out of 4,643 convicts discharged since the system was inaugurated in 1854, only 460, or *ten per cent.*, have been re-convicted, or had their licences revoked. Sir Joshua Jebb denies or doubts the correctness of the figures in the case of *his* rascals; but the "Four Visiting Justices" of Yorkshire, who thoroughly investigated the whole subject, have shown conclusively why his reclamations carry no conviction with them.

The *second* fact is this: that, while the number of convicts in the hands of government in Ireland, between 1854 and 1861, have decreased from 4,278 to 1,492—a diminution of 65 per cent.—the corresponding numbers in England have only fallen from 7,916 to 7,794; or 1·5 per cent. And this, although during the period named (besides 2,900 sent to the penal establishments at Gibraltar and Bermuda) Western Australia drained away 2,807 from the English prisons, and *not a single one from Ireland.*

The *third* fact is, that, while the number *committed* to convict prisons in Ireland fell off from 710 in 1854 to 331 in 1860—the corresponding diminution in England was only from 2,418 to 2,219—a decrease of 53 per cent. in the one case and 8 per cent. in the other. The number sentenced to minor punishments than penal servitude, and therefore not committed to *convict* prisons, diminished during the same period from 6,337 to 2,675 in Ireland (or 57 per cent.); and from 20,580 to 9,799 in England (or 52 per cent.).

The *fourth* fact is a strong corroboration of all the preceding ones. It is, that while several Government prisons have been shut up in Ireland from want of inmates, the amount of prison accommodation in England is on the increase; and that whereas the Irish convict establishments cost £50,000 *less* than six years ago, the English ones cost £77,000 *more.*

The differences in the mode of treating the convicts in the two islands, by which such an encouraging difference of result has been secured, resolve themselves into three,—discipline in prison, preparation for freedom, and supervision after discharge.

Sir Joshua Jebb makes his prisoners very comfortable, and feeds them like fighting-cocks. Not only is the food served out to them better prepared, more abundant, and more nutritive than that attainable by honest labourers or artizans—this, probably, is unavoidable, and may be alleged of Ireland too. But it comprises meat nearly every day, soup usually, appetising pudding not unfrequently, and even beer sometimes, and is calculated on the plan of keeping the men always in good, not to say high, condition. They are fed thus sumptuously while in separate confinement, on the plea that a generous diet is necessary then to counteract the depressing effects of solitude and seclusion; and, when on the public works, on the plea that the same diet is needed *then* to fit them for the labour exacted from them. The system is bad, both because it renders the prison anything but a place of punishment to men whose God is their belly; and because it conduces to violence and outbreaks by developing too largely the mere animal temperaments of the criminals, whose preponderating *animalism* is their besetting danger. Sir Joshua, again, works his convicts very gently, as well as feeds them very liberally—probably he finds it on his system almost impossible to get out of them more labour than they please to do. At all events, it is given in evidence by an admiralty engineer, that at Portland (the best conducted of his establishments) one ordinary labourer gets through as much as two and a-half or three convicts.

In the next place, Sir Joshua not only treats his rascals more and more liberally as their term of detention approaches its termination, but he *habitually* and *systematically* discharges them on licence at the earliest period he is allowed by law to do so; and he does this *without the slightest reference to their character*, or to the certainty of their relapsing

Digitized by Google

into crime; but invariably, and on principle, provided only they have not been outrageously violent or insubordinate in gaol—which they have no motive to be; or have not obstinately infringed the prison regulations—which it would be both difficult and foolish of them to do. Many of the worst ringleaders of the Chatham Mutiny were among Sir Joshua's picked and petted men, standing high on the list for gratuities, and covered with "good conduct" badges. Lastly, Sir Joshua Jebb discharges his men at once, and with no preparation; thrusts them out at a moment's notice from a condition of absolute restraint to one of absolute freedom; he pays their railway fare to whatever town they may wish to visit first—probably the one where their friends and old associates reside—giving them a post-office-order on that town for the residue of the gratuity which they have nominally earned, and which often amounts to £20 or £30. Of course most of them indulge themselves while it lasts, and resort to their old vicious career as soon as it is gone; all the more surely as Sir Joshua, from a dread of interfering with or hampering these men on their path towards a new and better life, *especially instructs the police not to notice them at all.*

Sir Walter Crofton's system is the reverse of all this. He not only feeds his convicts more sparingly, especially for the first three months, but he works them much harder. He is enabled to do this—making them anxious for work and zealous in the performance of it—by letting them feel, during the early part of their seclusion, how wretched it is to be without employment; and then by rendering their progressive indulgences and their early liberation depend entirely and inexorably *upon the amount of work they do*, and upon their diligence in school, as well as upon mere negative subordination. Each man works his way up from class to class, knowing that his fate depends solely upon himself, and that for any failure or misconduct he will be remorselessly sent back to a lower grade. Thus, it lies with himself to render his punishment shorter or longer, and more or less severe; and, the consequence is that, in nine cases out of ten, he works hard and behaves well, and learns to associate labour with reward and hope. But—knowing well that good habits are readily lost if not tested, and that mere good behaviour in prison, where every act is regulated and every movement watched, affords no guarantee whatever for the conduct of the man when restraint and supervision are withdrawn, and he becomes once more his own master—Sir Walter Crofton established intermediate prisons, to which those who have given satisfaction hitherto are in due time removed, and where there is a great amount of liberty combined with vigilant supervision. One of these prisons is in the country, the other is in the heart of Dublin. Here the convicts go out in turn, are intrusted with a little money, execute commissions for their fellow convicts, and are tied to little but residence and their allotted work. They may misbehave if they like, but they seldom do; for the slightest misconduct sends them to an ordinary and a far stricter prison. They might escape if they pleased; but escape would be sure to be followed by recapture and relegation to the old severity, and the original length of confinement; so it is too obvious a folly to be attempted. They might be dishonest and steal while out on messages; but they have been trained to reflection and self-restraint enough to see the badness of the policy, and to drive away the incipient temptation. Being thus prepared by slow and gradual steps for liberation, they are discharged on licence, but they are still carefully watched, and their licence is revoked on the least irregularity. Pains are taken to place them with employers who are informed of their antecedents, but who know at the same time that they would not have been liberated unless they had been deemed fit for freedom, and had been trained to use it well. They may change their master if they like, and often do, but they must report themselves every month to the Inspector of constabulary in their district,—failing which, or relapsing into idleness or bad company, they are at once remanded to prison. The consequence is, that nine-tenths, as far as can be traced, lead reformed and honest lives; and, of those finally liberated on the expiration of their sentences, it is known that twenty-five per cent. become voluntary emigrants. Such are the opposite systems, and such the opposite results. What else could be expected? We do not gather grapes of thorns or figs of thistles, and whatsoever a man soweth that shall he also reap. But what language of condemnation can be too strong for the high officials who, in the face of these facts (which are not new to-day), have so long supported and upheld a system of which the disastrous failure was so manifest, and of which such failure might have been so confidently predicted from the outset?

M. FOULD'S REPORT.

A FRENCH budget, like the "Nautical Almanack," is always prepared a year or two before it is wanted. At the present moment M. Fould is engaged in preparing, not as our own practice would lead us to expect, the estimates for 1863, but those for 1864. When Mr. Gladstone makes his usual statement at the beginning of our financial year in April, the estimates which he submits to Parliament are those for the year on which he has already entered; and it not unfrequently happens that three months have elapsed before the budget which is to regulate the expenditure of the current year has finally passed. But no real inconvenience is experienced from this delay. Our revenue and expenditure in ordinary times proceed with so much uniformity, that there is no danger in passing a few weeks without knowing to a figure the exact position in which we stand. The nation pays its taxes as cheerfully, and spends them as merrily by land and sea in the months of April and May, while the budget is under discussion, as when it has safely passed both Houses and the Appropriation Act has received the Royal assent. But this unmethodical mode of procedure is ill-suited to the logical character of the French intellect. If the budget is intended to regulate the national expenditure during the year, it ought to be framed and voted before the year begins. A nation, like an individual, should know what its income is likely to be before it enters on any given course of expenditure. Such is the reasoning of the French on this subject, and, as usual, the bare logic is entirely with them. And their practice is quite equal to their theory. The French budget is generally voted six or seven months before the commencement of the financial year, while our own has seldom passed both Houses till two or three months after that date. While we are quite satisfied with our Chancellor of the Exchequer if he makes his financial statement at any time in the first month of the financial year, the French Minister of Finance would depart very much from the custom of his predecessors, if his budget were not framed and ready to be submitted to the Legislative Assembly nearly a twelvemonth before the beginning of the year to which it relates. The French nation—or at least that small part of it which takes an interest in financial matters—would have looked forward dolefully and with many anxious misgivings to New Year's-day if the budget of 1863 had not been voted months before. It is evident, however, that what the French budget gains in length of deliberation it loses in accuracy. The Finance Minister of France, preparing the budget of 1864 at the beginning of 1863, has to look forward for two whole years. Mr. Gladstone has difficulty enough in telling what one year will bring forth; how can M. Fould tell what two will bring forth? Hence it happens that the French budget not seldom becomes old and antiquated before it comes into use. It is generally idle to judge of the financial state of France by the budget as it is voted. We have been so often deceived by the estimates of French financiers that we have come to regard them with no more faith than a fresh prediction by Dr. Cumming of the end of the world.

One result of this long anticipation of the future is, that about this period of the year the Finance Minister of France finds himself with three budgets on his hands at the same time. Every financial report made to the Emperor about New Year's-day is likely to contain some reference to no less than three several budgets; and the late report of M. Fould is no exception to the rule. There is first the budget of the year just ended, the results of which have to be declared; next, there is the budget for the current year, which was framed and voted months before; and there is, finally, the budget for 1864, in the preparation of which M. Fould is at present engaged, and which will shortly be submitted to the legislative body. This multiplicity is puzzling enough to Englishmen, who are never required, even by so enterprising a Chancellor of the Exchequer as Mr. Gladstone, to direct their attention to more than two budgets at one time, that of the past and that of the current year. But it will not be necessary to embarrass ourselves at present with more than the first part of

Digitized by Google

M. Fould's report. The budget of 1863, which forms the second part, claimed only a moment's attention from M. Fould, and we shall dismiss it with equal brevity. His chief concern with that budget is to see that his colleagues should do what, unfortunately for a Finance Minister, they are very little in the habit of doing—keep within the limits of expenditure which are there marked out for them. M. Fould's calculations will of course be disturbed by the continuance of the Mexican expedition during the present year; and a less sanguine minister might fear that the equilibrium which now exists on paper would be disturbed by this attempt to found a monarchy on American soil. Not so M. Fould. The elasticity of the revenue, on which so much dependence is now placed by financiers, comes to his aid. It must be remembered that the estimates of revenue for 1863 were framed on the basis of the actual receipts of 1861. But the actual receipts for the year just ended exceeded these estimates by more than £2,000,000. Allowing for a similar increase in the receipts of the present year, M. Fould considers that the excess of the actual receipts over the estimates will leave him with a surplus of £4,400,000, which will be sufficient to meet the expenses to be incurred in the present year for the Mexican expedition. It would of course be quite premature to make any remarks on the budget of 1864, which forms the last part of the report. M. Fould gave only some vague hints as to the basis on which he had framed it, without entering into much detail. Moreover, the Council of State have to take it in hand after the Minister has finished his labours, and it will be quite time enough to offer criticism when the result of their joint labours is submitted to the discussion of the Legislative Assembly.

That part of the report which relates to the budget of 1862 is the most deserving of attention. The estimates of the French ministers have for several years past corresponded so little with the actual results, that it is generally far more important to examine the budget when the year is over and the accounts are definitely settled, than when the estimates are voted. The Emperor has not been in the habit of confining himself within the limits of expenditure authorized by the legislative body. The budget, as voted, was merely a basis or foundation on which was erected, during the course of the year, a series of extraordinary or supplementary credits. When the money provided for any particular service was exhausted, the Emperor, by his simple decree, opened a credit for the minister of that department. Since the accession of the Emperor the average amount of these extraordinary credits exceeded £10,000,000 a year. In other words the expenditure actually incurred exceeded the money voted by that enormous sum. Here was an opportunity worthy of a great minister, and the accession of M. Fould marked a new policy. December is the Emperor's chosen month for making revelations of a startling and novel character. In the December of 1861 there was a confession as well as a revelation. The emperor confessed to his minister, and, through him, to Europe, that the finances of the empire were in a dangerous state; and, at the same time, promised the concession of a great prerogative. The extraordinary credits were the root of the evil, and the Emperor would surrender entirely the power of making them.

The year 1862 has therefore been a year of change, and the report of M. Fould is chiefly important as showing the working of the new system. It is, indeed, clear that the report is framed with the view of exhibiting these changes in the most favourable light. No year could have been better adapted for testing their value, for the Mexican expedition is exactly one of those instances in which, previous to the decree of last December, the Emperor would have opened the necessary credits for the ministers of war and marine. It was fortunate for the resolution of the Emperor that it had become apparent before the end of the session of the legislative body, that the struggle in Mexico was becoming a serious one, and that he was able to obtain legislative sanction for a sum of £2,360,000 towards its expenses. The sum actually expended has however exceeded that amount by nearly £1,000,000, the total cost of the expedition during the year having been £3,320,000. The estimates for this additional sum will therefore be submitted to the legislative body after the expenditure has actually taken place, which is therefore no more under their control than it was before. It must, however, be admitted that what has taken place with reference to the Mexican expedition is no more than what may happen to any government in a crisis which demands the sudden development of its military or naval power. In such a case the executive must act on its own responsibility, and incur the necessary expenditure. It was thus that our own government acted in the case of the *Trent*. To take away such a power would destroy the efficiency of government, and the path of safety lies not in forbidding its exercise, but in making the ministers who use it responsible for their conduct. The power must exist, and the responsibility of ministers is the only guarantee for its cautious exercise. We have not failed to maintain on former occasions that M. Fould was deluding the public with a vain chimera when he led them to suppose that extraordinary credits could be altogether suppressed. The system of transfers which he has substituted for it is only a covert way of arriving at the same result—a result so distasteful to friends of constitutional government—the incurring of expenditure without legislative sanction. These credits may be reduced; but they cannot be suppressed. And the chief merit of M. Fould is that he has insisted on making such abundant provision for the wants of the service in the original budget that the reduction of supplemental credits would be possible. Compared with any of the recent years, the amount of the supplemental credits made during 1862 is comparatively trifling. M. Fould assures the Emperor that the "abandonment of the prerogative of credits by decree has not deprived the Government of independent means of action, or in any way prejudiced the progress of public affairs." The assurance was quite unnecessary. M. Fould might have made himself easy on that score. No one supposed for a moment that the Emperor had really abandoned the power of controlling affairs. If M. Fould had been able to assure the public that the legislative body had at present any greater control than before, the assurance would have been a welcome one.

NEW YEAR'S DAY IN SCOTLAND.

Scotland owes much to her long connection with France. She has thereby enriched her vocabulary with many useful and expressive words unknown to English ears, and she has acquired a certain comprehension—though dim and inadequate—of the art of cookery, to which the native John Bull is utterly a stranger; and she has derived from the same source a peculiar reverence for the first day of the year. England, indeed, observes, or rather did long ago observe the New Year after a fashion; and after the fashion which has always been recognized as orthodox—namely, the drinking of healths and the giving of presents. The wassail-bowl—which took its name, we are told, from the Saxon "Wass-hael," "to your health," was a recognized part of the merry-makings of New Year's Eve in Saxon England. In monasteries and religious houses this convivial custom was kept up with especial zeal. Poor people were in the habit of carrying about a bowl crowned with ribbons, and begging the wherewithal to fill it, and some of the old songs or chaunts in which they were wont to prefer their requests exist at the present day. The custom of making New Year's gifts was observed not less religiously in the olden time. As might be supposed, such gifts were made with peculiar frequency to superiors in station, and often to those on the throne; indeed, some unusually ingenious kings of the Plantagenet race are said to have utilized this graceful usage as a means of taxation. Both these forms, however, of celebrating New Year's Day have fallen into disuse, and the First of January receives but little honour south of the Tweed. Speaking generally, we may say that in England Christmas is held, while New Year's Day is neglected; and that in Scotland the claims of Christmas are disregarded, while New Year's Day is the most festive time of the year.

Christmas in Scotland, like New Year's Day in England, seems to have been duly honoured in days gone by. It was known by the name of Yule—the old Scandinavian season of rejoicing—on which the early missionaries had, in accordance with their constant habit with regard both to observances and legends, engrafted the festival of the nativity.

The English New Year's Day appears to have worn out gradually and without cause, but the Scotch Christmas yielded only to direct attack. The custom of its observance, like many things of more evil influence, disappeared before the Reformation. The Presbyterian clergy exerted themselves vehemently to put a stop to it. They considered it a rag of Popery, or of Prelacy, which was worse, and they were determined to put it down. For more than a hundred years it was a grievous ecclesiastical offence for a

Digitized by Google

Scotch householder to cook a better dinner than usual on Christmas Day. At the present time Scotch people can be found who will gravely urge as a proof of the "unscripturalness" of the English Church, the sacred nature of the services which she has set apart for Christmas. This violent and long-continued crusade was entirely successful. In some of the northern districts of Scotland, where Episcopacy has always lingered, Christmas is still held in reverence. But, as a rule, the great festival of the Scottish nation is New Year's Day.

This, as we have said before, was probably taken from France; but the more peculiar features of the French New Year's Day are hardly discernible in the North. There is little in Scotland of the elaborate interchange of visits and of gifts, which marks *le jour d'étrennes* in Paris. Indeed, so far as there is present-giving in Scotland at all, it occurs not on the first day of the year, but on the last; and it is rather of a limited nature, consisting mainly in donations to poor children of cakes and good things to eat. The last day of the year is called Hogmanay, and it was, and in the more retired districts still is, the custom for children of the poorer classes to go from house to house chanting old cries with a begging signification, in return for which they are presented with cheese and oaten-cakes. Mr. Chambers, in his "Popular Rhymes of Scotland," gives several of these cries, of which the most mysterious, perhaps, is—

Hogmanay
Trollolay
Give us of your white bread, and none of your grey!

The last line seems to indicate a natural, though unnational, preference for wheaten bread over oat-cakes; but the meaning of the word hogmanay has never, we believe, been ascertained. Jamieson in his dictionary gives it up; and the ingenious suggestion that it is derived from "au gui menez"—"to the mistletoe go,"—can hardly be received as conclusive. The combination "trollolay" is beyond the reach even of a suggestion. On the same day, and also on New Year's Day, the *guizards*, or masquers, wander from door to door. They are something like the old Christmas mummers in England. Some half-dozen boys array themselves in strange attire, and, content with the hall or the kitchen as a stage, recite old songs, or, fired with a more vaulting ambition, go through a regular drama, called "Galatian," the plot of which consists in various stalwart knights fighting to the death, the victims, however, being carefully restored to life at the end of the play, when a few pence are considered a sufficient acknowledgment of this brilliant entertainment. This custom held its ground until very lately, even in large towns.

Perhaps more peculiar to Scotland than either the gift of hogmanay or the dramatic efforts of the *guizards*, was the custom of first-footing. As the last night of the old year was waning, a "hot-pint," as it was called, would be prepared,—a villanous composition consisting of warm ale, whisky, spices, and sugar. When the clock struck twelve, a general hand-shaking and wishing of "happy New Year!" took place, after which the elders of the household sallied forth, armed with the said hot-pint, and deleterious cakes and buns, visiting all their acquaintance, renewing the drinking and the expressions of good wishes at every house, and perfectly willing to interchange similar courtesies with any party they might meet bent on the same errand as themselves. The object was to be the first to enter a neighbour's dwelling on the New-Year; and hence the origin of the name. This custom was at one time universal throughout Scotland, and prevailed even in towns within the memory of those still living. It is said that some fifty years ago the streets of Edinburgh between twelve and one o'clock on the first morning of the year were crowded as at midday. Now it has fallen altogether into desuetude, the only remnant of it being that, among people of the old school, any valued friend receives a welcome even more hearty than usual, should he chance to be the first visitor, or the "first foot" in the house on New Year's Day.

In fact all these things are passing away, and there remains little in Scotland to distinguish the first of January from any other day in the year, save a tendency on the part of the middle classes to parade the streets gorgeously apparelled, and among the lower classes a general aptitude to get drunk. Neither of these "proclivities" are worth cultivating. The sight of men and women marching up and down streets of towns, marks of painful efforts after hilarity plainly visible on their faces, cannot surely be exhilarating. None of the Anglo-Saxon race were intended by Providence to indulge in out-of-door frivolities. And it cannot be considered a very creditable thing for a country that the labouring-classes generally devote the second and third days of the year to recovering from the too joyous festivities of the first. This latter evil, however, is decreasing. It is a subject on which it is not easy to speak with confidence, but many well qualified to judge appear to entertain good hopes that in Scotland drunkenness at new year's time, and at all other times, will speedily share the fate of the less exciting but more innocent representation of the *guizards*.

It is observable that the observance of Christmas is gaining ground in Scotland, especially in the towns, and among the upper classes. This is probably in some way connected with the spread of Episcopacy, which has, within the last few years, become *comme il faut* north of the Tweed. But, whatever be the cause, the fact is certain. Churches are attended; houses are decked with holly; Christmas-trees are adorned for the delectation of children; the very dinners have conformed to Anglican types of festivity; in fact, not unfrequently, the arrangements would meet with the entire approval even of Mr. Dickens. We trust we are not unduly influenced by national prejudice in thinking that this change is for the better. Cheerfulness and goodwill to all men are surely appropriate to Christmas-tide. But at epochs which merely mark the flight of time, while the good-will is not less beseeming, the cheerfulness does not so readily arise. We do not say that such periods should be neglected—quite the contrary; but we do say that they are not the fit occasions for uproarious hilarity. We may wish our friends a happy New Year as we wish them a good morning; many thoughts may occur, not such as we idly speak or communicate to any ordinary acquaintance; but these are not thoughts which tend to cheerfulness only, nor can any man of sense, over thirty, feel nothing beyond an inclination to be jolly when the fact is impressed upon him that another year out of his threescore and ten has passed away. "Of all sounds of all bells," says Charles Lamb, "most solemn and touching is the peal which rings out the old year. I never hear it without a gathering up of my mind to a concentration of all the images that have been diffused over the last twelvemonth; all I have done or suffered, performed or neglected, in that regretted time. I begin to know its worth as when a person dies. It takes a personal colour; nor was it a poetical flight in a contemporary when he exclaimed—

'I saw the skirts of the departing year.'"

Surely Elia here expresses the truth; and if such are the feelings with which we ought to regard the close of the old year, it cannot be that getting more or less drunk is the appropriate welcome of the new.

NEUTRAL TRADE WITH BELLIGERENTS.

The case of the *Alabama* has given rise to much general discussion on several complex and intricate questions which lie at the very root of the whole existing system of positive International Law. By positive International Law jurists understand International Law as established by treaties and by the observance of customs between independent nations in their dealings with each other. It is of the essence of a Law, properly so called, that there should be a sanction to enforce its performance and to punish its violation. Unlike Municipal Law, International Law is without a sanction in the proper sense of the term. The only sanction which a breach of the usual observances of international customs can call forth is a declaration of war on the part of the offended nation. The absence of any other sanction than the *ultima ratio* of war has led Mr. Austin, in his great work on jurisprudence, to deny that International Law is a Law at all in the proper sense of the term. Whether that be so or not, it is admitted by all writers on the subject, that the rigorous deductions from principles which are required by Municipal Law cannot be looked for in International Law.

Positive International Law, such as it is, is founded upon international morality as its basis. International morality, or the morality which should in theory bind nations in their dealings with each other, bears the same relation to positive International Law as ethics or morals bear to positive Municipal Law. International morality is, as its name indicates, national morals or national ethics. Ethics or morals regulate the conduct of individuals, international morality regulates the conduct of states and governments, in their dealings with each other. Municipal law is nothing more nor less than a branch of the great subject of ethics. Its accordance with the broad principles of ethics is the test by which the goodness of municipal law must be measured. The imperfections and infirmities of man's nature are the grounds for the enactments of positive law. The knowledge of his duty is not sufficient to insure its performance by him. Positive law, therefore, steps in and punishes him for the violation. Positive law does not, however, pretend to be co-extensive with ethics. The line of demarcation which shuts off ethics proper from those parts of the ethical system which have been embraced within its limits, and invested

Digitized by Google

with a sanction by positive law, is often a thin one; where it ought to be drawn is often the most puzzling subject which offers itself to the mind of the legislator. No positive rules can be laid down on the subject. As civilization improves, it is to be hoped that the dictates of conscience may, in process of time, supply of themselves a sufficient sanction to secure the prevention of acts which require at present the punishments of positive law. These remarks have been introduced because they are calculated to throw much light on the relations existing between International morality and positive International Law. The former bears the same analogy to the latter as ethics do to positive law: morality, whether private or national, is, in the language of jurists, a duty of imperfect obligation, the breach of which is punished with no other penalty than remorse of conscience; the latter, subject, of course, to the remarks we have already made as to the absence in International Law of a sanction in the proper sense of the term, is a duty, in a certain sense, of perfect obligation. In Municipal Law the sanction is perfect; in International Law it is only in a sense perfect. This imperfection does not, however, destroy, for practical purposes, or throw down the partition-wall, thin though it may be, which separates International Morality from positive International Law.

These observations bear very materially upon the question as to how far a neutral may, consistently with his neutrality, furnish belligerents with the muniments of war. A writer in the *Times*, in a letter signed "Historicus," has by no means done full justice to M. Hautefeuille, the adviser of the French Government, or to the Queen's Advocate, in his criticisms on their discussion of this delicate point. The manner in which M. Hautefeuille treats the whole subject is, it is true, quaint, if it may not be styled even priggish. He tests the question, in the first place, by what he calls the "primary or the divine Law," and then he considers how far the "secondary law" is in accordance with the requisitions of the former. A very little observation will lead any one to see that, by the divine law, he means the dictates of International Morality, and by the secondary law, merely the customary usages of positive International Law. His method is sound, though exceptions may often be taken to his positions. But it is idle to sneer at the work of M. Hautefeuille. It is an honest, careful, and most laborious production; the opinions of other writers are stated by him with remarkable fairness, which of itself is a great merit in a subject of so slippery a nature as International Law, and are discussed with extreme impartiality. His book is a complete repository of all the learning on the subject. The failure of M. Hautefeuille, where he fails, arises from the fact that he attempts too much—from his wish and endeavour to place International Law upon as scientific a basis as that on which Municipal Law rests. A very slight acquaintance with the first principles on which every system of jurisprudence is based, is enough to show that this is the aim of his work. If he fails, it is because the object is impossible; for a system of law which hangs for its sanction on the cannon's mouth cannot well be scientific. He is, however, well entitled to respect for his learning and for the fearlessness with which he expresses his opinions. At all events, he is entitled to have his opinion fairly quoted. Now, in the chapter as to whether it is an unneutral act in the neutral to sell muniments of war to the belligerents, M. Hautefeuille does not say, as he is represented to do by the writer in the *Times*, that the neutral government is bound to prohibit and prevent its private subjects from selling, in its own territory, muniments of war to one or both of the belligerents. What he says is, that, on the ground of international morality, the sale on the neutral territory of these articles by private subjects is, in fact, a violation of the precepts of that higher law; and, being so, he concludes that a belligerent might be justified theoretically, upon grounds of International Morality, in regarding the breach as a *casus belli;* but he adds that, practically, a belligerent will, as a general rule, in almost all cases, rather submit to an infraction of the higher law than take this step and thereby bring upon his shoulders another belligerent. More than this M. Hautefeuille does not say, nor is the deduction which has been made from his remarks legitimate. His treatment of the matter is a mere theoretical discussion; he does not inculcate on the neutral government the duty of preventing its subjects from selling in its territory muniments of war to a belligerent. The motive of his discussion is the question whether acts of the sort would, under any state of circumstances, justify the other belligerent in regarding it as a *casus belli*. We confess that, to our minds, the theoretical question is somewhat an idle one, though a writer who aims at a scientific treatment of the subject could hardly have passed it by. The Queen's Advocate discusses the subject much in the same manner as M. Hautefeuille. What is with the French writer the "divine or primary Law," is with the English jurist the principles of universal justice. A captious critic may perhaps think that universal justice is rather a broad and sweeping term; but the Queen's Advocate, if he errs, errs in common with a great man and a great judge, and uses language which has been already employed by jurists and diplomatists. Lord Redesdale, that great master of equity law, in defining the limits of the jurisdiction of the Courts of Equity, says that they are only bounded by the requisitions of universal justice; and the British Minister, Mr. Hammond, in discussing with the American Minister in 1794, questions of International Law, almost uses the same words. Probably we should prefer the phrase "International Morality;" but the Queen's Advocate, when he speaks of "universal justice," means nothing more. In the few pages which he devotes to this special subject he treats it, like M. Hautefeuille, on the purest theoretical grounds of International Morality; and, though he thinks, with M. Hautefeuille, and with the commentators of Valin, that the sale of muniments of war is a breach of that higher law, he does not, in any part of his book, assert, as he has been represented, that the sale of contraband articles by the private individuals of a neutral nation as a pure commercial venture to either or both of the belligerents, is an act which the neutral Government ought to be called upon to prevent. The distinguished position which the Queen's Advocate occupies, as the chief adviser of the Government in matters of great difficulty, entitles him to every courtesy. His work on International Law is to a degree honest and laborious. Indeed, the authorities cited by "Historicus" in favour of an opinion which the Queen's Advocate probably never meant to dispute, are almost all derived from his pages. The sale of contraband to the belligerents by the neutral is perhaps of all the questions of International Law that in which the line of demarcation between international morality and the positive International Law is the most obscure. It does not follow, that because an act may be internationally immoral, it ought, therefore, to be prohibited by positive International Law. Slander and abusive language are immoral, but they are not, except in certain cases, visited by the sanctions of positive Municipal Law. Similar difficulties occur in International Law in determining where international morality ends and positive International Law, such as it is, begins. The actual conduct of nations is perhaps the best test of the principles on which they act in deciding this question. All jurists are, we believe, agreed in the doctrine that the sale of muniments of war, such as powder, shot, &c., as a commercial adventure, is not a violation of international law. M. Hautefeuille and the Queen's Advocate, when they seem to disagree, only do so upon the purest theoretical grounds. Their argument refers, not to the practices during war as they are, but to the practices as they should be under a perfect state of things, which is far from being realized. The want of power in the neutral to prevent the sale, and the unreasonableness of the demand on the part of the one belligerent in requiring the neutral to prohibit the sale to the other belligerent of muniments of war as a pure commercial adventure, are the reasons which have led to the establishment of the present doctrine. Questions of convenience, and a general balance of the conflicting rights, lie at the bottom of the rule which appears to be now fixed upon a very reasonable basis.

"Our citizens," said Mr. Pickering, in reply to the British Minister, Mr. Hammond, who had complained that a French agent was buying up arms and military accoutrements with the intent to export them to France, "have always been free to make, vend, and export arms: it is the constant occupation and livelihood of some of them. To suppress their callings, the only means, perhaps, of their subsistence, because a war exists in foreign and distant countries, in which we have no concern, would scarcely be expected. It would be hard in principle and impossible in practice."—*American State Papers, 20th Jan.*, 1796.

The quotation which has just been made shows that such questions are not new. A long correspondence arose upon this subject in 1794, when war broke out between France and England, America being neutral, and was continued during 1795 and 1796. The correspondence, which lies before us in the American State Papers, is, at the present moment, both amusing and instructive, now that the tables are turned, and the neutral of those days is the belligerent of our own time. The belligerents of those days were not more modest and forbearing in their demands than it is the usual custom of belligerents to be. England demanded that the United States should stop the sale of arms to the French. France demanded that the United States should not allow their citizens to sell horses to the English. Our limits prevent us from noticing any other part of this correspondence than a very important letter of Mr. Pickering, the Minister of State, to M. Adet, the French Minister. This letter is so far important that it has been cited by that great lawyer Kent as one of the letters which establish the rule "that neutrals may lawfully sell at home

Digitized by Google

to a belligerent purchaser, or carry themselves to the belligerent powers, contraband articles, subject to the right of seizure *in transitu*." The jurist cited by Mr. Pickering in that letter at considerable length, and spoken of by him in terms of respect, is Galiani, who, on the other hand, is described by "Historicus" as "a mighty foolish" author. M. Adet had, in his letter which called forth the letter of Mr. Pickering, appealed to Galiani in favour of his own position. Galiani, therefore, has had the enviable and rare distinction among international lawyers of being admitted by France and America to be a decisive authority on a complex and intricate point. It may not be out of place to say that the writings of international lawyers are, with hardly an exception, coloured by the sentiments and the prejudices of the nation of which the writer is a member. Natives of powerful maritime states are almost all in favour of advanced belligerent rights, while the natives of weak maritime states are in favour of the rights of neutrals. The proof of this remark might be followed out without any difficulty. We make it to prevent persons who have not looked closely into the subject from being led blindly along by a string of authorities on any point of International Law. It must not be forgotten that in International Law, as well as upon any other branch of law, one good authority is better than a dozen indifferent ones. The difficulty, however, is the determination of which is the good authority. Each man is too apt to fly to the one which supports his own views and panders to his own prejudices, and to trumpet that one forth to the world as the embodiment of wisdom. A better field for the exercise of this common proclivity of human nature could hardly be found than is offered by International Law.

MARRIAGE CARDS.

England expects every man to do his duty, excepting, perhaps, clergymen, who can be hardly expected to do it, if they can get anybody else to do it for them; but it has never been said that England expects every woman to do her duty; nor does it appear to be known whether Britannia could conscientiously say that she did expect it, or whether she was ever impartially zealous upon the subject. The time has come, however, for clearing up the doubt. If fugitive symptoms are to be deemed of much importance, a large and highly-respected branch of the feminine sex seems almost inclined to give way. The bridesmaids of England have an onerous and a high office to fulfil; and it should be their endeavour to discharge its serious duties without swerving or shrinking from responsibilities. Any indications of a feeling of dissatisfaction or disorganization on this part of our social system are of themselves a species of misfortune. Vague disquiet and unrest among the outlying nationalities of the Continent come to us as familiar phenomena, and we are able to bear up accordingly. The Epirote provinces, men say, perhaps, are at it again. There has been a rising of the tribes in the Caucasus, or the ladies of the Sultan's harem, in a sudden burst of domestic disappointment, have murdered those who are their legal and natural guardians. To such Continental rumours and turmoils the country is accustomed, and it can bear them with Christian equanimity. But a rebellious spirit among bridesmaids is a new and overwhelming catastrophe, and comes from a quarter where all, it was thought, was peace. It has long been clear that something was in the wind. At last open signs of the disaffection have shown themselves in the marriage column of the *Times*, in the shape of a dropping fire of announcements of "No cards." When the first announcement of "No cards" was brought home forcibly to the mind of some friend of the family, who may have belonged to the old school, as he sat after dinner with the paper at his club, it is more than probable that it produced upon him that peculiar old gentleman's feeling of the end of all things being indeed at hand, which is wont suddenly to overcome us when we hear that Tom (just home for the holidays from Eton) has been smoking a cheroot in the drawing-room, or that Tom's elder brother, who is a puppy in the Guards, has five different kinds of umbrellas for five different kinds of rainy days. Arabella and Fitzsimmons, married at St. George's, Hanover-square, with eighteen bridesmaids in white silk dresses trimmed with swansdown, and a bishop to bestow his blessing on the bride in a voice broken with emotion—and yet "no cards"! This is another of those monstrous innovations which are to be expected from a generation which has no reverence for tradition, or for its elders, or for the decencies of society, and which is inbred with the most latitudinarian and revolutionary ideas. This comes of Catholic Emancipation and the Reform Bill, and what is called the march of intellect. It was to be expected; yes, it was to be expected. It is only another proof that the floodgates of radicalism are opened, and that the landmarks of society are about to be removed. Such may, no doubt, have been the sentiment of the old family friend, called forth in a sudden flash of anger and astonishment, and who can say that they were not such as would do honour to his head and to his heart?

If everybody who married belonged to one little coterie, which knew when a marriage was on the *tapis*, and in which no marriage ever altered the social relations of the "high contracting" parties, marriage cards might be of no especial use. This, however, is not the case. The English world of gentlemen and ladies is a wide one, and is by no means confined to that little world which meets itself nightly at the one most fashionable ball of London. Scotland is not too far to marry into Cornwall. Buckinghamshire would make very little of going through the wedding ceremony with York. Welsh heiresses, unlike Welsh mutton, are a resource bestowed impartially by a kind Providence on all parts of this favoured realm alike. A flying golden bridge connects Belgravia and the Hampstead Road. Mayfair has been known to unite itself to Clapham with much apparent satisfaction to itself. How is it possible that marriage cards can cease to be a necessity when such is the state of the social world? Few people belong to a set of gods and goddesses, all of whom are universally known; all of whom are on an equality: and all of whom intermarry only among themselves. Most Englishmen and Englishwomen of the upper classes have numberless friends and acquaintances in all quarters of the world, who are not likely to hear for a certainty of the great event, and who, when they do hear of it, are glad to be personally informed that the great event changes nothing in old friendships, and that not even on account of new ties is old acquaintance to be forgot. To such as these the absence of marriage cards makes a considerable difference. It is a cold and uninteresting piece of news to learn through the medium of a newspaper gazette that a schoolfellow of one's youth has married out in India. It becomes a very different affair when the white envelope with the whiter cards, tied by the well-known silver cord, appears after its long journey from the other hemisphere upon your breakfast table. Old recollections laid aside for many years are revived; rusty friendships burnished up into warmer and brighter ones; and Brown from Richmond, in return for a white card, sends back a loving wish to Jones upon the Ganges. In theory the wedding-card is particularly well-timed, because it is at a moment of great and absorbing interest to ourselves that it is most important to make our friends feel that we are not too absorbed to think of them. In practice, it is convenient as a means of continuing or dropping an acquaintance. There may be people whom the husband is not desirous of introducing to his wife, or there may be people whose acquaintance the husband does not care to make for himself, and wishes his wife to drop. It is right that every man at the time of his marriage should have this opportunity of selecting his own and his wife's friends afresh, for without it the news will be certainly known to all who are concerned about the bride and bridegroom. This innovation comes from that graceful and ingenious sex which believes that the marriage column is read, next to the Bible, by all classes of the population with perennial vigour. An announcement appearing in the literary gynæceum of the *Times* is as good, we have no doubt, as a notice to all Englishwomen. Unfortunately, thea is one part of the *Times* which men do not so assiduously prefer at breakfast-time. The idea of making it legal notice to all mankind emanated from no masculine brain. *Dux fœmina facti.* If it emanated (as it must have emanated) from a woman, we are obliged to lay the fault on those whose privilege and tearful pleasure it is to deck the victim for the sacrifice, and to despatch afterwards to all who know her the card containing the information of her fate.

The time for dispatching the marriage cards has hitherto been understood to be during the dull afternoon that follows the departure of the wedding-guests. We hope and trust that it is not from any unjustifiable feeling as to the exercise or fatigues of a wedding-day that the bridesmaids feel a disinclination to discharge the additional yet simple duty. Nothing could be plainer than that the fatigues of the day do not fall on them. Got up in rich lace or tulle regardless of expense, they occupy a cool and spacious place in the church during the ceremony; and are not crowded into an uncomfortable position among the collective hats of the assembly upon the pulpit steps. They arrive at breakfast fresh and vigorous, not jaded with the incessant toil of protecting one's own hat, and not treading on the rest; a toil to be performed under the exhausting mask of devout attention to the service, and an emotion of sympathy for the performers. Their breakfast is for them a gala hour, instead of pointing to a vista of nightmare and unrest. Their young constitutions now, doubtless, stand drinking champagne and eating all kinds of soups and *entrées* at an hour at which nature stands aghast. They do not feel feebly buffeted, and driven by circumstances over

Digitized by Google

which they have no control, from one glass to another, till agitated at once by the sentiments of the hour, and by the unusual and precocious supply of feverish beverages, they find themselves, when the afternoon is not half begun, in a state of maudlin indigestion. They are not forced to tire themselves out by keeping up a show of gushing sympathy for the united company, which no serious-minded Englishman could possibly consent to feel, if he were not driven half wild by the champagne and the speechifying, both getting into his head together. Then, again, let them look at what men have to go through when they leave the house! What is a man to do at three o'clock in the afternoon, after the agitation and the repletion to which he has been exposed? He cannot walk, for his head is aching with the scene; and he is too sleepy to read; and he cannot bear the noise of the street; and he wants fresh air and to be let alone. A gloomy cloud prevents him from looking forward to any dinner with even moderate patience. His day is ended prematurely before the evening has began. He has nowhere to go to, and nothing he cares for in the world that he is fit to do. If any bridesmaid is inclined to repine or to fancy the day has been less pleasant than it might have been, she has only to think of what others have thought it right to suffer, and her lot will presently appear a light one. At any rate, cheerfulness and industry are the best recipe for feminine discontent. The process of directing and despatching the wedding-cards is the best that is possible for raising the spirits which have been depressed by the gloomy affair of the morning. It is, of course, possible that it is not to save trouble that the abuse of dispensing with this process has crept in. Every family in the world has a certain number of what may be called amphibious friends; that is to say, friends whom one is always wishing at the bottom of the sea, and who ought to be at the bottom of the sea, but who are still always turning up on dry land. The horrid question is whether or no the amphibious friend shall have cards. To send cards to others and not to him, is to slap him smartly and distinctly on the face. To send him cards is more than human nature can endure. The obvious, but unworthy solution of the difficulty, is to send nobody any cards at all; by which means the amphibious friend is neither insulted nor encouraged. If the "no cards" system be invented to meet this social obstacle, it is still an objectionable one, for the very reason that it leaves the amphibious friend where he was, and does not better matters. It would not make him much worse or more objectionable to go through the ceremony of acknowledging his existence, and the other alternatives might have the effect of driving him straight to the water, and thus putting, pleasantly and mercifully, an end to his amphibious character. On all grounds, then, we should wish respectfully, but firmly, that this movement among the bridesmaids should be suppressed. Wedding-cards ought to be spared. If it were not impolitic to suppose that a bridesmaid could understand a dead language, one might employ the words of the poet—*perituris parcite chartis;* but we have no intention, in disputing against fair opponents, to be so unwise as to allow our case to rest upon its pure logical merits. It may be of some service to suggest that suppressing one part of a ceremony is only one step to suppressing another. To-day it is a *coup d'état* against wedding-cards. To-morrow it may—who does not shudder at the thought?—be a *coup d'état* directed against bridesmaids!

HISTORY À LA MODE.

We live in an age of speculative hardihood: *per fas atque nefas*, across the most cherished prejudices, the best-beloved beliefs, a ruthless spirit of inquiry is for ever pushing on to some new conclusion, or impugning the authority of some established dogma. Everywhere innovation stands courageous and defiant. In our houses, our fashions, our modes of travel, our daily talk, no less than in our politics, the spirit of conservatism has received a thousand deadly stabs. A disembodied country squire who returned from beyond the Styx, to revisit once more the glimpses of the moon, would wander disconsolate about his hereditary acres, and would find a degenerate race in possession of an England that was no longer the England of the good old times. In history especially the spirit of scepticism has run riot with an irreverent and capricious vehemence. The heroes of antiquity have been hurried from their pedestals, and their places occupied by those at whom hitherto the finger of scorn has been by common consent directed. The grand old myths of early Greece have crumbled away beneath the touch of unsympathetic investigation; rehabilitated Roman emperors stand forth the shining models of refined, benevolent, and unselfish sovereignty; while the English Blue Beard is acquitted of all conjugicidal tendencies, and triumphantly demonstrated to have been everything that a husband and a monarch should be. No revolution is too great to be attempted, no sentence of antiquity too final to be reversed.

At such a time the duties of journalism must be necessarily often perplexing. Truth must not be stifled; yet, on the other hand, there are discoveries so tremendous, changes so radical, criticisms so audacious, that we almost shrink from giving them additional publicity. Nothing but a stern sense of duty could drive us to the performance of so uncongenial a task, or support us under the conflicting emotions of intellectual martyrdom. Without, then, further prelude or apology, we announce the latest conclusions to which the most fashionable school of history has conducted its converts. We shall be giving a rude shock, we have no doubt, to many a sensitive nature; we shall be disturbing the serenity of many a tranquil life; we shall have to dislocate the chronology of pretentious and self-satisfied ignorance, and to impugn the cogency of traditionary logic. Indolence, timidity, worldliness suggest a discreet reserve; but we owe it to our readers and ourselves to be courageous, and, be the consequences what they may, we have resolved to speak.

It appears, then, that scholars have become convinced that comparatively modern English history stands sorely in need of rectification. What Niebuhr did for Rome, what Bunsen attempted for Egypt, a learned pamphleteer has recently achieved for the last three centuries of English annals. Bringing the same machinery to bear upon the house of Stuart which antiquarians have directed against the house of Cheops—examining the "Caroline legend" with the same crucial tests which have resolved the myths of the Heraclidæ and the fabulous chronicles of Egyptian papyri into their true elements—applying, in fact, to modern times the same unceremonious method of investigation and rearrangement which has hitherto been monopolized by the elucidators of antiquity, he has arrived at results which, though startling at first sight, bear upon them all the evidences of inherent truthfulness, and need only be seen in order to be believed. The sagacious historian in question writes with a dignified and almost authoritative air, and advances, like a skilful general, securing each position as he goes. In the first place, he points out the absurdity of their being two historical methods, one for ancient and one for modern times. Arithmetic, he observes, was as true before the deluge as after, the same canons of credibility apply to Psammeticus as to George I. Next, the advantage is shown to be all on the side of the historians of antiquity. The narrators of modern times have been the victims of a slavish accuracy; they have insisted on contemporary evidence, they have balanced the claims of contradictory witnesses, they have rejected unsupported hypotheses, they have carried the wretched logic of the law courts into the noble domain of history; they may be regarded, says the author, "as breathing the spirit of historical red-tapism." The historians of antiquity have been animated by a more generous spirit, and have shaped more courageous canons for their guidance; they have decided that positive proof is the vulgar necessity of untrained intellects; difficulties, otherwise inconveniently insoluble, are met by the ready expedient of an invented hypothesis; oral tradition, though a few centuries later than the events which it commemorates, is accepted as reliable; the gratification of inquisitiveness, the historian's highest function, and the Aristotelian dogma that poetry is more philosophical than history, have necessitated and justified the employment of less prosaic modes of thought than those conventionally made use of. "As an instrument of research," says Sir David Brewster, "the influence of imagination has been much overlooked by those who have ventured to give laws to philosophy." Kepler's discoveries were grounded on a lucky guess, and it is to such fortunate intuitions, rather than to the deciphering of obscure chronicles, or the tedious comparison of immaterial proofs, that the true historian will look for aid. *L'histoire est aux heureux*, that is, history is for those who make the luckiest shots. Thus, no less than poetry, it will become one of the imaginative arts, and, so treated, "would obviously acquire a compass, richness, and variety, and would exhibit a unity and consistency of which it has hitherto been destitute."

Armed with this theory, and covering his advance, as it were, by some personal confidences of the illustrious Niebuhr, the author proceeds forthwith to carry the first hostile position. The artillery which he employs is, if we may be forgiven the pun, the well-known historical canon that genealogies apparently successive are often to be regarded as contemporaneous, and slightly different names as referring to the same individual. Before this formidable piece of ordnance the House of Stuart makes a very poor resistance. To the critical eye its very appearance is suspicious. The dynasty is related to have reigned from 1603 to 1688. There are

Digitized by Google

four monarchs, two named James and two Charles, two usurpers, Cromwell and William, and two Pretenders, also named Charles and James. "Altogether, there is so much confusion in the received history of these Stuart Kings; some reigning, some deposed, some claiming to reign, and all sharing the names of Charles and James, that an hypothesis is called for, which shall replace contradiction and obscurity by coherency and light." The hypothesis—such is the fertility of a truly scientific imagination—is no sooner called for than it is forthcoming. That strange delusion, which oftentimes awaits intellectual no less than physical inebriety, has led the victims of a too generous literary diet to see two things when only one exists. Charles II. and James II. are imaginary beings reflected from the two Pretenders, and Cromwell but a shadowy anticipation of the usurper, William. So luminous an hypothesis scarcely stands in need of corroboration, but the author, with scholar-like precision, secures each position as he goes, and links the whole together with a chain of probabilities. Both the Pretenders, as well as the imaginary King Charles, are represented as being at Paris, under the patronage of the French King. All three set sail for Scotland, a very improbable destination for Charles, as it was here that his father's bitterest foes were collected. All three collect an army, all march southward, all are ultimately defeated, are the objects of Government pursuit, and are enabled at last, by the fidelity of their adherents, to reach the coast. Nor does the resemblance stop here. Both the imaginary Charles and the elder Pretender have mothers living at Paris; the name of each of these ladies is Maria; the affix Henrietta, in the one case, being a mere "caprice of tradition;" each is of an Italian princely family,—the one of the House of Este, the other of the House of Medici, a difference which, as Modena and Tuscany are contiguous States, is, the author rightly observes, almost imperceptible. The other discrepancies are equally insignificant. The Pretender is victorious at Preston Pans, whereas Charles is defeated at Dunbar; but the places are near to one another; and this is precisely the sort of variety with which the historian must be prepared to deal. In the same way, the fictitious Charles's march is arrested at Worcester, whereas the young Pretender was checked at Derby. But Derby and Worcester are both capitals of Midland counties, and about the same distance from London, and might be easily substituted. And though the legend has introduced Worcester, it has recognized Derby in the shape of an Earl of Derby, who is described as falling into the hands of the enemy and decapitated after the battle of Worcester,—an obviously mythical method of describing the pillage of the town by the victorious Hanoverians after their victory at Derby. At this point the stories again coincide: the young Pretender is rescued by Flora Macdonald, Charles by an oak-tree, the noblest type of that vegetative world over which Flora presides. Both of them owe their safety to the almost incredible fidelity of their partizans; Charles is the head of the "Cavalier" party, while the Pretender is celebrated in Jacobite ballads as "the young Chevalier;" both, lastly, are Catholics in faith. Do not such coincidences compel us to believe that the personages are identical? May we not gladly, following the "Egyptological method," sweep the dreary austerities of the Commonwealth, the orgies of the Restoration, the abortive tyranny of the second James from our annals, and henceforward accept William III. as the real opponent and immediate successor of the martyred Charles?

The "Caroline Legend" thus, by an ingenious analysis, cleared away, we are in a position to take a correcter view of matters nearer home. There is a portion of the great Napoleon's career which science finds it impossible to admit. For awhile all is continuous, lucid, and probable, and firmly established by authority; after his escape from Elba, however, "the narrative changes its character, it becomes improbable and incoherent, it exhibits marks of a legendary origin, and is no longer worthy of credit." Instead of continuing the peace, which exhausted France had just began to taste, the fugitive Emperor is represented as plunging at once into a campaign which, though lasting only a week, is marked by two first-rate battles, the latter of which necessitates his flight. Then there is a second abdication, a second captivity, a second island: the Bourbon dynasty, just blown away by the mere breath of Napoleon's approach, is reinstated; in 1830 it is overthrown, again in 1848 it is overthrown, and in 1862 we find another Napoleon on the throne, bent, like his great original, on military glory, territorial grandeur, and domestic development. Why, asks the discriminating Egyptologist, why not sweep away this improbable interlude, and believe that the first and the second Napoleons are the same individual? How ill supported by evidence is the great turning-point of the whole, the battle of Waterloo! Napoleon himself is described as having despatched a bulletin to Paris describing it as a victory, and to have issued a proclamation at Brussels to the same effect. The last French historian has succeeded in proving that all the odds were in favour of the Emperor, that the English and Prussian arrangements were one long blunder, that the chief portion of the English army was annihilated, and that the defeat of the allies was saved from becoming a disaster only by the French troops being unable to see their great leader in the dark. And this at six o'clock on a Midsummer evening! Here surely we must confess that fiction has been at work, and a wholesome scepticism will reject what is, when taken to pieces, a mere tissue of impossibilities! The author probably omits as superfluous the circumstance that most of the European arrangements of 1815, as described in the myth, are falsified by the existing facts of the case. The principle of legitimacy was established by vast sacrifices, and sanctioned by the consent of the powers,—how far has it been observed? No member of the proscribed family was ever to reign; but we have Europe generally assenting to a second Napoleon; the Netherlands were erected into a powerful kingdom to guard the French frontier; where are they? Austria was put in charge of the rich plains of Lombardy, to guard the Italian frontier—has she deserted her post? The Italian princes were restored, but we search for them in vain. We read the accepted text-books, we look around us for proof, and we reiterate De Maistre's complaint: "L'histoire depuis trois siècles n'est qu'une conspiration contre la verité." Napoleon the first and the third are identical—the Bourbon interlude the imaginary offspring of royalist fanaticism, and the mythical Battle of Waterloo merely a monstrous example of the length to which lying Englishmen will go when they set about it.

So much for the joke; the moral seems to be that ingenuity may be pushed too far, that apparent improbabilities are not always improbable, and that gentlemen who undertake, on *à priori* grounds, to reconstruct the history of the past, have every reason to be laborious in conducting their research, and diffident in arriving at their conclusions.

THE PATRIARCH OF ROMSEY.

It is not recorded in the pages of any historian that Cincinnatus ever took the chair at an agricultural meeting, or endeavoured by the weight of his presence to promote the cause of the propagation of trout in the Tiber. We are not even sure that the habit of replying to toasts prevailed among the fathers of the Roman people. But if such institutions did exist, we know exactly the very things which the ploughman-hero would have said, from the perusal of the Hampshire county papers of the past fortnight. The park at Broadlands is the seat of one who, when not actually engaged in the sterner service of the State, spends his days in walking over the turnip-fields and gently anathematizing "couch." When the Queen's messenger comes down with the little tin boxes in his hand, he finds the tough old warrior in moral, if not actual, shirt-sleeves, plodding through the Hampshire clay, and here and there pulling up a charlock. Turnips—cattle—the promotion and improvement of fish—such are the themes which Lord Palmerston chooses for his holidays. Twice in one week did the Minister, whose body is too often on the Treasury benches though his mind is in the cattle-shows at Romsey, take the chair to celebrate pigs and salmon; and either the Premier himself had devoted all the powers of his active intellect to getting up the subject from personal inspection and study, or his private secretary had spared no pains to do it for him. The fact is, we are all of us much wiser than we seem. The patriarchal viscount says that he is speaking to men who know more about it than he does himself. It is the duty of a chairman, no doubt, to be condescending, and human knowledge is limited even in those who have spent a whole day in learning the names of the yellow weeds in corn. But when the senator and agriculturalist not only shows himself perfect in botanic nomenclature, but corresponds with gentlemen at Brighton who "dibble their seeds so as to give room for each plant to grow," there is no resisting the belief that he has attained the highest point in the science of practical farming. It was only necessary to come down again to the Town Hall and discuss the probable price of a salmon-ladder, to make it certain that if ever a new editor should be unfortunately wanted for the *Field*, no more fit person will be found to fill the post than the owner of Broadlands himself.

Even practised farmers, though they know the names of as many weeds as Solomon, and even the most devoted patrons of fly-fishing, get some good from going to Parliament. To say the right things to the right people is an art which may be learned even by constant replying to troublesome members, and to members who are reported at full length. To say that, under certain circumstances, the Government would not refuse to take a subject into consideration, is a kind of easy training for the more difficult task of pro-

Digitized by Google

posing the health of the mayor of a country town. Practice has made Lord Palmerston nearly perfect. The Christmas cattle-show at Romsey was followed, as it should be, by a dinner, and at this dinner the noble chairman had no less than eight toasts to propose. What an anxious morning it must have been, if it were not for the duty of walking over the turnips! How those anecdotes of the old women, which Hampshire rumour declares to be provided by the tenants at the small fixed charge of one shilling a-piece—how those classical allusions, which Lord Palmerston somehow never can get right, perversely insisting on confusing Ajax with Achilles, must have been looked up, in the hope of something appropriate! But everything went right. Lord Palmerston proposed the United Services, and coupled with the toast the name of Lieutenant Allsop, of the Romsey Volunteers. Lieutenant Allsop replied, that the consciousness of having the confidence of the country was enough to incite the Romsey Volunteers to do their duty. Lord Palmerston, with an analogy about good seed most unfairly borrowed from St. Matthew with the distinct object of avoiding the customary shilling, proposed the bishop and clergy. The vicar of the parish responded that there were no associations which the clergy felt so near and dear to their hearts as those of the agricultural societies. He even went so far as to say that the bishop of the diocese, whose health they had so cordially drunk, was one of those who took an especial interest in agriculture. Whether the audacious vicar intended a sly hit at his diocesan or not, it is not for us to say; and upon the question, how far the income of the bishop of the diocese depends upon the current price of hops, he gave no hint whatever. But he certainly pointed, with emotion, to the spires of the village churches of England, which, contiguous as they are to the village cornfields, seem to indicate, in the beautiful but enigmatical language of the Rev. gentleman, "that the interests of time and eternity are one, and that we cannot ignore one without ignoring the other."

Then the chairman gave "The County Members," who replied with allusions not to be understood by the multitude. Then he gave "The Mayor," and added something about the principle of self-government; and the mayor answered, speaking something also about the principle of self-government, but more about the Romsey market. And then came the moment when the eminent agriculturist in the chair exhibited himself as a minister, but also as a man, touched pensively on the noblest feelings of the human mind, and proposed the health of the prize competitors at the show. The humble owners of the cattle replied, sang the praises of their landlord, and told of the improvement of stock. But they spoke shortly, and sat down; either their hearts, or something else within them, were well-nigh too full for utterance. The last toast of all was the most purely Cincinnatus-like. Lord Palmerston had followed the plough, if not with his bodily legs, at least with his mind's-eye, for many years, and the couch and the charlock and the Brighton gentleman who dibbled are but specimens of his wondrous lore. So ended the feast; and but for one circumstance we might now dismiss it with confidence that the interests of native agriculture are safe in the hands of a man who can speak of weeds as fluently as he can of protocols. That circumstance is this. From one sentence used by the chairman, taken in connection with his Romsey antecedents, it is distressing to have to draw the inference that the Prime Minister has deliberately formed the intention of seducing the population of the town into heresies so shocking that we absolutely do not know their name. The insidious viscount appears to have remarked that "it is an old saying—but all old sayings are not necessarily true—that in peace men beat their swords into ploughshares." Whether he said "swords" or "spears" seems uncertain: and the use of the wrong word would at worst only involve the comparatively venial offence of misquotation. But this dangerous speaker not only described the words of the prophet Micah, in the disrespectful phrase of "an old saying," but ventured to assert that it was possible they might not be founded on fact. An old saying—that is, mythical, and delusive, and untrustworthy. But Lord Palmerston does more than hint the inference, he draws it distinctly;—or, perhaps, we should rather say that he Jesuitically implies it; we should have had much more respect for him if he had said boldly and openly that he did not believe in the minor prophets, and had taken the consequences. He might have started a new sect of his own, on the basis of the inveracity of Micah and the natural goodness of infants. But when he guardedly insinuates that prophets are only utterers of old sayings, and that even then they are as likely to be wrong as to be right, we cannot but see in the owner of Broadlands and Lord of Romsey a very theological wolf in the clothing of an agricultural chairman.

The subject of fish must have seemed mere child's-play to Lord Palmerston after the really difficult business of the turnips. Besides, in the meeting for the preservation of salmon, he had really nothing to do. He could sit in his chair and compose his features into a close resemblance to the portrait of Isaac Walton; and he could declare, in his opening remarks, that the subject, in common with all other subjects upon which public meetings are addressed by their chairman, was of the greatest possible importance. But it was not the observations of the chairman that the lovers of salmon came to hear, and the tenants stood prepared to applaud. Men were present who had constructed actual visible salmon ladders, and to preside over the audience which listened to them was an office purely ornamental. Readers who are not acquainted with the river Test, who know Cincinnatus only as a chief and conqueror, and not as the joy of his townsmen's hearts, and an oracle on yellow flowers, may even find the proceedings a little tame. So it is to us. But the great viscount can sit and be amused by surveyors who talk for an hour about spawning. Happy patriarch! Would that we, whose lives are passed in similar work and hurry, could retire like him to his charlock and dwell with his bland composure on the quiet statistics of fry! An inspector of fisheries "gave the meeting the benefit of his long and varied experience in the manners, customs, and general habits of salmon." We think we hear the viscount starting up suddenly at the end, and declaring that he could say for himself and his colleagues that her Majesty's—he meant that the speech they had listened to was one of surpassing interest. In the end he moved the appointment of a committee to propagate salmon, and read his own name as their president. May he live to do his work in the humble sphere of his adoption, and in years to come may troops of sportsmen on the Test, and generations of farmers who dibble, live to bless his name!

PROFESSIONAL CHARACTER.

We have it on the personal authority of one who is himself a learned Oxford professor, that a Welsh clergyman improved the occasion of Sir Robert Peel's death in the following terms: "My brethren, this great man was a Christian; and, let me tell you, in the words of a learned Oxford professor, that no one despises Christianity, save beggars, bakers, butchers, bell-hangers, bottle-blowers, and blackguards." Suspiciously like this criticism, though not epigrammatized by its neat alliteration, is the sentiment of tribulation in the "Alchemist":—

> "Where have you greater atheists than your cooks?
> Or more prophane or cholerick than your glass-men?
> More anti-Christian than your bell-founders?"

Absurd as such expressions may be, they hardly exaggerate the strength of the notions which are popularly though indefinitely and half-unconsciously held of the effect of a profession on character. "I have an idea," says Lucius Mason, in "Orley Farm," "that all lawyers are liars," and the world holds something of the same opinion. On the other hand may be adduced the prevailing idea that clergymen uniformly possess a moral character superior to that of the rest of the world. Soldiers are sometimes believed to own a peculiar and exclusive monopoly of the sentiment of honour. Manufacturers labour under the suspicion of cynically regarding their "hands" as mere machines, just as on a larger scale England's commercial greatness has acquired for her a character for selfish and perfidious policy; and journalists are sophists who glorify the opinion of the day, or of their party, regardless of their own views or moral sense. There is enough of truth in these notions, after eliminating the cases in which men choose a certain profession only in consequence of a certain bent of character already formed, to make it worth while to attempt to disentangle the truth from the errors contained in them.

Men seldom propose to themselves distinctly any end to be attained in life; any one object which is to dominate in the whole, and towards which every action and thought must be a step, or be considered as wasted. A vague conception of success is substituted, and the nature of the profession or pursuit in which that success is to be attained gradually changes and moulds the whole character. Nothing can be more certain, than that no one can make really great progress in any profession or art, unless he allows it to command wholly, at least for the time, all his thoughts and aspirations; unless, in short, he makes it the object of his life. We have a well-grounded distrust of amateurs in any subject There is wanting in them that warranty of sincerity and conscientious labour, which the practical professional man brings, and which is necessary to inspire confidence. Nothing again can be more certain, than that what is so earnestly followed must deeply affect the character of its single-hearted votaries. It becomes an ever-present end, and the moment it begins to be so regarded, it shapes the whole moral and intellectual nature. Here, two important

Digitized by Google

questions suggest themselves; first, what amount of effect does the nature of a man's profession exercise on his character? and secondly, whether that influence is on the whole good or bad?

Two or three instances will be enough to illustrate the amount of this effect. Some one has remarked that priests must labour under a continual tendency to be hypocritical, by the necessity of their position. They are expected to be always in a state of strained spiritualism. Duties are perpetually recurring, which, at least in conventional belief, require fresh religious fervour. But how is it possible that men, the greater part of whom have become clergymen as much from chance as choice, can maintain themselves long and often, at a level so much above the natural condition of their own feelings and of human nature? The laymen, again, who consult them, come to them, for the most part, only when they are themselves in an exceptional state of religious excitement. How can any man always satisfy those who, perhaps in his intervals of spiritual deadness, come to him with excessive demands on his zeal? It is almost necessary that he should pretend to that which he does not feel, and his character must suffer in consequence. Doctors, again, are liable to peculiar mental obliquities. It would hardly be extravagant to divide them as a class into materialists, and believers in final causes. If they are not struck by the evidences of design, which meet them at every step, they become materialists; if they are impressed by them, they take up the hypothesis which is more prejudicial than any other to scientific progress. As a class, again, they are deficient in taste, and their opinions on general subjects are continually injured by a narrow and professional point of view. These are, of course, only tendencies, and are often to be traced to a want of general cultivation; and they are liable to many exceptions; but, as tendencies, they cannot be denied. They have also their good side. Lastly, of all professions none is popularly supposed to impress a more distinct character than law. Partly from its centralization in London, partly from the uniformity of processes, and of interest, and of social rank in those who follow it, there is in it, perhaps more than in any other, something of the mediæval spirit of a guild. As a whole, if it is lowered in practice, it is elevated in theory, by its connection with politics. It may be added that those professions exercise the greatest influence, in which it is necessary to rise through many grades, from the lowest to the highest rank, more particularly if a special training from boyhood is requisite.

It is a much more difficult question, whether this great and pervading influence is on the whole good or bad. It is easy to say something against every profession, hard to appreciate the good elements which each contributes, still harder to say what is the value, taking the good with the bad, of a definite professional character in any case. There are two obstacles to its accurate measurement. In the first place, there is the fact, plain here as elsewhere, that each evil has its corresponding good, just as in the natural character, good qualities are bound up with defects, and the same characteristic which is at the root of one produces also the other. Against the tendency to hypocrisy produced by one profession, is to be set its unselfishness and perpetual recognition of some higher aim than the present. Discipline and habits of order and command redeem another; spirit of enterprise, a third. Secondly, different men are affected in very different degrees by their work. Some men seem to have something in them which is perpetually in a state of defiant antagonism to the spirit of their profession. To some, all work is alike—some have taste in work, and throw themselves into one sort, not into another. Some like variety, some definite sameness. Whilst some desire to find their end in their business, others live two lives—one of their profession, the other individual—and take the greatest pains to keep them separate. In any case, the operation of influences of this kind is unconscious. Not the most laborious spinner of his life into one continuous thread can really at its outset choose an end and follow it out. The conscious statement of an end is rather the result of an accomplished career of work, than a goal proposed in entering on it. Of all the thousand things which have, in different times, been elevated into ends of life by individuals or by philosophic schools, probably not one grew into distinct shape till the vigorous life of the individual or school was nearly completed. Ends cannot be conceived *à priori*. Such views are retrospective, not initial. Aristotle thought the only pursuit worth living for was a perpetual habit of speculative classification and of reduction of all things to his four causes, and he constructed his morality with a view to this principle. Mr. Ruskin thinks that perfection, and by consequence that supreme felicity, consists in illuminating albums. Neither of these ends could well have been conceived by anticipation. They are the result of years of the work to which they give its value by a subsequent judgment. So every one of the ends which have been proposed for action has been, not a thing first devised and then acted on, but the final epitome of a history, a philosophic system, the aspirations and labour of a life. Meanwhile, if it is impossible to determine beforehand the best object of life, and the profession or pursuit in which it may best be attained, the practical conclusion may still be laid down, that almost any end, and therefore almost any profession, is good enough as an instrument of moral and intellectual cultivation. One-sided progress is better than many-sided and stationary dilettantism.

THE PAST WEEK.

Mr. Gladstone has been presiding at an entertainment given in the Music Hall at Chester for the Lancashire Relief Fund. In his speech he gave a new edition of the statistics of the cotton distress, reckoning the present loss of weekly wages, either directly in the cotton manufacture, or in trades dependent upon it, at more than the rate of £12,000,000 a year. This must tell sensibly on the revenue of the State, to which each man in this country yields one-eighth of his income. The actual loss to the revenue for the current financial year he estimated at more than one million. The total number of persons thrown into destitution by the want of cotton he took at half a million, of whom, in twenty-seven unions, 250,000 were receiving Poor-law relief, besides 190,000 others relieved by charitable funds, and many workpeople who are supported by their own employers or by local bounty. It had been difficult in the summer and early autumn, when the distress increased so rapidly, to organize at short notice an extensive system of relief which should not involve enormous waste, and, perhaps, encourage fraud. The managers, too, of these funds had in some cases shown an excusable timidity, not having faith enough in the sufficiency of voluntary subscriptions to meet the demands of the coming winter; while the boards of guardians did not everywhere perceive in a moment that this extraordinary calamity must be dealt with by unusual measures. The average rate, however, of out-door Poor-law relief, which, before the distress, was 1s. 2½d., was now nearly 1s. 6d. a head weekly. The poor-rate expenditure in the Lancashire and Cheshire cotton districts was at the rate of a million sterling per annum, amounting to 5s. in the pound on the rateable property of the district. The funds subscribed by this time amounted to more than £1,200,000; and as one-half that sum remained as yet unexpended, he looked forward cheerfully to being able to provide for the remainder of the winter. Should the dreadful and sanguinary war which now desolated America, and threw the surplus of its curses upon us, be brought to a speedy close, a great and early relief might be expected. He praised the noble independence and patience of the factory workpeople in their affliction, but reminded them that they would have to put up with low wages for some time after resuming their work.

The Clydesdale Banking Company has been defeated in an action for libel against the *North British Daily Mail*. The libel complained of reflected severely on the management of a branch bank at Cupar, in Fife. It was occasioned by the manner in which the local agent of the banking company, Mr. Taylor, had behaved on the discovery of some forgeries by Samuel Robinson, late proprietor of the *Fifeshire Journal*, who absconded in February last, but was afterwards captured in London, tried, and sentenced to five years' penal servitude. It appeared at the trial, that Mr. Taylor, when he learnt the forgery from the persons whose names Robinson had put to the bills, had a long interview with Robinson, asking him for a statement of his affairs, as well as receiving an admission of his guilt. The next day Mr. Taylor consulted with the manager of the company, Mr. Readman, suggesting that it would be the more prudent course not to prosecute "the poor man" criminally, but to allow him an opportunity of paying off the money, as he said he had sufficient to pay all his creditors 20s. in the pound. Mr. Taylor remarked that "the poor man" would be punished enough by being banished from the town and his business. He was afraid, too, that as Robinson was "rather popular and kindly regarded in Cupar," the company would incur much odium by taking steps against him, and the newspaper property would be injured. Mr. Readman, however, the manager at Glasgow, did not hesitate a moment as to the course which the company ought to pursue. Leaving Mr. Taylor to make the best arrangements he could to lessen the loss to the bank, he directed that the Fiscal, or Public Prosecutor, should be at once informed of the forgeries, that he might take criminal proceedings against Robinson. Mr. Taylor got a letter with these instructions at 9 o'clock one Saturday night, and at 3 o'clock on Monday he went to the Fiscal; knowing that Robinson was at that time in Edinburgh. The chief officer of the Fifeshire police went to Edinburgh, but could not find him there, and with some difficulty traced him to London. Robinson, thus overtaken at length, was so desperate, that in the railway train, on his way back to Scotland, he slipped off the handcuffs, and jumped out of the carriage window while going at full speed. He was, however, not much hurt, and having been once more caught, received the due award of punishment at the Circuit Court of Perth. The *North British Daily Mail* remarked upon his trial, that much of his guilt was to be attributed to the "vicious habits of business in the Cupar branch of the Clydesdale Bank; a habit so suggestive of crime, if not actually stimulating it, that poor and needy wretches, tempted to their ruin by the fatal facilities which the bank furnished them, were to be regarded as victims if they found this a short and easy way to prison and the hulks." The writer further insinuated, that the bank managers had dishonestly forborne to

Digitized by Google

prosecute Robinson until they could see if he was able to get some other man to purchase a share in his newspaper, so that the value of his forged bills might be secured. This would have been a sort of "indirect swindling, as disreputable, and more dangerous, than picking pockets or breaking into houses." Mr. Taylor stated in his evidence, that Robinson told him he was going to sell half his paper, but that his assets were £3,000 and his liabilities only £1,600. Mr. Taylor and his brother, who seems to have had an interest in the *Fifeshire Journal*, were very willing to spare Robinson, because they "liked the man," and because they feared the property would suffer if he were prosecuted. It came out, with regard to Robinson's escape from immediate arrest, that Mr. Taylor's brother, who went to consult the manager at Glasgow, met Robinson in Edinburgh on his way back to Fifeshire. These being the facts, it was contended that the alleged libel was justified by the conduct of the bank managers; and the jury thought so too.

The Hon. R. C. Bingham has described, at the Mansion House Police-court, an impudent conspiracy by which he was defrauded of £800 in March, 1861. He had, in the December previous, noticed an advertisement in the *Times*, soliciting a loan of money on good security; and, as he had some money to invest, he communicated with the advertiser, one Frederick Charles Hunt, to whom he advanced more than £700, receiving from him in exchange a number of Custom-house warrants for tea in bond, which were to be the security for the loan, and interest upon it, amounting to £880 altogether. In March, however, Mr. Bingham applied to Hunt to repay the money; and Hunt undertook to to raise the money by selling his tea. He desired Mr. Bingham to bring the warrants and to meet him at the Royal Exchange, and then took him to the Commercial Sale-rooms in Mincing-lane, where they met a stranger to Mr. Bingham, but he was introduced by Hunt as "my friend Mr. Thomas Edwards, well known in the tea trade, who has chambers upstairs." Hunt took this person aside, and presently returning, told Mr. Bingham that he had made a bargain for the tea; and he persuaded Mr. Bingham to give up the warrants, taking one £100 note, and a bill at four days, accepted by the supposed Thomas Edwards, for the rest of the money. It was not without some demur that Mr. Bingham agreed to this; but he was assured that Edwards was worth £100,000, and that it was the custom of the trade, on making sales, to take a deposit in cash, and a bill at four days for the balance. He at the same time saw the man called Thomas Edwards turning over a heap of bank-notes, from which he took the £100 note actually paid; but Mr. Bingham could not tell whether the others were all £100 notes, or genuine notes at all. The acceptance, at any rate, proved to be worthless, no such person being known in Mincing-lane. A commission agent, named William Firman, or Fairman, has been arrested on the charge of being the false Mr. Edwards.

We are still hearing of disasters at sea from the gale which blew for three days round our shores a fortnight ago. The saddest of them all, perhaps, is the loss of the *Lifeguard* steamer, from Newcastle and Shields to London, with thirty passengers and twenty sailors on board. Another vessel, besides, the *Ailsa Craig*, an East Indiaman, is supposed to have foundered off the same coast. The *Omega*, of Dundee, was cast away on the Mull of Tongue, where most of the men on board perished. The damage to the dykes and seaward sluices, on our low-lying eastern shores, was very considerable; but the Marshland Level dam, in the neighbourhood of the late floods between Wisbech and King's Lynn, was not destroyed, as rumour said it had been. There is no fresh colliery explosion this week; but twelve persons have been killed by the fall of a "cage" down the shaft at a mine in Shropshire, 900 feet deep. One distressing circumstance about the late explosion at Edmund's Main, near Barnsley, is that since it has been found necessary to pump water into the pit, so as to extinguish the fire, there are sixty dead bodies of men and boys, which cannot be got out for months. The Exchange and Town Hall of Chester have been partially destroyed by a fire; while in London, the other night, six lives were lost by the burning of a house in Portland-street, Soho; the rooms were occupied by several different families, and most of the people escaped; but at the top of the house were a man, a woman, and four children, who could not be saved.

Several noteworthy persons have died in this last week of the year. Earl Gifford, M.P. for Totnes, for whose vacant seat Mr. Alfred Seymour is a candidate, leaving Exeter, which he had been canvassing, to be wooed by Mr. J. D. Coleridge in the Liberal interest,—in Ireland, Mr. Justice Crampton, a retired judge of the Irish Court of Queen's Bench,—and, in France, not only M. Goudchaux, who was Minister of Finance under the Republic of 1848; but another and a more important personage, namely Cardinal Morlot, the Archbishop of Paris. He succeeded Archbishop Sibour, who was stabbed by a mad priest in the church of St. Etienne du Mont, in 1857. Archbishop Sibour, it may further be remembered, had succeeded Archbishop Affre, who was shot on the barricades in the bloody fighting of June 1848, while vainly exhorting the combatants to peace. A monument to the pious and heroic memory of this martyred prelate is one of the new ornaments of Notre Dame Cathedral, which, after being closed for three months past, for the purpose of internal decorations, was reopened on Christmas Eve.

The revenue returns for the last quarter of 1862, just ended, show an increase of £1,310,889, as compared with the last quarter of 1861. The increase on the whole year's revenue is £2,392,528. The sum of £3,429,902 has been applied, in this quarter, to the redemption of Exchequer bills. The amount of Exchequer bills issued in the quarter is £2,158,512.

The Senate in Spain has been debating the conduct of the Spanish Government, and reflecting on that of the French Government, in the expedition to Mexico. The Minister of Foreign Affairs is Señor Calderon de Collantes. He took occasion to reply to a speech lately made in the French Senate by M. Billault. This was an infraction, if not of parliamentary, at least of diplomatic usages, which has provoked a complaint from the French Ambassador at Madrid. Señor Collantes justified the Spanish General, Prim, for withdrawing his troops, because it was never the intention of Spain to take part in any interference with the domestic affairs of Mexico. On the other hand, the Marquis of Havana (General Concha), late Spanish ambassador at Paris, urged that the Government which he has represented is wrong in treating the anarchical republic of Mexico as a regular Government to be seriously negotiated with. It would be a good thing, all the courtly Spaniards agreed, if the Mexicans were to re-establish monarchy of their own accord; but there was no wish to place a Spanish prince on the throne. Marshal O'Donnell spoke out more boldly than his colleagues in disapproving the lengths to which France is carrying her armed intervention; but he laid the blame of it upon the Mexican intriguer Almonte, by whose wily tales the French generals had been misled. He stated that, when the combined expedition was agreed to by the three Governments of England, France, and Spain, their intention was only to occupy Vera Cruz and San Juan de Ulloa for a short time, as a material guarantee for the compensation which they had demanded for the outrages on European persons and property. The debate resulted in a vote of the Senate favourable to the policy of the Government.

A report has just been published on the Savings' bank system in France, which is of some interest, as compared with our own. It seems that the total number of depositors is 1,218,000, in England there are 1,580,000. But the total amount of their deposits is but twelve millions sterling; whereas in England, it is forty millions. The French are habitual savers, quite as much, or more, than our own people; but they have much less to save.

A step towards the reform of legal procedure in France has been made by a decree that in future the sittings of the Prefectoral Council, in each department, for the trial of ordinary lawsuits, shall take place in public, and that the suitors or their attorneys are to be heard.

The French army in Mexico is so much weakened by the fevers which infest that clime, that General Forey must wait for additional reinforcements of 10,000 men, or 6,000 at least, before he can renew the campaign. His convoys are much harassed by guerilla attacks. He has no chance of making his triumphal entry into the capital for some weeks to come.

From South America, on the Pacific side, we get a little political news. The President of Chili and his Ministry have come into collision with the House of Representatives; and a public meeting has been held at Valparaiso to support the Executive Government. The new President of Peru has undertaken a thorough financial reform, and proposes that Congress shall sanction a loan offered him by a German firm in return for a guano monopoly, in Germany, for eight years.

The Russian Government has detected, it is said, an extensive conspiracy in Poland. The officers of the Russian army in Poland have, by order, disavowed the address lately published by Alexander Herzen in the *Kolokol* or *Russian Bell* of London. In Prussia, Count Bismarck Schönhausen is preparing, with sham concessions as to the term of military service, to meet the Parliament, whose taxing prerogative has been usurped by the Crown. The Italian Government has instructed the heads of its provincial administration, in Naples and Sicily, to invite the more active aid of the municipalities in putting down brigandage.

The King of Italy has made a speech, in which he entreated the Parliament to put trust in him, and expressed the hope that 1863 would be a happier year than 1862. He alluded to the folly of dreamers, who endangered public order. When the pacification of the southern provinces was achieved, the national cause would be fully triumphant. The spirit of the army was most excellent, and wholly Italian. With that, and concord in the nation, the enemies of Italy might be defied.

There is nothing fresh from Greece; but we have the text of an agreement, which has been frequently mentioned, between the British Government and that of Russia, engaging that neither Prince Alfred nor the Duke of Leuchtenberg shall accept the throne of Greece. Mr. Elliott has distinctly made it known at Athens that the election of Prince Alfred will be in vain. It seems that Austria raises some difficulty to the cession of the Ionian Islands to Greece, but a conference on that question will shortly be held.

The convicts in Dartmoor Prison, numbering eight hundred of the most desperate ruffians unhung, have committed another outbreak. On the Sunday before Christmas-day, one of them, who misbehaved himself on his way to chapel, was ordered back to his cell; he refused, and the warders laid hold of him, to take him by force. The others then turned against the warders, and rescued their comrade, after which they kept up a scene of tumultuous exultation, till the armed police of the establishment, with fixed bayonets, drove them into their cells. No one was much hurt; but a few minutes afterwards, Col. the Hon H. Best, the deputy governor, having entered the chapel to desire that the service might go on, was assaulted and knocked down by one of the convicts.

Digitized by Google

Further mischief, however, was prevented for that time. It seems rather strange, after all this, that the convicts were let out to spend their Christmas-day in the halls and wards together, singing, dancing, and making merry with three groans for the deputy governor, and three cheers for a more indulgent official, whose rule they rather liked. The *Daily Telegraph* is our authority for this account of the convict discipline practised at Dartmoor.

Meetings were held simultaneously on Wednesday night in the Free Trade Hall of Manchester, and in the Cowper-street Institute, City-road, London, for an address of sympathy and congratulation to President Lincoln, on his decree for the emancipation of the slaves, and to denounce the recognition of the Southern States. Mr. Abel Heywood, bookseller and news-agent, who is the Mayor of Manchester, presided at the meeting there; and Mr. Bazley, M.P., with Mr. Samuel Pope, Secretary of the Maine Law Alliance, took part in it. The meeting in London was addressed by Mr. R. R. Moore, a lecturer of the Anti-corn-law League, and the Rev. Newman Hall, of Surrey Chapel.

The Archbishops and Bishops, all but the Bishop of Hereford, have signed a memorial to the railway directors against Sunday excursion trains.

Mr. Horsman, dining with the rifle volunteers at Stroud, says he shall be disappointed if the Government does not, in the coming session, propose to give some more assistance to the volunteer force. As a friend to economy, he has the comfort of thinking that there is no country where the taxation, in proportion to its requirements, is so small as in England, or so fairly devoted to the public service, though our departmental military expenditure still admits of great savings. But our national defences must be kept up, for at this time, so long as Italy is unsettled, there can be no security for the peace of the world; and while the French emperor keeps his army at Rome, storms that may destroy his dynasty are likely to arise from his trifling too long with that question. The Greek, the Eastern, and the American questions are no less full of peril; though he finds no fault with the policy of our own Government in these affairs. He is proud of the strong and steady attitude of England amidst her present trials.

Mr. Cardwell, at Oxford, has dined with the Noble Arch, Past Arches, and Brother Druids of the local Druids' Lodge. He, too, is honestly satisfied with the moderation and firmness of this country, in its righteous resolve not to meddle with the fratricidal conflict of America; since we owe the Americans nothing but our frank goodwill and best wishes for their peace. The patient suffering of our distressed people is sublime; the generous bounty which relieves them has proved that the true cement of society, in our happy land, is the Christian feeling of sympathy between rich and poor; the British Government, freer than any republic, firmer than any despotism, stands by taking counsel with the popular intelligence. Our trade and revenue are yet well maintained. He therefore praised the commercial treaty with France. Let France and England, by mutual intercourse, augment their wealth and mutual goodwill. God bless the Queen in her widowhood, the Prince in his marriage, and all the Royal Family! The vessel of the State rides gallantly through the storm, and *Vogue la galère!* Such was Mr. Cardwell's discourse to the modern Druids at Oxford.

A Mr. John Tovell, a British subject who has lived eight years in America, but never applied for naturalization, cries out from the State Prison at Nashville, Tennessee, that he has been deprived of his liberty, without a trial, by order of the Federal military commander, for no other offence than having spoken out at the funeral of an aged neighbour, who was murdered in his own house by three soldiers breaking in for the purpose of theft, as common burglars in the middle of the night.

The Common Councilmen of the municipality of Berlin, having to compliment his Majesty on New Year's day, refused to adopt such an address as the Government would have dictated to them, and sent him one requesting the King to desist from his deplorable conflict with the Parliament and enter on a safer and more honourable course, dispelling the grave apprehensions of the country by measures of due conciliation.

The letters from New York estimate the Federal loss at Fredericksburg as not less than 20,000 or 25,000 men. The deposition of Mr. Lincoln is urged by the New York *Journal of Commerce*, while others call on him to dismiss his present Ministry; public meetings are to be held on the state of the nation. The resignation of Mr. Seward and General Burnside is still talked of. There are doubtful accounts of a battle at Kingston, North Carolina. The New York contributions in kind, for the relief of distress in Lancashire, are shipped in the *Griswold*, besides 150,000 dollars subscribed in money.

On New Year's day, at the Tuileries, the Emperor Napoleon was complimented, as usual, by the Papal Nuncio in the name of all the diplomatists present; and in his reply, expressed his firm hope that peace would be maintained during the year that has now begun. The Pope, at Rome, at the same time received a visit from the officers of his borrowed French army, to whom, in a long speech, his Holiness prophesied that "Piedmont" would fall repentant before St. Peter's chair, "as Jacob prostrated himself before the angel, after having wrestled with him all night, in ignorance of who he was." This comparison is "pretty, and apt;" though his Holiness has not yet prevailed to put Italy's thigh out of joint, and the King's new Ministers have renewed their promise to suppress the brigandage fomented by Papal and Bourbonist intrigue.

Reviews of Books.

FREDERIC THE SECOND, EMPEROR OF THE ROMANS.*

The student of history, the thinker on politics, and the analyser of motives, were too long cut off from accurate knowledge of the one man in whose mind first sprung up the modern ideas of Europe. Frederic II., Emperor, and King of the Sicilies and Jerusalem, was the opponent at once of the traditions of Charlemagne's half-Byzantine Empire, of the feudal system, its necessary result, and of the spiritual despotism over Europe which Hildebrand conceived and Innocent consummated. The lawyer Giannone, under the later Neapolitan tyranny, wrote his life under the influence of professional and local ideas, and glorifies too partially "the good old Swabian rule," as the Romans loved good King Servius or the Saxons lamented the Confessor. Dean Milman, in his "Latin Christianity," devotes a whole book to a splendid and dramatic sketch of the Emperor's life; Mr. Kington has drawn it on a larger scale, and filled in the picture with new information from foreign authors and newly-published chronicles, especially that of Salimbene. Henceforth, in every view of the Middle Ages, Frederic will stand out in bold relief as the first Liberal in Europe.

The best parts of Mr. Kington's work are those in which he describes the relation of Frederic to the Popes. The power usurped over Sicily by Innocent III., as the young king's guardian, was lost by the peaceful Honorius, in whose life there was peace with the Empire; but the unusual alliance was only kept alive by cruel laws against heretics and those suspected of heresy, as the peace between Barbarossa and Hadrian IV. had required the murder of Arnold of Brescia. With the accession of Gregory IX., a man, in Frederic's own words, "of spotless reputation and blameless morals, renowned for piety, learning, and eloquence," the mortal strife began again. The writer has pointed out very clearly the real reasons for the hostility of the Popes; the Emperor meant to rule over a united Italy, judging clerks and laymen alike: he even ventured to imagine the advantage of having a Pope and clergy without temporal power. This was quite enough to place the Pope at the head of a crusade of heretic Lombards and others against the young Emperor, who had fought against heresy and would recover Jerusalem. "Doctrine with Rome is always secondary to dominion. Alliance with Paterines was less to be dreaded than the overwhelming might of the Hohenstaufen Kaisers. Thus it has ever been: the Pope deserted Charles V. at the very crisis of the struggle with the Lutherans, for fear of that monarch becoming too powerful in Italy."

Within eight months from his election, Gregory excommunicated the Emperor no less than four times, to the indignation not only of most Christian princes, but also of the Roman mob, who rose in insurrection and for a time drove out the Pope. The reason given, that Frederic would not go upon a crusade, was shown to be futile when the ban was renewed on the Emperor's sailing to the Holy Land. Though he recovered Jerusalem, not a priest would crown him in the Holy Sepulchre or go through the service. Can we wonder that he began to feel bitter against the ordinary religion of his age, comprising little more than blind obedience to a vindictive pope?

So far Mr. Kington's account is clear and true, and, if he does not draw the individual characters with the energy of Dean Milman, he fills in the details with valuable simplicity. But from the point at which the struggle fairly begins, perhaps from too great a love of order, he omits to dwell on the curious contrasts in the position of emperor and pope, seemingly produced by mere geographical divisions, which an analysis of the politics of that age will show to us. We believe that Ferrari, in "Les Révolutions d'Italie," was the first to point out, that in the South each upheld the very principles which he combated in his opponent throughout the North. Frederic was a Conservative in Lombardy, and tried to destroy the power of the Podestàs, those nomad despots whom Italy had improvised against the feudal tie which chained them to Germany. The Pope, champion of the Guelfs and freedom, rejected the idea of an emperor freed from laws and above all kings. But in the South each takes the *rôle* of his adversary, with an inconsistency which no one noticed in a war where all was fair. The Pope is the Conservative in Naples, wishing to see it again a fief of the Church, an "inexhaustible well of money" like England. Frederic, on the other hand, is no longer a feudal king or a Roman emperor, but a higher sort of reforming Podestà. The fundamental ideas of society were set aside; military service was forbidden, females were allowed to succeed to fiefs, the law was extended over noble and villeins, Christian and infidel, clerk and layman, with the same innovating force. Though they contained enactments against giving lands in mortmain, the constitutions of Frederic II. were not really hard on the clergy; for not only did he free them from taxes, but he prohibited all customs which diminished their liberties, on pain of outlawry and fines and the confiscation of all the property of hardened offenders. The offence of the constitutions was that they were new.

The confused story of the Lombard and Tuscan cities is in general well unravelled in these volumes, but even here we think that there is a tendency to over definiteness. For

* The History of Frederic the Second, Emperor of the Romans: from Chronicles and Documents published within the Last Few Years. By T. L. Kington, M.A., of Balliol College, Oxford, and the Inner Temple. In Two Volumes. Macmillan & Co.

Digitized by Google

instance, Piacenza is made the uncompromising foe of Frederic to the end of his life, but there is no doubt that there was a strong Imperial party there, consisting chiefly of men who were not full citizens, but powerful enough on one occasion to elect as Podestà Humbert the Iniquitous, the partisan, as the citizens cried, of an "imperium nimis imperiale." Again, the sudden change in the politics of Modena after the capture of King Enzio by the Bolognese is left unaccounted for; we learn from other sources that Cardinal Octavian had lately reinstated one of the great Guelf families, which had been expelled. The author elsewhere draws a parallel between the multitude of Italian civil wars and the tragedy of Greece; the comparison is just, and might have occurred to any scholar, but we have seen the comparison of the Macedonian conquest better and more definitely applied to the invasion of Charles VIII., than, as by Mr. Kington, to the "inroads of Barbarossa and many another emperor" before the smaller cities had been really fused into the powerful States of Milan, Genoa, and Venice.

The author has called especial attention to the bearings of his subject on the politics of our own day. He has shown the ancient importance of the families which now hold European thrones; that the hereditary dislike of the House of Brunswick to Rome was exemplified in their ancestor, Otto, while the turbulent courage of the Wittelsbachers has not descended in the same fortunate manner on feeble ex-king Ludwig or the bankrupt of Athens. The Pope, as of old, encourages crowned and uncrowned brigands; Garibaldi is a nobler John of Procida, and the Wise Man of the Tuileries, more cunning and coarse of fibre than Frederic, has almost allowed the scheme of the latter for the unity of Italy to be accomplished. This sort of sentimental history may easily be overdriven, and we hardly find much likeness between the great emperor and our Charles I., or between the Angevin rule in Naples and the Scotch influence in England.

The chapter on Frederic's Sicilian legislation is perhaps the best in the book; but the Emperor had nothing to do with English law. The Sicilian law of Dower and our law of hotchpot have a common prototype in a constitution of Severus; and, so far from our feudal law being "mercifully devised to abolish villeinage," in the case of a child of a serf father and free mother, the very opposite course would have been taken to that maxim of Marcellus, which Frederick followed, when, in a special case, he decided that any moment of freedom in the mother freed the child. Any collection of Roman or Canon Law will give the opinions of Gaius, Ulpian, Justinian, and the papal lawyers on this un-English rule. The writer also gives the Emperor Anastasius the credit of having passed the law, which now holds in Scotland, that subsequent marriage of the parent legitimatizes the offspring; but Justinian, in Novel 89, which finally laid down the principle, only mentions the temporary law of Constantine on this point. These instances might be unimportant, had not Mr. Kington, in a very vigorous manner, shown that the Emperor was setting up the Civil Law against the infant Canon Law. This was one of the best points in his policy; and, in his hands, Peter de Vineâ, and Thaddeus of Suessa, were powerful weapons against the Papacy. So completely did he assume the person of a Roman Emperor, that we find, in the lawbooks of the 16th century, his alterations of the Code placed without comment among the Novels of Justinian. The fall of the University of Naples, the loss of those excellent laws, and the degradation of Sicily, force us to regret that, in this case, the lawyers were beaten by the priests.

Mr. Kington has touched but slightly on the connection between Frederic and Louis IX.; he speaks of their friendship, and of the appeals made to the Pope for mercy by Louis, but we think that he has fallen into the conventional idea that the two men were essentially different. We rather think that in many points they present a startling likeness. The minds of both were troubled by the new ideas disturbing that century of change; both were reformers of law, both the destroyers of feudalism. The Paterines in Sicily fared no better than the Pastoureaux or the remnant of the Albigeois; and the two men equally felt that vague desire for the East, so different from the savage spirit of the earlier Crusades, which showed that the "World's Debate" was over. By a sort of elective affinity the East had received the practical virtues of chivalry, Europe the breadth of Asiatic ideas. The Popes too had played their part, and the captain of Christian war was no longer to enjoy his privilege of ostracising powerful friends and foes, and breaking their power against the Moslim. The struggle of Pope and Emperor was in its last act, and then the new Europe was to rise. Frederic was clever enough to know that crusades were old-fashioned, that the future wars would be political, not religious; perhaps his friendship with the Sultans had shown him the state of affairs, while a morbidly-trained religion sent Louis to ruin himself in a foolish campaign, and the Popes, with dogged conservatism, could not see that the world was changed. "Was ever sorrow like unto my sorrow?" said Innocent at Lyons, "like Christ I have five wounds—the raid of the Tartars, the schism of the Greeks, the heresies of Lombardy, the taking of Jerusalem by Kharismians, and the hatred of the Emperor to the Church." Louis was the favourite of the Church, her hereditary bulwark against Germany, but we find him, like Frederic, resisting the exactions of Rome, allying with Mohammedans in Syria, confessing to Joinville that he would have liked to be Sultan of Egypt. The parallel might be prolonged, and should have been more touched upon in a work of this kind; but we will here try to discover that difference between them, which has caused the world to divide them by so wide a gulf. It was an age when all old principles were dying; and on what was a strong mind to rest? There were two chances of safety; either a strict religion or a self-imposed code, its dangerous substitute. Louis took the first, Frederic neither; the doubts of the former were happily satisfied with Franciscan novelties: the moral pride of the Emperor built up dreams of a reunion of Church and State, when he, a greater Charlemagne, should wield the khalifate of Europe. Some such plans seem really to have occurred to him; by a ludicrous deduction Peter de Vineâ was to be his vizir and apostle. A man without conventional morality is the Ishmael of society, and the confused host of Frederic's opponents were doubtless right in their way, though their enemy was worth them all. Could he have subdued his pride and lust of reason, the empire might still be a living force, and he have been the Napoleon of an earlier time.

Thus it was that Louis became the Christian hero, while his friend was Antichrist, "Herode Herodior:"—one canonised, the other "descending to hell with nothing but his world of iniquity;" or, as Mr. Kington prefers to construe, "*seculum peccatorum*," "his burden of sin." Two popes and two kings monopolize the interest of the thirteenth century, and we wish that this book had placed in stronger relief the likeness and the unlikeness of Innocent III. and Innocent IV., of Frederic and of Louis.

In a notice which is necessarily superficial we cannot do more than slightly sketch the result of this Emperor's life on Germany and on the East. The treaty of 1229 with Sultan Kameel was a great gain to the Christian cause: it gave Jerusalem to the Franks, the Temple of Solomon, or the Mosque Geemaleta, to the Saracens; and if the Christians might pray in the Sepulchre, the Mohammedans might go on pilgrimage to Bethlehem. Mr. Kington, without noticing the wilful confusion of the Holy Sepulchre with the Temple, which Gibbon ascribes to the clergy, has summed up this result very well:—

"No crusader," he continues, "since Godfroy de Bouillon had effected so much as Frederic II. What would he not have obtained, had the Pope, the Patriarch, and the Orders given him their hearty co-operation? It is possible that he might in that case have smitten Cairo to the south, and Damascus to the north; that he might have restored the old kingdom of Jerusalem as it existed before Saladin's fatal inroad; and that he might have alarmed even distant Mecca and Bagdad."

But it was of no use to attempt the reform of that den of thieves, the Christian kingdom of Jerusalem; like the late kingdom of Naples, it needed more violent remedies, and it gained the extinction, which it had earned, from the fierce Mamelukes at the end of the century.

In Germany the Emperor's laziness got the better of his wisdom, and, by the edicts of 1220 and 1232, he definitely established the two abuses, which had grown up under the Swabian rule—the disintegration of German territory and the royal power of the Seven Electors. This was worse than the temporary misery of the Taeping incursions of Batou Khan, whose armies, from the notices of contemporaries, seem to have been a mongrel collection of Finnish as well as Mongolian tribes. It was worse than the subsequent usurpation of power by Austria, which the far-sighted Frederic appears to have foreseen, when, in an instrument quoted by Hallam from Struvius, he created an Austrian kingdom. Thus it came about that, while France was a consolidated power, while in England and Castile the Commons were gaining constitutional liberty, Germany was utterly divided. The empire was a phantom, the government was anarchy, when the Milanese army without assistance could drive back the Emperor Robert in disgrace across the Alps.

The theory that men derive the chief part of their character from the mother, however generally questionable, is justified at any rate in this particular instance. The Emperor certainly inherited some traits from his Norman mother, and throughout his life we are compelled to remember the character given by Dante and Michelet to the Normans. Like the ancient Romans, they were a strange mixture of hero and lawyer, and in this respect Frederic is a much magnified Guiscard. Even in his personal appearance—fat, red-haired, and short—he recalls the traditional taunts cast at the Normans for their insignificant looks. The Arab chronicler declared, that as a slave he would not have fetched 200 drachms. His character has been looked at from every point of view; but we are equally unconcerned with the profanely idolatrous rhapsodies of De Vineâ, and the bitter curses of the monks. Guelfs and Ghibelline writers have alike praised him, and Mr. Kington, while not sparing any of his faults, has left us to infer some of his virtues.

"Troubadour, crusader, lawgiver; German by blood, Italian by birth, Arab by training; the pupil, the tyrant, the victim of Rome; accused by the world of being by turns a Catholic persecutor, a Mohammedan convert, an infidel freethinker;—such is Frederick II."

We are tempted to add from Schardius, a long-forgotten chronicler: "If this our age, which has shaken off Papal tyranny, had seen that Emperor, nothing would be now more august than the empire, more impotent than the Pope, wherefore I will add no more, except that it well might be inscribed on his statue, as on that of Brutus, 'Utinam Viveres.'"

ROUNDABOUT PAPERS.*

Two favourite authors, Mr. Thackeray informs us, lie by his bedside. One of them is Howel's "Letters" and the other Montaigne.

* Roundabout Papers. Reprinted from the *Cornhill Magazine*. By W. M. Thackeray. London: Smith, Elder, & Co.

Digitized by Google

"If I wake at night they prattle me to sleep again. They talk about themselves for ever, and don't weary me. I like to hear them tell their old stories over and over again; I read them in the dozy hours, and only half remember them." Remembered or forgotten, they have infected their admirer with a love of easy, polished garrulity, and from them he has borrowed the idea and the method of "roundabout writing." Montaigne's "Essays" are, so far as their structure is concerned, merely "Roundabout Papers," rather longer, rather more learned, and not quite so refined as those which are now served monthly for the delicate appetite of the million readers of the *Cornhill*. Their quaint titles, their entire inconsequence, their rambling carelessness, their indolent tone, their frank confessions, and, not least, their apparently negligent but really artistic arrangement, constantly remind us of their latest and most successful imitator. "Of Conscience—Of Books—Of Ill Means to a Good End—Of Posts—Of Roman Grandeur—Of Men's Thumbs—Of a Monstrous Child,"—these are the sort of pegs upon which the French writer hangs a host of amusing stories, curious quotations, pieces of miscellaneous information, and intimate personal confidences; in the same way Mr. Thackeray takes "Two Children in Black," or "Tunbridge Toys," or "A Chalk-mark on the Door," or a "Letts's Diary," as the text for his sermon; and having aroused attention by its oddity, and got his pen into motion on its behalf, proceeds to use it or neglect it, precisely as the mood takes him, and as he happens to find convenient. If the production is gracefully slip-shod, if the stories come in *à propos* of nothing, but still are good stories, if the sentiments are commonplace and trite, yet fit for gentlemen and ladies, if the whole thing wear an air of well-read and well-bred laziness, the object of the writer is achieved, and the "Roundabout Paper" may be considered as artistically perfect. The first essential is, that the author should put his readers on a footing of complete familiarity, and this is most easily done by disclaiming all pretensions to excellence or to the fatigue which excellence involves, and by directing attention to the shortcomings of the performance, by implying the impossibility of its being any better than it is. "As things come into my head," says Montaigne, "I heap them one upon another; sometimes they advance in whole bodies, sometimes in single file. I am content that every one should see my natural ordinary pace, as ill as it is. I suffer myself to jog on at my own rate and ease. I should wish to have a more perfect knowledge of things, but I will not buy it so dear as it will cost. My design is to pass easily and not laboriously the remainder of my life. There is nothing I will break my brains about: no, not knowledge of what price soever. I seek in the reading of books only to please myself by an irreproachable diversion. I do not bite my nails about the difficulties I meet with; after a charge or two I give them over. If one book does not please me I take another, and never meddle with any but when I am weary of doing nothing." Mr. Thackeray, following his model, makes a similar avowal of indifference, love of ease, and incapacity for all but ornamental study. He gives us a thousand little domestic disclosures to show what a nuisance it is to have to write roundabout papers, and how natural that people should find them dull. He recounts with glee how he has watched people going to sleep over them at the club; how he has sometimes got a nap out of them himself; and how an inconveniently frank friend saluted him with, "So you have given up that roundabout business: very glad indeed you have."

From beginning to end Mr. Thackeray is for ever yawning and stretching himself. He is thoroughly tired, not so young as he was, and wishes every one to know it. In his latest novel he on one occasion puts in the name of a hero of another tale by mistake, and particularly begs the attention of his readers to the circumstance. One story or another, such is the obvious suggestion, are much the same to their author, and if other people are weak enough to be interested about them, he, at any rate, is guilty of no such amiable feebleness. In another place he describes himself as having an under-secretary to fill in the details of scenes, for which he will merely sketch the outline: love-making and romance, and enthusiasm for an old gentleman who has been crying, "Vanitas vanitatum!" these twenty years, and who has proved matrimony, like everything else, to be a bore, and early attachment only a disagreeable phase of juvenile folly! No, no; courtships, indeed, there must be, for the *Cornhill* million must be amused, but the under-secretary—an impetuous, hopeful young man, not yet *désabusé du monde*—can do all that, Mr. Thackeray meantime standing by with a cynical satisfaction, and protesting to heaven that it is inconceivable how any intelligent creature can be amused with such nonsense.

This sort of thing can be done with good effect only by performers sufficiently distinguished in public to make people inquisitive about them in their private capacity. It is a vulgar taste, but decidedly a strong one, which loves to see great actors off the stage. The crowd will pay anything to be let in behind the scenes, and invited to criticize the occupants of the seats which they have just deserted. Here is the famous tragedian, at whose sublime indignation half an hour ago the whole house was shuddering; here the Prima Donna, whose soul-stirring strain has scarcely died away; here the bewitching danseuse who just now was queen of Fairy-land;—how pleasant to see them without their theatrical habiliments, and exchange the common intercourse of life; how amusing to hear them abuse their own professions, and rave at the fools who come to hear and see them! "Call me an actor, indeed?" cries the dramatist; "my fustian rant, tragedy? my vulgar tricks, art? *allons donc*, what next? Bring me some mutton chops and porter, and sit down and hear about my little people at home, about the chalk marks on my door which my maid will not wash out; about the bit of orange-peel I trod upon as I trudged here to-night through the dirt; or the sheriff's officer whom I dodged across the square." "I a prima donna?" exclaims the lady with a sneer, and off come her robes of state, her paint, and gilt, and mock diamonds, and she stands disclosed, an ugly, coarse old woman, with a voice which fanaticism itself must own to be half-cracked. "Dancing!" screams the raddled beldame who was just now princess of the ballet, "just look at the carmine on my lips, and my artificial teeth and padded legs, and know, oh, too excitable youth! that if I hop about the stage to gain an honest living, the sight is scarcely one for raptures of admiration, and that last *pas angelique* of mine a real triumph of elaborate clumsiness; across the foot-lights it is not so bad, and some people, *les imbécilles*, will pay to come and look. But beautiful! Come, come, you must own that I am hideous." It is certain that many people would like, of all things, to have this sort of personal confidence made to them, and would feel flattered by the intimacy which such outspoken communications involve. In this way Mr. Thackeray is constantly flattering his readers. He invites them to a strictly domestic *séance*, he brings his easy-chair and dressing-gown, lights a cigar, offers his guest a place on his sofa, and hopes that every one will imitate him in feeling quite at home. All the *détails du ménage* are unflinchingly betrayed; Mr. Roundabout opens his table-drawer, shows us his weekly bills, tells us about his lazy maids, the lies which his confidential valet told him, and the rogue of a coachman who used to drive some unknown lady in his master's brougham, and invented all sorts of calumny to blacken his master's reputation. Servants are so invariably mendacious. For instance, one evening John's step is unsteady, his voice thick, he knocks his employer in the eye with the glass which he hands him, and in return is charged with being tipsy. "'Drinking! s'ulp me! I have had my one pint of beer with my dinner at one o'clock;' and he retreats, holding on by a chair. These are fibs, you see, appertaining to the situation. John is drunk. S'ulp him, he has only an arf-pint of beer six hours ago with his dinner, and none of his fellow-servants will say otherwise. Polly is smuggled on board ship. Who tells the lieutenant when he comes his rounds? Boys are playing cards in the bed-room. The outlying fag announces master coming, out go the candles, cards popped into bed, boys sound asleep. Who had that light in the dormitory? Law bless you, the poor dear innocents are every one snoring: every one snoring, and every snore told a lie through the nose! Suppose one of your boys, or mine, is engaged in that awful crime, are we going to break our hearts about it? Come, come. We pull a long face, waggle a grave head, and chuckle within our waistcoats."

Gossip like this will always find plenty of listeners, and Mr. Thackeray can probably manufacture it as well as any author of our day. After all, however, it is low art, and low art for which such monster contrivances as the *Cornhill Magazine* are mainly responsible. They are meant for a million readers, and must therefore be pitched at a level, which the million will be able to attain. The result is a studied mediocrity. It is a misfortune for our literature that the author of "Vanity Fair" and "Esmond" should be spinning little monthly yarns about tipsy footmen, just as it is a misfortune for our art that the painter of "The Release" should be wasting his time on the crinoline and smart dresses of Mr. Trollope's insipid heroines. Low art has necessarily a tinge of vulgarity, and Mr. Millais's pictures are an excellent specimen of the inevitable fate which befalls the noblest genius, when it accepts a low ideal, and condescends to an unworthy employment. The million readers, no doubt, like their heroines with the conventional amount of petticoat, and fashioned throughout upon a conventional type. The artist accepts their orders, and produces a series of sketches slightly more natural indeed than the cards of Paris fashions, but as commonplace in design, mean in sentiment, and superficial in their prettiness, as the commonplace, mean, and superficial stories which they are employed to ornament. The same sort of criticism might be pronounced upon Mr. Thackeray's monthly gossip; every word he writes, so he has bidden us take notice, represents so much solid bread, beer, and cheese. But it is bread, beer, and cheese which he might purchase more worthily, though not perhaps so easily, by efforts in some degree commensurate with his real powers and his earlier reputation. The tales which won him his fame will probably take their stand among the classics of our country; they are highly wrought, diligently elaborated works of art: they bear the marks of genuine hard work, resolute patience, humorous invention; they abound with those fortunate accidents which are the legitimate rewards of serious effort. The "Roundabout Papers" are scarcely more than the froth which hangs about a generous wine. They could be done by no one but a clever man, but they tell us at every line that the clever man is working at half-power, and cares so little for his audience, that he does not mind letting them know how slight pains he is taking to please them. Great writers as well as small must labour, if they mean to be worthy of themselves; and though Mr. Thackeray can talk about nothing far more agreeably than any other writer of the age,—though he never in his laziest moments is anything but well-bred, courteous, and refined,—though his stories form part, and a very pleasant part, of every young Englishman's education,—those who admire him the most will be the readiest to regret his descent to a region of elegant trivialities, and to a style of sentiment which, in less skilful hands than his own, would appear intolerably superficial and monotonous.

DR. WHEWELL ON THE REPUBLIC.*

Dr. Whewell has ventured on the task of making Plato "intelligible to ordinary readers of English literature." The attempt is a bold one. Who shall undertake to transport men who have not followed the development of Greek speculation, from that firm standing-ground of established right and positive science, on which inquiries into the origin of right and science are merely a pleasant pastime, to an age in which educated men were doubting whether obligation or knowledge were possible in a world of fleeting sensation? Yet this is what is involved in the attempt to make Plato intelligible to the uninitiated Englishman. It has been the fashion of late to force the problems of Greek philosophy into association with the practical questions of our own day. No association could be more superficial or misleading. To modernize Plato is to ignore the true filiation of his theories, just as to Platonize our modern difficulties is to divorce them from the facts out of which they spring. The "ordinary reader" who hears of the Socratic paradoxes that philosophers must be kings, and that virtue is a science, will not be nearer to their true import for thinking of our thrice-worn discussions on hero-worship or on the improvement of morality through intellectual enlightenment. Yet how is he to catch their true interpretation in their connection with the sophistical denial of universal principles of polity and morals, when the knowledge of the preceding speculations is sealed against him? We answer, only by closely following the organic connection in the Platonic dialogues themselves, which to a great extent are their own key. The merit of an interpreter of them must, therefore, mainly lie in his making this organic connection perspicuous. Our complaint against Dr. Whewell is that in the interpretation of the "Republic" before us, by arbitrary severance and arbitrary re-arrangement of parts, he has gone out of his way to make it obscure.

According to him the treatise on the "Republic," properly so called, is confined to those portions of Books II., III., and IV., which treat of the origination of the state in "mutual need," of its three necessary classes corresponding to the three elements of the individual soul, and of the true office of the rational class or element in regulating the rest according to that law of harmony, which is Justice. Into immediate sequence on this treatise (which he entitles, "Of the Ideal Polity and Virtue") he brings that contained in the eighth, and part of the ninth, book, "Of Imperfect Politics, and of Vices." The first book, under the title "Thrasymachus," is treated as a separate study on the sophistical character, which might have been included among the anti-sophist dialogues, if it had not been undesirable to dismember the "Republic." The rest of the work, notwithstanding this delicacy as to dismemberment, is broken up into two supplementary parts—one "A Sequel to the Ethics of the Polity," the other "On the Immortality of the Soul;" and five digressions—"Of Education in the Ideal Polity," "Of the Condition of Women" in the same, "Of Philosophers as Politicians," "Of the Degrees of Human Knowledge," and "Of the Exclusion of Poets from the Ideal State."

An old lover of the Republic would naturally feel some indignation at the sight of so perfect a work of art thus rudely mangled, however much the exigencies of the "ordinary reader of English literature" might render the mangling necessary. But we feel sure the "ordinary reader" would have had a much better chance if the demon of orderly disorder had not led Dr. Whewell to substitute a collection of treatises, accidentally strung together, for the natural organism of the original work. He has, indeed, "murdered to dissect." It is an obvious remark, but not the less true, that Plato could probably arrange his own argument for himself much better than Dr. Whewell can do it for him. The interest of the Republic is no doubt, in a secondary sense, dramatic; it has successive scenes, as well as successive stages of argument; but these successive scenes and stages are essentially parts of a whole, which is alike philosophically and artistically one. Secondarily, the purpose of the first book may be, as Dr. Whewell supposes, to exhibit the blustering sophist in dramatic contrast to Socrates; but its main object surely is, in connection with the former part of Book II., to show us the hiatus which the criticism of the sophists had made in the customary and political morality of Greece, and which the ideal polity was intended to fill. This criticism consisted in the opposition of convention and nature, of fleeting sensation and stable knowledge, of subjective impression and objective vitality, and in the suppression of the latter members in each of these pairs of opposites. The opposition itself appears more or less clearly in the earlier philosophers—in Heraclitus, Parmenides, and Democritus; it was the denial of one of the opposites, and the application of this denial to the purposes of a general scepticism, that gave "sophistry" its character. Science and morality stood or fell together. The same criticism in the "Theætetus," which reduces knowledge to a succession of momentary impressions on the sense, sweeps away all absolute laws of moral right, and fills their place with passing images of the pleasant. The morality of Greece was not of a kind to withstand such an assault. It rested partly on custom, partly on positive law. The failure of this twofold foundation is exhibited in the early part of the Republic. The morality of custom, represented by the maxim of Simonides, "to give to each his due is just," is involved in confusion for want of a general principle. What is the "due" is the question to be decided; and there is nothing but custom—the custom of doing good to friends and harm to foes—to decide it. Robbed of his confidence in the moral laws of society, the Greek might fall back on the actual law, to him divine, of the state, from which he had "no dividual being." But from this standing-ground he was again driven by sophistical analysis. This state law has no natural or divine authority. It is but the will of "the stronger," whether the stronger be the tyrant or the majority. It is either an arbitrary enactment for the purpose of making the herd as profitable as may be to its master, or it is the result of the universal repulsion which acts as attraction—the expression of the interest of the majority, who lose more than they gain by the strife of every man with his neighbour in the suppression of this strife by convention. Either way, the "justice" (or, as we should say, morality) which consists in obedience to this law, has no universal or necessary character. It exists, according to the old formula, "ὀυ φύσει ἀλλὰ νόμῳ." This is the real issue of the discourse of Thrasymachus in the first book, and of that of Glaucon and Adiemantus in the second. By treating the first book as virtually a separate dialogue, Dr. Whewell spoils the combined effect of these discourses, and takes from the reader's chance of appreciating the principle, in relation to which the system, afterwards constructed, can alone be understood.

A far worse effect, as it seems to us, is produced by his detaching the sixth and seventh from the preceding books, and treating them merely as digressions. He does this in disregard of Plato's own statement as to their true position. In Book IV., before passing from the discussion of classes and virtues in the State to that relation of parts in the individual soul, which, in its proper form, is justice, Socrates says, in the words of Dr. Whewell's translation, "I must tell you, Glaucon, that in my opinion we shall never make this rightly out by the methods of discussion which are now in use. We must have a longer and larger road to lead us to our end. But, perhaps, it will answer our purpose to follow the same course which we have followed hitherto." In the sixth book Socrates reverts to this proviso: "You recollect that, having distinguished the faculties of the soul into three classes, we re-established on that ground the nature of temperance, courage, and justice, and what each of these virtues is. . . We said that the best possible way of regarding these things was one more prolix and roundabout, by following which the nature of these qualities might be made evident, but that it was practicable to give a proof depending on what we had then been saying. You then said that such a proof was sufficient, and so we took a course which was, as seemed to me, deficient in exactness." Socrates then proceeds to discuss the "degrees of human knowledge," as leading up to the Idea of the Good. It is clear from this that Plato considered his theory of virtue as incomplete, until, along with his theory of knowledge, it had been deduced in some way from the doctrine of the Good; in other words, that "the digression on the degrees of human knowledge," so far from being really a digression, is the coping-stone to the whole ideal structure of the polity. The more clearly we trace the connection between the theory of Books III. and IV., and the sophistical denial of the "naturalness" of justice, which it was meant to supersede, the more fully shall we appreciate its incompleteness according to the view of the author. Working out the conception of the ἔργον, indicated in the refutation of Thrasymachus, Plato shows that each part of the soul, whether embodied in the individual or in the state, has its proper function, that of the rational part being to rule the rest. His object is to substitute this "natural supremacy" of reason, as the source of obligation, for the will of the tyrant or the convention of the majority. But neither is the right of the reason to govern established, nor the mode of its government fully explained, in the fourth book. The sophist might object that the question of moral and political obligation was not settled by the mere arrogating of authority to imaginary "guardians;" that force, or convention, was as good a foundation for right as a system coined by Plato's brain, or adopted from Sparta, whose correspondence with the true order of things was at least unproved. To prove this correspondence, and thus give the character of philosophical necessity to the system, the harmony of classes and functions under the rule of reason must be proved to issue from the operation of the ultimate principle of existence. This is done, by showing that reason, whether regarded as the ruling principle in the individual soul, or as embodied in the ruling philosophers, is the reflex of that idea of Good which is the source of being and knowledge. The soul of man being treated by Plato as essentially the same, whether it be manifested in the individual or the state, the rule of philosophers in the state is neither more nor less than the authority of universal principles of the reason in relation to the conduct of the individual man. The argument in the sixth book, therefore, which, by the aid of metaphorical language common to the spheres of art and morality, carries the intellect of the philosopher from its commerce with the principle of all things to beneficent rule and harmonious action in the world of practical life, is a proof that there is at once an essential morality and an essential polity existing, "ὀυ νόμῳ ἀλλὰ φύσει." The ideal structure of the fourth book now appears no longer as an arbitrary figment of the imagination, but as an interpretation of that which really is. The rule of reason is the activity of the creative idea through its perfect counterpart, "Justice;" the harmony of the soul and of the state is necessary with the necessity of that unifying principle of which it is the manifestation, and without which it is as impossible to think as to see without the light. But the work is not yet complete. The inquirer who is to be fully delivered from the sophistical entanglements must travel the "μακροτέρα περίοδος," must follow, step by step, the journey of the reason upwards, to that

* The Platonic Dialogues for English Readers. By W. Whewell, D.D. Vol. III. Macmillan & Co., Cambridge. 1861.

Digitized by Google

contemplation of the idea which is identification with it. Till this road has been travelled, the chasm between the particular virtues and their supposed principle is not practically bridged, nor has the unity of the moral with the other sciences been established, as it must be, before the double edge of the sophistical weapon could be turned, cutting, as it did, at once at absolute knowledge and natural right. "The degrees of human knowledge," in Plato's view, form a "scala descensoria" no less than a "scala ascensoria." They are not merely the steps by which the reason ascends from multiplex phenomena to that unity of thought in relation to which the phenomena can alone be truly understood; they also constitute the process by which their unity develops itself into the particular ideas which are the principles at once of the abstract sciences, and of morality both as theory and practice, but which are mere assumptions (ὑποθέσεις) so long as they are viewed out of connection with the ultimate idea. The ascent and descent over, and the "roundabout way" traversed, the moral and political system is proved, the statesman is able to "give an account" of his principles, the virtuous man adds to his virtue the full consciousness of the law to which he conforms.

This Platonic argument may seem to us hazy and unsatisfactory enough. It is a first attempt at that which has been attempted since, in one way or another, by most of the philosophers, popularly called Pantheists, and achieved, if by any one, by Hegel, in the exhibition of all knowledge and morality alike as the evolution of one living idea. But crude and vague as is Plato's speculation in this direction, it at least had a purpose, of special interest to his own time, and not without interest to us. Let us once understand this purpose, and the "Republic" appears a perfect piece of art, with beginning, middle, and end; and, if not a perfect piece of philosophy, at least an essay towards the only possible solution of the great speculative question of the age which produced it. Without such understanding—and without it the "ordinary reader" of Dr. Whewell's patchwork version is likely to remain—the Platonic masterpiece can seem little more than an ingenious compilation of verbal disputes.

THE SANDWICH ISLANDS.*

If books were interesting and important in proportion to their size, little could be said for the present volume, which may be almost read through in a day; and if they were always dull in proportion to the greatness of the persons who write their commendatory prefaces, this might be fairly allowed to share the fate of similar adopted offspring. But though it is not large in dimensions, and though it has unwisely sought to shelter itself under the patronage of the Bishop of Oxford, the book before us is one of the most interesting, and by no means the least important, which has appeared in the course of the past season. It has quite enough claims to our attention without the four pages of respectable, but rather commonplace observations, which date from Cuddesdon, and introduce the subject to the public. It is possible to live a useful life, and die very happily, without knowing whether Honolulu is in Asia, Africa, or America, and without having ever heard of the hero Kaméhaméha. But short as the annals of the Sandwich Islands are, they supply a picture unsurpassed in clearness, if not even in vividness, of the results of the sudden mixture of civilization with barbarism, and are most fertile in suggestive lessons to the members of a nation whose mission, beyond all others, has been to spread civilisation in the world. If regarded only as a sample of progress, it is impossible to learn, without some interest, the fact that on the same island in which Captain Cook fell by the spear of a native in 1789, a popular, patriotic, and constitutional Sovereign made an English speech in 1855 to the representatives of foreign Governments at his Court.

The Sandwich Islands lie in the middle of the Pacific Ocean, rather nearer to America than to China, and in about the latitude of Canton. *Ultimi orbis*, they are further from human society than any known land on the globe. Their climate may be roughly estimated as considerably the best in the world; at least, if there is any land known to the faculty in which, for twelve years, the thermometer has never ranged above 90° or below 53°, invalids would be glad to hear of it. The soil is fairly productive, and the natives more intelligent than those of more tropical groups. This little paradise—barring volcanoes—was peopled nobody knows when, by nobody knows who, coming from nobody knows where. The only data we have on the subject of race is that the inhabitants are similar in features and habits to those of the Society, Samoan, and New Zealand Islands, a family sometimes called Polynesian, sometimes Malayan, and different, at any rate, from the inhabitants of the Feejee and New Hebrides' groups, who are taller, fiercer, and blacker. Mr. Hopkins considers it probable that their original colonisation was from the west; but, as we have had occasion to show in a former article on a somewhat similar subject, the question cannot be considered as yet ripe for settlement. However it may be, the islands were first discovered by a European vessel in the sixteenth century: ten years before the first French revolution Cook, with the *Resolution* and *Discovery*, touched at the islands; and in the following year, after acting the god among the natives for a longer period than was prudent, he perished by their spears on the beach of what was then known as Owhyhee. This name, as Mr. Hopkins informs us, is simply Hawaii, with the definite article or demonstrative pronoun prefixed. After the tragedy above mentioned, merchant-ships from time to time touched at the islands, and gradually found cause to reverse the estimate which had been formed of the inhabitants as barbarous, cruel, and vindictive. So little vindictive was their character that even the gross inhumanity of an American captain, who massacred a hundred natives to avenge the theft of a ship's boat, left no permanent hostility in their minds. The seeds of civilization were sown by two Englishmen, common sailors, who were taken prisoners not long after Cook's death, and lived for many years in the service of the chiefs, to whom one of them in particular attached himself with affectionate and faithful zeal. Late in the last century Vancouver touched twice at the islands, and was fortunate enough to have many interviews with the king, the great national hero of all Hawaiian memories. Kaméhaméha seems to have been a man of unusual ability, a strong will, and much political foresight; and it is not unlikely that his intercourse with Vancouver may have suggested many new ideas to his mind of political progress and morality. So favourable was the impression that the character and language of the English seaman left, that his visit was actually followed by a voluntary proposal to cede the group to England; the offer, however, was not practically accepted. After Vancouver's time a regular trade sprang up with the Sandwich Islands, and Beechey, as he walked up the chief street of the town in 1826, was saluted by notices on sign-boards, inviting passers by to "Billiards," and to "An Ordinary at One o'clock." The internal history of the islands in the meantime is not uninteresting. It centres in the king just named. He first subdued the whole of the group by mingled force and art; and then, like our Alfred, set himself resolutely to the task of government. He encouraged commerce, enacted good laws, established a council, created a small fleet, supported, though he did not adopt, Christianity. "Since I have been king," he said, when near his death, "no European has had cause to complain of having suffered injustice here." He died amid the profound mourning of his subjects, and was succeeded by his son. In his reign idolatry was abolished by a spontaneous movement of the people; the king himself visited Europe, and died in London. Missionaries had by this time begun to arrive in the island; they at once secured an important influence, and, having first concocted a constitution for the kingdom, caused it to be administered on patriarchal principles, which the lapse of time and further intercourse with Europe have fortunately modified. Twice Hawaii has been in danger of war; once with France, and once with England. On both occasions it is satisfactory to be able to relate that the over-bearing conduct of the naval officers who threatened hostilities has been disavowed by the Home Government. At present Hawaii is in peace and amity with all the world; and the last public document which we possess is a proclamation that "We, Kaméhaméha IV., having been officially notified that hostilities are now unhappily pending between the Government of the United States and certain states thereof styling themselves 'The Confederate States of America,' hereby proclaim our neutrality between the said contending parties."

In such a work as this, we naturally turn first to the story of the death of the great English sailor. Mr. Hopkins has been at some pains to examine the various accounts of the matter, and describes the scene minutely. From the narrative published at the time it was evident that Captain Cook committed several grave mistakes. To allow the absurd apotheosis which the islanders accorded him was most ill-judged; and the plunder which he committed at the shrine of one of the national gods was worse. After setting sail from the island on terms of suspicion and hostility, he was compelled to return, in order to repair some trifling damages to his ships, and on one fatal Sunday he was induced to go on shore with the object of procuring the restoration of certain stolen property, by seizing the person of the king. Mr. Ellis, the celebrated missionary traveller, was able, in his visit to Hawaii, to speak with many persons who were either present themselves at the scene of Cook's death, or were well acquainted with its circumstances. The author of the book now before us gives the native version very distinctly:—

"Their plain unvarnished tale is told in sorrow, not in anger, and without justification of themselves. They state that Cook, having come on shore, and had an interview with Kalaniopuu, the two walked together towards the shore, Cook designing to take the king on board his ship. The people, seeing this, and having their suspicions already roused, thronged round, and entreated, as did his wife, that he would not go on board. Kalaniopuu hesitated; and while he was standing in doubt, a man came running from the other side of the bay, crying, 'It is war! The foreigners have fired at a canoe from one of their boats, and have killed a chief.' On hearing this the people became enraged, and the chiefs were alarmed, fearing that Cook would put the king to death. Again his wife, Kanona, used her entreaties he would not go on board, and the chiefs joined with her, the people in the meantime arming themselves with stones, clubs, and spears. The king sat down; and Captain Cook, who seemed agitated, began walking towards his boat. Whilst doing so, a native attacked him with a spear. Cook turned, and with his double-barrelled gun shot the man who struck him. Some of the people then threw stones at the Englishman, which being seen by his men in the boats, they fired on the natives. Cook endeavoured to stop the firing, but on account of the noise he was unable to do so. He then turned to speak to the people on shore, when some one stabbed him in the back with a *pahoa*, or dagger, and at the same time a spear was driven through his body. He fell into the water, and spoke no more."

The English narrative is slightly different. According to it, Cook received the thrust of the dagger whilst desiring the boats to

* Hawaii: the Past, Present, and Future of its Island-Kingdom. A Historical Account of the Sandwich Islands. By Manley Hopkins, Hawaiian Consul-General. With a Preface by the Bishop of Oxford. Longmans & Co. 1862.

Digitized by Google

cease firing; and so long as his face was turned towards the shore none of the natives ventured to attack him. In this latter case his death would have been immediately occasioned by the humanity which prompted him to spare the lives of the natives.

The most striking scene in the history of these islands—a scene to which it would be difficult to find a parallel in any history, is the extraordinary movement by which idolatry was suddenly and utterly abolished throughout the kingdom. A hundred thousand men, by a spontaneous and unanimous uprising, overthrew, at one blow, the whole of the system under which they and their ancestors had lived, destroyed the images, profaned the shrines, absolutely and irrecoverably emancipated themselves from the religious thraldom of centuries. There were no missionaries to suggest a new religion, and no teachers to explain the follies of the old: this movement is even more marvellous in its spontaneous character than in its completeness and uniformity. It seemed as if civilization, without conveying distinct knowledge to the minds of the people, had needed but to open their eyes. They had groaned under a most oppressive system of regulated superstition; the *tabu* in particular—an institution somewhat resembling the Papal interdict of the Middle Ages—pressed upon them with burdens as arbitrary as they were pernicious. They saw men who cared nothing for idols, and despised the most solemn restrictions; and they heard that in the far south there were islanders like themselves who had abandoned the worship of their fathers, and found themselves none the worse. A young king had just succeeded to his father, the great founder of the united empire. He was known to be sceptical in his ideas, and the high-priest himself, with a grand unselfishness, was foremost among those who secretly encouraged the movement. One trifling act of disobedience followed another among the people, and the wrath of Heaven did not visit itself on the transgressors. The final scene is well painted by Mr. Hopkins. The king, the queen, and the high-priest had come to an understanding, and the abolition of idolatry was determined; at last the crisis came. One of the most solemn ordinances was that men might not eat with women; and it was with the transgression of this injunction that the religious revolution was to be inaugurated. A feast was made, with separate tables for the sexes; the guests assembled; every man took his seat, and paused in expectation. Deliberately the king rose, walked to the place of the women, and seated himself among them. The *tabu* was broken for ever. Then arose a shout which reverberated to every corner of the land, and from one end of the kingdom to the other the chain of superstition was loosed. Men woke to freedom with a sudden joy, which showed how galling the oppression had been. Temples, images, relics, perished in the flames, and the high-priest was the first to apply the torch. Thenceforth and for ever, idolatry ceased in Hawaii.

A mysterious and gloomy interest gathers round the present condition of these islands. That strange law by which civilization has so often been found fatal to the race which it raises from barbarism seems not to have spared this docile and advancing people. Year by year their claims to live are higher, and year by year their numbers are less. How far the diminution had proceeded before European had mingled largely among them, cannot be accurately known; but it is certain that it is now advancing at a rate which threatens to destroy the race. It is a terrible visitation; they see it themselves. It is their lot to feel the blessings of civilization, and to feel, at the same time, how they sink and perish before it. Mr. Hopkins, in this book, makes some attempt to account for the decrease of population, and he is not without hopes that it may yet be arrested. What he says is well worth attention, but the light that statistics of disease and of commerce throw upon the subject little more than show how deep is the mystery under which this law is shrouded. It is one of which, as its causes elude our investigation, so, too, the purpose and the justice baffle our philosophy. Let civilization advance; let knowledge increase; let trade bind man to man. The solemn issues of the struggle between light and darkness, the balance of good and evil in the most obvious duties of a Christian country, the workings of a fate which disappoints our highest aspirations for our fellow-creatures at the very moment of their first fruition, who shall discuss and determine?

POETASTERS AND THEIR POEMS AND PREFACES.

The editorial table groans under twenty volumes of verse. To be sure the volumes are not ponderous. But when four children arrive at a birth, one does not inquire as to their size; and the only wonder is that so numerous a swarm of poetic effusions should be produced at once in this prosaic age and gloomy season. Of course, the twenty volumes are made up of what is good, what is mediocre, and what is bad. But the old quotation from Martial only partly applies in this instance. Among the greater number, not badness but mediocrity predominates; mediocrity, that most unpardonable crime in poetry, which wants the energy and vivacity to be bad, and is more fatal than badness itself.

There are two volumes of translation; the first and second Georgics, by "a Market Gardener," and Horace's Art of Poetry, by the Dean of Dromore. Both these seem carefully done, as far as can be judged from a cursory glance. Then there are two devotional volumes; one of hymns, the other a set of short-rhymed meditations for every day in the year. The latter, without aiming at high poetic excellence, appear to have in places much merit. These four may be dismissed, as belonging to distinct subjects, and not to be fairly classified with the rest; as also may a little book of rhymes for children, prettily illustrated by Mr. H. K. Browne, and called "Snow Flakes."

These discarded, fifteen volumes remain. Reserving for more extended notice a few which really deserve it, let us examine, as a curiosity, the residuum of some nine or ten, which have no excuse for existing, relieved as they are, only occasionally, by something good enough to be readable or bad enough to be laughable, and, presenting on the whole, one dead level of dull, Bœotian mediocrity. What is the philosophy of their existence? Whence did they spring? and how did they get into print? For the latter sin "friends" are for the most part answerable. The following is the history of several. The bard was first excited by the Prize at the Crystal Palace to write verses on Burns; or Garibaldi, or the death of the Prince Consort, has moved him till the fire kindled, and at last he wrote with his pen. Then he read his lines to his friends, or printed them in some more or less obscure newspaper, and proceeded to write more,—to fancy himself in love and indite sonnets, or perhaps to recall the sentiment and verses of the time when he "kept company" with his present wife. The friends, as really admiring, or wishing to pay him a cheap compliment, or as merely desiring to share their new-found burthen with the broader shoulders of the world in general, entreat him to publish. Then, with perhaps a dedication to Garibaldi, or Lord Shaftesbury, or whoever may be the author's special idol, and possibly a preface, either deprecating or defying criticism, the new volume is brought to birth, to afflict an indifferent world with useless matter, and to cumber the shelves of the publisher and the British Museum.

The colour of the binding may serve as some kind of guide in threading this labyrinth of song. First come sober grey, brown, and black. Then we rise to green and mauve, and end in bright Magenta or Solferino. The grey is "An Elegy on the Death of the Prince Consort," in five parts, by A. E. Lisle, dedicated to the English nation, and with a "Preface," humble, but claiming credit for "abstaining to indulge in fulsome adulation." Poor English nation! Were not the laureate's few but glorious lines enough for you? It is worth while shortly to analyse this effusion. Part 1. Death conquers all, even great conquerors; twelve stanzas on Napoleon! Parts 2 and 3. Commonplaces on death, and the funeral of the Prince. Part 4. The Prince was not a warrior, did not, &c., &c.; six stanzas on battle. The Prince was not a sailor, nor a pirate. Five stanzas on naval war and piracy, with note on Lord Nelson and Lady Hamilton. Part 5. "Mourn, science," &c. The Prince conceived the idea of the Crystal Palace, and was the patron of art and improvement. "Good works are man's best monument." For this, to say truth, "friends" are not responsible. The author seems to have printed in full conviction that he was doing the world a kindness. Brown is a dreary mass of blank verse, varied by perpetual italics, on "The City of the Great King"—all about Babylon, the Beast, the Pope, Methodism, and the old and the New Jerusalem. Next is a black volume: "Poems of Truth and Fancy," by J. S. Redman, dedicated to Lord Shaftesbury. Preface, *naif*. "I never produced anything worthy of the name of poetry till September, 1859, when I commenced a poem on the life of Burns. About this time an incident occurred which caused me to write, 'Oh! spare the lash.'" Having printed this poem in the *Weekly Times*, and others in the *Family Herald*, the author now publishes, "at the wish of friends." "Nothing will be found to wound the delicacy of any, or sully the purest mind." As if that were the least excuse for such stanzas as this in "Night in a Jungle":—

> "'Mong the leaves in safety keeping,
> Birds of various hues repose,
> On the topmost branches sleeping,
> Nought to fear from hostile foes."

Or for the following address to "The Monument:"

> "Nobly erect, of Doric structure rare,
> In works like thee what years must Wren have spent!
> From his design, made with unerring care,
> Rose thy chaste form, proud London's Monument!"

Truly the British public is too goodnatured and uncritical. That same easy tolerance which applauds worn-out singers and wretched acting in our theatres, condemns us to such inflictions as these.

It is time to pass to livelier colours. But hold! here is one more brown volume not quite so dreary as the rest. "The Homestead, by Cecil," is a glorious specimen of Orange-Liberal sentiments and Americanized Irishism. It is dedicated to the Irish Chief Secretary. "The humble writer of the following poem looks with confiding trust *to The Right Honourable Sir R. Peel, Baronet, as the guardian of its (Ireland's) hearths and Homesteads.*" Does he also look to him, with confiding trust, for the place of a tidewaiter or an exciseman? The following sentence from the preface must be quoted entire:—

"The succeeding cantos, written immediately on the writer's return to Ireland in 1857, were suggested by the cherished objects of home scenes and recollections, from which he was occasionally drawn, to note the political and religious aspects of his country, in some passages of which are held up to censure: the purchase system in our army of a military status, by feather-bed poltroons, to the disgrace of the service; the appointment to magisterial office, of men more anxious to identify themselves with the religious, gipsy abductions, of the Aylward, St. Vincent de Paul system, than to uphold British law; as also to the maudlin state patronage, which supplies the most distant parts of the world, and the self-expatriated traitors and French intriguers in America, with legions of Irish priests, from colleges and schools endowed by state grants from England, to extend and support the Church of Pio Nono; from which are selected consuls, *attachés*, engineers, &c., &c., nine-tenths of whom obtain foreign appointment

Digitized by Google

as Pio's subjects, to give *éclat* to a dominancy abroad, which has heretofore been so prolific of home distractions; and which, through British bounty, is cropping up in America those broils, which are now being so happily cultivated there, since the materials for producing such harvests in Ireland have evaporated before the English Volunteer movement, that has also check-mated the game of the sharper of the *coup d'état*, and, through Providence, has become the stay of British action and of the peace of Europe, under a first *Minister* of the Crown, who is the pride of the empire, to whom Ireland is indebted for the appointment of the man who knew how to place his heel on the inflated impudence of papal assumptions, to the imbecile arrogance of which it had become a routine of courtesy to bow for years."

Such sentiments, varied by descriptions of Irish and American scenery and of things in general, compose a sort of *pendant* to Goldsmith's "Deserted Village;" only in this case the emigrant has returned and the village is still thriving. We have only space for this grand and original view of Columbia's mission, which forms the peroration of the poem:—

"Her stripes and stars shall distant regions cheer,
Guarding the faith, wherever they appear,
From west to east, and Britain's language spread,
Till the last trump shall wake the sleeping dead:
While Anglo-Saxon anthems shall arise
From every land, and close Earth's obsequies!"

Green claims attention next, a neater and more scholarlike volume: "Shadow and Substance, and other Poems," by Robert Ripley. Here is wild Manfredian dialogue. "Scene,—The Shore of a Lake—Evening. Roland and Gertrude." We quote at random from page 11. The gentleman is not very gallant:—

"Two before thee, meek beings of the Earth,
Have ta'en their thrones in that dark sky of mine.
Two forms more sweet than are mouth-kissing winds,
Whose birthplace is the blossoms of the south,
That beat in music for one blessed moment,
Then die in beauty.
GERTRUDE.—And I?
ROLAND.—Fairer than light
Softened on bed of flowers.
Dost thou not hear
A sense of music on the trembling trees?"

&c., &c., *ad infinitum*. This gushing business will hardly do. But some sonnets and smaller pieces are fair enough; only they are mostly Shakespeare and water, or Tennyson and water. Yet the writer has some poetic taste, and may some day rise from mediocrity into something better.

But this improvement of the inside does not keep pace with the increasing brilliancy of bindings. "The Village Festival, by Scribolus," is a very poor and common-place account of a country-feast, and has nothing whatever to recommend it beyond a very pretty mauve binding. And now Magenta is reached, the brightest hue of all this rainbow of colour. "The World of Phantoms" is a most uninviting dissertation on mesmerism, written in correct heroic couplets. Correct versification and shortness are its only merits; for it seems to be wholly without poetry, and without any story, interest, or meaning whatever.

One Magenta-coloured book is left: "Songs on Italy, by Caroline Giffard Phillipson." This is an enthusiastic lady who visited Garibaldi on his sick-bed in 1861, and writes a short dedicatory letter to her hero by way of preface. He will hardly thank her for the offering. Miss Phillipson (the atmosphere of blighted hope which breathes through some of the poems leads to the inevitable conclusion that she is a maiden lady) drew her knowledge of the events taking place in Italy from the English newspapers, and "all the lines were written on the spur of the moment." Of this they certainly bear the impress. For very many of them read vastly like commonplace newspaper paragraphs or articles put into slipshod rhyme.

Can anything be more "wishy-washy," more slovenly than this?—

"Though he lies there pale and wounded,
I would rather far be him (*sic*),
Stretched upon that humble pallet
In the fortress-prison dim,
Than the false king in his splendour,
Who such noble heart betrayed,
Than the abject crowd around him,
Who to France concessions made."

Thus the lady's feelings gush out in a kind of spontaneous doggrel towards Garibaldi, Italy, Count Cavour, Mrs. Browning, the Prince Consort, or whatsoever person or thing the world and the newspapers may happen to be talking of.

Some pages on, the amnesty to Garibaldi's followers has been proclaimed, and the authoress thus addresses a kind of palinode to Victor Emmanuel:—

"Glad I also am in thinking
That the king has done his best,
That he was not traitor-hearted,
Only coward like the rest!
That he has not quite deserted
One, his stanchest friend of yore,
Whose good name has long been sounded
With loud cheers from shore to shore!"

Besides this kind of thing, there is a good deal of what Miss Mills, in Dickens's "David Copperfield," so appropriately speaks of as "The Great Sahara." The broken heart's grievance is dwelt upon in sad monotonous strains, and with tedious iteration. And yet, amidst a chaos of stuff not merely commonplace, but often absolutely contemptible, one set of really simple and pathetic stanzas appears, as if dropped from the clouds. But this, though somewhat of a relief to the weary critic, is scarcely good enough to deserve quotation.

Before we go to press number twenty-one arrives, in humbler guise, "Advice to Lovers," price sixpence, in a brown paper cover, dedicated to the editor of the *Daily Telegraph*, "the unflinching advocate of true morality." Here are twenty-seven pages of satire and advice on the great marriage question so debated in the *Times* eighteen months ago. The satirist has little advice to offer but generally to marry and choose well. Still, though his lines seem carelessly strung together and with little method, he shows some power, and though tending to coarseness and rather too fond of calling a spade a spade, he is at times amusing and forcible.

The following are not bad specimens:—

"I used to read of virgins casting glances
As they indulged in pretty graceful dances,
But few glance now; they stare in a bold fashion
Which says at once, We feel the ruling passion.
Daphne the fair, instead of being chased,
Follows Apollo, which is not good taste;
The timid pine, the bold succeed and carry
The hearts of men, although the men won't marry.
Belgravian matrons wail because they find
That men for marriage have but little mind.
They drink the wines and eat the costly dinners,
But give their love to impudent young sinners.
Still those same matrons wink to see their sons
In the society of wicked ones.

The tender misses as they glide along,
Think partners angels who can do no wrong,
And pout to think that Lais with her charms
Can draw strong men to her enchanting arms,
Or sigh to think Aspasia can command
The finest fellows in the British land.

Forms that the poets love and painters prize,
Faces that haunt us with love-breeding eyes,
Are lightly bought and recklessly are sold
To the first bidder for his gleaming gold.
Oft have I stood in busy Oxford-street,
Whose stones are trodden by hot aching feet,
And as I stood have looked upon the sky
Where stars roll on while erring women die.
Doubting, I ask, can life be otherwise?
Sin should not be, an inward voice replies.
Yet often men who would be calm and quiet,
Taking their love as invalids take diet,
Find all their hopes of getting safely married
Are blown to air or grievously miscarried.
What can such do?

At first she's elegant and thrives right well,
While beauty lasts she's always sure to sell;
But time speeds on, and she who pleased a beau
Is quite content with vulgar ones to go;
The dandies leave her for the new arrivals,
For Vice, like Methodists, has its revivals.

Why even Spurgeon joyed at having twins,
His deacons slyly laughed or gave broad grins."

But enough of quotations. The lines are worth the sixpence asked for them. But the writer should write less at random in his next attempt, should avoid such a rhyme as "women" and "beginning," and, above all, should correct gross and obvious misprints.

AUTOGRAPHS.*

THIS volume may pleasantly recall to some of our readers an interesting exhibition at the Law Institution last year. The exhibition was private; but those who had at the time the privilege of visiting the Law Society's Library in Chancery-lane will not readily forget the unique collection it contained. Rows of frames lined the room, each frame was divided into two compartments, that on the left containing the portrait, that on the right an autograph letter of some great person; the portraits were choice specimens of the engraver's art, and almost every letter was eminently characteristic of the writer, no mere signature or formal scrawl, but something which was immediately connected with his career, and which could scarcely have been written by any other person. It was scarcely possible to prevent the rising of some slight feeling of envy towards the excellent City Solicitor, who was understood to be the possessor of the entire series; but if any such feeling has survived the reflection how impossible it was to rival the lawyer's collection, it may be finally disposed of by the sight of Mr. Netherclift's admirable fac-similes. He has presented to us some six hundred autographs of eminent persons of all countries; and though the specimen of each handwriting is necessarily short, he has generally contrived to make such an extract of three or four lines as to suggest some point of the writer's character or career, whilst the accuracy of the reproduction seems, as far as we can judge, likely to heighten the great reputation already attached to the name of Netherclift. There is only one drawback to the volume, and that is attendant upon an advantage on the other side, which, in the opinion of many, will far outweigh it. Through his desire to produce a cheap book, Mr. Netherclift has printed his fac-similes on both sides of the paper, so that those who would wish to cut them out for the purpose of attaching them to the portraits of the writers, will require two copies of the book. How pleasant it is to turn from the portrait to the writing, and from the writing to the portrait, and, by poring over the lines of the face or the turns of the signature, to spell out the character of the man, is well known to many, most especially to those who are the fortunate possessors of Thane's "British Autography," now too rare a book, one of the best possible companions to the history of England in the sixteenth and seventeenth centuries. But the cost of two copies of Mr. Netherclift's book is comparatively trifling; and as Thane's

* The Handbook to Autographs. By Frederick G. Netherclift, author of "The Autograph Miscellany," &c. With a Biographical Index, by Richard Sims, of the British Museum. London: J. R. Smith. 1862.

Digitized by Google

autographs never exceed the subscription to a letter, no comparison can be instituted between the interest of the productions of the two fac-similists.

A list of the names in Mr. Netherclift's collection would only serve to oppress the reader; but we may call attention to a few possessing some special interest. We find a line of royal signatures in almost an unbroken succession from the time of Richard III. down to our own Queen, whose autograph letter we may extract for the sake of the glimpses it gives us through the simple words "nous" and "notre,"—the language, not of the sovereign but of the wife:—

"*Château de Windsor*, 7bre, 1844.

"Je vous remercie de tout mon cœur pour le curieux et beau tableau de François II. qui nous est d'une grande valeur pour notre collection.

"Je suis, Madame, de votre Majesté la toute devouée sœur et amie,

"VICTORIA R."

Along with the line of English royalty occur the autographs of contemporary kings, warriors, statesmen, divines, poets, lawyers; and, indeed, from the time of Henry VIII. downwards there is scarcely a single department of thought or action which is not represented. Henry VIII. himself writes to Wolsey, to recommend himself to "myne own good Cardinall as hartely as harte can thynke;" whilst the Cardinal writes to his own entirely beloved Cromwell, of whom Gardiner is also a correspondent. Contemporary with these we find Francis I., James IV. and James V. of Scotland, Cardinal Pole, Erasmus, Cranmer, the poet Surrey, Luther, and Melancthon; whilst a little later in date we meet with a letter in the well-known stiff print-like hand of Edward VI., thanking his uncle, the Lord Protector, for his victory over the "Scottes." Lady Jane Grey writes to her father-in-law in the same print-like character, to console him on the prospect of the approaching death of the writer and her husband; and besides this letter signed "Jane Duddley," Mr. Netherclift has given *fac-similes* of two signatures, "Jane the Quene," and one of Jane Grey. A specimen of her grandmother, the Marchioness of Dorset, Mr. Sims incorrectly ascribes to one of the Sackville family. There is a large group of reformers and martyrs: we have mentioned Cranmer; besides him there are Beza, Calvin, John a Lasco, "but for the grace of God" John Bradford, Ridley who writes Bradford—

"Dear beloved brother Bradforth,—I had thought of late I had wryten you your vale untyl we shuld have met in the kyngdō of heaven.

"VEST. IN DEO. N. R."

Hooper, Rowland Taylor, whose letter, written in great tribulation, begs the prayers of his correspondent, Latimer, John Knox. Queen Elizabeth in the time of her trouble writes to Mary subscribing herself "Majestatis tua humillima soror," but her temper more clearly appears in a second example; "as to liberties," she says, "who is so simple that doutes whether a prince that is hed of all the body may not cōmand the fete not to stray?" Amongst the products of the Court of the Virgin Queen, is the well known stiff handwriting of Cecil standing up like a corn field. Essex complains of the charges he has been put to in the service of her Majesty; his friend and Shakespeare's patron, Wriothesley, Earl of Southampton, forwards a petition. Leicester writes from Flanders about the siege of Ostend; his nephew, Sir Philip Sidney, returns thanks in a letter written in French; the Bishop of Ely is anxious about the translation of the Bible, the Queen not yet having sworn to unfrock him if he opposed her will; Dean Nowell writes of Whitaker, the Cambridge Professor, and Whitaker, whose rare portrait may be remembered in Holland's Hermologia, writes of himself. Sir Francis Drake and Sir Walter Raleigh represent the Queen's sea-dogs, and for her poets we have fac-similes of the three signatures of Shakespeare in the British Museum, and the City Library, and a grant from Spenser, dated Kilcolman, of all his woods in Balligamin. Sir John Harrington and Ben Jonson are links connecting the Court of Elizabeth with that of Charles I., and the interval is also marked with a letter of Anne, the Queen of James I., so curious that it deserves to be quoted; no clue is given as to the person to whom it is addressed, and though we believe we have seen the letter before, we do not remember in what connection.

"My kind dog, I have receaved your letter which is verie wellcom to me you doe verie well in lugging the sowes eare, and I thank you for it, and would have you doe so still upon condition that you continue a watchfull dog to him.

"ANNE R."

The first specimen of Charles's writing is in a very stiff upright hand, and was written when he was Duke of York; it exhibits him as a wit, a character in which his most devoted admirer would not claim high rank for him:—

"My Lord, Saterday is the day;
Let 4 great barrels of powder cume away.
"Your friend, YORK."

His son, the second Charles, at a like early age, writes some unknown correspondent in a happier vein; the handwriting is a fair round schoolboy's hand, very unlike the rapid scrawl of his later life; and he says, "I would not have you take too much Phisick; for it doth alwaies make me worse." The period of the Great Rebellion is very fully illustrated; besides Charles and Henrietta Maria, we have Rupert spreading over a page with a large bold hand; Strafford's heavy black writing recalling his own dark visage; Goring; Henry Jermyn, Henrietta Maria's reputed second husband; Sir Charles Lucas, the brother, and the Duke of Newcastle, the husband, of the fantastic Margaret; Hampden, Sir Harry Vane, Cromwell, Essex, the Fairfaxes, Ireton, Lambert, Blake, Milton, Whitelocke, Hugh Peters, Lord Wharton, Colonel and Mrs. Penruddock. Lord Wharton, the correspondent of Cromwell, the pious anxious Puritan, from whom sprang, by some strange succession, his son, Swift's famous Marquis, and his grandson, Pope's yet more famous Duke, "the scorn and wonder of his days," writes a fair, plain, careful hand which may well agree with his character, and the face familiar to us in Richardson's portraits. Mrs. Penruddock writes her husband when under sentence of death for his unsuccessful rebellion in the west against the Commonwealth:—

"Oh, my deare, you must now pardon my passion, this being the Last (oh, fatall words) that ever you will receive from me,

"Yor sadd, but constant wife, even
to Love yor Ashes when dead,

"A. PENRUDDOCK."

Rupert's handwriting may be compared with that of his father, the Winter King, of whom two specimens are given, one as Elector Palatine, and the other as King, and with his mother, the unhappy Elizabeth; but though it resembles in some degree both of these, it is still more like the writing of his sister Elizabeth, the pious friend and correspondent of Penn and Barclay of Ury, the pupil of Descartes, the Lutheran nun. There is also in Mr. Netherclift's collection a letter ascribed to a third Elizabeth, the daughter of Charles I., who died at Carisbrook, leaving a history beloved by painters; but its authencity seems doubtful. We have mentioned the boyish production of Charles II.; in later life he writes:—

"As for newes, my wyfe beginnes to mend her maners. I know not how long it will continew."

A note of the unhappy Catharine herself is principally remarkable for the fact that no two letters of it are joined together. We also find specimens of Clarendon and Sir Orlando Bridgman, Rochester, and Shaftesbury,

"The daring pilot, in extremity,
Pleased with the danger when the waves ran high;"

who seems from his handwriting to be himself *in extremis;* it is as irregular as a snail's walk, and he writes,—"My limbs and health are so infirm that I fear I shall not be able to attend the House." Of "glorious John" himself there is a *fac-simile*, signed Dryden; we learn from it that his own taste inclined rather to Homer than to Virgil, and we must attribute his translation of the latter to other circumstances than his own choice. "Cousin Swift," though no poet, according to his kinsman Dryden, must be owned to be a rhymer. This is his letter:—

"I can send you no news; only the employment of my parishioners may, for memory's sake, be reduced under these heads:—

Mr. Percivale is ditching,
Mrs. Percivale in her kitchen,
Mr. Wesley switching,
Mrs. Wesley stitching,
Sir Arthur Langford riching,

which is a new word for heaping-up riches; I know no other rhyme."

The great men of the Augustan age are almost all here,—Addison and Pope, Prior and Congreve; Gay is absent, but we have a letter of "charming Kitty," the Duchess of Queensberry, his patron, who was dismissed from Court on account of him:—

"Of all thy blameless life the sole return
My verse and Queensberry weeping o'er thy urn."

"The Duchess of Queensberry is surprised and well pleased that the king hath given her so agreeable a command as to stay from Court, where she never came for diversion. C. QUEENSBERRY."

Mr. Netherclift has made a fac-simile of but these lines of the Duke of Marlborough's writing, but they are sufficient to show the guardian angel's inability to spell:—"I must desier," he says, "you will give the inclosed to my Lord Portland, ther being own (one) in itt for the king.—MARLEBOROUGH." An equally short scrap of Bolingbroke's exhibits the remarkable loftiness which is apparent in everything he wrote, the spirit of the great fine gentleman mingling amongst poets and philosophers. Going back somewhat in date we encounter Penn, George Keith, for whom at one time Quakerism was not sufficiently free, but who afterwards recanted, took orders in the English Church, and wrote "Rehortations of diverse former Treatises," Newton and Locke, and again, Leibnitz, Voltaire (a very clear handwriting), Montesquieu, Rousseau. Step by step we are led to the epoch of the American and French Revolutions,—Lord North, Chatham (erroneously said, by-the-by, by Mr. Sims to have been born at Boconnoc, in Cornwall, his real birthplace being St. James's, London), Burke, Washington, Franklin, Danton as Minister of Justice, Robespierre, the unhappy Louis XVI., Marie Antoinette, Mdlle. Elizabeth, the King's sister, and Louis XVIII. Marie Antoinette's letter is written in a gleam of sunshine; we give it *literatim*:—

"Vous avez seu sans doute l'étrange avanture qui s'est passée à la commedie le mois dernier, le tapage et les applaudissemens à mon apparition avec mes enfantes. MARIE ANTOINETTE."

Bonaparte writes a note as Buonaparté, officier d'artillerie, and, to jump to our own times, we meet with a note dated King-street, the 20th of March, 1848, and signed Napoleon Louis Bonaparte, requesting some one, probably a newspaper editor, to contradict

Digitized by Google

the report that the writer intended to become a candidate for a seat in the National Assembly of France.

We have only given a few examples of the riches of Mr. Nethercliff's volume: there is a nest of poets at the end of the last and the beginning of this century,—Johnson, Goldsmith, Cowper, Burns, who characteristically quotes Pope,—

"My ancient but ignoble blood
Has crept through scoundrels ever since the flood."

Chatterton, Goethe, Schiller, Coleridge, Scott, Southey, Wordsworth, Leigh Hunt, and Byron; a heralds' college of antiquaries, kings-at-arms and heralds; and, in conclusion, we have all the dramatists, musicians, actors, and singers that have ever been seen in a green-room.

FRENCH LITERATURE.

After a pause of several months, literary activity has recommenced in France, and several new publications have made a good deal of noise. We will first, however, notice the graver sort of books, which have given rise to no scandal whatever. To begin, then, with a book which treats of the beginning of all things; here is one by M. Figuier, on "The Antediluvian World." He has a special talent for popularizing these subjects, and for bringing the results of scientific discovery within the reach of all classes of readers. In this work he gives an account of the geological changes which preceded the existing constitution of our planet, and describes the various forms of its animal, vegetable, and mineral productions in the remotest ages we know of. But we may pass on to "La Philosophie du Bonheur," by M. Paul Janet, which is an essay on the art of making the best of the world as it is, as prepared at length for the habitation of mankind. The author, a young philosopher, but who has earned high distinction, is now deservedly promoted from a professorship in the Lycée Louis XIV. to the Faculty of Letters in the University of Paris; and he lately made his *début* before an audience of 800 persons, in the Amphitheatre of the Sorbonne, with the greatest success. His former works are a "History of Moral and Political Philosophy," for which the Institute awarded him the crown; an able essay on the Logic of Plato and Hegel; and lastly, a charming little treatise on morality, entitled "La Famille," which obtained much praise in this country about two years ago. "The Philosophy of Happiness" is a book of the same order, presenting a view of the different causes by which happiness, in our mortal life, is either given or taken away from us,—the possession of wealth, the influence of the passions and of imagination, the affections, the powers of thought, the pursuits of an active career, the distractions of society and the world. The author, with much elevation of sentiment, and with equal shrewdness and sound judgment, discusses all these matters; he urges that it is in temperance and moderation, in the proper direction of all our faculties, in the discreet use of all the gifts of Providence—above all, in constant self-possession and a rational appreciation of outward things, that the true conditions of happiness are to be found. We feel touched by the seriousness, and even by the noble sadness of the author's tone, throughout these earnest pages; seeing that, after all, this relative happiness, which we so ardently seek, but which we can scarcely hope to enjoy, and that on the most difficult terms, is but a fleeting image or shadow of that which is promised beyond the tomb. M. Paul Janet's book has only just come out; we doubt not that it will be favourably received.

Books of historical and antiquarian research are seldom the publications which excite most immediate sensation in the French public mind, except when the subject appears to suggest an analogy with the political situation of the day. In the department of archæology, we have an account of the explorations made in Asia Minor by M. Perrot, late a member of the French school at Athens, and M. Guillaume, salaried architect of the French academy at Rome, who were jointly employed by the French Ministry of State, for more than a year, in carrying on those researches. In Galatia, Bithynia, Mysia, Phrygia, Cappadocia, and Pontus, than which few countries are less known to the modern traveller, these learned agents of the Imperial Government have been digging among the ruins of ancient cities, and deciphering the inscriptions which successive ages of barbarism had spared to efface. The relics which they brought to Paris were exhibited in the Palace of Industry, in a hall adjoining that in which the Campana collection was exposed to public view last summer. In the two parts, already issued, of their printed report, are given, entire, both the Greek and the Latin text of that famous political testament of Augustus, which may still be read inscribed on the walls of his temple at Ancyra, the old capital of Galatia. Its existence had indeed been known for three centuries past; but we have now a copy of it which is accurate and complete, excepting one *hiatus* not much to be deplored. The most recent books we have of a properly historical character are rather curious than important; but there are one or two which, like that of M. Francisque Michel, on "Scotchmen in France, and Frenchmen in Scotland," are interesting alike to readers on both sides of the Channel. Such is the collection by M. Réné de Belleval, in one octavo volume, entitled "La Grande Guerre," of many fragments of the history of France in the fourteenth and fifteenth centuries, during what has been called the Hundred Years' War between the French and English; the author having composed a special narrative of that struggle, and sought to explain the motives of its long continuance, as well as to depict some of its famous episodes, such as the achievements of the Sire de Charny, the disaster of King John at Poitiers, the battle of Agincourt, that of Mons, and that of Patay, with much more fulness of detail than can be expected in any general histories of France. We have also two historical monographs; one is the story of Lady Jane Grey, by M. Dargaud, author of a well-known memoir of Mary Stuart. The dramatic misfortune of Jane Grey is a popular subject in France, as proved by De la Roche's picture of her; and this interest is made the most of by M. Dargaud, though he lacks the more serious qualities of an historian. From M. Guizot, who knows so well how to reconcile the interest of narrative details with the dignity of history, we have "A Royal Marriage Project," referring to the celebrated scheme of a union between Charles I., then Prince of Wales, and the Spanish Princess, daughter of Philip III., with which every reader of English history is more or less familiar. The political intrigues mixed up with that affair, the diplomacy of the several courts, including that of the Papal Court, and the romantic errand of the young prince going in person to court his destined bride at the ceremonious Court of Spain, become, in the hands of M. Guizot, the materials of a pleasant and yet instructive piece of history, one of the best and most finished specimens of this kind of writing. The last we mention of these books, upon subjects belonging equally to England and to France, is M. Prevost Paradol's historical essay on Elizabeth and Henri Quatre. The author needs no personal introduction to English readers. Imbued, as he is, with the spirit of English literature and English liberalism, his polemical writings, as a journalist, show the same qualities of practicality and energy that distinguish the English press, combined with the grace and address of a well-bred Frenchman. As an historical writer, he has still more important merits. This essay, the materials of which he has taken from the best English authorities, is replete with a political sagacity, that gives it a claim to rank far above most historical works. It seems a good omen for the mutual understanding of the two great nations of western Europe, that their best writers should now, in the department of past history as well as in that of science, prefer to investigate those subjects which are interesting to both nations alike.

From the shores of England and France, we are transported to Russia, in noticing the publication, by Prince Augustin Galitzin, of some very interesting memoirs of the reigns of Peter the Great, Catherine I., and Peter II., under the title of "Russia in the Eighteenth Century." We know so little, as yet, of that vast empire, which has resisted all attempts to learn its real condition, that whatever can throw light upon the truth of its history may still be of service. French readers, for example, have been content to rely on Voltaire's narrative of the reign of Peter the Great; but more authentic documents are sadly wanted. It appears that, some twenty years ago, by a lucky chance, under the Arcade Colbert at the Palais de l'Institut, Prince Galitzin found these manuscripts, part of which, at least, are ascribed to J. B. Shérer, a resident for thirty years at the court of Catherine II., and author of a collection of anecdotes respecting that empress, which were printed in his life-time. The pieces now given to the world, let their authorship be what it may, have a good deal of *couleur locale*, and the stamp of correctness upon them. In Peter himself we here behold the half-savage reformer as he really was, and not as Voltaire displays him, tricked out in rhetorical drapery, beneath which the figure of the Russian is concealed. But we see Peter wrestling to overcome the Oriental barbarism of his native country; and in these simple incidents, jotted down without plan or order, to illustrate the political transactions and the household habits of the famous Czar, we find him certainly a wilder, but, at the same time, a grander personage, than as he was represented to us before,—a greater despot than ever, but more of a human creature than he is in the pages of Voltaire. We see him do such things as beating Prince Mentchikoff with his walking-stick; but we see him give himself up to tears and settled melancholy at the loss of Catherine's first-born child; though he had no mercy upon another child of his own.

The book, however, which has made most noise, and has even provoked, as above intimated, a certain amount of scandal, is M. Michelet's book, "La Sorcière." What shall we call it,—a history or a romance? It is partly the one, and partly the other, as might be expected from a writer whose profound and curious erudition is only equalled by the vivacity of his fertile imagination. The Witch, whom successive ages have believed in, from the days of Paganism to our own days,—this is the personage of whom M. Michelet gives us, not so much a history, as her apotheosis; raising her to a character of mythical significance, and regarding her as the doleful, odious, persecuted avenger of nature, belied and outraged by the Middle Ages in so many ways. He considers that the Witch of those times was the direct heiress of that tradition of the antique Sibyl, which had been proscribed since the establishment of Christianity; as well as of the woman of Germany or Gaul, to whom the barbarians ascribed a kind of prophetic or divine inspiration. He has ransacked all the old books of magic and sorcery, and he has extracted from old criminal records all the most detestable accusations of witchcraft in the most ignorant and superstitious times. Upon this ground M. Michelet, with his transcendent power of style, but with a strangely distempered imagination, portrays the vulgar Witch of those past ages as a heroine, a Joan of Arc, to whom Satan had become her god, and the orgies of her infernal sabbath, as it were, an act of divine worship, invoking the revelation of nature's deepest secrets to be used for the profit of man. It is the rehabilitation of the evil principle, thus incarnate in a woman, after having been long oppressed by what was called the good principle, since the creed of Manicheism succumbed to

Digitized by Google

the victory of the Mediæval Catholic Church. But we can give no idea of this wild book, still less account for the giddy fascination with which it has seized on so many readers' minds. French critics have, for the most part, abandoned the attempt in despair. Meanwhile, the book is eagerly read, and may be taken as a sign of the times, in this age of spirit-rapping and table-turning impostures. After the first edition of six thousand copies had been sold off, it was understood that the sale was to be prohibited in France; but M. Michelet had made his arrangements to print a new edition at Brussels; and we now hear that another edition, with the omission of a few passages, is to be printed at Paris. *Apropos* of this romantic history of witchcraft, we may refer to the historical romance of "Salambo," by M. Gustave Flaubert. It is, perhaps, needful to tell our readers that Salambo was a Carthaginian witch, but she was the sister of Hannibal; and she saved her country, in a peculiar way of her own, when the renowned mercantile republic was threatened with destruction by the war of the revolted mercenaries, not long before the formal outbreak of hostilities between Carthage and Rome. M. Flaubert is the chief of the realistic school; his "Madame Bovary" has reached thirty editions, but for its morality we cannot say much. In "Salambo" there is, besides the dramatic interest of the story, some pretension to antiquarian learning; M. Flaubert has been on the spot, among the ruins of Carthage, to study, as he tells us, with the aid of local observations in that deserted site, the social state of the Carthaginians, and their manners in private life, as well as the working of Punic political institutions, with which the fate of Salambo is entwined. She, like another Judith, devotes herself to the salvation of her country by complying with the voluptuous passion of the enemy, who is Matho, the leader of the rebellious mercenary troops. But enough of Salambo.

Several new theatrical pieces have lately excited an interest, more political than purely literary, in Paris. The Parisian Aristophanes, indeed, ventures not to caricature upon the stage any of the political personages of the actual *régime*, but those of a former day. Two eminent French dramatists have just been giving examples of this kind, M. Sardon, in "Les Ganaches," performed at the Gymnase; and M. Emile Augier, in "Le Fils de Giboyer," which is played at the Theatre Français. The meaning of *Ganache* is an old-fashioned person, who is behindhand with his age, and does not comprehend what is going on around him; so that the political *Ganaches* are the men of the old parliamentary parties—Orleanists, *doctrinaires*, and Legitimists; while *Giboyer*, in a former piece of M. Augier's, stood for an Ultramontane journalist. But while crowded audiences have proved the success of these smart hits, the parties assailed have had a word to say in their own defence. M. Prevost Paradol has cleverly retorted, showing that the existing *régime* has among its adherents not a few as arrant *Ganaches* as those who cling to the governments that have fallen. M. Louis Veuillot, for his part, declares that he never aspired to serve the Church as a sort of lay bishop, as was said of him; but that his only ambition was to act as "a sort of beadle, to turn out the yelping curs and profane giggling boys." The comments of the press upon these plays have, in general, seemed rather to incline towards the side of the victims of their satire; and each of their authors, in a preface to the printed edition, disclaims any intention to attack personal character. The houses are still crowded; at the Theatre Français you must engage your seat a fortnight in advance.

Clissold, M.A. Rivingtons.—Life in Heaven. By the Author of "Heaven our Home." W. P. Nimmo, Edinburgh; Simpkin, Marshall, and Co.—The Gardener's Annual for 1863. Edited by the Rev. S. Reynolds Hole. With a coloured illustration by John Leech. Longmans.—Homer, the Odyssey; or, the Ten Years' Wandering of Odysseus, after the Ten Years' Siege of Troy. By T. S. Norgate. Williams and Norgate.—The Cost of a Secret. By the Author of "Agnes Tremorne." In 3 vols. Chapman & Hall.—Such Things Are. By the Author of "Recommended to Mercy." In 3 vols. Saunders, Otley, & Co.—Selections from the Poetical Works of Robert Browning. Chapman and Hall.—Poems: an Offering to Lancashire. Printed and published by Emily Faithful, for the Relief of Distress in the Cotton Districts. Victoria Press.—Air and Water: their Impurities and Purification. By H. B. Condy. J. W. Davies, Princes-street, Leicester-square.—Barrington. By Charles Lever. Chapman & Hall.—A Great Mistake. By the Author of "Palgrave of Sycamore." Saunders, Otley, & Co.—Christmas at The Cross Keys. A Tale by Kenner Deene. Author of "The Dull Stone House." T. C. Newby.—The Voyage of the Austrian Frigate *Novara*. By Dr. Koel Scherzer. Vol. III. Saunders, Otley, & Co.—Sir Aberdour; or, the Sceptic; a Romaunt. By Walter P. J. Purcell. Pickering.—"Standard" Series of Elementary Reading Books; the "Primer," the "Reader," and the "Second Reader." By J. S. Laurie. Longmans.

CONTEMPORARY SCIENCE.

In science one never knows what is going to turn out interesting. A high-sounding title may be followed by an uninteresting paper, and a paper of no moment may be followed by a most valuable discussion. The Philological Society does not, *à priori*, promise much entertainment, except for the learned; but lately some papers which from their title did not seem likely to produce much that was lively, have been made extremely entertaining by their authors. Few would have thought the two words, "Groveling" and "Grovelling," capable of much instruction or amusement, and yet the learned editor of the "Liber Cure Cocorum" contrived, by his valuable commentaries on the connexion of the suffix *-ling* with that of *-long*, as in head-long, side-long, to be not only instructive but entertaining.

Word-origin finds, however, a sympathy with other classes than linguists. Ethnologists regard it in its widest bearings as one of the evidences of the spread of human races over the earth; and even the mere inquisitive reader finds a gratification in the tracing the steps by which a common word has been brought to its present form. Mr. Morris first showed that old English writers used the word *grove-ling* (with the face downwards), as an adverb and sometimes as an adjective; and that the termination *-ling*, having lost its significance, became, after the middle of the thirteenth century, mistaken for the imperfect participle of the verb *grovel*. Both the adverb and the participle belonged to the same root, but the former was only one remove, while the latter was two removes from the root. (Norse, *grufe*, = pronus.)

Bailey correctly defines the word groveling as follows: "lying on the face, with the face to the ground;" to feed *groveling* (among hunters). A deer is said to do so when she feeds lying on her belly. Junius writes *groveling*, = pronus; Horman (Vulgaria, p. 35), says that "a full stomache is digest with watche and slepynge *grovelynge* [pronâ in faciem dormitione], and Dr. Turner directs that date-stones are to be planted *grove-ling* [*i. e.*, flat-wise].

As late as 1609 the word is used by Holland as an adverb: "A certaine matrone . . . . . fearing very much some hard dealing and cruell torture . . . cast her face *groveling* upon a featherbed, and so stopping the breath of her nosthrils, ended her life." Here the meaning of the word in the above quotations and its syntactical use proved it to be an adverb and not the imperfect participle of grovel. But the *form* of the word was sure proof of its grammatical function.

In the "Romance of Alexander," published for the Roxburghe Club, occurs the following passage:—

> "The pillars ware of pur-fire, polischt and hewen,
> With gomes *grovelings* of gold, grathid for the nanes,
> Foundand on all foure, on fote and on handis,
> Buskid undire the baisins to bere up the postis."

Here *grovelings* is explained by the phrase, "On all foure, on fote and on handis." Groflynges—groveling—face downwards, occurs in the "Townley Mysteries," p. 40.

Junius shows that *groff*, *grouse*, &c., were used in the same sense as groveling, by Chaucer and by Douglas. The writer showed, that "oh groffe" had a similar meaning in "Morte Arthure."—Ed. Halliwell, p. 323.

Scottish writers used *gruflyngis*, *grulingis*, and *grulyng*; while the more modern form, *groflins*, pointed to a class of adverbs in *lins*, a suffix undoubtedly adverbial. Though *groveling* was of Norse origin, yet no trace of this termination was to be found in any of the Scandinavian idioms (ancient or modern), but the Germanic languages had it under various forms.

Suntar-ingun, separately; *Tarn-ingun*, secretly; *Rucchi-lingun*, on the back; *Plinti-lingun*, in secret (Old High German); *Heal-ingen*, *Still-inge*, secretly; *Sunder-lingen*, separately; *Rucke-lingen*, on the back (Middle High German); *Blind-lings*, *Rück-lings*, blindly, backwards (Modern High German); *Niew-inghe*, lately; *Var-inghe*, suddenly; *Ga-linghe*, suddenly; *Onder-linghe* (Middle Dutch), in turn; *Blinde-ling*, blindly; *Ruggeling*, *Ruggelings* (Modern Dutch), backwards; *Dearn-enga* (Anglo-Saxon), *Darn-ungo*, secretly; *Fer-inga*, *Far-ungo*, suddenly; *Gegn-unga*, *Gegn-ungo* (Old Saxon), certainly; *Baeclinga*, *Baecling* (Anglo-Saxon), backwards, &c.; *Blindlunge*, blindly; *Nedlunge*, of necessity; *Ruglinge*, *Ruglunge* (Semi-Saxon), backwards. Before proving that there were traces of this adverbial suffix in Old and Modern English, Mr. Morris directed attention to a form of groveling well calculated to throw light upon another form of *ling*, which occurred in the following passage from the Metrical Romances, edited by Mr. Robson for the Camden Society.

> "Suche a touche in that tyde he taste hym in tene,
> And gurdes me Sir Gallerun, evyn *grovelonges* on grounde,
> All *grovelonges* in grounde," &c.—"Antars of Arthur," xlvii., l. 8.

The ending *longes* presented itself again in Nede*longes* in the same collection (p. 31, l. 1). The form *longes* was valuable because it gave us two forms in use bou at the same time; and we must not suppose that *longes* was a corruption of *lings*, but merely two forms of the same ending, just as in Anglo-Saxon there were *Grundlinga* and *Grundlunga*, *Unmyndlinga* and *Unmyndlunga*; and in semi-Saxon, *Ruglinge* and *Ruglunge*. There were, therefore, good grounds for supposing that the suffix *ling* or *lings* arose out of the Anglo-Saxon *linga*, while by the *lunga* became *long* or *longes*. And this view of the case was strengthened the following forms:—Grove-*ling* and Grove-*long* (Holland), Darkling (Milton), Darklings (Bishop Hall), Darke-long (Hackluyt), Flatling (North), Flatlins (Scotch), Flat-long (Shakespeare), Sideling and Sidelong (Trevisa), Head-ling and Headlong (Surrey).

The existence of an adverbial suffix in *long* was important, as it explained even-long, evenly (Trevisa), *auelonge* (*awelonge*, *aweyonge*), *oblongus*, oblong, in the Promptorium Parvulorum.

Bearing in mind that there were two adverbial forms in Old English (in ling, long, and ly), as langlinges and landly, neidlingis and nedly, &c., we might compare *auelonge* with (Old English) awkely, awry, aslant. This was the only explanation the word admitted of. The *k* in awkely was merely adjectival, as is seen by the cognate forms, and longe-the-long, in headlong, &c.

The form awey-longe gave a clue to the modern English way-ward, which is not, as Dean Trench supposes, to be derived, along with *awk* and *awkward*, from the Anglo-Saxon *awey*, away, but is equivalent to the *awey* in awey-longe; as *awoh*, Old Saxon, *avuh*, awry; Old High German, *abuh*; Prov., *awech*, Flemish, *aue*.

Mr. Morris, after noticing other Old English adverbs in *ling*, as *Hodlinges*, secretly, *Noselynge*, on the nose, *Outelyng*, external, *Blyndlyng*, blindly, *Stridlyng*, astride, *Sunderlyng*, separately, showed that two adverbs in *ling* still existed in the language;—1. Middling (mid-

Digitized by Google

ling), Midlins (Scotch), Mid-lin (Provincial, N.); 2. Footling, footwise, having only a technical use in obstetric surgery.

Dr. Miller, in 1845, and, very recently, M. Mitscherlich, in Poggendorp's *Annalen*, have drawn attention to the prismatic spectra of certain chlorides of copper and other metals. Dr. Gladstone, taking up afresh the subject, and repeating and extending experiments performed by himself some years ago, has shown that a peculiar violet flame is common to many chlorides, if they are sufficiently heated. Nothing is more familiar in spectrum analysis than the double line D produced by common salt; yet, if salt be thrown on red-hot coals, it produces violet flames; and this is beautifully seen when old ship-timber is burnt. When these flames are analyzed, they are found to give not the familiar yellow lines, but three groups of lines—the first green, extending to fixed line *b*; the second bluish-green and blue, lying on either side of F; and the third violet, stretching from midway between F and G to a little beyond G. Examined by the spectroscope, these lines are identical with those of the chloride of copper. The same light is given by chloride of platinum, gold, mercury, nickel, cobalt, potassium, barium, zinc, iron, heated respectively at very different temperatures by the spirit-lamp, Bunsen burner, or gas flame. To what is this violet flame due? It might be to the chloride itself in the gaseous form, or to the decomposition of the chloride, or to the combination of the chlorine with the carbon or hydrogen of the combustible; but to all these and other suggestions there are strong objections, and Dr. Gladstone considers further elucidation of its origin is required.

Amongst the interesting objects displayed at the recent soirée of the London Institution was a series of Mr. Warren De la Rue's unequalled enlarged photographs of the moon. It will be remembered that during the past year the Astronomical Society awarded Mr. De la Rue their gold medal for his photographic views of celestial objects. Over a period of five years he has busied himself with the portraiture of the moon, and during that time has obtained negatives of every phase of such beauty and excellence of detail, that they have proved capable of being enlarged from one inch, their original size, to 18 inches, without in any way losing their sharpness of definition.

The series of enlarged views published by Messrs. Smith & Beck comprises the first and last crescent, the first and last octant, the first quarter, two from first to second quarter, two gibbous moons, two nearly full, and the full moon; and has been selected from upwards of 300 photographs. The object of the publishers is to show the varied appearances presented by the moon at its different phases, the mode in which its craters and elevated lands reflect the morning and evening rays of the sun, and to mark out and briefly describe some of the principal lunar objects. The large level plain of the Mare Crisium, 280 miles by 350, and the two great craters Theophilus and Cyrillus, are prominent objects in No. 1. The former of the two craters is the deepest of any on the moon, its ridge being 18,000, and its cone 5,200 feet. In No. 2 the fine watered plain Maurolycus, with its peaks and precipitate cliff-like ramparts, is finely shown. In No. 3, Tycho, the most conspicuous crater on the lunar disc—fifty-four miles across and three deep,—first comes into view, its long bright rays spreading out in every direction, giving rise to the popular fancy of a pole to our satellite. In No. 4 the rampart of Eratosthenes—a grand object terminating the lunar Apennines—is first seen tinted by the sun's rays. In No. 7, Aristarchus, the brightest spot on the moon, comes into view. In No. 11, Clavius, one of the largest of the lunar plains, 142 miles across, with peaks on its ramparts 17,000 feet high, is well displayed. The main object of No. 12, the last of the series, taken at 23½ days of the moon's age, besides giving the beautifully thin crescent of the waning moon, is to show Aristarchus as a crater. In all the other photographs of the series it appears as a brilliant spot, but here the shadow of its wall, 7,500 feet deep, is clearly shown.

Those—and they are very many—who have felt interest in the valuable scientific aëronautations of Messrs. Glaisher and Coxwell, will find an admirable account of their remarkable balloon ascents, and of Mr. Glaisher's observations, their objects and their results, in the latter gentleman's Exeter Hall lecture, now just printed in Messrs. Nisbet's threepenny series. This little pamphlet, consisting of fifty pages, and illustrated by four diagrams of the ascents, is, without exception, the best popular account of scientific ballooning ever published. The language and descriptions are full of the enthusiasm which characterizes that eminent meteorologist, who has thrown himself as entirely into his lecture as he does into his scientific work. Mr. Glaisher will lecture again, we believe, on this subject at the Royal Institution on the 26th of February.

Mr. W. H. Warner, of Canterbury, has made the singular discovery that the extract of the green husks of nuts is sensible to light. If a sheet of paper be immersed in this extract, and exposed in a camera lucida, the colour will only change at the points exposed to the light, and there it becomes as black as if a solution of nitrate of silver had been used. To fix the image obtained, it is sufficient to soak it for some minutes in ammonia diluted with 200 parts of water.

M. France, a lieutenant of artillery, has made an experimental trial at Namur of a new projectile for illuminating during the night any point it may be desirable to reconnoitre. The light of this new bomb is very bright, and its range of illumination some hundreds of metres.

Two new comets have been observed by M. Bruhns of the Leipsic Observatory. The first very faint, but increasing in brightness; the second, much brighter, observable to the south-east of the corn-ears of the constellation Virgo. This latter, called No. III. of 1862, is no longer visible in our latitudes, but is well situated for observation in the southern hemisphere, where it is probably visible to the naked eye. It may possibly become revisible to us in the month of January, when it commences remounting towards the equator, and after the middle of February it will be sufficiently near to be seen; but its brightness will be very faint, and it must be looked for at twilight near the horizon. Its orbit differs from those of all known comets. The first comet of M. Bruhns is styled No. 1 of 1863, because it passes its perihelion in February, 1863. It traversed the plane of the ecliptic about the middle of December, and is travelling towards the constellation Bootes. It rises now about one in the morning.

LEARNED SOCIETIES.

LIST OF MEETINGS FOR NEXT WEEK.

MONDAY.

MEDICAL—32A, George-street, Hanover-square, at 8½ P.M. "On the Superiority of Chophart's Operation and Excision of the Ankle over any other method, in all cases admitting of their performance."
GEOLOGISTS' ASSOCIATION—5, Cavendish-square, W., at 7 P.M. (Anniversary.) "Fossil Animals of South America." By C. Carter Blake, Esq.
LONDON INSTITUTION—Finsbury-circus, at 7 P.M. "Sculpture." By Professor R. Westmacott, R.A.
ENTOMOLOGICAL—12, Bedford-row, at 7 P.M.

TUESDAY.

PHOTOGRAPHIC—King's College, at 8 P.M. "Photography in its Application to the Magic Lantern, Educationally considered. By Samuel Highley, F.C.S., &c.
ROYAL INSTITUTION—Albemarle-street, at 3 P.M. "Air and Water" (juvenile lectures). By Professor Frankland.
PATHOLOGICAL—53, Berners-street, Oxford-street, at 8 P.M. (anniversary meeting).

WEDNESDAY.

ROYAL SOCIETY OF LITERATURE—4, St. Martin's Place, at 8½ P.M.
GEOLOGICAL—Burlington House, at 8 P.M. 1. "Lower Carboniferous Brachiopoda of Nova Scotia." By J. Davidson, Esq., F.R.S. 2. "On the Gravel-deposit of Ludlow, Hereford, Skipton." By T. Curley, Esq. 3. "On the Northerly Extension of the Upper Silurian Passage-beds to Lindley, Salop." By Mr. Roberts and Mr. Randall." 4. On some Crustacean Tracks from the old Red Sandstone at Ludlow." By Mr. Roberts.
ROYAL LITERATURE—4, St. Martin's-place, Trafalgar-square, at 8.30 P.M.
LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Heat in Geological Phenomena." By E. W. Brayley, F.R.S.
PHARMACEUTICAL—17, Bloomsbury-square, at 8 P.M.

THURSDAY.

ROYAL SOCIETY—Burlington House, at 8.30 P.M. 1. Contributions towards the History of the Monamines. V. Note on the action of Iodide of Methyl on Ammonia. VI. Transformation of Aniline into Benzoic Acid. By Dr. Hofmann. 2. "On the Synthesis of Leucic Acid." By Dr. Frankland. 3. A Development of the Theory of Cyclones. By F. Galton. 4. "On the Immunity enjoyed by the Stomach from being digested by its own secretion during Life." By Dr. Pavy.
ACTUARIES—Somerset House, at 8.30 P.M.
ROYAL INSTITUTION—Albemarle-street, at 3 P.M. "On Air and Water" (juvenile lectures). By Professor Frankland.

FRIDAY.

ARCHÆOLOGICAL INSTITUTE—26, Suffolk-street, Pall Mall East, at 4 P.M.
LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Non Metallic Elements." By Professor Field.
ASTRONOMICAL SOCIETY—Somerset House, at 8 P.M.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Bonar's (Rev. Dr. H.) Family Sermons. Crown 8vo., cloth, 6s.
Bremner's (W. L.) The Pilot of the Pentland Frith; and other Poems. Second edition. Fcap., sewed, 1s.
British Baptist Reporter (The). Vol. for 1862. 8vo., half bound, 4s.
Children's Magazine (The). Edited by J. F. Winks. Vol. XXV. 16mo., half bound, 2s.
Chope's (Rev. R. R.) Congregational Hymn and Tune Book. Imperial 16mo., 2s. 6d. sewed, 5s. 6d. cloth antique.
Chope's (Rev. R. R.) Hymnal. 32mo., 4d. sewed, 10d. cloth.
Christian Love and Loyalty; or, the Rebel Reclaimed. By A. L. O. E. Fcap., cloth, 2s. 6d.
Christian Pioneer (The). Edited by J. F. Winks. Vol. XVI. 12mo., half bound, 1s.
Christmas (A) at the Crosskeys: a Tale. By Kenner Deene. Post 8vo., cloth, 7s. 6d.
Coker's (C.) The Round Robin. 18mo., cloth, limp, 1s.
Confessions of a Ticket-of-leave Man. Written by Himself. Fcap., bds., 2s.
Dana's (Dr. J. D.) Manual of Geology; with Special Reference to American Geological History. 8vo., cloth, 21s.
David Elginbrod. By the Author of "Within and Without." 3 vols. Post 8vo., cloth, £1. 11s. 6d.
De Quincey's (Thomas) Works. Author's edition. Vol. XII.—Speculations, Literary and Philosophic. Crown 8vo., cloth, 4s. 6d.
Dods' (Rev. Marcus) The Prayer that Teaches to Pray. Fcap., 2s. 6d. cloth.
Entomological Annual (The) for 1863. 12mo., bds., 2s. 6d.
Farrar's (Adams) Critical History of Free Thought (Bampton Lectures for 1862). 8vo., cloth, 16s.
Garrod's (Dr. A. B.) Nature and Treatment of Gout. Second edition. Enlarged. Crown 8vo., cloth, 12s.
Gangain's (Mrs.) Lady's Assistant in Needlework, &c. Parts 1 and 2. Oblong, sewed, 1s. each.
Home Lesson Book of Spelling for Junior Classes. 12mo., sewed, 6d.
Hudson's (L. M.) The Second War of Independence in America. 8vo., cloth, 7s. 6d.
Hughes's (Rev. Thomas) Prayer and the Divine Order. Crown 8vo., cloth, 4s. 6d.
Jackson's (J. W.) Ethnology and Phrenology as an Aid to the Historian. Crown 8vo., cloth, 4s.
Little Child's Picture Magazine (The). Vol. IX. 32mo., half bound, 1s.
Littlewood's (Rev. W. E.) Essentials of English History. Fcap., cloth, 3s.
Lord Dundreary's Book of Riddles and Conundrums. 32mo., sewed, 6d.
Lytton's (Sir E. B.) Novels. Library edition. Vol. XXXIX.—Night and Morning. Vol. II. Fcap., cloth, 5s.
Maling's (Miss) Birds and Flowers; or, the Child's Guide to Gardening and Bird-keeping. Fcap., cloth, 2s. 6d.
Mary McNeill. By the Author of "Alice Lowther." 18mo., cloth, 1s.
Mistakes (The) of a Life. By Mrs. J. Hubback. 3 vols. Post 8vo., cloth, £1. 11s. 6d.
Mystery (The) of Money Explained and Illustrated. 8vo., cloth, 7s. 6d.
Naville's (Ernest) Life Eternal. Royal 16mo., cloth, 2s. 6d.
O'Dowd's (J.) The Merchant-Shipping Amendment Act: with Notes, &c. 12mo., cloth, 7s. 6d.
Owen's (J.) Choruses of the Prince of Wales Prize Cantata. Royal 8vo., sewed, 1s.
Parlour Library.—Jack Brag. By Theodore Hook. Fcap., bds., 2s.
Penny Post (The). Vol. for 1862. 8vo., cloth, 1s. 8d.
Pepperell's (Rev. W.) The Home and the School. Crown 8vo., sewed, 6d.
Poems: an Offering to Lancashire. Crown 8vo., cloth gilt, 3s. 6d.
Punch. Reissue. Vol. XXIII. 4to., bds., 7s.
——— Vols. XXII. and XXIII. in one vol. (1852). 4to., cloth gilt, 10s. 6d.
Queen's Maries (The). By G. J. Whyte Melville. Second and cheaper edition. Crown 8vo., cloth, 6s.
Reeve's (L.) The Land and Fresh-water Mollusks of the British Isles. Illustrated. 8vo., cloth, 10s. 6d.
Riego's (Mdlle.) Winter Crochet Book, 1862. Oblong, sewed, 1s.
Rose Bryant, Passages in her Life. By Emma Marshall. Fcap. cloth, 1s.
Rowing Almanac (The) and Oarsman's Companion for 1863. 32mo., cloth, 1s.
Royal Kalendar (The) for 1863. 12mo., red sheep, 5s.
Royal and Other Letters Illustrative of the Reign of Henry III. Edited by Rev. W. W. Shirley. Vol. I. (1216 to 1235). Royal 8vo., half bound, 10s.
Rutherford's (Samuel) Letters, with Memoir, &c., by Rev. A. A. Bonar. 2 vols., 8vo., cloth, 21s.
Scott's (Sir W.) Waverley Novels. Cheap Edition. Vol. 13, The Pirate. Fcap. 1s.
Scott's (Sir W.) Life. By J. G. Lockhart. New edition (10 vols.) Vols. 7 and 8. Fcap., 3s. each, cloth.
Shilling Volume Library. After Office Hours. By Edmund Yates. Fcap., sewed, 1s.
Stanley's (Rev. A. P.) The Bible: its Form and Substance. Three Lectures. 8vo., sewed, 2s. 6d.
Thomson's Seasons. Part I., Spring, with Notes, Analysis, and Parsing. By C. P. Mason. 12mo., cloth, 2s.
Wild Dayrell. A Biography of a Gentleman Exile. By J. Kemp. Second edition. Crown 8vo., cloth, 5s.
Wilson's (F. Collins) Short Poems. Fcap., cloth, 5s.

NOTICES.

THE LONDON REVIEW

OF

POLITICS, SOCIETY, LITERATURE, ART, & SCIENCE.

Price 4d. Stamped, 5d.

The London Review is published on Friday, in time for the Evening Trains and Post, and may be obtained in all parts of the country on Saturday Morning.

TERMS OF SUBSCRIPTION.

Post-free (payable in advance).

Annual	1 1 0
Half-yearly	0 10 6
Quarterly	0 5 5

A single copy sent post-free on receipt of 5 postage stamps.

Post-office Orders to be made payable at the Strand Office to J. K. Sharpe, Publisher and Manager.

The London Review may be obtained at all Railway Bookstalls, and, to order, of all Booksellers and Newsagents throughout the kingdom.

Country Newsagents who experience any difficulty in procuring Weekly Contents' Bills, Display Bills, &c., are requested to forward their Names and Addresses to the Publisher.

SCALE OF CHARGES FOR ADVERTISEMENTS.

Four Lines and under	0 3 0
Each additional Line	0 0 8
Whole Column	4 0 0

Back page, according to arrangement.

Advertisements received up to 4 p.m. on Thursday.

Communications relative to Business matters to be addressed to the Publisher. Letters on Editorial matters *only*, to the Editor.

THE LONDON REVIEW

OF POLITICS, SOCIETY, LITERATURE, ART, AND SCIENCE.

Published every Saturday. 32 pages. Price Fourpence.

Contents of No. 130, December 27, 1862:—

The Greek Election.
A Useful Receipt for Whitewash.
The Last Phase of the Yelverton Case.
The Two French Empires.
Insurance Companies.
The Battle of the Benchers.
Mince-pies.
The Coburgs at Home.
Pantomimes.
The Land-tax in Greece.
Science at the Universities.

The Past Week—(with Map).

Reviews:—
Tractatus Theologico-Politicus.
Joseph Locke.
Agriculture in Belgium.
Progress of Archæology.
Public Health in Relation to Air and Water.
The Atlas of English Church Missions.

ADVERTISEMENTS.

ROYAL ENGLISH OPERA, COVENT-GARDEN. Under the Management of Miss LOUISA PYNE and Mr. W. HARRISON, Sole Lessees.

On Monday, Jan. 5, and Friday, 9th, Howard Glover's Popular Opera, RUY BLAS. On Tuesday, 6th, and Thursday, 8th, Wallace's new and brilliantly successful Opera, LOVE'S TRIUMPH. On Wednesday, 7th, and Saturday, 10th, Balfe's Grand Opera, THE PURITAN'S DAUGHTER. Every Evening the Grand Original Zoological, Comical Christmas Pantomime, written by H. J. Byron, entitled HARLEQUIN BEAUTY AND THE BEAST; or, the Gnome Queen and the Good Fairy. The Grand Transformation Scene, Moonbeam and Sunlight; or the Descent of Morn's First Ray. Invented and painted by W. Callcott.

Notice.—A MORNING PERFORMANCE of the New Pantomime will take place on Wednesday, January 7th, and each succeeding Wednesday at Two o'clock. Carriages to be in attendance at Four. N.B.—Children under Twelve years of age Half-price to the Morning Performances, Pit excepted, price 1s. 6d.

Private Boxes, from 10s. 6d. to £4. 4s.; Orchestra Stalls, 10s.; Dress Circles, 5s.; Upper Boxes, 4s.; Amphitheatre Stalls, 3s.; Pit, 2s. 6d.; Amphitheatre, 1s. The Box-office open daily from Ten till Five. No Charge for Booking or Fees to Box-keepers. Doors open at Half-past Six, commence at Seven.

CHRISTY'S MINSTRELS.—Christmas Week.—SPECIAL PERFORMANCE. The Celebrated and Original CHRISTY'S MINSTRELS will appear at ST. JAMES'S HALL every Evening at Eight (except Christmas-day), and on Wednesday, Friday, and Saturday Afternoons at Three o'clock. Proprietor, W. P. COLLINS.—Stalls, 3s.; Area, 2s.; Gallery, 1s. Tickets at CHAPPELL & CO.'S 50, New Bond-street; and at AUSTIN'S, 28, Piccadilly.

HOSPITAL for CONSUMPTION and DISEASES of the CHEST, Brompton, S.W., supported by Voluntary Contributions.—Liberal and continuous support is required to meet the current expenses of this Charity.

PHILIP ROSE, Hon. Sec.
HENRY DOBBIN, Sec.

LONDON LIBRARY, 12, St. James's-square, London, S.W.

President.—The Earl of CLARENDON.

The following are the terms of admission to this Library, which contains 80,000 Volumes of Ancient and Modern Literature, in various Languages:—Subscription, £3 a year, or £2 a year with entrance-fee of £6; Life Membership, £26.

Fifteen Volumes are allowed to Country, and Ten to Town Members.

Reading-room open from Ten to Six. Prospectus on application.

ROBERT HARRISON, Secretary and Librarian.

THE Proprietors of a Printing Establishment in the Country, possessing a splendid Assortment of TYPE, excellent MACHINERY, worked by steam-power, are desirous of making arrangements with Companies or Firms, requiring large or small quantities of Printing, and are prepared to execute either Bookwork or Jobbing Printing in first-rate style, and at moderate prices. Estimates given for any description of work.—Address, D. W., care of the Publisher of *London Review*.

BEN RHYDDING, ILKLEY, YORKSHIRE

A WINTER AND SPRING RESIDENCE.

Physician.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.

Surgeon.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

A DELIGHTFUL ABODE TO BE LET OR SOLD, with early occupation. This property presents many advantages to persons seeking an agreeable and select place of residence. It is detached, and contains three excellent reception rooms, seven bedrooms, housekeeper's room, and domestic offices; cheerfully situate a short distance from town. Trains to and from Waterloo-bridge every hour. Omnibuses several times daily.

For further particulars apply by letter, to B. H., care of Mr. Potter, 65, Farringdon-street, E.C.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

President.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

Vice-Presidents.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L., & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

Director.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

Professors.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

THE CONSERVATIVE LAND SOCIETY, THE ELEVENTH YEAR. TRUSTEES:—VISCOUNT RANELAGH and J. C. COBBOLD, Esq., M.P.

Prospectuses explanatory of the Share, Deposit, Land and Building Departments, will be sent, free of charge, to any part of the world. No Partnership liability; and the taking of land entirely optional. Present rate of interest, payable in half-yearly warrants, five per cent. per annum on Shares (with participation in any profits above that allowance), and four per cent. per annum on Deposit Accounts—the investors not becoming members of the Society.

CHARLES LEWIS GRUNEISEN, Secretary.

Offices No. 33, Norfolk-street, Strand, London, W.C.

SEVEN PER CENT. PERPETUAL PREFERENCE STOCK of the

DEMERARA RAILWAY COMPANY,

Incorporated by Act of the Colonial Legislature, and confirmed by Her Majesty in Council.

Applications for the remaining portion of this Stock may be sent to CHARLES CAVE, Esq., Colonial Commissioner, at the Banking-house of Messrs. PRESCOTT, GROTE, CAVE, & CAVE, 62, Threadneedle-street, London.

SOUTH AUSTRALIAN BANKING COMPANY.

Incorporated by Royal Charter, 1847. Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, Robe, Kadina, and Wallaroo. Approved drafts negociated and sent for collection. Every description of Banking business conducted with Victoria, New South Wales, and the other Australian Colonies, through the Company's Agents.

London: 54, Old Broad-street, E.C.

WILLIAM PURDY, Manager.

THE MUTUAL LIFE ASSURANCE SOCIETY,

(A.D. 1834), 39, King-street, Cheapside, E.C., London.

Capital on November 1, 1862, from Premiums alone, £438,490.
Income, £75,000. Assurances, £1,700,000.
Bonuses average more than 2½ per cent. per annum on sum assured.
Profits divided yearly and begin on second premium,
Every member can attend and vote at all general meetings.
Last Annual Report and Accounts may be had.

CHARLES INGALL, Actuary.

ESTABLISHED A.D. 1844.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.

Empowered by Special Act of Parliament, 25 & 26 Vict. cap. 74.

WILLIAM HENRY DICKSON, Esq., Chancellor House, Tunbridge Wells, Chairman.

THOMAS R. DAVISON, Esq., 2, Royal Exchange-buildings, Deputy Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the members, under their own immediate superintendence and control. The profits are divided annually.

101, Cheapside, E.C. C. L. LAWSON, Sec.

ROYAL NATIONAL
LIFE-BOAT INSTITUTION.

(Incorporated by Royal Charter.)

PATRONESS.
HER MOST GRACIOUS MAJESTY THE QUEEN.

PRESIDENT.
Vice-Admiral the Duke of Northumberland, K.G., F.R.S.

CHAIRMAN.
Thomas Baring, Esq., M.P., F.R.S., *V.P.*

DEPUTY-CHAIRMAN.
Thomas Chapman, Esq., F.R.S., *V.P.*

APPEAL.

The Committee of Management have to state that, since the beginning of the year 1860, the Royal National Life-Boat Institution has incurred expenses amounting to £27,260 on various Life-boat establishments on the coasts of England, Scotland, and Ireland.

During the same period the Lifeboats of the Institution have been instrumental in rescuing the Crews of the following Vessels :—

Barque *Vermont*, of Halifax, U. S.	16	Brig *New Draper*, of Whitehaven	8
Schooner *William Keith*, of Carnarvon	2	Schooner *William*, of Liverpool	5
Brig *Flying Fish*, of Whitby	5	Lugger *Nimrod*, of Castletown	3

		Total	762

For these and other Lifeboat services the Institution has voted 2,458*l.* as rewards to the crews of its Lifeboats. It has also granted rewards amounting to 572*l.* for saving 562 shipwrecked persons, by shore-boats and other means, making a total of 1,324 persons saved from a watery grave during the last two years and a half.

The number of lives saved by the Lifeboats of the Society, and other means, since its formation, is 12,712; for which services, 82 Gold Medals, 713 Silver Medals, and 16,000*l.* in cash, have been paid in rewards. The Institution has also expended 64,300*l.* on Lifeboats, Lifeboat Transporting-carriages, and Boat-houses.

The public cannot but sympathise with the vigorous efforts now being made by this Institution, to save the lives of Ship-wrecked Crews. Their help was never more needed than at the present time, when, through the extraordinary exertions the Society has made within the past few years, it has now One Hundred and Twenty-three Lifeboats under its management, for the maintenance of which, in a state of thorough efficiency, a large permanent annual income is absolutely needed, if its humane mission is to be perpetuated.

The Committee gratefully acknowledge the following Contributions :—

	£.	s.	d.
Her Majesty the Queen (an.)	50	0	0

DR. DE JONGH'S
(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for
CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,
Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES :
ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

BEDSTEADS, BATHS, AND LAMPS.—WILLIAM S. BURTON has SIX LARGE SHOW-ROOMS devoted exclusively to the SEPARATE DISPLAY of Lamps, Baths, and Metallic Bedsteads. The Stock of each is at once the largest, newest, and most varied ever submitted to the public, and marked at prices proportionate with those that have tended to make his establishment the most distinguished in this country.

Bedsteads, from	12s. 6d.	to £20	0s. each.
Shower Baths, from	8s. 0d.	to £6	0s. each.
Lamps (Moderateur), from	6s. 0d.	to £7	7s. each.

(All other kinds at the same rate.)

Pure Colza Oil.....4s. 9d. per gallon.

FENDERS, STOVES, FIRE-IRONS, and CHIMNEY-PIECES.—Buyers of the above are requested, before finally deciding, to visit WILLIAM S. BURTON'S SHOW ROOMS. They contain such an assortment of Fenders, Stoves, Ranges, Chimney-pieces, Fire-irons, and General Ironmongery as cannot be approached elsewhere, either for variety, novelty, beauty of design, or exquisiteness of workmanship. Bright stoves, with ormulu ornaments, 3*l.* 15s. to 33*l.* 10s.; Bronzed Fenders, with standards, 7s. to 5*l.* 12s.; Steel Fenders, 3*l.* 3s. to 11*l.*; ditto, with rich ormolu ornaments, from 3*l.* 3s. to 18*l.*; Chimney-pieces, from 1*l.* 8s. to 100*l.*; Fire-irons, from 2s. 3d. the set to 4*l.* 4s.
The BURTON and all other PATENT STOVES, with radiating hearth-plates.

GASELIERS IN GLASS OR METAL.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from the various manufacturers in metal and glass all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are ON SHOW over his TWENTY LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom—viz., from 12s. 6d. (two-light) to £22.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had Gratis, and free by post. It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro-Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot Water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gaseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bedroom Cabinet Furniture, &c., with Lists of Prices and Plans of the Twenty large Showrooms, at 39, Oxford-street, W.; 1, 1A, 2, 3, and 4, Newman-street; 4, 5, and 6, Perry's-place; and 1, Newman's-mews, London.

GEOLOGY and MINERALOGY.—ELEMENTARY COLLECTION, to facilitate the study of this interesting Science, can be had, from Two Guineas to One Hundred, also Single Specimens, of J. TENNANT, 149, Strand, London, W.C. Mr. Tennant gives Practical Instruction in Mineralogy and Geology.

HOBBS & CO., 76, Cheapside, London.

THE LONDON LOCK-MAKERS IN THE INTERNATIONAL EXHIBITION.

MESSRS. HOBBS & CO.

Beg to inform Bankers and the Commercial World that their PATENT LOCK in the Exhibition was on challenge from the 1st of May to the 1st of November, for 300 Guineas to any person who could pick it. This was THE ONLY LOCK EXHIBITED that invited and dared the ingenuity of the Mechanician to fraudulently open it. Seven days were allowed to examine the interior, and thirty days to operate on the security of the works; yet, during the 158 days the Exhibition was actually open, not one single application was made! In 1851 this Lock was tried for 123 days without the slightest approach towards success.

MESSRS. HOBBS & CO. are Prize Medallists from the Exhibitions of America, Austria, and France, and London in 1851 and 1862.

76, CHEAPSIDE, LONDON.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,
METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

PUBLIC OPINION. A First-class Weekly Family Newspaper. Published every Saturday, 32 pages, price 2d.

PUBLIC OPINION is indispensable to Politicians, Editors, and Authors, the Nobility, Clergy, and Gentry, Merchants and Manufacturers, and all who take an interest in Political, Social, and commercial Progress throughout the World. It gives the Opinions of the Press at Home and Abroad, on all the Important Topics of the Week; together with a Complete Summary of Current Events, and a Selection of Articles of a literary and popular character: it is, in short, what its title implies—The Mirror of Public Opinion on Politics, Society, Commerce, Literature, and Art.

To English Residents abroad "Public Opinion" is invaluable.

CONTENTS:—JANUARY 3rd, 1863.

HOME: The Past Year—The Lucknow Prize Money—Promotion in the Navy—Punishment of Criminals—The Consumption of Gin—Probable Continuance of Lancashire Distress. AMERICA: The Capture of Fredericksburg—Defeat of the Federals—Opinions of the Press—The Confederates—The Confederate Generals. FRANCE: M. Fould's Report. ITALY: The Papal Reforms. GERMANY: The Dispute between Austria and Prussia—The Convocation of the Prussian Chambers. GREECE: The Great Powers and the Ionian Islands. SPAIN: Justice in Spain: a Romance of Real Life. Digest of the Week's News. Literary Notices: The Prophecy. Correspondence: The Colenso Controversy—Sunday Excursion Trains—English (Im)morality. Music and the Drama: The Christmas Pantomimes. MISCELLANEOUS: Mince Pies—Our Criminals—The Royal Wedding—Mr. Roebuck and the Government—Indian International Telegraph—Aid in Shipwreck—Sightless—The Late Archbishop of Paris—Notabilia—Varieties, &c. &c.

PUBLIC OPINION may be obtained at all the Railway Book-stalls, and of all Booksellers and News-agents throughout the kingdoms.

OFFICE—1, SAVOY-STREET, STRAND.

"A book which should be in the possession of all who keep horses."

London: WM. H. ALLEN & Co., 13, Waterloo-place, S.W.

POEMS: an Offering to Lancashire. By CHRISTINA ROSSETTI, GEORGE MACDONALD, W. ALLINGHAM, C. B. CAYLEY, FREDERICK LOCKER, EMILY TAYLOR, R. MONCKTON MILNES, "V.," MARY HOWITT, "G.E.M." W. B. SCOTT, BESSIE RAYNOR PARKES, ISA CRAIG.

Printed and Published for the Art Exhibition for the Relief of Distress in the Cotton Districts.

PRICE 3s. 6d.

"This is a right welcome Christmas present. Fifteen good and true men and women have given their best thoughts, Miss Faithful and her young women their work and care, and Messrs. Richard Herring & Co. the paper, to make an offering to Lancashire. It is a beautiful and fragrant gift, the latest manifestation of a spirit of life and love, which will yet redeem us from many a saddening evil in our social state. We heartily recommend this volume to our readers."—*Daily News, Dec.* 25th, 1862.

"To instance all the noteworthy poems of the volume, would be to transcribe the table of contents. It is a gift-book of the highest excellence, and we hope to hear that the first edition is exhausted between Christmas and New Year's Day."—*The Star, Dec.* 26th, 1862.

VICTORIA REGIA. A Volume of Original Contributions in Poetry and Prose. Edited by ADELAIDE A. PROCTER. Dedicated, by special permission, to Her most Gracious Majesty the Queen. Second Edition. Handsomely bound in cloth, Gilt edges, 21s. In Morocco, Gilt edges, 31s. 6d.

"A number of our best authors have been interested in the experiment, and have given their contributions, while the Queen has accepted the dedication of the work. Thus, from the social, as well as from a literary point of view, the book is very attractive."—*The Times.*

FRIENDLESS AND HELPLESS. By ELLEN BARLEE, Authoress of "Our Homeless Poor." Crown 8vo. Cloth, 3s. 6d. [*Next Week.*

JANET, ONE OF MANY. A Story in Verse. By Mrs. ELLIS, Authoress of "Women of England," &c., &c. Small 4to. Cloth, 4s.

"As a poet, Mrs. Ellis's hand has not 'lost its cunning;' rather has it acquired a more chastened skill, by which a ripe poetic imagination, an observant experience, and a deep and holy moral earnestness are blended into a poem which only one or two of our living female poets could have produced, and which no one can read without having all that is best and purest in feeling appealed to. Where, save in Hood's 'Bridge of Sighs,' have the sin and woe of the fallen been so holily, so pityingly sung?"—*Patriot*, October 2, 1862.

EMILY FAITHFUL,
Printer and Publisher in ordinary to Her Majesty,
VICTORIA PRESS OFFICES:
83A, Farringdon-street, E.C.; Great Coram-street, W.C.

18mo., Cloth, price 1s., Free by Post,

"Good words are worth much and cost little."—HERBERT.

Sixpence Monthly, Profusely Illustrated with Woodcuts from Designs by Millais, Holman Hunt, Tenniel, Keene, Walker, Pettie, and others.

GOOD WORDS.—A Magazine for all the Week. Edited by NORMAN MACLEOD, D.D., one of her Majesty's Chaplains.

Arrangements for 1863.

The experiment has been tried of establishing a Magazine which should reflect the every-day life of a good man, with its times of religious thought and devotional feeling, naturally passing into others of healthy recreation, busy work, intellectual study, poetic joy, or sunny laughter,—and its success has exceeded even the sanguine hopes of its projectors. GOOD WORDS was commenced three years ago, and has already reached a monthly circulation of 70,000 copies.

The Publishers have now much pleasure in announcing that whatever has hitherto attracted public favour to their enterprise will be continued and extended; and that, in addition to the regular Magazine Papers, there will next year be FOUR IMPORTANT SERIAL WORKS by Dr. GUTHRIE, ANTHONY TROLLOPE, Dr. CAIRD, and Dr. MACLEOD, going on together, and completed within the volume.

CONTENTS OF THE JANUARY PART.

1. The Monks and the Heathen. By the Rev. Charles Kingsley. Illustrated by John Pettie.
2. The Parables, read in the Light of the Present Day:—Chapter I. The Parable of the Leaven. By Thomas Guthrie, D.D. Illustrated by Millais.
3. Charities in the Black Forest. By William Fleming Stevenson.
4. The Widow's Mite: a Christmas Tale. By Anthony Trollope.
5. The Cure of Over-Anxiety. By the Editor.
6. A Pastoral. By Dora Greenwell. Illustrated by J. D. Watson.
7. A Visit to Montenegro. By Laurence Oliphant.
8. Concerning Things which Cannot Go On. By A. K. H. B.

MR. ANTHONY TROLLOPE'S NEW WORK.

In Two Vols. demy 8vo., price 22s.

ORLEY FARM. By ANTHONY TROLLOPE, With Forty Illustrations by J. E. Millais, A.R.A.

"When a voluminous author writes a work of sustained power, the reader, fresh from the perusal of it, is apt to say, 'This is his best.' One is strongly tempted to pronounce such an opinion on the present work, seeing that in passages of it there is a tragic force, or something like it, which is rare in Mr. Trollope's writings. . . . He has attempted, and he has achieved, something higher in 'Orley Farm' than in any of his works. . . . The illustrations, too, of Mr. Millais add considerably to the charms of the volumes."—*Times.*

CHAPMAN & HALL, 193, Piccadilly.

PUBLISHED BY ROBERT HARDWICKE, 192, PICCADILLY.

The "REGISTER" is published Monthly, Price Sixpence. It gives a full descriptive account of the Contents of every important New Book, describes every New Discovery in the Sciences, and records every fresh achievement in the Arts. It is the ONLY MONTHLY JOURNAL which keeps its readers fully acquainted with all that is being done in the Literary World, the Scientific World, and the Art World.

The August Number of the "REGISTER" commenced a NEW SERIES, beautifully printed from an entirely new fount of "Elzevir" type.

THE JANUARY NUMBER CONTAINS:—

1. LITERARY INTELLIGENCE.
2. BISHOP COLENSO ON THE PENTATEUCH.
3. SYDNEY LADY MORGAN.
4. MEDIÆVAL VERSE.
5. JOSEPH MAZZINI. BY WILLIAM WHITE.
6. SOME SANSKRIT FABLES.
7. ON ORGANIZATION IN DAILY LIFE.
8. OUR EARLY FEMALE NOVELISTS.
9. LOUIS BLANC on MARIE ANTOINETTE AND THE AFFAIR OF THE DIAMOND NECKLACE. BY P. F. ANDRE.
10. ALLEGED FACTS OF SPIRITUALISM. BY WILLIAM WHITE.
11. PALÆOGRAPHY. BY GUSTAVE MASSON.
12. SCIENTIFIC INTELLIGENCE. BY EDWARD SONSTADT.
13. A NEW WRITER ON ART.
14. MODERN FRENCH PAINTERS. BY GUSTAVE MASSON.
15. GEORGE CRUIKSHANK. BY F. G. STEPHENS.
16. ART NOTES OF THE MONTH. BY W. M. ROSETTI.

PRICE SIXPENCE.

CONTENTS OF THE FIRST FIVE NUMBERS OF THE NEW SERIES OF THE "REGISTER."

No. I. (AUGUST, 1862), CONTAINS:—

Literary Intelligence.
Working Men's Colleges.
Pocket Money Authors. By John Hollingshead.
Jerome Napoleon Bonaparte, Prince of Wales. By S. L.
Is there a Moral Element in Political Economy?
Female Life in Prison. By Thos. Shorter.
The Third Volume of Mr. Carlyle's Frederick. By S. L.
The Dwellings of the Poor. By W. Moy Thomas.
Thomas Bewick.
Kangaroo Land. By Horace Moule.
Montenegro, Servia, and the Slavonians of Turkey. By P. F. André.
A Bohemian Nobleman's Adventures in Turkey Three Hundred Years Ago. By John Stebbing.
Felix Mendelssohn Bartholdy. By E. H. Jones.
River-Names.
Our Fijian Friends. By J. A. Chessar.
Darwin on Orchids. By W. B. Tegetmeir.
Vestiges of a Forgotten People. By E. P.
Scientific Intelligence. By Edward Sonstadt.

No. II. (SEPTEMBER, 1862), CONTAINS:—

Literary Intelligence.
A Book Compiled by Her Majesty.
The Financial Prospects of the International Exhibition. By John Hollingshead.
The Moral Element in Civilization.
Authors and Gentlemen.
The Influence of Novelists on English Periodical Literature.
Heinrich Zschokke. By Thomas Shorter.
The Count de Gasparin on the Civil War in America. By W. Moy Thomas.
A Book about Anagrams.
Life at Baltimore a Hundred Years Ago.
Thomas Hartwell Horne.
Miss Hume's Poems.
Two Years of Italian History.
The Book of Babylonian Agriculture.
Isaac Pitman and his Work. By William White.
Mediæval Literature as a Branch of School and Popular Education.
The Poems of Arthur Hugh Clough.
Hawaii.
Nothing Lost.
A New Use for the Ocean.
Metamorphoses of Heat.
The Relations between Terrestrial Magnetism and the Sun.
Scientific Intelligence.
The Musée Napoleon Trois. By W. M. Rosetti.

No. III. (OCTOBER, 1862), CONTAINS:—

Literary Intelligence.
American Treatment of English Authors. By Percy Greg.
The Publishers' Bogie. By John Hollingshead.
Routine Journalism. By P. F. André.
An Author in a Passion.
Children's Books.
"Declined with Thanks!" By S. L.
A New Light on the Story of Richard Savage. By W. Moy Thomas.
Her Majesty's Selections from Zschokke.
Confucius and the Confucian Analects. By P. F. André.
A Frenchman who Understands the English People.
How the Reporters got into Parliament. By William White.
The Autobiography of Charles the Fifth.
The Utilization of Waste Substances.
Captain Gronow's Reminiscences. By W. H. Cooke.
Cattle Food Quackery. By W. B. Tegetmeier.
Salt. By Edward Sonstadt.
A Further View of the London Bread Question. By Thomas Hood.
Sculpture in the International Exhibition.
Pictures in the International Exhibition.
Art Notes of the Month. By W. M. Rosetti.
Scientific Intelligence.

No. IV. (NOVEMBER, 1862), CONTAINS:—

Literary Intelligence.
Books of the Month.
American Publishing Honesty. By Thomas Hood.
Life in Secessia. By W. Moy Thomas.
Saint Martin, the Philosopher. By Gustave Masson.
The Hero of the High Rope. By John Hollingshead.
Reporting the Debates. By Wm. White.
Count Cavour. By A. R. Bennet.
Some Early English Poems. By Horace Moule.
Mohammed and the Koran. By P. F. André.
Nicolas Fouquet. By Gustave Masson.
Prehistoric Man. By Wm. White.
The Philosophers at Cambridge. By Edward Sonstadt.
Scientific Intelligence.
Mr. Leech's Gallery.
Applied Art at the International Exhibition.
Art Notes of the Month. By W. M. Rossetti.

No. V. DECEMBER, 1862), CONTAINS:—

Literary Intelligence.
Books of the Month.
Post-Office Shortcomings. By John Hollingshead.
The "Religio Medici" of Sir Thomas Browne.
Christopher North.
The Correspondence between England and Spain in the Reign of Henry the Seventh. By A. R. B.
London Music-Halls. By John Hollingshead.
Novels among the Ancients. By Gustave Masson.
Greece under Otho the First and Last. By P. F. André.
Lucrezia Borgia.
National Debts and the Question of Paying them.
British Columbia and Vancouver Island.
Portland Breakwater.
The Figure of the Earth. By Francis H. Baker.
Gleanings from Cambridge.
Wood-Engraving at the International Exhibition. By Thomas Hood.
The Loan Collection at South Kensington. By F. G. Stephens.
Art Notes of the Month. By W. M. Rossetti.

THE ABOVE ARE ALWAYS OBTAINABLE. PRICE SIXPENCE PER NUMBER.

LONDON: WALTER WELDON & CO., 3, FALCON COURT, FLEET STREET,

AND ALL BOOKSELLERS IN TOWN AND COUNTRY.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, JANUARY 3, 1863.

Contemporary Science.
Max Müller on Languages.
Correspondence.
List of New Publications for the Week.
List of Meetings.

DEVONSHIRE CREAM.

As we are told with such pertinacity of repetition that a Conservative reaction has set in, it is not unnatural that we should be somewhat curious to know what the said "reaction" is about, and what it proposes to do with us. We have examined therefore, with much interest, the records of a banquet at which was gathered together the *crême de la crême* of Devonshire Toryism. Three wise men of the West, Northcote, Palk, and Kekewich, on that occasion revealed as much as they thought fit of the mysteries with which the future is big. We had always understood that the peculiar characteristic of the Conservative reaction was the singular harmony and unanimity of its opinions. In this respect no doubt Conservatism has some advantage over Liberalism. It is not very difficult for any number of people to agree to do nothing, and a party prudent in negation ought to find no embarrassments in its nonentity. The real difficulties arise when it is necessary or desirable to do something, for then it is by no means equally easy to secure the concurrence of many minds. We are therefore surprised to find that the Devonshire pundits seemed so little in one story. Of course, they all agreed as to the magnitude, virtue, grandeur of the great Conservative party, and the terrible reality of the Conservative reaction. But what the great Conservative party was going to do, or when the great Conservative reaction was about to act, was a point which did not seem by any means settled. Nothing is more amusing than the diverse views of their situation taken by the different speakers, according to their various temperaments. They all agree that the Conservative party is the greatest, the wisest, and the best party that ever existed. Why then are the wise and good not directing the destinies of the nation? This is a troublesome and impertinent question which will intrude itself upon inquiring minds even in the remotest corners of Devonshire. Now each of our three political luminaries has a separate and completely satisfactory theory on this subject, none of which three theories, however, by the way, square one with the other. Sir L. Palk, who seems to be a specimen of the real old crusted Tory bin, is compelled very much against the grain to admit the melancholy fact, but growls at it in the real old fashion. The great Conservative party, quoth Sir Lawrence, "permitted a Government without a majority in the House of Commons, and without the confidence of the country at large, to meddle with the finances of the country and to pass laws of questionable utility." But why, we should like to know, does the great Conservative party so far neglect its duty as to permit the Liberal Government to do anything so highly improper? The Palkian theory of this strange anomaly is at once amusing and instructive. He says, "They did this because they felt that the time had not come when the Conservative party could rise from that mass of obloquy which had been showered upon it by a venal press—a press supported by the Government which they wrote into power." What, the great Conservative reaction unable yet to rise from obloquy? Heartbreaking reflection! And then the cause too. A venal press has done it all! We cannot help thinking Sir Lawrence is a little hard upon the virtuous section of the press which devotes its disinterested services to the Conservative reaction. How comes it that the noble Conservative press has not been able to raise the great Conservative party from the obloquy which has been showered upon it by the venality of the Liberal press? How is it that the gratuitous and brilliant efforts of Tory journalism have not yet written Sir Lawrence and his friends into power?

Kekewich of the euphonious name — we wonder whether he is on sufficiently good terms with his Lord Lieutenant to obtain leave to change it — regards this gloomy topic from an easier point of view. His prospects of the future are not sanguine, it is true. "He had last year said, it was then impossible to fight a battle. Perhaps the next session might be the same. He thought there were many reasons to prevent its being a stormy session. He did not say there would not be some smashing and perhaps some growling." Could he possibly be referring to Sir L. Palk? "Very likely there might be, and there might be some skirmishing." Nevertheless Kekewich thinks it will all come to nothing. His reasons are somewhat different from the Palkian hypothesis. He does not say anything about a venal press; but he thinks the Queen ought not to be disturbed, the Prince of Wales is going to be married, and he ought to have at least a year's honeymoon; then the state of things in America makes it undesirable to disturb the Government, especially as Mr. Kekewich agrees that Lord Palmerston has done quite right not to interfere—wherein he seems widely to differ from the sagacious Pakington—and, lastly, the distress in Lancashire makes it expedient that the advent of the Conservative reaction should be postponed for another twelvemonth at least. Though why, from the Kekewichian point of view, should the inauguration of the great Conservative party in power aggravate the sorrows of the Queen, cloud the honeymoon of the Prince of Wales, entangle our relations with America, and add a pang to the Lancashire cotton famine?—We should have thought that, "*Disraeli duce et auspice Disraeli*," the wilderness would have blossomed like the rose, and under the influence of a triumphant Conservative party, every heart would have been filled with joy and every tongue with praise.

Next came the arithmetical and flaxen head of Northcote. He is not altogether disposed so patiently as Kekewich to post-

Digitized by Google

pone the period at which Northcote shall walk across the floor of the House of Commons, and take his seat on the right instead of the left hand of the Speaker's chair. His theory is that the great Conservative party are not in power because they get their work done for them by other people. He is too cautious to admit that Palmerston is as good a Conservative as Northcote, lest the clotted Devonshire cream should say, "Well then, had you not better leave him alone?" This would never do, so Sir Stafford gently intimates that, though the cat's paw may be a convenient test, yet, after all, the monkey is really the superior animal, and that it would be better if he were allowed to pull out his own chestnuts. The Northcotian doctrine is not that the great Conservative party is unable to rise above the obloquy of a venal press, but on the contrary, that it has for the last twenty years accomplished everything good and great that has happened. Now Sir Stafford has written a book, and a very good book, on the yearly financial history of the country. He has drawn a picture of a national prosperity increasing in a ratio perfectly miraculous. But has the author failed to remark that the growth of the financial prosperity of England is neither more nor less than a continuous march of Liberal triumphs and Conservative defeats? The policy of free-trade was inaugurated by the man whom the great Conservative party designated as Iscariot, and the political organization, of which Lord Derby and Mr. Disraeli are the chief, was formed on the basis of opposition to the measure which it is now admitted has been the salvation of the country. The great Conservative party, which overthrew Sir Robert Peel, was formed for the express purpose of resisting the repeal of the corn laws. In this object they were happily defeated. They resisted the repeal of the navigation laws—again they were defeated. They resisted the equalization of the sugar duties, but always with the same success. They fought in vain against the succession duty with the same result. They proposed financial schemes of their own which were contemptuously neglected. Their last campaign was against the commercial treaty with France, and they were happily worsted in their opposition to a measure which has given us the only profitable compensation for the diminution of our American trade. Such have been the feats and such the glory of the great Conservative party. We observe that in his enumeration of Conservative triumphs, Sir Stafford Northcote carefully avoids all allusion to the most striking incident of last session, in which his party did make a desperate and futile attempt to supplant the ministers whom he boasts that they control. It was thought more discreet to keep out of the view of the Devonshire squires the celebrated speech of Mr. Disraeli on "bloated armaments," and the indictment from which Mr. Walpole ran away.

On the whole we are disposed to believe in the Kekewichian prophecy: "there will be some smashing and perhaps some growling;" there may be some skirmishing, but the great Conservative party, however big they may talk, don't mean fighting. They know that the country does not trust the men whom they would have to place at the head of affairs, and what is still more to the purpose, do not trust them themselves. The great Conservative party are shrewd enough to suspect that it is a safer occupation to talk nonsense in Devonshire than to get into scrapes in Downing Street.

NEW YEAR AT THE TUILERIES.

CONTRARY to custom the Emperor of the French has received the new year in silence. The curtain falls upon the drama of 1862, and the Imperial player has not been summoned to the foot-lights; nor has he chosen to court the criticisms of a dissatisfied and disappointed audience. At the beginning of the year which has just closed France occupied in Europe a splendid diplomatic position. Her dignified voice had just been heard rising above the storm which threatened the peace and friendship of England and America. The opinion of the cabinet of the Tuileries had been received with a courtesy and a respect that showed clearly the influence their sovereign possessed in the council-chambers of the world. Nor on the Continent was the part played by the French Empire inferior to that which an ambitious prince might have conceived as the summit of his wishes. The Italians, expectant and deferential, turned towards their great ally, and seemed half inclined to take permanent shelter under the shadow of his wings. It appeared as if the Genius of Italy had seated itself pensively at the footstool of the Napoleons. France, like an armed Minerva, stood forth with pride as the champion of right and justice, as the moderator and charioteer of progress; and, by universal consent, as the first figure in the royal amphitheatre of nations. The year that expired last week has seen a change in all this. The French Empire still, of course, holds a foremost place; but its hegemony is departing or departed. A premature movement in favour of intervention in America has exposed French diplomacy to a mortifying repulse. The French consul at New Orleans, like the rest of the world in that city, endures without much redress the insults and threats of a martinet attorney. How little America hopes or fears from the French flag may be seen from the semi-indifference with which the rumours of French intervention are received. It is upon England that New York and Boston fix their attention. How long will Lancashire bear the blockade? When does the British Cabinet propose to interfere? These are the questions that chiefly agitate the newspaper politicians of the capitals of the New World; and France is less canvassed, less feared, less threatened, less defied. If the influence of France is lessened on the other side of the Atlantic, what is to be said of what has happened to her beyond the Alps? During the last year she has succeeded by her reactionary and short-sighted policy in obliterating the memory of the campaign of Lombardy, and in exhausting the gratitude of Italy. The Italians, at last, are tired of waiting till it pleases the French Emperor to fling them Rome. With dignified wisdom they have signified to him that the time has come when negotiations between France and Italy on the subject of Rome had better cease. This is the best thing that an Italian Government has done since Cavour's death, and smacks not a little of the policy of Cavour himself. To France it is a wholesome and a well-merited rebuke. While Italy has shown symptoms of emancipating herself from the incubus of French patronage, Greece, by way of contrast, has paid a splendid compliment to the English people and to English justice. No more bitter lesson could have been inflicted on French vanity than this anxiety of the Greek nation to be allied to the reigning family upon the English throne. So far as French dignity is concerned, the Mexican expedition has proved equally a failure. Of the ultimate success of the French arms no doubt is entertained by those who are best acquainted with the Mexican character. But that success has now been delayed too long for the prestige of the French Emperor; and as yet the only result of the armed intervention has been to awaken the dissatisfaction of the taxpayers of France and the jealousy of Spain.

A brief retrospect of the past year has probably convinced the Emperor of his mistakes. They are most of them the errors of a student and a dreamer, whose projects are unreal or shadowy in the extreme. The diplomacy of the French Emperor is injured by the theoretical and philosophic turn of his own mind. The French Empire, as a destructive force and as a solvent, is all-powerful in Europe. It represents the principles of nationality, of revolution, and of free thought. As the leader and armed champion of these ideas Napoleon III. is more influential on the Continent than Englishmen can well bring themselves to allow. But the constructive power of the French empire is less than its destructive. When it comes to grouping nationalities together, to settling frontiers, to arranging compromises between the past and the present, France loses half her power. This is the weak side of French policy. Gunpowder is an excellent thing for blasting a rock, it is not of much use for building a house. The French are too apt to forget that it is before the ideas France propagates, not before the intellectual genius of France herself, that Europe stands confounded. Her mission is to destroy the past; it is mere vanity which leads her to suppose that mankind is willing to accept her political map of the future. The mania is common to all Frenchmen. There is not a statesman or politician of any notoriety, from M. Emile de Girardin upwards, who has not a plan for the re-construction of the globe upon theoretical principles of his own. Napoleon III. shares the universal delusion of his subjects. He is not content with freeing Italy from Austria, he must needs force an Utopian constitution, and a ready-made federation on the emancipated peninsula. He attacks Mexico under a pretext of necessity and national honour; but in his own heart he has already settled what is to be done with Mexico, and is prepared to make her fit into some wider arrangement—which he has upon his cabinet-table—for disposing of the

Digitized by Google

destinies of Central and South America. He proposes to mediate between the North and the South. It may be that the pressure of the blockade is becoming sensibly felt by French commerce. It is far more probable that the Emperor's true object is to realize some scheme which he has in the background, and of which the separation of the Union forms an essential part. This passion for reorganizing and rearranging is natural to a monarch of reserved and reflective habits, and of almost uncontrolled authority. But it is not the less likely to bring the sovereign who indulges it into difficulty. The year 1862 will remain as a signal instance of the truth that the policy of a great country like France should not be founded upon the obscure and visionary theories even of the most ingenious Imperial thinker.

Napoleon I. used to say that he "had a horror of idealogues." Napoleon III. is an idealogue *par excellence*, Like Plato, he might have composed a scheme of an ideal commonwealth, only that, unlike Plato, he would have insisted on carrying it out as an experiment in Italy or in Greece, or in Central America, or in the Danubian Principalities. It is a misfortune that the Gordian knots of the nineteenth century should have to be cut by a dreamer and a speculator who, when he has cut them, insists upon replacing them with Gordian knots of his own. If Austria had held Italy, we should have had at last a melancholy insurrection, an Hungarian and Venetian war, perhaps a revolution at Vienna; after which Italy would have been free, and Italian affairs would have fallen into a natural groove. As it is, we have had a Franco-Italian campaign planned and executed by a visionary and idealist Emperor, who has spent the time ever since Magenta and Solferino in trying to cut down Italy to suit a preconceived fantasy of his own. A matter-of-fact soldier would have bombarded Vera Cruz and perhaps overrun Mexico; but Mexico would neither have been by this time a French dependency or a reformed and chastened nation. The French Emperor, instead of this, approaches the Mexicans with loud professions of impartiality, with a sentimental intrigue in favour of Almonte and the Spanish clergy in one hand, and the Archduke Maximilian and an ideal constitution carefully concealed in the other. A practical and worldly-minded diplomatist would either have interfered to break the Gulf blockade, or have held his peace altogether. Napoleon III., who has some Utopian view or other in his head, interferes to no purpose in order to gratify some theory, and lets the world know that his anxiety to do so has been of no avail. It is not true to say that the Emperor of the French is mystery incarnate; he is as mysterious, and no more mysterious, than a reserved and taciturn bookworm is mysterious. Nobody can predict, it is said, what he will do; nobody, it is true, can guess at the particular project which may have seized upon his imagination. But that he has projects in plenty is certain; and it is equally certain that he never acts except upon a project. Nor is it to be doubted but that his projects are ingenious, and that upon paper they seem feasible enough. Unfortunately, in action, they are almost useless; and the sovereign who, but for this besetting sin of theorizing, might be of much service to civilization, reduces himself thereby to a mere puppet in the hands of superstition and reaction.

If Napoleon III. desires to reap the admiration of a future generation, he will lose no time in laying aside the temporizing character of a European Whig, which he has been tempted latterly to assume. We do not wish to see him turn into a revolutionary firebrand; but there is a long interval between a firebrand and a consistent Liberal. The Emperor has been carrying on long enough an intellectual flirtation with philosophers and schemers and reactionists. It is not his mission to bridge over the gulf that separates the old and the new state of things. It is not his mission to reconcile Catholicism and revolution, Italy and the Papacy. Such an Imperial programme is worthy only of a Cagliostro, who has nothing but nostrums and philtres to run the diseases of the world. The celebrated Tory-Radical coalition proposed by Mr. Disraeli would be less preposterous than this notion of a Catholic happy family, in which all the patriots were to be moderate and all the Popes virtuous. The Emperor Napoleon is not, nor can he ever convert himself into a Lamennais. He is not a Catholic in sentiment or in conviction. It is folly for him to ape the character for the purpose of carrying out a crotchety and chimerical idea. Let him be content to initiate great movements without assuming to himself the right to direct their course or to bridle their freedom. He cannot guide the world; he cannot remake it. He has the power—and it is a power which the most ambitious might envy—of leading a crusade against abuses. If he is wise, he will cease to try to impose his own conditions on the progress he sets in motion. He will drop the sentiment, the theories, the Catholic clergy, the sage Ultramontanism, which hamper him and prevent him from being a great actor on the European stage. Let him put off the prophet of the cave and put on the character of the chief of a civilized and liberal nation. Let him put off the student of Ham and remember only that he is Emperor of France. It is yet in his power, by a new and Liberal policy, to recover the ground that he has lost in 1862, and to raise the French empire in 1863 to the niche in European estimation that is open for it to fill.

AMOUNT AND COST OF CRIME IN ENGLAND AND WALES.

SO much attention has of late been given to the subject of crime and criminals, that it cannot fail to be interesting to our readers if we endeavour to lay before them as much as is known or can be calculated as to the number of malefactors existing in these islands, the quantity of crime annually committed, and the expense inflicted on the country in supporting it, punishing and providing against it. The yearly volume of "Judicial Statistics" issued from the Home Office, which is admirably compiled and analysed, will furnish us with most of the particulars we require. The following figures relate only to England and Wales :—

I. As to the *amount of crime*.—This is, of course, a very different thing, both from the number of offences committed and the number of offenders punished. Thousands of crimes are annually committed, especially those of a minor character, which are never detected or published, and thousands of criminals are charged to whom conviction cannot be brought home. For example, we find for 1861 50,809 crimes recorded, on account of which only 27,174 persons were apprehended. Of these only 16,764 were committed for trial, and only 13,879 convicted. Of the more serious crimes, or indictable offences, such as are tried by juries at sessions and assizes, the number last year was, as we have seen, 50,809. Of minor offences, ranging from vagrancy and drunkenness up to theft, and disposed of summarily before magistrates, there were 394,717 charged, which resulted in the conviction of 263,500 persons. On the whole, therefore, it appears that nearly 500,000 offences, large or small, come annually under the cognizance of the police, and that nearly 300,000 persons are punished for them.

II. *The Numbers of the Criminal Classes.*—Great pains have of late been taken by the authorities to ascertain and keep an accurate record of that portion of the population which is known to live by crime or vagrancy, which last nearly always implies a course of petty pilfering, or of mendicancy approaching very nearly to the same character. Nearly all these classes are pretty well known to the police in their respective districts, and the returns now presented only include those whose trade is depredation, omitting those who, though they may have been once convicted, are now believed to be pursuing a course of honest industry. The list is as follows, in round numbers :—

Known thieves and depredators	30,000
Receivers of stolen goods	3,800
Suspected persons	34,000
Vagrants and tramps	23,000
	90,800

To these we must add the number of criminals actually in prison, viz.—

In local prisons	15,601
In convict prisons	7,123
In reformatories	3,199
	25,923

Making a gross total of 116,723, whose business and habit it is to prey upon society in one form or another.

III. *Expense of Crime to the Country.*—It must be allowed that the above numbers constitute a very considerable and a very formidable army—one nearly as large, in fact, as Her Majesty's regular troops. Let us see, now, what sort of a force we keep on foot for watching, defeating,

Digitized by Google

and punishing this crowd of malefactors. It amounts to about one-fifth of the criminals. The total is :—

Police and constabulary	21,413
Establishment in local prisons.....	2,334
Establishment in convict prisons	1,182
	24,929

That is to say, we have 25,000 guardians of the community to deal with 120,000 enemies of it—a proportion which, well handled, ought surely to be adequate.

Thus far, we are dealing with ascertained results, to which, no doubt, in order to get at the complete truth, a large addition would have to be made, but containing within them no conjectural element. They are *inadequate* assuredly, but not incorrect. We may go a few steps further in certainty, but only a few. The recorded cost of our repressive and punitive establishments is as follows :—

Police and constabulary	£1,579,222
Outlay in local prisons.....	542,306
Outlay in convict prisons	253,731
Cost of convict establishments abroad ...	171,861
	£2,547,120

Against this sum we ought, perhaps, to set the estimated value of the prisoners' earnings, though it is so mere an estimate that we confess we do this with much misgiving. These earnings are said to be:—

In local prisons	£35,300
Convict prisons at home	111,000
Ditto Bermuda and Gibraltar (?)	90,000
	£236,300

We have not included in the cost of criminals to the country either the outlay on reformatories, as to which we have no return, or the proportion of the salaries of judges, &c., which we cannot accurately apportion. But, on the whole, we cannot state the cost of *convicted* offenders to England and Wales at a lower figure than two millions and a half annually.

But how are we to estimate the expense of keeping the *known but unconvicted* criminals? It is certain that they live at the cost of the community, and that in many cases they live very well. They do not work, and they do steal. They are maintained by a local rate just as surely as the malefactors whom we shut up in gaol,— though it is a rate assessed and levied by themselves. Few who know the recklessness and sometimes the luxury, and always the wastefulness, of the criminal class, will be disposed to think that the undetected depredators (those out of prison) can be maintained at as small a cost as those who are provided for during their confinement on a systematic scale at the public table and in public buildings. The average cost of a prisoner in local gaols is £26 a year, in convict prisons it is £33. We believe that very few thieves and ruffians at large spend much less than 20*s.* a week. But we will take a more moderate estimate, and calculate their cost at 12*s.*, or the same as their incarcerated fellows, say £30 a year. At this rate the 90,800 registered pilferers and rascals at large cost us not less than £2,724,000 per annum. If we add this to the figures previously given, we shall arrive at the startling but undeniable result that our criminal classes cost us — in guarding against them, in detecting them, in punishing them, and in supporting them in idleness in and out of prison — not less than FIVE MILLIONS a year, and this without including either Scotland or Ireland in the calculation.

Now, £5,000,000 is about half the sum we expend upon our navy, and about a third of that assigned to our army. It is about the yield of the tea-duty, the tobacco-duty, and the sugar-duty, respectively. And no one who has followed the various papers which have recently appeared in our columns, and more especially the comparison of the English and Irish convict systems which we published last week, will feel much doubt that, by better management and the adoption of sounder principles, this enormous expenditure might be reduced one-half. If we took reasonable pains to nip crime in the bud by dealing wisely and effectually with juvenile delinquents; if we made the punishments we inflicted on crime severe enough to deter amateur offenders, and to make professional depredation a bad trade; if, when we had once got hold of a regular and habitual offender, we never let him loose till his habits and character were radically changed; if we resolutely incarcerated for life those whom we found it impossible to mend; and if we did all we might do to smooth for those we liberate the backward path to an honest course,—we hold it to be absolutely certain that half our gaols might be shut up, and half our expenditure avoided. Sir Joshua Jebb and Sir George Grey must cost the country at the present moment not less than a million a year each. We cannot think they are cheap at the money. Even gold may be bought too dear.

THE LAST NEWS FROM JAPAN.

AS an occasional variety amid the accounts of those thrilling events which follow each other in rapid succession upon the American continent, we now and then receive strange and disjointed fragments of news from the Far East, rendered doubly unintelligible in the first instance by a telegram which has condensed it into nonsense, and, even in its detailed form, by such mutilation of the names as to be scarcely comprehensible to those who are familiar with those distant regions. To the general mass of the public, the very vagueness of the tidings only serves to increase that feeling of uneasiness with which it has lately become the fashion to regard our policy in China and Japan. The account of a "rebel movement in Shantung" is apt to produce in the minds of those who have not a conception where Shantung is, serious misgivings as to the wisdom of Captain Sherard Osborn's expedition; and the "bloodless revolution" now taking place in Japan is attributed to diplomatic mismanagement by persons who never heard of the Gorogio. Unfortunately, an extension of our commercial relations with partially-civilized countries must always imply increased responsibilities and involve heavier risks. Whether it would have been wiser to have abstained from any such intercourse, it is not for us here to determine. In the case of China, it would be easy to show that no policy which could have been pursued, would have averted those hostilities which were inevitably incidental to that intercourse, though they might have occurred at a different period and under other circumstances; and in the case of Japan it would be folly to cherish the delusion of uninterrupted peaceful relations. Nations, like individuals, are oftentimes forced into courses of action attended with dangers and difficulties, which are easily foreseen but impossible to be avoided; and at the period of our negotiation of the treaty in 1858, the Japanese Government anticipated, as surely as we did ourselves, those troubles which are now impending. America had already extorted a treaty from Japan, which was afterwards adopted by this country, concessions, however, being made to the Japanese Government in the case of some of the most obnoxious conditions. Russia had concluded a treaty most advantageous to herself. France and Holland were both negotiating. It would have been impossible for this country, with a mercantile community resident in the East ten times greater than that of all the other treaty-making Powers put together, to hold aloof. It is indeed true, that no pressure was required on our part to obtain the treaty; whatever pressure was necessary had been applied by those negotiators who went before us. The Japanese gave us unhesitatingly what they had given to others, and would have been much astonished if we had not asked for the same. A certain show of opposition was occasionally thought necessary, but it never amounted to more than coquetting, and was not intended seriously. The barrier had been already broken down; what was the use of resistance then? While, however, we cannot be held responsible for having forced a treaty upon Japan, upon us fall all the liabilities arising out of the introduction of foreigners into the country. Four-fifths of the foreign community in Japan are English, who, on the faith of the treaty, have established themselves in the country, built houses, stores, and invested money in a variety of ways, while they are carrying on a trade of upwards of a million sterling a year, which is rapidly developing, in spite of the adverse influences which surround it. It is as well that the British public should understand that beyond the abandonment of this trade, the payment of a large sum of money to the mercantile community interested in it in compensation for the heavy loss to them which withdrawal from our treaty rights will involve, and the employment of force, there is no alternative. The British public who ratified the treaty have no right to complain if it involves them in difficulty; but, in point of fact, they had no other alternative, and

Digitized by Google

they must find consolation in their dilemma from the philosophy of our trusted ally, who will be delighted to join a looting party to Japan, and console himself with the "inexorable logic of facts."

The news which we have just received from Japan tends to bear out this view. Although it is couched in terms so vague that, even were we more familiar with Japanese institutions than we are, it would be impossible to draw other than vague conclusions from it, those conclusions are by no means encouraging. In order to understand the probable effect of the abandonment of the temporal capital by the nobility, it is necessary to glance cursorily at the circumstances under which they first became resident at Yedo. Scarce three centuries have elapsed since Japan boasted of only one emperor, who united in his august person temporal as well as spiritual functions. Head alike of Church and State, the palmiest days of pontifical rule would furnish the nearest analogy to the system of the government at that period. The empire, however, consisted of a collection of principalities, whose rulers enjoyed almost absolute independence, and whose allegiance to the Emperor, in the first instance real, had gradually become little more than nominal, until at last a revolution occurred which threatened to overturn the Imperial Government altogether. The Emperor confided the suppression of this rebellion to a man who not only succeeded in reducing the rebellious princes to obedience, but constituted himself their temporal head, depriving his master of all but his spiritual privileges and nominal dignity as head of the State, while he himself established the seat of his government at Yedo, then an unimportant town, and rendered it compulsory upon the vanquished princes to reside a portion of every year at his new capital; to maintain extensive establishments in that city; and to leave as hostages in their absence some of the most important members of their families. While these princes were permitted to exercise almost absolute power in their own territories, they were held in check by the Government at Yedo, which consisted, besides the Tycoon, of a Gorogio, or Chief Council of State. In the event of the direct line failing, two other families were chosen to supply a Tycoon. The three families together are called the Gosankey. In the event of the Tycoon being a minor, a regent is chosen, called the Gotiro. A reconstruction of the nobility took place. Some of the territories were constituted and formed into imperial domain; others were subdivided, and the country generally cut up into smaller provinces; so that, while the number of Daimios, or nobles, was increased, their power, individually, was diminished. The compulsory residence at Yedo has ever been irksome to the nobles, as reminding them of their defeat, and the more powerful have lately neglected to comply with an obligation which a rapidly declining administration has been unable to enforce. Gradually the principal nobles have begun to emancipate themselves from their allegiance to the temporal Government, and in the presence of the foreigner have found that excuse, which they have eagerly sought, to repudiate their allegiance to the temporal authority, and abandon their compulsory residence at Yedo. As all the attacks on foreigners have been made by the retainers of these nobles, whom the Japanese Government was afraid to punish, and as it was constantly involved in difficulties with foreign powers in consequence, it has regarded the withdrawal of the Daimios from Yedo with complacency, preferring a loss of dignity and the risk of internal combination against itself to a foreign war. It is easy to foresee, however, that if the nobles, now left to their own devices, choose to combine against the temporal Emperor, either for the purpose of regaining the imperial territory, and dividing it amongst themselves, or of ejecting the foreigner, the Government at Yedo will look to us for assistance. We shall have been the cause of the blow to its authority, which the defection of the nobles has inflicted on the Government, and we shall be bound to support it against its internal enemies. The downthrow of the temporal Emperor would imply the massacre of every European in Japan, and our interest, no less than our sense of honour, would oblige us to act in his behalf. Fortunately, almost every prince's capital is on the sea-coast, and most of their palaces are easily attainable by water. With the imperial armies operating in conjunction with our gunboats, the struggle could not be of long duration, and would place our commercial relations in Japan on a firm and enduring basis.

ENGLISH WRITERS ON SCOTCH LAW.

THE Scotch are rather a sensitive people. They dislike all criticism, and they have an especial distaste to criticism from this side of the Tweed. Being the smaller and poorer country, they resent with peculiar bitterness any disparaging remarks from their powerful neighbour. This has been observable ever since the Union. For many years after the passing of that measure their jealousy broke out in fierce riots; now, tempered by time, it displays itself in the milder form of angry writing. Like Mr. Pott and Mr. Slurk, the combatants abstain from personal hostilities, and the whole country, like Eatanswill, "rings with the noise of their terrific contests—on paper."

We think they carry this feeling to an extreme; but, if anything can excuse its excesses, it is the tone which English writers too often assume when treating of Scotch manners and Scotch institutions. It is not good that men should venture either to praise or to blame what they don't understand, but it is especially incumbent on fault-finders to speak with intelligence. Englishmen speak of things Scotch more frequently in a spirit of censure than in a spirit of commendation; and they should, therefore, take especial pains to instruct themselves accurately in this subject. We regret to say that, as a rule, they are far from being so instructed. They write in a grand patronizing style, but they don't in the least know what they are writing about. In plain words, they generally contrive to exhibit the grossest possible ignorance in the most offensive possible way. This tendency has of late been unusually conspicuous. It was displayed to a considerable extent with regard to the notorious trial of Mrs. M'Lachlan at Glasgow, last autumn; and it has been displayed still more remarkably with regard to the Yelverton case. Many English journals have commented on the late judgment in that case; very few, we regret to say, have done so with fairness or with understanding. But by far the most discreditable performance which we have seen, was an article in the *Saturday Review* a fortnight ago. This article was not only arrogant and insulting, but it possessed another characteristic which did not always mark that periodical in its prime, that of profound ignorance. The writer condemns Scotch law—nay more, he loudly abuses it, while every line that he writes proves unmistakably that he knows no more of Scotch law than he does of good taste or good sense. "These be very bitter words;" we proceed to justify them.

We pass over the writer's blunders as to the scope and bearing of the Irish verdict; as to the aspect in which the case was presented to the Court in Scotland; and his ludicrous argument that the Irish verdict renders a Scotch marriage impossible. Such blunders, indeed, would bring deep discredit on any ordinary writer; but they are dwarfed into insignificance before those which follow. Before proceeding further, it may be convenient to repeat our former statement as to the Scotch law:—People may be married in Scotland in two (at least) irregular ways. 1. If they interchange a consent to the contract there and then; or, in the legal phrase, by consent *de præsenti;* or, 2. If they promise to marry, and subsequently cohabit on the faith of such promise—with the restriction that, in this latter case, the promise must be in writing, or admitted on oath by the party making it. But, in order that marriage may be constituted, all these things must take place in Scotland. The consent in the former case must be interchanged in Scotland; and in the latter case, the promise must be given, and the subsequent cohabitation must take place, in the same country. Now (1) this writer says: "If, as Lords Curriehill and Deas hold, the Scotch marriage consisted of two parts, one of which (the promise *de presenti*) took place in Scotland, and the other (*subsequente copula*) in Ireland, then, &c." We should like very much, indeed, to know if the author of this sentence attached any clear meaning to the words he was writing down. We certainly can extract none from them. If there is any part of the paragraph which puzzles us more than another it is the words, "promise *de presenti*." They are to us utterly mysterious—only showing this, that the writer's familiarity with the English and Latin languages is about on a par with his knowledge of Scotch law. If we make this great censor intelligible in spite of himself, and relieve him from his troublesome Latin, by omitting the words "*de presenti*," then he makes the judges say, that a promise in Scotland, followed by *copula* in Ireland, constitute a Scotch marriage, which the judges never did say.

Digitized by Google

In short, the sentence is either bad law or illimitable nonsense. 2. "Marriage must consist of consent *de presenti*, and the promise must be followed by *copula* under certain circumstances." Here this eminent critic uses the word consent rightly enough; but immediately thereafter that fatal word "promise" creeps in — confounding him utterly. What promise does he refer to? He has spoken of none. This dogma we give up as hopeless. No amount of ingenuity can make it either good sense or good law. 3. "The evidence as to 'consent' being thus imperfect and suspicious, a necessary link is wanting between the first and second constituents of a marriage according to the received interpretation of Scotch law." This sentence would suggest the idea, that, if the writer has any idea on the matter at all, he thinks that a Scotch marriage is made up of two things: 1. Consent; 2. Copula; leaving the mysterious "promise" quite unexplained. There could hardly be a grosser error. The contract is perfected by consent alone. One of the commonest maxims in the Scotch Courts is—*consensus* (not *concubitus*) *facit matrimonium*. But we are rather disposed to think that the unhappy man has no ideas whatever, at least on this matter; but that finding the words "consent," "promise," and "*subsequente copulâ*," used by the Scotch judges, he dutifully follows suit, heedless of intelligibility. 4. We are assured that the correspondence, by which two of the judges were "palpably biassed," had "nothing to do with the simple issue presented to them;" and that the Lord President said so "with *something like* the contempt of common-sense." Here is an error both of law and of fact. The letters had a great deal to do with the case, and the President never said they had not, either with or without contempt. In all such cases, letters are of the highest importance, as showing whether marriage had really been in the contemplation of the parties; and the President expressly announced the opinion he had formed of the bearings of the letters in this case, and said he was only saved from going over them in detail, because that had been done by the other judges. The Saturday Reviewer must have "waded" through the judgment to very little purpose. 5. We are solemnly assured that "the judgment in favour of the pursuer goes to this extent, that an incomplete marriage, according to the very peculiar Scottish law, may be completed in a domicile where that law has no force;" and, with indecent insolence, that, "according to the latest expositors of Scotch law, marriage may be defined to consist in two elements—viz., loose talk and incontinence—which talk and which incontinence may be separated by days and weeks, and, for aught we know, by months and years, as well as by oceans and thousands of miles." Whatever this pack of words may mean, it certainly does not set forth Scotch law or anything like Scotch law. It is not true that a promise in Scotland and *copula*, "in a domicile where Scotch law has no force," will make a Scotch marriage. Both elements of the marriage must be in Scotland, and no view to the contrary of this was ever expressed. Nor is it true that any Scotch judge ever said that "loose talk and incontinence" would make marriage. No "talk" of any kind—loose or otherwise—will be received as constituting a disputed promise; for it is one of the most elementary principles of Scotch law that such a promise *must be in writing*. And not only so, but that writing must be distinct and unmistakable in its meaning.

We have no patience for more of this work. We have said enough to establish the truth of our assertion, that the writer of this article is grossly ignorant of the subject which he has ventured to discuss. And yet he has not hesitated to assail Scotch judges, and to denounce Scotch jurisprudence in language the most violent. The judges were "palpably biassed," were "swayed by sentiment rather than law," and "influenced by considerations which will have no place at Westminster." Scotland is "not above Japan in real civilization;" Scotch law is "a mockery of all that belongs to religion, morality, and social order;" indeed "we might as well live under Norman law as under this law." On this side of the border the spectacle of foolish bluster thus striving to make amends for culpable ignorance is merely contemptible. To expose it is no pleasurable task, and one to which we certainly should not have stooped, had it not been for the consideration that such a style of attack will do mischief elsewhere. Scotchmen will be angry, and will be angry with good cause. And anger will prevent their listening with favour to fair and kindly discussion. Criticism on a nation's institutions is not less useful than on a nation's literature. But ignorant abuse is not criticism; and it tends to deprive criticism of its due influence. Such ignorance and such abuse as we have exposed on a subject the most trivial would be discreditable to a paper the least respectable. But when it is displayed on such a subject as the marriage-law of the sister-country, and in a newspaper which arrogates to itself dignity, infallibility, and exalted position, it is something more than discreditable. The mighty are indeed fallen when such an article is allowed to appear in the pages of the *Saturday Review*.

"HISTORICUS" AND THE "LONDON REVIEW."

A SOMEWHAT intemperate letter has been addressed to us by "Historicus," on the article which appeared in our last number on the subject of "Neutral Trade with Belligerents." It will be found in another part of the paper. Only a few months ago this same writer showed himself ignorant of the doctrine of blockade, and was proved to have done M. Hautefeuille considerable injustice. It is not surprising, therefore, that he should be anxious to damage the authority of the distinguished French jurist, or that he should see no discourtesy in expressing "his confident hope, that in advising the Crown, the Queen's Advocate" (who is Dr. Phillimore, and who agrees with M. Hautefeuille) "should pay no attention to the opinions of Dr. Phillimore." On the 23rd December, "Historicus" distinctly asserted that, according to Hautefeuille, not only a trade in contraband carried on by a neutral subject with one of the belligerents in a neutral territory is unlawful, but that *it is a trade which the neutral government is bound to prohibit and prevent*. Now we once more assert that neither M. Hautefeuille nor Dr. Phillimore expressed any such opinions. What they do assert is, that such trade is a breach of neutrality, but they do not hold that the neutral nation is bound to prohibit it.

In order to explain this, it was necessary to show that, according to Hautefeuille, and according to Phillimore, international law consists of two parts: the primary or divine law, or international morality, and the secondary or customary law. According to "Historicus," this is mere "nonsense," or, as he phrases it, "cant phraseology." If he will read the two first pages of the Commentaries of Kent, whom he may perhaps admit to be an authority, he will find this very distinction adopted. Kent says, "The most useful and practical part of the law of nations is no doubt instituted on positive law, founded on usage, consent, and agreement. But it would be impossible to separate this law entirely from natural jurisprudence, and not to consider it as deriving much of its force and dignity from the same principles of right reason, the same views of the nature and constitution of man, and the same sanction of Divine revelation as those from which the science of morality is deduced. There is a natural and a positive law of nations." The editor of the same book quotes with approbation the *Edinburgh Review*, which divides the law of nations into: 1. International Morality—the Divine, or natural law of nations. 2. International Law, being rules of conduct sanctioned by public opinion and usages of civilized nations on the positive law of nations. Now this is precisely the doctrine stated both by Hautefeuille and Dr. Phillimore; if they err, they err with such men as Kent; and this they may well prefer to shining with "Historicus" and his learned friend, who consider "eternal justice" another name for "infernal nonsense."

We pointed out that an act may be a violation of international morality or the primary law, and yet there may be no penalty attached to such a violation by the secondary law of nations. Moreover, we pointed out that there were many acts which, although unlawful according to the primary law, yet were not and ought not to be prohibited by any nation. One of these acts, according to Hautefeuille, Phillimore, and the commentators of Valin—whom "Historicus," with his accustomed arrogance, calls "flimsy," is the sale of arms on neutral ground. "Historicus" then attempts to show that Hautefeuille, in arguing against Lampredi, admits that the sale of arms on a neutral territory ought to be probibited. But any one who can understand a legal argument will at once perceive that this is a mistake. Hautefeuille's argument is this: I will prove to you that the sale of arms on a neutral territory is unlawful, or, in other words, a violation of neutrality. There are municipal laws—

Digitized by Google

statutes and decrees—which, as Kent says, are made to enforce the value of neutrality. Now throughout Europe and in America it is forbidden to sell arms in harbour for the purpose of arming a ship. Here, then, is a particular case of sale which is forbidden by a municipal law, which has been passed in accordance with international law. Such a sale must have been considered a breach of the law of nations.

But, further, "Historicus," quoting half a sentence from Hautefeuille, insists "that the primary and secondary law, jointly and severally, prohibit such traffic." He does nothing of the sort. What he says is: "*According to the primary law* the duty of neutrals is to abstain from furnishing to belligerents any of the articles which are called *contraband*. The *secondary* law "*n'a rien changé, n'a rien modifié à cette disposition;* it has confined itself to setting up a special sanction against the violators of these rules, who use the sea in order to complete their offence." In other words, the secondary law does not alter or modify the rules of the primary law; all the secondary law does is to entitle the belligerent who finds a neutral carrying to his enemy *contraband* of war, such as arms, on the high seas, to seize these contraband goods.

"Historicus" seems unable to understand or conceive, that although an act may be immoral, it may not be the duty of a Government to prohibit it. He adds, that if M. Hautefeuille's doctrine prevailed, a feeble neutral would very soon have this duty inculcated upon it by a powerful belligerent in a manner which would be anything but theoretical. Now, it is a well-known fact, that this is exactly what happened. In 1793 the Americans were neutrals and weak. The French called upon them to prohibit the sale of horses to the English as contraband, whilst the English called upon the American Government to stop the sale of munitions of war as contraband. Even so late as the 27th September, 1855, the Earl of Clarendon, who was then Foreign Secretary, thus wrote to Mr. Marcy, the American Secretary of State:—"The United States profess neutrality in the present war between the Western powers and Russia; but have no actions been done *within* the United States by citizens thereof which accord little with the spirit of neutrality? Have not arms and ammunition, and warlike stores of various kinds, been sent in large quantities from the United States for the service of Russia." "Historicus" may possibly be able to explain the grounds upon which Lord Clarendon considered the acts of American citizens as a breach of neutrality: or why it was that the English Government of that day attempted, as "Historicus" says, "to devolve upon America an intolerable responsibility?" No doubt Lord Clarendon agreed with his predecessor, Mr. Hammond, with Hautefeuille, and with the Queen's Advocate, that, although the sale of arms by a neutral is a breach of neutrality, a neutral nation is not bound to prohibit such sale by the only means in its power—a municipal enactment.

If any further evidence were needed to show that this same doctrine is held by many eminent jurists, we might refer to Mr. Duer, one of the late revisers of the statutes of New York, in his admirable book on Insurance.

In the first volume, p. 750, ed. 1845, he says:—"It has been alleged that the conduct of a neutral who engages in a trade that, by the law of nations, subjects his property to capture and confiscation, is not illegal; that he has a perfect and lawful right to engage in the trade, and the belligerent a right equally perfect and lawful to seize and confiscate the property so employed. But the grounds on which this allegation is made are not easy to be discerned." "Were the trade," he says, "lawful; although the belligerent might be allowed, from a regard to his own safety, to intercept warlike supplies destined to the use of his enemy, he would be bound to pay their value and satisfy their freight, for then the injury to himself would be prevented and the rights of the neutral be preserved." And he adds, "It is the illegality of the trade that can alone justify its interruption." Again, "It appears from recent decisions in England, that the doctrine I have stated has been there explicitly recognized. It has been in effect determined that an insurance made in a neutral country on a neutral ship, where the voyage is undertaken with the intention of violating a blockade, is illegal and void, on the sole ground of the illegality of the voyage. The only illegality in this case is created by the law of nations, and there seems to be no reasons why the principle of those decisions is not applicable to every case where the property insured is justly liable to belligerent capture at the inception of the voyage." Thus a contract in a neutral country to supply arms to a belligerent would be void.

As to Dr. Phillimore, "Historicus" is equally unjust. That jurist, instead of supporting his view simply by appealing to the principles of "eternal justice," quotes a string of authorities, which, we suspect, constituted the whole learning of "Historicus" when he wrote his first letter. Even now "Historicus" has quoted no passage from Dr. Phillimore in which he has declared the necessity of a nation prohibiting and preventing the sale of contraband of war. And the fact, that the Belgians did not enact any law prohibiting the export of arms, notoriously carried on during the Crimean war, proves distinctly, that although, in the opinion of Lord Clarendon at least, it was a breach of neutrality, the Belgians were not considered bound to do any act to prevent it. It is now, therefore, clearly established that Lord Russell, in refusing to prevent the export of arms to the North, has acted in strict conformity with international law, as expounded by all jurists, not even excepting M. Hautefeuille or Dr. Phillimore. And in conclusion, we think ourselves entitled to say, that if "Historicus" hopes to form sound opinions upon the more abstruse subjects of international law he must devote himself patiently to more severe studies than the sayings and doings of Mr. Samuel Weller, or even the antithetical couplets of Alexander Pope.

WEATHER-WISDOM.

To discuss the private ways of public men is beyond all question ungentlemanly, and contrary to the true principles of journalism. But however wrong it may be, it is quite impossible to help wondering what remark Admiral Fitzroy is in the habit of making when he takes in a lady to dinner. The only avenue to conversation which is broad enough to allow no misconstruction, and common enough to secure general interest, must be inexorably closed to him. In the passage from the drawing-room, and more especially if it involves a descent, something must be said, and nothing but the most trivial topic will answer. It is foolish to make no observation at all, and to approach any subject out of the beaten path not only implies a confession of weakness, but gives some ground for the suspicion that it has been prepared and studied beforehand. As a general rule, the procession to the dining-room occupies itself exclusively with meteorology. The country ball naturally comes in after the first course, and the last new novel appears with effect while the cloth is being removed. Now it may be fairly presumed that no Chancellor of the Exchequer ever yet took his place in the social caravan with a remark on the three per cents., or a doctor with an observation on typhus fever. The clerk of the weather, in like manner, has no doubt his regular office hours, and pays diligent attention to his business. He cannot so well assert the mildness of the weather, or expect a continuance of rain, as the rest of the untutored public. His must be a terrible position at the crisis of which we have spoken. Shut out from the one topic which is the common bond of our humanity, unable to strike that one chord to which every mortal heart is at once responsive, he must tread the appointed journey with mute and agonized perplexity, and must probably feel at the end of it, that very peculiar sensation about the roots of the hair which is indicative of a profound and uncontrollable wish to be buried in the bowels of the earth.

The case, however, will be still worse when a prophecy is at stake, and when the elements seem determined to baffle science. It happens that the weather has set itself of late with an extraordinary obstinacy to do on every single day the very thing which by all the rules of natural philosophy it ought not to have done. Admiral Fitzroy publishes, as is well known, a daily meteorological report in the columns of the *Times*. Some thirty stations send in reports each morning to a central office, which are collected, arranged, and published in a tabular form the next day, with an explanation of the abbreviations which reminds the reader equally of a pictorial spelling-book and the "various readings" in an edition of a classical author. B. stands for barometer, D. for difference (of the moist-bulb thermometer), F. for force, X. for 'xtreme force, of wind, H. for hours, and C. for cloud. We cannot but remark parenthetically, that, to use the Admiral's vocabulary there must be a similar amount of C. over his mind on the subject of orthography, to that which actuated the eminently moral gentleman, who used in our earlier days to set the exquisitely printed copies for lessons in penmanship; who, while advising us to Venerate valuable virtue, and to Withdraw from unwarrantable wickedness, conceived that our sense of Uprightness received no

Digitized by Google

shock whatever from the mean subterfuge by which they palmed off some maxim about 'Xemplary excellence as a fit and proper type of the letter which should follow next in order. Admiral Fitzoy has also a smaller army, a kind of initial rank and file, b. for blue sky, f. for fog, h. for hail, and so on; and he finishes by a declaration that a calm, since C. is already occupied, is to be represented by a capital Z. So far all is satisfactory; though it must be confessed that it is a little difficult to understand how the force of the wind at Jersey can be at present 9, and yet that the extreme force since the last report cannot be put down as higher than 8. It is, however, with the prophecies which accompany the report that we are particularly concerned, and with the mysterious causes which by an unerring fate render them so invariably and fatally wrong.

Hitherto the winter has rejoiced the hearts of those who hunt, and driven those who skate to desperation. The traditions of rude Boreas are coming to be quite a recollection of the nursery, and there has been such a run on balmy zephyrs that it will be a wonder if any are left for the summer. Something has clearly gone wrong; and if it be scientific to infer from the multitude of sharks on the Irish coast that the gulf stream has been turned on this last month at double power, we can only say that the phenomena are fully adequate to support the theory. The chief satisfaction to be derived from the warm winter is that nobody will ever again venture to augur any decisive result from the multitude of November berries. At all events, no one who is liable to sensations of heat and cold will deny that, as a matter of fact, the wind for the last fortnight has been continuously south and west, and the temperature extraordinarily high. Now it is a remarkable fact that, on almost every occasion during this period on which his prophecies have appeared, Admiral Fitzroy has persisted in endeavouring to persuade his readers that the wind is on the point of coming round to the north, and not improbably with the accompaniment of snow. We have taken the trouble to register his predictions for the first week of this year, and test them day by day with the actual weather; taking for specimens the two districts of South-west England, which, for brevity, we may call Devon, and South-east England, which we will shorten into Kent. The Admiral on each morning supplies us with prophecies for that and the following day, and is thus able to correct on the next morning by a second oracle the impressions of twenty-four hours back. Moreover, it will be remarked that he is always careful to allow himself plenty of margin, and as often as not he includes half the compass in his statements. On January 1, the Admiral predicts for Devon W. to N. and N.E., and for Kent N.W. to N.E. and E.; this resulted in a uniform south-west wind over all the South of England. For the 2nd his prediction on the 1st was for Devon N. to E. and S.E., modified next day to S.W. to N.W. and N., a prediction which resulted in a due westerly wind at Plymouth; and for Kent a simple "Easterly," followed next day by W.N.W. to N.N.W. in prophecy, and W.S.W. in fact. For January 3, the pair of prophecies are:—Devon, W.N.W. to N.N.E., and S.W. to N.W. and N., which result in a simple W.; and for Kent, N.N.W. to E.N.E. and S.E., and W.S.W. to N.N.W.,—thus embracing nearly three quarters of the compass, but failing to include the reality, S.S.W. The next recorded observation that we have is a S.W. at Plymouth, corresponding to a prediction of W. to N. and N.E., and a S. at London, corresponding to N.W. to N.E. and E. Next day a heavy rotary gale being predicted for all the South of England, we are surprised to find a gentle southerly wind everywhere prevailing; and on the 7th, while Admiral Fitzroy still insists on his gale, to which he fixes the delightful latitude of W. to N. and E, the breeze falls almost to a calm, and the sun beams forth on a genial summer's day.

We are truly sorry for the gallant Admiral. We hope that he will not be discouraged. If he will but continue to prophesy north winds long enough, they are quite sure to come. But it must be very annoying to him to have his heavy rotary gales shirking their work in that unfeeling way. Fortune might as well allow him to hit upon the right thing just once or twice in the fortnight, if it was only for fair play. He surely tries hard enough,—short of predicting all four points of the compass at once. Are the most meteorological admirals in the service to be for ever in the situation of those weathercocks in which a gentleman is represented as discharging his musket from hour to hour in whatever direction the wind at the time is not? What makes the matter worse is, that Admiral Fitzroy has just published a work explaining, with the greatest accuracy, the principles upon which he works. We may, possibly, have to consider his book on another occasion in a literary point of view, and will here only profess ourselves fully satisfied, were it but by way of tendering what consolation we can, that his system is as exact as can be conceived. Good people have in all ages been upheld, in their worst trials, by a consciousness that they have acted for the best; and when the wind sets itself resolutely to choose whatever particular career he has neglected to pre-occupy, the Admiral will not be without the consolation of knowing that, by the most certain laws of science, it ought to have chosen exactly the opposite. Perhaps even yet, as the wind seems coming eastwards after all, he may live to see, if but for one happy day, a prophecy and a result in accordance. If this should be too bright a hope to be realized, the thought we speak of will be something to restore his feelings, even though it may not be quite sufficient to support him under conversation about changes of climate.

A remarkable fact is stated by those who have visited the shores of Hawaii, and made sufficient acquaintance with the natives to understand their language. The inhabitants of that forlorn island, it is said, have no word in their vocabulary to express the weather. Somehow, in rude, barbarous fashion, they mix with each other, and enjoy such intercourse as they may; but with the amenities of social life, the delicate pulsations of hearts conversationally united by climate, the whispered suggestion, the soft reply imagined before it is spoken, all the engines of social intercourse which break the ice of first acquaintance, and melt frozen tongues to talk, these victims of fortune and of dialect have nothing to do. It may be that they are happy under it; habit is a second nature; the Greenlanders almost live upon fish, to which no civilized person would think of being helped twice in England. If it be so, what a place for Admiral Fitzroy! Let him take a bold step, and relieve himself for ever from the perplexity of his social position. Let him establish a weather oracle for the next few years, by sending word to the *Times* that the wind is to be north all over England till further notice; let him establish a heavy rotary gale for the first Tuesday in every month, and double the allowance on leap-year; let him predict rain on the days sacred to Volunteers, and leave word that the drum is to be hoisted at Shields whenever three colliers have been shipwrecked; and then let him depart to finish his days in that remote clime where a weary soul may pack up its barometers, and be at rest. So—if we may again use the magic initials—the f. of bewilderment will clear from his mind, in his relations to the world around him, he will h. a D. not to be described, and with a sense of relief never apprehended before, he will devote his happy H. to a better and abiding Z.

DEMOCRACY BREAKING DOWN.

For some years past a fashion has prevailed of describing every misfortune which happens to an unpopular person or institution as its "breaking down." When the supplies could not be got up to the army before Sebastopol, eminent authorities were seriously afraid that constitutional government in general, and at the very least the British aristocracy were breaking down. When a sharp frost threw a considerable number of the poor of London into the streets, and revealed the fact that, when wages were high, they never thought it desirable to save against hard times, there was a very general cry that the poor-law had broken down, and for some months past there has been in many quarters a constant repetition, sometimes with open exultation, sometimes with a strange affectation of sympathy and regret of the phrase prefixed to this article. Whatever else may be said or thought of the American civil war, this point appears to be taken for granted. The Federals or the Confederates may be right, the effect of the war may be this or that in respect of slavery, but one thing—thinks a considerable section of the British public—is quite clear,—Democracy has broken down; and the conclusion is generally received with a sort of chuckling hallelujah, which looks as if Democracy were a dreaded antagonist, constantly creeping on us unawares, and now, by a fortunate combination of circumstances, forced to give up his vile attempts and retreat from his expected prey.

Such phrases, repeated in various forms in newspapers and on platforms, make up something which is as near an approach to an opinion on public affairs as a considerable section of the community has the means or the inclination of possessing. It is, therefore, matter of some importance that they should be examined and criticised, in order that some sort of estimate may be formed of the degree of truth (if any) which they contain. What, then, is the meaning of the assertion, that the civil war, which has now raged for nearly two years in America, shows that Democracy has broken down? If it means anything, it must mean that the civil war shows that Democracy is a bad form of government, and one which, by reason of its inherent defects, has produced the calamities under which America labours. If it means only that the United States,

Digitized by Google

being a democratic country, are at present undergoing calamities it is a mere truism, about as ill expressed as if a man, seeing a horse come down on his knees, should say that the principle of having four legs had broken down.

How far, then, is it true that the present war has discredited Democracy? In the first place, the object for which the two parties are fighting has absolutely no relation to forms of government. Many contrasts exist between North and South, but the form of their governments and the principles on which they are conducted are the same. There are great differences between Virginia and New York, but they are both democratic states, and if peace were to be made to-morrow, no question would have to be settled on that subject. The Southerners never complained that the Northerners' institutions were too popular. The Northerners have never shown the faintest wish to interfere with the political organization of the South. The victory of either party would leave untouched all the questions which divide aristocrats and democrats, it would not affect government by elective assemblies, vote by ballot, universal suffrage, or the election of the judicial and executive officers. Whatever the merits of the contest may be—and our opinion on that subject has been too frequently expressed to need re-statement here—the war is beyond all doubt a war for the maintenance of the Union on the one side, for the acquisition of independence on the other; and it is equally clear that it arose out of a deep-seated and widely-extended difference of views founded on the existence of slavery in the Southern states. It would be difficult in a few words to convey a clearer notion of the dispute than by saying that the South resolved to break up the Union because they feared that if it were maintained slavery could not be extended, and that the North want to maintain it, not upon any definite grounds as to slavery, but on account of their natural pride in its magnificence, and of a keen sense of its many advantages. How is this state of things, lamentable as it is, specially discreditable to Democracy?

Democracy had nothing whatever to do with the existence of slavery. That institution has existed both in ancient and modern times, and does still exist, under governments of every form. It prevailed in our own possessions till within living memory. It prevails to this day in those of Spain, and it was introduced into the North American States long before they were democracies. Democracy has still less to do with the quarrel between North and South, unless, indeed, it is to be blamed for having made possible the Federation which is now so terribly severed. If the separate States had been independent kingdoms it is highly probable that the present civil war would not have happened, but neither would the eighty years of unexampled peace and prosperity which preceded it have blessed one of the finest regions in the world. If each State had been entirely independent of the rest, there might and probably would have been a repetition of the darkest side of European history. There would have been wars, standing armies, internal lines of custom-houses, and a thousand obstructions of every sort, to the reduction of that great continent to a state fit for human habitation. That which has really broken down is not Democracy, but a scheme devised with wonderful care and skill for producing extraordinary benefits to a large section of mankind, which, by the aid of Democracy, met with unexpected success for nearly three generations, and did actually produce results of unexampled magnitude.

Nothing sets in a more striking light the flimsy and careless way in which people are content to think and speak, than the ignorant habit which prevails of calling the United States, collectively, a Democracy. The Federal constitution is or was a most elaborate and wonderfully ingenious contrivance for conducting, under one head, the common affairs of a number of independent States,—States whose sovereign character was expressly recognized and reserved by the constitution, except in so far as it was limited by the express words of that instrument. No doubt the officers to whom the management of these affairs was intrusted were chosen by popular election, but once chosen, they had a degree of authority which imposed severe restraints on the direct exercise of the popular will. A President of the United States has, as long as his term of office lasts, more authority and less responsibility than an English King or Prime Minister, as Mr. Lincoln's proceedings throughout this war sufficiently prove. The constitution of the Senate is anything but democratic. Rhode Island or Delaware have as much power in it as New York and Pennsylvania. The Supreme Court, again, is anything but a democratic institution. Its judges are appointed for life, and its decisions are superior in authority to the legislative powers of Congress itself, and also to those of every State legislature. It is this part of the institutions of North America which has broken down, in the proper sense of the word, that is, which has proved inadequate to the functions allotted to it, and this is precisely the least democratic part of the whole. Why has it broken down?—from a growing dissimilarity between the two parts of the nation, dissimilarity in habits, tastes, and feelings, which has always existed to some extent, but has grown to its present height and produced its present consequences under political institutions not merely similar but substantially the same. To describe this as the breaking down of Democracy, is about as reasonable as to describe the Indian mutiny as the breaking down of constitutional monarchy.

It may possibly be said that though the quarrel between the North and the South cannot possibly be charged to the account of Democracy, it may fairly be debited with the scandals which the war has brought to light—the extravagance, the corruption, the brag, the insults to foreign powers, and especially to this country,—in a word, with the bad manners of a considerable proportion of the Northerners. The existence of many of these scandals must be admitted; and enthusiastic advocates of all things American are somewhat too apt to undervalue their importance. Both to men and to nations good manners are what modesty is to chastity, or enamel to the teeth; and there is a real connection between the coarseness of feeling which finds vent in noisy swagger, and the bluntness of moral perception which sees no reason to blame a man who makes a fortune by applying his official knowledge to the purposes of private speculation. Great allowances and deductions are, however, to be made in the popular estimate in this matter. Where an enormous army has to be extemporized at any cost, there will, of course, be enormous jobbing, especially in a nation which carries the trading spirit to the very highest pitch. It is also true that the great bulk of English critics take their views of the Americans from prejudiced sources, from writers who appear to think it their duty to cull for the edification of Englishmen all the flowers contributed to the *New York Herald*, and other journals of the same stamp, by renegade Irishmen who unite the faults of the dunghill on which they grew, with those of the cesspool into which they have drained. Still, with all allowances, it is not to be denied that there is an ugly side to the American character, or that recent events have made it unusually prominent. Is this, however, the fault of Democracy? People of all nations can make themselves wonderfully unpleasant, when they give their minds to it, whether they are democrats or not. A thoroughly vulgar Englishman is as offensive an animal as the human mind can well imagine, and our national ways of thinking and expressing our thoughts are by no means calculated to endear us to the rest of the world, nor do they do so in point of fact. A certain Mr. Rufus Choate, well known as a leading Boston lawyer, is recorded to have described one of his colleagues as looking "as if he doubted whether he made God, or God made him;" probably the imperturbable self-complacency of Englishmen in general, and that serene conviction of ineffable superiority to the rest of the human race which shines from every English face and through the columns of every English newspaper, might suggest to most foreigners a similar observation on John Bull. This immovable self-confidence, or, as others would call it, pride, is so far from breaking down our institutions, that it is one of their firmest props, though it may, no doubt, be disagreeable enough to other people. Hence the admission that American conceit and bluster is a very bad and an exceedingly unpleasant thing, does not involve the consequence that Democracy has broken down. It does not even imply that Democracy is the cause of what is complained of. The truth is, that most of the disagreeable features of the American character, whether displayed in their writings or in the management of their affairs, are not the effect of Democracy, but of the marvellous prosperity of the country. The political constitution of the States, whilst they were still colonies and during the early part of their independence, was democratic enough, but their behaviour was then inoffensive. For the last forty-five years they have enjoyed a sort of carnival. No debt, no taxes, absolutely unbounded room for every kind of enterprise, an unparalleled demand for every sort of labour, and a lavish supply of it from the uncomfortable and dissatisfied part of the whole population of Europe. This is enough to explain everything that can fairly be alleged against them, and much more than has been alleged with any show of justice. No doubt there is something in common between this state of things and democracy. The universal race and passion for wealth which the circumstances of the country produce, has a tendency to produce democracy, and has also a tendency to produce coarseness and fustian; but the one effect does not of necessity produce the other. In the quieter parts of the Union, and amongst the more settled classes of its population, the two things do not go together; and in many other parts of the world—

Digitized by Google

Switzerland, for instance—and Norway (which has a very democratic constitution), there is no connection between democracy and bad manners.

To talk of the breaking down of Democracy, not only shows ignorance of the facts of the particular transaction which suggests the phrase, but also of other matters of much wider importance. Democracy, in the sense of the process of equalizing the conditions of the different classes of mankind, is a process which no living man will see broken down. It is going on all over the world in one form or another, but in America it is almost as likely that the Ohio and Mississippi will break down as that Democracy will do so. Taking the gloomiest possible view of Northern affairs, there is absolutely no reason whatever to expect it. Suppose that not only the South should establish their independence, but that their example should be followed by the West,—suppose even that the process should not stop there, and that the States should split into four or even five distinct nations, can any one doubt that each of these would continue to be a Democracy in every sense of the word? As far as it is possible to speculate on such a contingency, it is probable that such a process would rather strengthen than weaken their democratic principles. Democracy has hitherto succeeded better in small states than in large ones, and, for an obvious reason, the members of the governing body in a small state are more manageable than where a large one is to be represented, and the separation between them and their electors is less marked.

On the whole, the rejoicings over the downfall of democracy are very foolish. They may, perhaps, have one good purpose. They are, by reason of their folly, exactly suited to those who used to be deluded by wholesale praises of American institutions, and supply just the sort of answer which the glorifications of Democracy, drawn from the prosperity of the United States, deserved. People who were capable of being deluded by the one argument may be capable of being deluded in the opposite direction by the other. The prosperity of America was little more creditable to their institutions than the quiet behaviour of a schoolboy whilst he is gorging himself with plum-cake is creditable to his schoolmaster. Whilst absorbed in that occupation he cannot, of course, be fighting with the other boys or breaking the school-room windows, and in the same way a nation, with unlimited wealth and no burdens, could not help being prosperous. The test of institutions is not to be found in the prosperity or adversity of the nation in which they are established, but in their specific results, and in every case it is matter of the utmost difficulty to say what these results are. The results of the democratic constitution of the States in the present war are extremely complicated. They have produced wonderful unanimity on both sides. They have produced bad discipline on the Northern side. They have been accompanied by extraordinary vigour, but how far they have caused it is another question. To count up their good and bad effects would require a treatise founded on knowledge which few people possess, but to try to dispose of the subject in a single contemptuous or exultant phrase, is to show utter ignorance of its nature.

THE *ALABAMA*.

As it is not the practice of the Government to publish State papers during the Parliamentary recess, the only authentic information we have received as to the correspondence which has passed between the English and American Governments in the *Alabama* affair comes through American sources. The details, however, with which we have been favoured are still incomplete, and do not let us know what course of conduct the Government has resolved to adopt with reference to that vessel. According to Mr. Adams, the American Minister, an order has been sent that, if the *Alabama* appears at Nassau, she is to be detained; and a Liverpool paper tells us that orders have been sent out not to admit that vessel within any of our colonial ports.

The questions of law which arise out of the case are neither easy to be solved nor few in number. The difficulties in dealing with it are increased by its novelty. Several cases are to be found in the reports of the Supreme Court of the United States arising out of breaches of their Foreign Enlistment Act, which is almost identical with our own Act. None of them are identical with that of the *Alabama*, but the light which they throw upon its solution is of some material importance. The correspondence which took place in 1793 between the Government of the United States, being neutral, and the belligerent Governments of France and England, which is to be found in the American State papers, is, perhaps, quite as material, at the present moment, as the cases in the reports. It gives the whole history of the rules of neutrality, and the grounds upon which a distinction was then drawn between the sale of arms and the equipping of armed vessels in neutral ports. Moreover, it will be seen that the American Minister in demanding the interference of the British Minister to stop the *Alabama*, followed the example of this country; and that in acquiescing in the demand, Lord Russell has acted in strict conformity with every precedent.

"We have not hesitated to express our highest disapprobation," says the Secretary of State, Mr. Jefferson, on the 15th May, 1793, in a letter to the French Minister, M. Ternaut, "of the conduct of any of our citizens who may personally engage in committing hostilities at sea against any of the nations parties to the present war; to declare that if the case has happened, or that it should happen, we will exert all the means with which the laws and constitution have armed us, to discover such offenders, and bring them to condign justice. And that the like conduct shall be observed, should the like enterprises be attempted against your nation, I am authorized to give you the most unreserved assurances. Our friendship for all the parties at war; our desire to pursue ourselves the path of peace, as the only one leading surely to prosperity, and our wish to preserve the morals of our citizens from being vitiated by courses of lawless plunder and murder, are a security that our proceedings in this respect will be with good faith, fervour, and vigilance." "The President," he says, in a letter of the 5th June, 1793, to M. Genet, the newly-appointed Minister of the French Convention, a gentleman of very ardent temperament, and wild Republican fervour, "is of opinion, after mature consultation and deliberation, that the arming and equipping vessels in the ports of the United States to cruise against nations with whom we are at peace, is incompatible with the territorial sovereignty of the United States; that it makes them instrumental to the annoyance of those nations, and thereby tends to compromise their peace, and that he thinks it necessary as an evidence of good faith to them, as well as a proper reparation to the sovereignty of the country, that the armed vessels of this description should depart from the ports of the United States." Citizen Genet was, however, too vigorous a Republican to be soon silenced. His letters are the strangest diplomatic documents that, perhaps, ever were penned. "Discussions are short," he says in one of them, "when matters are taken upon their true principles." Notwithstanding this promising exordium, a reference to the correspondence will show that his discussions were neither few in number, nor short in length. Washington, the President, was for a long time patient and forbearing, but the conduct of M. Genet became so outrageous that his recall was at last demanded. Washington cannot be too highly commended for his conduct at this critical period. The popularity of France in the United States was at that period almost at fever-height. The irritation against England had not had time to subside, but no popular pressure could shake the firmness and dignity of the President. Strong in his convictions as to the duty of the United States as a neutral nation, Washington fearlessly braved the unpopularity which a course of perfect neutrality excited against his Government. An American citizen of the name of Henfield, who had engaged on board of one of the privateers, was indicted at common law for the offence. The jury, however, declined to convict, and the acquittal was celebrated with extravagant marks of joy and enthusiasm.

The conduct of the American Executive of those days has met with a splendid panegyric from one of England's greatest orators:—

"If I wished," said Mr. Canning, in the debate on the repeal of the Foreign Enlistment Bill, April 16th, 1823, "for a guide in a system of neutrality, I should take that laid down by America, in the days of the presidency of Washington, and the secretaryship of Jefferson. In 1793 complaints were made to the American Government that French ships were allowed to fit out and arm in American ports for the purpose of attacking British vessels in direct opposition to the laws of neutrality. Immediately upon this representation the American Government held that such a fitting out was contrary to the laws of neutrality, and orders were issued prohibiting the arming of any French vessels in American ports. At New York a French vessel, fitting out, was seized, delivered over to the tribunals, and condemned. Upon that occasion the American Government held that such fitting out of French ships in American ports, for the purpose of cruising against English vessels, was incompatible with the sovereignty of the United States, and tended to interrupt the peace and good understanding which subsisted between that country and Great Britain. Here, sir, I contend, is the principle of neutrality upon which we ought to act."

The conduct of the American Government of those days should be a lesson to us at the present time. Strong Southern sympathies are, it is well known, rife among us, and at no place more than Liverpool. It would be perhaps too much to expect that a people of active intellect and most energetic will should refrain from cherishing sympathies for one side or the other, when a civil war of gigantic proportions is raging among a people so closely

Digitized by Google

connected by blood and interests with themselves. The calm, judicial faculty is not a gift which every man has received from nature. Sympathies, however, should be kept within due bounds and should not be permitted to run into excess. The neutrality we profess on our lips should be a real one and not a mere empty name.

The principles laid down by the Government of Washington are in a legal point of view very important, for they show that no doubts whatsoever existed in the minds of the eminent men of his Cabinet, but that the prevention of the fitting out of vessels in their ports to prey on the commerce of nations with whom they were at peace was an international obligation which they were bound to enforce. The Foreign Enlistment Act, it must be remembered, was not enacted till the following year (1794), and it did no more according to the express admission of Kent, than give a positive municipal sanction to obligations which had been already admitted to be international. These considerations throw much light on the construction of our own Foreign Enlistment Act. The Act, being founded on an international obligation, recognized and admitted by the common law, as was asserted by Lord Lyndhurst and others who took part in the debate in 1819, and being intended to supply the infirmity of legal process by attaching the more perfect and complete sanction of municipal law to that higher obligation must be interpreted largely, so as to prevent the evil which it was intended to meet. Arguments have been urged to show that the case of the *Alabama* is not within the Act. Fortunately, any discussion on this question is no longer necessary, for the Law Officers have advised that the *Alabama* had violated the Foreign Enlistment Act and ought to be detained.

From a minute description of the vessel, given in an affidavit of one of the sailors hired for the *Alabama*, and from a description of her given by her late boatswain, it appears that this ship, then called 290, was built by Mr. Laird, under a contract with Mr. Butcher, who is alleged to be agent of the Confederate Government at Liverpool. She is described by the same person as "a large wooden screw-boat," or "a corvette." So unlike is she to a merchant-ship, that the Portuguese visitors who came on board at the Azores could not be persuaded to call her anything but an "English frigate." When she left the Mersey she had on board ninety-three men belonging to the Naval Reserve, all trained gunners and all men-of-war's men. Earl Russell, on receiving the affidavit from Mr. Adams on the 24th of July, laid it before the Law Officers for their opinion; they advised the detention of the vessel, but before the order reached Liverpool the *Alabama* left on the 29th. There can be no question that the Government was quite right; the only misfortune is that they did not act with more promptitude.

Whether the Federal Government have good grounds of complaint against us for delay may be doubtful under the circumstances. But there can be no doubt that just as the American Government in 1793 considered their sovereignty to have been violated by the conduct of the French, in using their ports for the equipment of ships of war, so the British Government ought to feel equally offended by the conduct of the Confederate Government in the affair of the *Alabama*. It is now clear that ship was not built as a commercial speculation, or for any private individual. Whether before she left Liverpool there was any evidence that she was really built for the Confederate Government, we know not. But that such was the fact is now beyond question. When Captain Semmes came on board at the Azores, where the *Alabama*, or, as she was then called, 290, was armed, he read out his commission, which purported to be issued by Jefferson Davis at Richmond, and directed the captain to "assume the command of the Confederate sloop-of-war *Alabama*, hitherto called 290, and to sink, burn, and destroy everything that flew the ensign of the so-called United States of America." It would have been proper respect to the authority of this country had that been consulted before these armaments were undertaken," said Jefferson to the French Minister in 1793, under similar circumstances. It is to be hoped that the conduct of Mr. Jefferson Davis will be rebuked in a manner not less dignified.

Attempts have been made to justify the case of the *Alabama* upon a dictum of Judge Story in delivering judgment in the Supreme Court in the *Santissima Trinidad* (5 Wheat. 353), when he says, "There is nothing in our laws, or in the laws of nations, that forbids our citizens from sending armed vessels, as well as munitions of war, to foreign ports for sale. It is a commercial adventure which no nation is bound to prohibit, and which only exposes the person engaged in it to the penalty of confiscation. Supposing, therefore, the voyage to have been for commercial purposes, and the sale at Buenos Ayres to have been a *bonâ fide* sale, there is no pretence to say that the original outfit in the voyage was illegal, or that a capture made after the sale was, for that reason alone, invalid." These remarks were, as we have already mentioned, a mere dictum, and did not constitute the ground on which the judgment was given. The case, moreover, was very different in its circumstances from that of the *Alabama*. The *Santissima Trinidad* was originally built and equipped as a privateer during the war with Great Britain in 1813, and was rigged as a schooner. After the peace in 1814, she was rigged as a brig, and sold by her original owners. In January, 1816, she was loaded with a cargo of ammunition of war by her new owners, and, being armed with twelve guns, part of her original armament, she was despatched on a voyage ostensibly to the northwest coast, but in reality to Buenos Ayres. By the written instructions given to the supercargo in this voyage, he was authorized to sell her to the Government of Buenos Ayres if he could obtain a suitable price. At that time it should be remembered the Spanish colonies were in revolt against Spain, and enjoyed belligerent rights. She arrived at Buenos Ayres, having exercised no act of hostility, and having sailed under the protection of the American flag during the voyage. She was then sold to her captain and two other persons, and soon afterwards assumed the flag and character of a public ship, and was understood by the crew to have been sold to the Government of Buenos Ayres. The dictum of Judge Story had reference to this state of circumstances.

The vessel having returned to Baltimore flying the Buenos Ayres flag, caused her armament to be there increased. This was held to be an illegal outfit, and certain goods which had been captured by her on the high seas were ordered to be returned.

"It has been long the doctrine of this Court," says Judge Story, "that such illegal augmentation is a violation of the law of nations as well as of our municipal law; and as a violation of neutrality it infects the captures subsequently made with the character of *torts*, and requires a restitution to the parties who have been injured by the misconduct." The case of the *Gran Para* (7 Wheat. 471) is much more like the case of the *Alabama* than the one just cited. The arms and armaments in this case were cleared out as cargo from a port of the United States, and the men were enlisted as for a common mercantile voyage; the vessel was constructed for war, and not for commerce; she was not commissioned to act as a privateer, and did not attempt to act as such until she reached the La Plata, where a commission was obtained and the men were re-enlisted. "If this," said that illustrious judge, Chief Justice Marshall, in delivering the judgment of the Supreme Court, "were admitted, the laws for the preservation of our neutrality would be completely eluded, so far as their enforcement depends on the restitution of prizes made in violation of them. Vessels completely fitted out in our ports for military operations, need only sail to a belligerent port, and then, after obtaining a commission, go through the ceremony of discharging and re-enlisting their crew, to become perfectly legitimate cruisers, purified from every taint contracted at the place where all their real force and capacity for annoyance was acquired. This would indeed be a fraudulent neutrality, disgraceful to our Government, and of which no nation would be the dupe." These observations of Chief Justice Marshall explain the real meaning of the dictum pronounced by Story. The dictum form from the context of the judgment, and the circumstance which suggested it, is easily misunderstood. These cases, instead of affording any justification for the case of the *Alabama*, show that the Government has acted right in ordering the detention of that vessel.

There can be little doubt that the commission under which the *Alabama* is at present sailing is valid, even against Great Britain. "The commission of a public ship," said Judge Story, in the *Santissima Trinidad*, "signed by the proper authorities of the nation to which she belongs, is conclusive proof of her national character. The courts of a foreign country will not inquire into the means by which the title to the property has been acquired." The original illegality of her conduct in violating the Foreign Enlistment Act, is not a sufficient ground for us to dispute her commission. She is now a vessel of war of a belligerent government, and cannot be either seized by us on the high seas, or forcibly detained in our harbours. To do either of these acts would be practically equivalent to a declaration of war against the Confederates. The order of Earl Russell to detain her at Nassau must have been made under the impression that she would have reached that port uncommissioned.

We cannot, consistently with our desire to remain neutrail do anything further than order the vessel away from our ports, should she attempt to enter them. We are glad to hear, though the source from which the information comes is not conclusive,

Digitized by Google

that the Government has made this order. Had the Confederate States been a recognized nationality, with a resident Minister in London, it would have been imperative on us to have followed the course which the Cabinet of Washington set in the case of M. Genet by demanding his recall. As it is, we do not think that we can refrain from conveying to the governing body of these States, a sense of our high displeasure at the manner in which they have infringed our national sovereignty to the prejudice of the other belligerent and in violation of the principles laid down and established by Jefferson and Washington, both of them Southern Statesmen. Our dignified position in the scale of nations, the magnitude of our empire and of the interests at stake, demand that we should not submit to conduct which is subversive of our own laws, as well as of all the principles of international law and morality.

AN OLD SENSATION DRAMA.

It is very hard to have to speak ill of one's grandfathers—to question their taste and to laugh at the idols which they tolerated and sometimes worshipped. Our grandfathers, however, provoke this want of respect by the tone which they or their admirers adopt when speaking about most of these idols. They constantly lecture us about the decay of our arts, and particularly about the decay of our national drama. They tell us in a manner which is sometimes very irritating that we have had no national drama for the last fifty years. They trace this falling off to several causes—but chiefly to the flippancy and inferiority of the present age, and the partial destruction of an old theatrical monopoly. When the "patent" theatres were in existence; when all their actors were "His Majesty's Servants," and all other actors were rogues and vagabonds; when it was illegal to "speak prose," and to perform anything much higher than pantomime, except on the privileged stage, the drama was supposed to be in a perfect and flourishing condition. Though the same complaints were occasionally heard then which are heard now about the lamentable dearth of originality in authors, these are now conveniently forgotten by the defenders of the past, and we hear of nothing but dramatic beauty, grace, force, harmony, judgment, and artistic feeling. The two great theatres, Drury Lane and Covent Garden, hedged in with special privileges which have happily disappeared, though they have left us the sediment of a Lord Chamberlain,—are referred to as schools where great actors were kept together for years, playing up to and round each other's talents and peculiarities in a way which has been killed by partial free-trade and the starring system.

The fact that all this has been attained within the last ten years by two or three intelligent managers, working with an intellectual, as well as a trading purpose, is also conveniently forgotten; and while a few of our actors are grudgingly admitted to have a few merits, our drama is denounced as hopelessly decayed and degraded. While admitting that the two leading London theatres had very strong companies fifty or sixty years ago, we may be pardoned for questioning whether these companies were always put to the best use; whether public taste was much purer then than it is now; and whether managers then were gifted with much greater judgment than their present successors. Legitimate and poetical dramas—the plays of Shakspeare—may have been more frequently in the bills, with strong casts, than they are at present; but they were mixed with a vast number of illegitimate dramas and electro-plated tragedies. Weak or stilted language, feeble or extravagant incidents, improbable plots, and Minerva Press sentiment, were the characteristics of most of these latter pieces, and yet they were popular. They were accepted by the best managers, distributed amongst the best actors, and presented to the best audiences. If we see one of them now performed in the country, or at some outlying London theatre, chiefly because it is claimed by no Dramatic Authors' Society, and is chargeable with no author's fees, we laugh at the writing and construction, pity the actors, and despise the taste and judgment of our grandfathers.

One of the worst of these pieces—though not, by any means, *the* worst, is the "Castle Spectre"—a romantic drama, by the celebrated Monk Lewis, first performed at Drury Lane, December 14th, 1797. It was originally written in five acts, but has since been very judiciously reduced to three, and in the latter form it has been lately revived for a few nights at Sadler's Wells. The original cast comprised Mr. Kemble, Mr. Bannister, Mr. Barrymore, Mr. Palmer, and Mr. Dowton, with Mrs. Jordan as the principal female character. Mr. Kemble's part has suffered most by compression, according to an actor's way of looking at it.

The "Castle Spectre" has a flavour of that German romance which Monk Lewis imported into some of his other literary productions. He loved a ghost, and he loved a lord, and we have, therefore, several lords and a ghost in this tragic drama. The bad lord is feudal to a fault, surrounded by conventional dependents, amongst whom are some unconventional Africans. Ethiopian serenaders and Christy minstrels had not vulgarized the black man, in 1797, and though the piece was received with some derision, the "black slaves of Osmond" were probably not the cause of this opposition. Hassan, a dignified slave—originally played by Mr. Dowton—is quite the poetical character of the piece, and it would be unpardonable not to give a taste of his quality:—

"Hassan. Saib, I too have loved! I have known how painful it was to leave her on whom my heart hung; how incapable was all else to supply her loss! I have exchanged want for plenty, fatigue for rest, a wretched hut for a splendid palace. But am I happier? Oh no! Still do I regret my native land, and the partners of my poverty. Then toil was sweet to me, for I laboured for Samba! then repose ever blessed my bed of leaves, for there by my side lay Samba sleeping.

"Saib. This from you, Hassan?—Did love ever find a place in your flinty bosom?

"Hassan. Did it? Oh, Saib! my heart once was gentle, once was good! But sorrows have broken it, insults have made it hard! I have been dragged from my native land, from a wife who was everything to me, to whom I was everything! Twenty years have elapsed since these Christians tore me away; they trampled upon my heart, mocked my despair, and, when in frantic terms I raved of Samba, laughed and wondered how a negro's soul could feel! In that moment, when the last point of Africa faded from my view, when as I stood on the vessel's deck, I felt that all I loved was to me lost for ever, in that bitter moment did I banish humanity from my breast. I tore from my arm the bracelet of Samba's hair, I gave to the sea the precious token, and while the high waves swift bore it from me, vowed, aloud, endless hatred to mankind. I have kept my oath, I *will* keep it!"

The story of the "Castle Spectre" is eminently sensational: it turns upon wholesale murder, and is soon told. Earl Osmond—the villain of the piece—after distinguishing himself in certain Scottish wars of an unknown period, has caused his elder brother, and his brother's wife and child to be murdered; and has usurped Conway Castle, with all the property belonging to it. By one of those interpositions peculiar to dramas, the brother and child were saved—the lady only having fallen a victim to provide a good ghost for the story. The brother, loaded with chains, and fed upon bread and water, has been immured for sixteen years in one of Earl Osmond's dungeons, without the earl knowing it; the jailer being a dissatisfied dependant, who is a strange compound of greediness, cruelty, remorse, and pity. The child—a little girl—has grown up into the beautiful Angela, a supposed cottager's daughter, outside the castle gates, and has excited the worthy love of Percy, Earl of Northumberland, and the unworthy love of the villain, Earl Osmond. Falling into the power of the villain, this young lady becomes the mainspring of the drama—one party in Conway Castle struggling to keep her—the other party, outside the castle, struggling to rescue her. The underplot is filled up with three good, strong, serviceable stage characters,—a fat monk, who loves flagons of wine and venison pasties; a jester, who is wise and impertinent; and an old housekeeper, who is timid and credulous.

The unity of place is strictly observed in this drama, as the action lies entirely within Conway Castle. With the exception of the first scene, which is merely introductory, the scenes seem to present pictures of a succession of dungeons. There are the castle hall, the armoury, the castle-hall again, a chamber, the castle-hall again, the cedar-room, the castle-hall once more, the cedar-room again, a vaulted chamber—which must be an imaginary Conway tubular passage of the middle ages—and a gloomy subterraneous dungeon. One sensation scene, which is badly put upon the stage, and where the most extraordinary gymnastic opportunities are thrown away, occurs where the captive Earl Percy, while his two black jailers are playing at dice, leaps out of a turret window into a sheet spread by his faithful followers below. The Sadler's Wells management, following the stage directions mechanically, have merely filled the stage with an ordinary dismal chamber, leaving the earl to leap out of a window at one of the upper wings, like a clown in a pantomime. Mr. Boucicault, with the same materials, would have divided the stage with a double built-up scene, showing the interior of the earl's dungeon on one side, and a seemingly unfathomable ravine on the other. The leap from the window, as well as the preparations for the leap, would have been seen by all, except those visitors in the side-boxes who pay double prices to witness only half the show. Mr. Kemble was a very good actor, like most members of his family, but he was evidently not a good arranger of "business" for sensation dramas.

We are sorry to see Earl Percy—the only leading virtuous person in the piece, with the exception of the heroine—continually putting himself in situations where the villains seem to have the best of him in argument. When Percy is taken prisoner after having crept into Conway Castle in disguise to rescue Angela, he addresses Earl Osmond rather indignantly:—

Digitized by Google

PERCY. Stay, sir, and hear me! By what authority presume you to call me captive? Have you forgotten that you speak to Northumberland's earl?

OSMOND. Well may I forget him, who could so far forget himself. Was it worthy of Northumberland's earl to steal disguised into my castle, and plot with my servant to rob me of my most precious treasure?

PERCY. Mine was that treasure; you deprived me of it basely, and I was justified in striving to regain my own.

OSMOND. Earl, nothing can justify unworthy means. If you were wronged, why sought you not your right with your sword's point? I then should have esteemed you a noble foe, and as such would have treated you: but you have stooped to paltry artifice, and attacked me like some midnight ruffian, privately and in disguise. By this I am authorized to forget your station, and make your penance as degrading as your offence was base.

Not improved by this warning, Percy attempts to tamper with his two black gaolers, gives them a purse of gold, and receives another reproof:—

PERCY. Here it is, and now unlock the door.

MULEY (*chinking the purse*). *Here* it is! And now I'm obliged to you. As for your promises, my lord, pray don't trouble yourself to remember them, as I shan't trouble myself to remember mine.

PERCY (*starting*). Ha! what mean you?

SAIB (*firmly*). Earl, that we are faithful!

PERCY. What! will you not keep your word?

MULEY. In good troth, no; we mean to keep nothing—except the purse.

PERCY. Confusion! To be made the jest of such rascals!

SAIB. Earl Percy, we are none, but we should have been, could your gold have bribed us to betray our master. We have but done our duty—you have but gained your just reward; for they who seek to deceive others should ever be deceived themselves.

The ghost of Evelina (the name has a fine full Minerva press flavour), appears only twice, and then in a costume of the true bleeding nun order. Her appearance, and the manner of her exit and entrance, can best be told, perhaps, by quoting the stage directions:—

(*A plaintive voice sings within, accompanied by a guitar.*)

"Lullaby!—Lullaby!—Hush thee, my dear,
Thy father is coming, and soon will be here!"

ANGELA. Heavens! The very words which Alice——The door too! It moves! It opens! Guard me, good angels!

(The folding-doors unclose, and the oratory is seen illuminated. In its centre stands a tall female figure, her white and flowing garments spotted with blood; her veil is thrown back, and discovers a pale and melancholy countenance: her eyes are lifted upwards, her arms extended towards heaven, and a large wound appears upon her bosom. Angelina sinks upon her knees, R. C., with her eyes riveted upon the figure, which for some moments remains motionless. At length the spectre advances slowly to a soft and plaintive strain; she stops opposite to Reginald's picture, and gazes upon it in silence. She then turns, approaches Angela, and invokes a blessing upon her, points to the picture, and retires to the oratory. The music ceases. Angela rises with a wild look, and follows the vision, extending her arms towards it. The spectre waves her hand, as bidding her farewell. Instantly the organ's swell is heard; a full chorus of female voices chant "Jubilate!" A blaze of light flashes through the oratory, and Angela falls motionless on the floor.)

The final scene of the drama is worked up by bringing all the characters together in a gloomy dungeon. This cell is not like the humanitarian places of confinement provided by our modern prison authorities. It is feudal, and very—oh, so very gloomy! Here lies the prisoner of sixteen years—the supposed dead father of Angela. He is very like the half-starved father in Schiller's "Robbers," though he spares us the agony of dying hard in a bedgown. He rolls in the straw, clanking his chains, and indulges in the following lamentations:—

BEGIN.—My child! my Evelina! Oh, fly me not, lovely forms! They are gone, and once more I live to misery. Thou wert kind to me, sleep! Even now methought I sat in my castle-hall: a maid, lovely as the queen of fairies, hung on my knees, and hailed me by that sweet name, "Father!" Yes, I was happy,—yet, frown not on me, therefore, Darkness! I am thine again, my gloomy bride! Be not incensed, Despair, that I left thee for a moment; I have passed with thee sixteen years! Ah, how many have I still to pass? Yet, fly not my bosom quite, sweet Hope; still speak to me of liberty, of light! Whisper, that once more I shall see the morn break, that again shall my fevered lips drink the pure gale of evening! Heaven, thou knowest that I have borne my sufferings meekly: I have wept for myself, but never cursed my foes; I have sorrowed for thy anger, but never murmured at thy will. Patient have I been—oh, then, reward me—let me once again press my daughter in my arms; let me for one instant feel again that I clasp to my heart a being who loves me. Speed thou to heaven, prayer of a captive!

(*He sinks upon a stone, with his hands clasped, and his eyes bent steadfastly upon the flame of the lamp.*)

In this dismal dungeon, Angela, flying through subterranean passages, with a friendly monk who favours her escape, comes suddenly upon her father; here Earl Osmond, seeking his brother to murder him or see him properly murdered this time, comes suddenly upon Angela, and here Earl Percy with his followers, having broken into the castle, arrives in time to see Osmond stabbed by Angela under the approving eye of Evelina's ghost. Angela embraces Percy, Reginald kneels to Evelina's ghost, Osmond lies on his back, and the other characters dispose themselves as effectively as possible under the glare of a little blue fire.

This was the production of a leading literary man some sixty-six years ago, at the leading theatre in England, assisted by the leading manager and actors of that time.

THE RESOURCES OF GREECE.

THE fact that civil liberty and a free government have been established in Greece by the noble perseverance of the Greek people, after two thousand years of slavery, naturally awakens an interest in the prospects of the country. There stands the little kingdom created by diplomacy, possessing an unrivalled commercial position, with every element of social and political improvement at hand, yet a generation has passed away unprofitably. To its own creation, diplomacy has hitherto made success impossible. It forced a bad king into a circumscribed kingdom, whilst the Greeks themselves, although they pretend to be proud of their country and of its political liberty, prefer to live enslaved in Turkey, rather than enjoy liberty in liberated Greece. It is true that commerce thrives, towns increase, and merchants grow rich; but the people, who constitute the real strength of the nation, do not increase either in wealth or in numbers. Nothing has been done to develop the resources of the country, which are considerable. The peasantry have been compelled to live on under their Christian masters, in the same primitive condition in which they were under the Mahommedan yoke.

From the budget we learn that the public revenue of Greece is derived from the following sources, viz.:—

	Drachmas.	
Direct Taxes.		
Land-tax and usufruct	8,030,519	
Tax on Bees	32,252	
,, Cattle	1,407,078	
,, Professions	220,519	
,, Houses	108,810	
		9,799,178
Indirect Taxes.		
Customs	4,198,188	
Stamp duties	1,515,479	
Miscellaneous	395,148	
		6,108,815
Public Establishments.		
Mint	2,000,000	
Post-office	244,961	
Printing-office	4,525	
		2,249,486
Public Property in possession of Government.		
Mines and minerals	123,283	
Thermal springs	5,383	
Salt-pans	514,705	
Fisheries	144,843	
Forests	260,387	
Olive-groves	84,328	
Vineyards	263,505	
Gardens	119,455	
Buildings	63,699	
		1,579,588
Revenues from national lands alienated		30,342
,, from ecclesiastical property		189,923
Miscellaneous revenues		755,534
Receipts on arrears due		1,438,927
Total drachmas		22,151,793

The expenditure may be stated as equal to the revenue. In England the difficulty is to raise a revenue sufficient to meet an unavoidable expenditure. In Greece the expenditure has been made to rise with the revenue, irrespective of public debts; the difficulty being so to distribute the increase of expenditure as to create as little jealousy as possible amongst the fortunate few in power.

The debts publicly acknowledged are as follows:—

First, the Rothschild debt of 1832, guaranteed by the three protecting Powers, who have, with very few exceptions, paid each year to the Messrs. Rothschild the amount due to them by the Greek Government as interest and sinking-fund on the debt. This debt will be liquidated in the year 1871. If the present system be permitted to continue, the Greek Government will then become a debtor to the three protecting Powers for the capital originally advanced as well as for the interest paid upon it.

Digitized by Google

These added together will amount at the end of 1871 to £3,984,961

The Bavarian debt, incurred in 1843, amounts to 107,400

No interest has ever been charged upon this debt; a large portion of it is disputed and a set-off claimed against it by the Greeks.

The principal unacknowledged debt was incurred in the years 1824-25 in separate sums of £800,000 and £2,000,000 sterling.

To the opportune arrival of these loans in Greece the nation is very much indebted for the ultimate success of the revolution. A very small portion of them have been redeemed. The accumulated interest on them amounts to fully 175 per cent. The bondholders would possibly not be unwilling to forfeit all interest due up to the present day, if the debt were formally acknowledged, and if arrangements were made for its extinction, with interest, by annual instalments. We will, therefore, set this debt down in 1862 at only its original amount, viz. 2,800,000

There exists also an interior debt of a very trifling amount, not necessary to be noticed here.

Thus the whole exterior debt of Greece, under the conditions specified, may be stated at..... £6,892,361

As compared with other nations, this is not a large national debt. Certainly, for Greece, which has her chief resources still undeveloped, there is nothing in it to create alarm. Greece has within herself the means to meet honourably all her financial engagements. During the last five years the receipts of the kingdom have increased by above 5,000,000 drachmas. In 1859, despite of all the systematic peculation then existing, the receipts reached 22,151,000 drachmas. Under the influence of a good government, fiscal honesty, and the development of the resources of the country, the receipts cannot fail to augment very considerably. But it is sufficient for all the present wants of Greece that the receipts should not decrease. This will be better understood when it is mentioned that by the financial commission of 1859, of which we have spoken, it was clearly demonstrated to the Greek Government that the national expenditure ought not to exceed 15,000,000 drachmas per annum. It had been practically proved that this amount sufficed in previous years, not only for all ordinary requirements, but even to keep up an unnecessarily large army. Obviously, then, a reformed or economical Greece can set aside each year fully 6,000,000 drachmas, or, say, £200,000 sterling, towards the extinction of her debts. In 1859 the three protecting Powers insisted on an annual payment of only £40,000 sterling; but it is now very generally admitted that it was an error to have been contented with so small an amount.

The increase in the revenues of Greece has arisen almost entirely from the increased price of agricultural produce received in payment of land-tax and from the increased commerce of the country. Commerce and agriculture are indisputably the chief sources of public wealth in Greece. These interests are so linked together that a stimulus to one stimulates the other. Commerce has thriven in Greece in spite of a bad government. This commercial prosperity has tended to enhance the value of agricultural produce, nor have the cultivators failed to profit by this circumstance. Agriculture would, doubtless, have sunk to even a lower ebb than it has now reached had it not received this timely aid from commerce. What we want now to see is, new vitality given to both, and to see both prospering and mutually aiding each other under an able and energetic ruler.

There is not now more land cultivated in Greece than there was fifty years ago, and the quality of the grain produced has deteriorated. Every road, bridge, or causeway constructed by the Turks in the interior has been allowed to fall into ruin or to become impassable. Fiscal remedies have been already suggested for the development of the agricultural resources; but in order to reap the results of this development, it is necessary to facilitate the transport of produce to the sea by roads, by railroads, by tramways, by any possible means which science and experience can suggest. Under a system such as we have sketched, which does not require the outlay of any large amount of capital, no reason exists why Greece should not supply to Europe a very large portion of the grain which is now annually imported from America and Russia. The Russian trade is carried on chiefly by Greek merchants in Greek ships. Greeks now pass by the empty but magnificent harbours of Greece, and brave the perils of the Black Sea to enrich Russia by a commerce which could easily be transferred to their own country, and this with advantages sufficiently substantial to excite an intelligent and speculative race to immediate and energetic action.

The commerce of Greece progresses steadily. The Minister of Finance, in a commercial report for 1860, the latest published, states the value of importations at 53,979,899 drachmas, and the value of exportations at 26,931,413 drachmas—total, 80,911,312 drachmas.

As compared with 1859, this shows an increase of 10,234,670 drachmas; and, as compared with the average of the five preceding years, the increase amounts to 22,830,696 drachmas.

The mercantile marine consists of 4,070 vessels, of an aggregate tonnage of 23,842 tons. In the year 1860, the number of vessels was increased by 86.

Of the importations, 27 per cent. come from England; of the exportations, 49 per cent. are sent to England. The former consist chiefly of cotton and woollen goods, iron, coal, and spirits. The exports consist of currants, cocoons, emery, and figs. Turkey, Austria, and France rank next after England in commercial importance to Greece.

It is worthy of observation that Greece imports grain from Turkey, Russia, Egypt, and the Principalities, to the value of 9,730,636 drachmas per annum. The value of the exports of grain amounts to 343,538 drachmas; leaving for home consumption grain to the value of 9,387,108 drachmas. This is a large amount of food to be imported in one year into an agricultural country thinly peopled, and affords evidence that we have not exaggerated the condition of the Greek cultivator under Bavarian rule. The forest laws and the tariff on timber are such that it is more profitable to import timber from Germany than to cut it in the forests of Greece. Moreover, not only does the nation derive a very small profit from these forests, but every summer very many acres of forest are destroyed by fire, and the Government appears powerless to arrest the wilful destruction of its property.

It would be beyond the limits of our present task to enter into explanations of the taxes, direct or indirect, or of the public establishments. Detailed reports on these, on the revenues of Greece, and on the financial condition of the country, have been for some years in the Foreign Office. The publication of these reports has been promised, but we are not aware that the promise has, as yet, been fulfilled. At the present moment such reports could not fail to be of some public interest.

It may, with all truth, be said that, under a better financial administration than has heretofore existed in Greece, both the taxes and the public establishments might be made more profitable to the public treasury and far less oppressive to the people.

The public property is of considerable value, and has notoriously been shamefully mismanaged.

The Greeks received from the Turks a rich heritage, consisting of salt-pans, fisheries, olive-groves, currant-grounds, vineyards, gardens, buildings, and about one million and a half acres of land, a large portion of which was arable or under cultivation.

Except the latter, the "national lands," of which we shall speak hereafter, it is directed by law that these properties are to be let by public auction to the highest bidder. As a rule, we believe the forms of an auction have been gone through. But in a country where mock elections for high public offices have been systematically carried on, under royal sanction, for the benefit of creatures of the court, it cannot be difficult to believe that a system of mock auctions may also have been established for similar purposes. It is certain that the law has been laxly carried out in the letting of public property; that the property has been let at less than its real value; that the property has deteriorated much in the hands of the tenants; that the rent due by tenants has been allowed to fall into arrear; and, as regards the salines and fisheries, both have been considerably damaged by tenants with impunity. Each year all this property decreases in value; it may yet be recovered, and made to yield to the nation a revenue far exceeding that which is now obtained from it. Since Greece has been a kingdom, the national lands have been an inexhaustible fund for bribery and corruption. From the Ministers to the lowest officials, as a rule, every one who has had the power of grasping a portion of them, has availed himself of his power. At this moment no correct account can be given of the disposal of these lands; indeed their very limits are unknown to the Government. Except by local tradition or by some lists loosely compiled, to which it is now attempted to attach an official importance, the Government has no means at its command to check the usurpation of this property, or to recover what has been usurped. And at this very moment much public land is illegally possessed by many of the first men in Greece.

Nevertheless, this public property and these national lands have been mortgaged, certainly twice over; viz., to the bondholders of

Digitized by Google

the loan of 1824–25, and the revenues derivable from them to the three protecting Powers for the loan of 1832. No better time than the present is ever likely to occur to institute an inquiry into and to rectify, once and for ever, this glaring public fraud. It is yet possible to benefit Greece considerably by such an inquiry. If it be deferred for a few more years, it would then, in all probability, be profitless.

Much is said amongst the Greeks themselves of the mineral wealth of the country. Rich mines of iron, lead, and coal, are stated to exist. Admitting their existence, it is very questionable whether they could be worked with profit in a rugged, roadless country, where fuel is very scarce and labour dear. Perhaps the coal-mine of Eubœa might be worked with profit: it is near the sea; the coal is serviceable, though not of a good quality. The emery of Naxos is far superior to that of Turkey, and always commands the highest price in the English market. For the polishing of machinery, and for other purposes in manufacture, it stands unrivalled. Notwithstanding its excellence, this valuable product has never been turned to the best account. It is stated that under one contractor it became depreciated in value in the London market because it was mixed with inferior Turkish emery. With another contractor the Greek Government was in litigation for some years, and lost, during a great part, if not the whole of the time, all revenue from the mines. We believe that the system in force of late years has been an improvement on any previously adopted.

The marbles of Greece are indisputably excellent in quality. The Pentelic marble, with which the Parthenon and all the great public temples were built, is unsurpassed as a marble for all architectural purposes. It exists to any extent in the mountain of Pentelicus, and, by the application of a little science and capital, might be put on board ship in the harbour of the Piræus at a small cost.

At Paros white Parian marble can be obtained in any quantity, and shipped without much difficulty. This marble was carefully examined in 1859 by competent judges, who gave it as their opinion that the vein of marble then being worked at Paros was of a superior quality, both in grain and colour, to any Carrara marble. Exquisitely-coloured marbles abound in Greece; large massive columns of "verde antique," quarried in the island of Psara, have recently been placed in the cathedral at Athens.

It is strange that there is no export trade of marble from Greece, although large vessels are perpetually laden with inferior marble at Leghorn and Genoa, destined for America or some European port. The same fatal spell under which Greece has suffered so much is traceable here also, preventing a trade by which some of the people might acquire a competency and independence.

The question of the real value of the resources of Greece may be reduced to a very simple sum in proportion, viz.: If, under an administration such as we have described, the resources are worth "*so much*," under a good and honest administration, what would be their real value? If a correct answer could be obtained to this question, doubtless it would exhibit a startling difference between the first term and the answer. Whatever the difference be, it represents the measure of Greek fiscal dishonesty; a dishonesty by which the public debtors have been defrauded, the national property squandered, and the people cruelly oppressed.

The best assistance which we can give at this moment to the Greeks would be to place a fit ruler upon the throne of Greece, and to take care that he be well and truly informed in every respect. If the "right man" cannot be found, it is difficult to foresee possible consequences. But if he be found, and once ascend the throne, and if the Greeks are true to themselves, it is not too much to hope for Greece a future as successful and as materially useful in the East as has fallen to the lot of Anglo-Saxon colonies in the West; and for the Greek people a freedom and a prosperity which may be instrumental in diffusing among the surrounding nations Christian civilization and political liberty.

THE PAST WEEK.

THE most important thing we have to record in European politics is the publication in our official *Gazette* of the memorandum which Mr. Elliott has presented to the Provisional Government of Greece, promising the cession of the Ionian Islands. The text of this document is as follows:—

"It is her Majesty's earnest desire to contribute to the welfare and prosperity of Greece. The treaties of 1827 and 1832 bear evidence of this desire on the part of the British Crown. The Provisional Government of Greece declared, upon the withdrawal of King Otho from Greece, that their mission is to maintain for Greece constitutional monarchy and the relations of peace with all other states. If the new assembly of the representatives of the Greek nation should prove faithful to this declaration, should maintain constitutional monarchy, and should refrain from all aggression against neighbouring states, and if they should choose a sovereign against whom no well-founded objection could be raised, her Majesty would see in this course of conduct a promise of future freedom and happiness for Greece. In such a case, her Majesty, with a view to strengthen the Greek monarchy, would be ready to announce to the senate and representatives of the Ionian Islands her Majesty's wish to see them united to the monarchy of Greece, and to form with Greece one united state; and if this wish should be expressed also by the Ionian legislature, her Majesty would then take steps for obtaining the concurrence of the Powers who were parties to the treaty by which the seven Ionian Islands and their dependencies were placed as a separate state under the protectorate of the British Crown." At the same time, her Majesty's Government "take care to make it understood that the election of a prince who should be the symbol and precursor of revolutionary disturbance, or of the adoption of an aggressive policy towards Turkey, would prevent any relinquishment of her Majesty's protectorate of the Ionian Islands. Her Majesty's Government trust that, in the selection of a sovereign to rule over Greece, the Greek assembly will choose for their king a prince from whom they can expect a regard for religious liberty, a respect for constitutional freedom, and a sincere love of peace. A prince possessing these qualities will be fitted to promote the happiness of Greece, and will be honoured with the friendship and confidence of her Majesty the Queen." It is said that a fresh attempt is being made, by the influence of King Leopold, to persuade Ferdinand of Coburg to accept the crown of Greece.

The struggle in Prussia, between the King and the constitutional deputies, seems to grow more intense. A popular meeting at Cologne has passed resolutions, approving of the conduct of the Chamber, in upholding its vote on the Budget. Professor Von Sybel, of the University of Bonn, has called upon the electors to "close their ranks" in defence of the Constitution, which is menaced by the encroachments of the royal prerogative.

The debates continue in the Spanish Cortes on the conduct of the Government and of General Prim in the expedition to Mexico. This affair seems to have occasioned some coolness between Spain and France. The Spanish ambassador, General Concha, has left Paris, and is not to return.

The news from America is to December 27. The latest war movements are these; that in Virginia the Confederates have abandoned Winchester, now occupied by the Federals, and have fallen back on Stanton, destroying the railway between those places In the West, they have cut off the communication between the city of Columbus, which they now threaten, on the Mississippi, and that of Jackson, in the State of Tennessee; while they are preparing an attack upon Nashville, the capital of that State, and have made a raid in the suburbs of Memphis. In the State of Mississippi, at Holly Springs, they have captured a large quantity of Federal stores; and their guerilla captain, Morgan, has made a successful dash at a place called Glasgow, in Kentucky. The political situation and plans of the Federal Government are still uncertain. It was affirmed by some, and denied by others, that President Lincoln would, on the 1st of January, definitely confirm his emancipation decree, exempting the Border States, and those in which a party loyal to the Union exists, from the operation of that decree. It is equally doubtful whether he will not put a constitutional *veto* on the bill which Congress has passed for the erection of Western Virginia into a new free State. With regard to finance, a bill has been brought in by the Secretary of the Treasury, for raising nine hundred million dollars by the issue of six per cent., seven per cent., and seven-and-a-half per cent. bonds, with notes to be brought into circulation through certain new banks which it is proposed to establish for that purpose. Mr. Chase, in his communication to Congress, proposing these measures, expresses his profound sense of the importance of this measure for the negotiation of loans, for the collection of internal revenue, and the security of the people against the evils of an enormous unredeemable paper-money circulation. The disastrous failure of General Burnside's attack at Fredericksburg led to a Ministerial crisis. An attempt was made by a party in the Senate to get rid of Mr. Seward, the Secretary of State, Mr. Chase, the Secretary of the Treasury, and Mr. Stanton, the Secretary of War; and the resignations of Mr. Seward and Mr. Chase were tendered to the President, but he would not part with them. General Burnside himself, in his report on the affair at Fredericksburg, admits that the crossing of the Rappahannock, and attacking the fortified positions beyond, were his own acts. He says, that the President and the Secretary of War, as well as General Halleck, the Commander-in-Chief, had advised that the crossing should be made lower down the river; but he, Burnside, in the exercise of the authority given him, had decided, for reasons which he deemed sufficient, to cross at Fredericksburg, and attack the enemy's centre. Such was his knowledge of the distribution of Lee's troops, that he thought a favourable moment for the movement had come. Unfortunately, the delay caused by the resistance of the enemy's sharpshooters, as well as by a heavy fog, involved a loss of twenty-four hours of precious time, and Lee was thus able to get ready for the attack. The failure is briefly dwelt on: the courage of the men; the delay afterwards, and the show of preparation for renewed attack; then the withdrawal of the army in a single night, leaving behind neither property nor men. Finally, General Burnside says that if the attack had succeeded, the praise for it would have been due to the courage of the troops. "For its failure," he adds, "I alone am respon-

Digitized by Google

sible." He then speaks of the loss—1,100 killed, 9,000 wounded, and 900 prisoners. The prisoners were at once paroled, or rather exchanged for a like number taken from the enemy. Of the wounded, an unusual number were but slightly hurt, so that but 1,600 were taken to hospital. He describes the march of the men in the early morning after their recrossing of the river, and their good order as they moved towards their old camping-ground, all as if they were on parade. He says that the army is not at all demoralised, and that it is, of course, eager for further employment. He speaks, then, of the change from Warrenton to Fredericksburg, the sudden alteration of the plan of campaign, as entirely his own act. He exonerates, in other words, the President, Secretary of War, and General-in-Chief from any share of responsibility for the movement, which has proved so disastrous.

The Federals have gained a military success in North Carolina, where General Foster, moving from Newbern to Kingston, found the enemy strongly posted, but by a vigorous attack he routed them, taking 400 to 500 prisoners and 11 pieces of artillery, with a large amount of quartermaster's and commissary's stores. His next move was upon Goldsboro', where his aim would be to sever the main line of communication between Richmond and the Carolinas. We look for tidings of another action in North Carolina; an expedition has left Port Royal, it is supposed for Wilmington. The expedition of General Banks has got into the Gulf of Mexico, where several of his transports have been wrecked. Its destination is supposed to be the mouth of the Mississippi, or else Ship Island, for an attack on Mobile. One of the Federal iron-clad gunboats has been blown up by a torpedo in the Yazoo river, Mississippi. An expedition again Vicksburg has just started from Cairo. We have accounts of a battle in Arkansas, which proved a substantial victory for the Federal troops. A body of 7,000 of them, under General Heron, fought nearly all day a force of the enemy represented as 26,000 strong. Immense courage was shown by his men. The enemy were held at bay, and late in the afternoon a reinforcement of Federals came up, under General Blunt, of 5,000 men. Then the ardour of the Federal troops became irresistible, and when night closed the enemy were in full retreat. The scene of the battle is known as Cane Ridge, which is therefore the name by which the engagement is called. The victory opens to the Federals a large part of Northern Arkansas. The flight of the rebel army is, however, in part a sudden transfer of themselves into Mississippi, to swell the force which threatens Nashville. Great frauds have been discovered, on the Federal Government in the matter of army debts. Many merchants and brokers in New York are involved. A secret investigation has been in progress for two months. The loss sustained by the Government amounts, as far as known, to about 1,000,000 dollars. An investigation shows that out of 1,600,000 dollars paid out in one city alone from the special appropriation of 20,000,000 dollars for recruiting, organizing, and drilling volunteers, nearly one-half has been paid on fraudulent accounts. Nearly one thousand persons had been engaged in the matter, but they were not all criminally implicated.

The Queen is at Osborne; the Prince of Wales is shooting over his newly-purchased demesne in Norfolk; Prince Alfred is not practising airs of Athenian royalty, but doing his duty as a midshipman, often at the masthead, or studying the use of the sextant, on board the *St. George*, in the Neapolitan Bay of Baiæ. Both our married sister princesses, curiously enough, have been meeting with carriage accidents—the one at Osborne, the other at Berlin; yet both, we are happy to say, escaped without any very serious hurt. The Princess of Prussia, with her husband, was riding along Tempelhofer Strasse, in a carriage drawn by two horses, at a very moderate pace, in order to avoid coming into contact with some fire-engines which were passing by at the time, when a careless driver from the country managed his horses so clumsily that the pole of the waggon to which they were attached was carried right through the window of one of the doors of the royal carriage, shattering it to pieces. The Crown Princess, in the terror of the moment, put out her hand to seize the door, and was cut by the broken glass. The Princess Alice of Hesse for her part, attended by the Hon. Miss Bruce, was proceeding in a waggonette from Osborne, by the Cowes road, and round the neighbourhood of Newport, for a morning drive, when the postilion attempted to drive between two other vehicles which were on the road. The wheels of the vehicles came into collision, the waggonette was overturned, and the Princess and her companion were thrown out with considerable violence. The ankle of the Princess was sprained and she was severely shaken, but sustained no further damage. Miss Bruce was also considerably shaken, and the muscles of her hand were severely lacerated. The unfortunate ladies were removed to a house close by, being assisted by Mr. Groves, a medical student, who was passing at the time. Her Royal Highness and companion were subsequently removed to Osborne, and, next day, the Princess was quite well.

Lord Palmerston is still playing the genial patriarch and patron of agricultural merit at Romsey, where he gave away the prizes of a Labourers' Encouragement Society on Wednesday last. He pleasantly admonished the ploughmen to beware of beer and 'baccy, desired their wives to keep the cottage tidy and trim, and denounced the weed "charlock," with which the fields about Romsey are too much overrun. While thus engaged in dispensing the honorary rewards of rural toil and virtue to the humblest class, he is minded also, as we learn from the *Globe*, to confer a baronetage upon six gentlemen of good estate and social influence; they are Mr. William Brown, of Liverpool; Mr. Frank Crossley, of Halifax, M.P. for the West Riding; Mr. David Baxter, of Dundee; Sir Daniel Cooper, the first Speaker of the Legislative Assembly of New South Wales; Mr. Henry Rich, for many years a consistent supporter of Liberal principles in the House of Commons; and Mr. Thomas Davies Lloyd, of Bronwydd, a Welsh gentleman of ancient lineage.

A further decrease of the numbers receiving relief from the rates in the twenty-one unions chiefly affected by the "cotton famine" is officially reported; in the last week of the year the paupers fell from 271,210 to 267,160, being a net decrease of 4,050. The total decrease since the numbers began to fall has been 10,950. At the weekly meeting of the Central Relief Committee at Manchester, Mr. Farnall, the Government Special Commissioner, reported the number of persons receiving parochial relief on the 27th ult., as 260,546, which is a decrease on the previous week of 3,911. Some important conversation arose as to the chances of an improved supply of cotton. It was stated that our weekly consumption during 1862 had averaged 22,990 bales, which, compared with 1860, the last year of full working, when the weekly average was 48,700 bales, gave a little short of three days a week. The probable increase for 1863 would be 134,650 bales. Altogether they estimated the supply per week likely to be received in 1863 at 21,000 bales, against the 48,700 of 1860. If the American war continued, we might expect only half-time working for 1863. Assuming the continuance of the war, we should require all the money that could be obtained for at least three years to come to keep the operatives alive, and probably many years would elapse before the supply of cotton would equal the demand of recent years. One gentleman, however, was of opinion that there would be amply sufficient cotton for half-time employment this year.

A report from Manchester states that the weekly expenditure of the committees is now close upon 40,000*l*., and the Central Relief Committee has a balance of 350,000*l*. at its bankers, making, with a balance unexpended in the hands of local committees, half a million. "If," adds the writer, "there is any truth in the complaint that local claims are being neglected from the diversion of charity to these districts, it would be a great pity. There certainly seems to be no necessity for it, for here is three months' provision, even at the present high rate of outgoings, which must fall off in a few weeks, when the work of clothing is completed."

The amount paid by the Central Relief Committee into its bankers to the end of last year was 500,372*l*. 0*s*. 11*d*. The whole of the Mansion-house Fund amounted to 335,843*l*. at the last weekly report. Together, therefore, these two great agencies have collected 836,215*l*.

A conference of Church schoolmasters, from all parts of England, has met at Oxford. They complained of the manner in which they were treated by the Vice-President of the Committee of Council, and by the Ministerial party in the House of Commons last session, in the debates on the Revised Code. They resolved to apply for a Scholastic Registration Act, on the same principle as the Medical Registration Act of 1858. An interesting discussion took place on the establishment of night schools in agricultural villages, where young single men of the labouring class should be gathered, under the eye of the parish clergyman, into a room more cheerful and attractive than the village alehouse, to be taught "the four R's," namely, reading, 'riting, 'rithmetic, and religion. There were good reports from Lancashire of the adult schooling which has began since the stoppage of work in the cotton factories. The Master of Balliol, who dined with the Associated Schoolmasters after their conference, was glad to see that they showed so much *esprit de corps*. He thought their work was second only to the ordained ministry of the Church, and much akin to it. Education, he observed, was now earnestly taken in hand as the great problem of the day. The parochial school, the grammar school, and the training school, should be linked together in some progressive order, by which one might feed the other, as the middle-class schools had been brought into communication with the universities by the system of local examinations. And as, among those who gained high distinctions in the local examinations, there were some led on to compete for University scholarships; he would like, also, to see rich and charitable persons lend a helping hand to any pupils in the parochial schools who were gifted with extraordinary talent, that they might be enabled to study at Oxford or Cambridge. By this means popular education throughout the country would be a running stream, and not a stagnant pool.

Another fire has been attended with as much loss of life as that in Soho a fortnight ago. It was in the house of a shoemaker, named Keene, in College-street, Portsea. There were six children asleep in the top rooms, while Keene and his wife sat with two friends, in a room behind the shop, to make merry on New Year's-eve. They heard a crackling noise in the shop, opened the door, and found the shop full of flames. The two "friends" rushed out of the back-door and "escaped" over a wall. The parents ran upstairs to save their children; but it was the mother, and not the man, who sacrificed her own life for them. While her husband, baffled by the stifling smoke, gave it up, and came safe down again, she insisted on going on, and died with her little ones. At the inquest on the death of six children who perished in the Soho fire, it appeared that the fire began in Mr. Chard's jeweller's and watchmaker's shop on the ground-floor. The policeman outside burst open the house-door, and the grown people who lived there, amongst whom were Samuel Spencer, a porter, and his wife, the parents of the six children, managed to escape; but the children

Digitized by Google

were burnt. There was some delay in getting the engines to work, and Denyer, the nearest turncock, was censured for neglect. Four more children have been suffocated by a fire in their bedroom, at Greenock. The Royal Hotel, with the Theatre Royal adjoining it at Plymouth, a large building of some architectural elegance, has been destroyed by fire.

A very horrible murder has been perpetrated at Haigh, near Wigan. John Barton, the fireman of a colliery, was missing from his place in front of the furnace on Saturday morning, and drops of blood were found on the furnace-plates. When the ashes were raked out, it was discovered that he had been thrust bodily, feet foremost, into the fire. A handful or two of charred remnants of bones, with a few teeth, some buttons, and the nails of his boots, were left unconsumed. It is supposed that he was killed for the sake of a silver watch and a little money in his pocket. He was an elderly man, with a wife and several children. The fire was kept burning for several hours after the man's disappearance was observed, nobody suspecting, until daylight showed the blood, what had become of him; and it is a shocking circumstance that the man's own son, whose turn it was to attend to the fire, helped unconsciously to destroy what remained of the father's corpse. The foul deed must have been done by more than one person, as it could have been no easy task to lift the body and thrust it into the furnace-hole, at a height of several feet above the ground, and in front of so fierce a blaze. The police are looking out for a man whose hair and whiskers are singed. At Newcastle, a woman fifty years of age, the wife of a cobbler, was murdered on New Year's-day morning, or died from the violence used towards her in dragging her, when drunk, to a lonely place behind the "Back Walls," where she was made the victim of a brutal outrage. The murderer was a labourer named George Vass, twenty-two years of age, who had met her at a beershop, and, seeing her helpless condition, had followed her out, beating off her husband, who interfered to protect her. Her skull and the bones of her face were found to have been smashed, and there was a rupture of her liver, from the savage violence with which she had been treated. At Marehamle-Fen, in Lincolnshire, Mrs. Garner, a widow, who died in December, 1861, has been taken out of her grave, where she had lain a twelvemonth, as it is now suspected that she died of poison, given her by her son, and a servant, Elizabeth Walker, whom he has since married; he is a grocer in the village. He often kicked his mother, abused her in the coarsest language, and taunted her when dying with what he called "her d——d Wesleyanism," saying that she was afraid because it was giving way; he said she had troubled him for thirty years, and she might "die and be d——d." The poor old soul replied, "My dear boy, I am comfortable now; I am dying; my Wesleyanism has stood by me all my days." The coroner's jury have found a verdict of murder against this fellow and his present wife, who helped him to mix the arrowroot and the other things for his mother in her last illness. Arsenic had certainly been given to her, in several doses. Shortly before her death, John Garner had arsenic in his possession, and those who ate of her rice pudding, which he and his paramour did not eat, were taken ill with symptoms of that poison. He had a first wife, who died some time before his mother. Her corpse has likewise been disinterred, and arsenic is found in the stomach.

An accident has occurred to the Great Northern parliamentary train from York to London, which was run into by the train from Leeds at the Knottingley station, on the Lancashire and Yorkshire railway. It happened in a dense fog on Tuesday morning. Twenty persons were more or less hurt, several having their limbs crushed or receiving severe internal injuries, but none were killed.

The trial of the six men concerned in stealing Bank of England note-paper, and forging Bank notes, has been commenced before Mr. Justice Blackburn, at the Old Bailey. The facts of this case must be fresh in our readers' recollection. The principal witness is Henry Brown, a young man employed in the paper-mill of Messrs. Portal, at Laverstoke, near Whitchurch. The case for the prosecution has been concluded.

An action for libel has been commenced against the *Saturday Review*, by the Rev. Dr. Campbell, a well-known Dissenting minister and a controversial writer.

Mr. A. Milne, an "artistic hair jeweller," in South Frederick-street, Edinburgh, is charged with the murder or manslaughter of a man named Paterson, a workman in his employment. The causes of their quarrel are not yet publicly known; but Mr. Milne, excited by drink, rushed upon the man, and stabbed him.

The East Kent election has resulted in the return of Sir Edward Dering, the Liberal candidate, by a majority of 88 over his Conservative opponent, Sir Norton Knatchbull; the numbers being 2,687 against 2,775. Sir Edward Dering will give his hearty support to the Government of Lord Palmerston. His proposer was Mr. Knatchbull Hugessen, brother of the defeated candidate, whose father, the late Sir Edward Knatchbull, was proposed for the county, twenty years ago, by Sir Edward Dering himself.

Mr. Cardwell has made another speech at Oxford, to the members of a Friendly Society, advising the working classes to cherish the virtue of frugality, for the sake of their social independence. He instanced the system established by the Merchant Shipping Act for encouraging saving habits among the sailors. In a twelvemonth after that system commenced, they had saved and sent to their families above £100,000.

The chairmen of Quarter Sessions throughout the country are discussing the punishment of criminals and management of prisons. Sir Eardley Wilmot, in Warwickshire, says it is really useless to pass sentences on offenders, under the present system, because the sentences are not carried out. He recommends transportation, with the employment of convicts on public works in some of our colonies, where there is "a native population for the convicts to mix with." The Earl of Carnarvon, at Winchester, has censured and derided the laxity of prison discipline with some force. Sir William Miles, in Somersetshire, declares that the system pursued by Sir Joshua Jebb and the Home Office is, to him, perfectly unintelligible, and even astonishing: he would adopt the Irish system. He read a letter from the chief constable of that county, with some practical suggestions as to the conditions upon which tickets-of-leave should be granted; besides which the chief constable thinks it would be as well to cease pampering the convicts with luxurious fare in prison. "S. G. O.," and another clergyman, a Dorsetshire neighbour of his, write in the *Times*, with sarcasm as powerful as Lord Carnarvon's, about the literary leisure enjoyed by the ruffians in Portland prison. Some of the convicts are allowed to "read Horace." Others, for aught we know, delight in the Eclogues of Virgil, and gratefully repeat of Sir Joshua Jebb, *Deus nobis hæc otia fecit!*

An old man of seventy, William Ockold, a tailor, having just been hanged at Worcester for the murder of his wife, the Earl of Dudley, chairman of the quarter sessions, notices the scandal of the popular sympathy excited by his venerable appearance—with a hoary head—upon the scaffold, and suggests that the performance of executions might as well not take place in public. A committee of the county justices is appointed to consider this question.

There has been a Ministerial crisis in Turkey, the exact causes and results of which are not yet explained; but Kiamil Pasha is now Grand Vizier, and Aali Pasha still Minister of Foreign Affairs, while Fuad Pasha will be President of the Council.

Sixty-six political offenders are undergoing their trial at Warsaw, and a political spy has, meanwhile, been stabbed.

Reviews of Books.

THE DUTIES OF MAN.*

This is a translation of a small but comprehensive treatise, addressed by M. Mazzini "to the Italian working class," and intended as a statement of the principles upon which they "may, if they will, fulfil their mission in Italy." It is written in a style which is deservedly a perfect abomination to Englishmen. "To you, sons and daughters of the people, I dedicate this book. "Hold the Family sacred, my brothers." "The family is the heart's country. There is in the family an angel. This angel of the family is woman. . . . . Woman is the caress of existence." Such sentiments so expressed must make every one who has had the advantage of an English education feel the most sincere satisfaction in the reflection that from an early age he has been taught not to maunder, and to keep his feelings to himself. Woman may be the caress of existence, but what can we think of a man who has the face to print such a sentence? The bare quotation of such a phrase is a sufficient criticism on the style of the book which contains it, and may supersede all further remarks on the subject. It is as offensive to the taste as two bearded men kissing each other are to the sight.

The substance of M. Mazzini's book deserves more attention than its style, and throws considerable light on the character of a man whose name is held in lower estimation in this country than that of almost any other foreign politician. Justly or not, M. Mazzini has the reputation of being not merely an impracticable and unreasonable antagonist of the only solid prospect of liberty and prosperity open to his country, but of setting on others to run the risks which he himself declines. His book throws no light on his political conduct, but it throws a good deal on his speculative power, and on the tendency which his teaching has, or ought to have. The effect of what he has to say may be given shortly as follows:—Ever since the French Revolution, that part of Europe in which the revolt against the old state of things triumphed most decisively, has conducted its affairs on what M. Mazzini calls the theory of rights—the theory, that is, that "Man was born for happiness; that he had a right to seek happiness by every means in his power; and that no one had a right to impede him in that search, while he had a right to overthrow whatever obstacles he met in his path to it." The acceptation and prevalence of this theory, says M. Mazzini, has not improved the condition of the poor, because, though it secured them liberty, it did not give them the means of using it. The theory of rights, in a word, was a theory that life is a general scramble for money or money's worth, and in this scramble the weakest have gone to the wall; nor have they got much satisfaction from the reflection that the rules of the game are made fairer than they used to be for those who can afford to play at it. These evils are to be remedied by substituting for the theory of rights the theory of duty. "We must convince men that they are all sons of one true God, and bound to fulfil and execute one sole law here on earth; that each of them is bound to live not for himself, but for others; that the aim of existence is not to be more or less happy, but to make themselves and others more virtuous." M. Mazzini, after this, goes on to inquire, in a chapter entitled "God," more specifically what this law is. He disposes, much to

* The Duties of Man. By Joseph Mazzini. Chapman & Hall. 1862.

Digitized by Google

his own satisfaction, of the views taken by others on the subject. Protestants, he says, separate politics and religious belief, and they ask "Materialists or Spiritualists, whichever you be, do you believe in the liberty and equality of mankind? Do you desire the well-being of the majority? Do you believe in universal suffrage? Unite together to obtain these things; in order to obtain these, you will have no occasion to come to a common understanding about heavenly things." On the other hand, devout Catholics call upon mankind to despise this world, and to live entirely for another, considering the present life exclusively as a time of trial and a scene of exile and misery. The first view leads to the destruction of the weak, and the second to a practical Manicheism. The true view is, that God created the world with certain objects, and imposed duties having reference to them on its inhabitants.

Up to this point M. Mazzini will appear, to an English reader, to have been talking the oldest of all commonplaces, in language remarkable only for its affectation. It is true, no doubt, that in many parts of the world, especially in France, and amongst ignorant or inexact speakers and writers in England, a great deal of nonsense has been talked about rights; but the theory of natural rights which M. Mazzini appears to suppose to be essential to the utilitarian, or, as he absurdly calls it, the materialist theory of morals, is in fact opposed to it, and has been refuted in the most conclusive manner by the principal English advocate of that theory, Jeremy Bentham. Austin and Mr. John Mill would repudiate as vigorously as M. Mazzini the notions which he ascribes to the liberal school of modern politicians,—to what he calls indiscriminately Protestants. The theory of that school (which is summed up with beautiful clearness in Austin's lectures on the Province of Jurisprudence) is that a law is a command; that a right is a power which the legislator confers and ascertains by the law; and that a duty is the correlative of a right, a burden imposed by a law. Hence there can be neither rights nor duties without laws, and there can be no law without a legislator, nor can any one speak of rights and duties, in the strict sense of the word, apart from those which are imposed by the express law of some nation, unless he believes in a God who has, in some way or other, issued commands imposing those rights and duties. This theory has not only been well established in England for the last half-century, but might be traced far back in English legal and theological literature. Blackstone puts it forward at the very beginning of his Commentaries in a mincing illogical way. The difficulty is to make out what the divine law is. Let us see how M. Mazzini deals with it.

Chapter II. is entitled "The Law," and it begins by repeating, in a feeble form, the phrases which unfortunately deluded men so eminent as Montesquieu and Hooker:—"You live, therefore you have a law of life. There is no life without its law. Whatever thing exists, exists in a certain method, according to certain methods, and is governed by a certain law. The mineral world is governed by a law of aggregation, the vegetable by a law of development; the stars are ruled by a law of motion. Your life is governed by a law higher and nobler than these, even as you are superior to all other created earthly things. To develop yourselves and act and live according to your law, is your first, or rather your sole duty." This is all metaphor, and inappropriate and misleading metaphor. If God has ordered men to do this and that under pain of punishment, there is such a thing as a divine law; but what reason is there to suppose that the sun shines and the planets move for fear of being damned? Passing over this, however, the question still recurs, what this law is. M. Mazzini tells us that some have found it in a book, others in conscience, others in "the universal Judgment;" "whenever Humanity is agreed in a belief, that belief is the truth." M. Mazzini considers that all these are wrong, and affirms that the concurrence of the conscience of the individual with the consent of Humanity (with a capital H) constitutes the Divine Law. "Whensoever they agree, whensoever the cry of your own conscience is ratified by the consent of Humanity, God is there." To most understandings this will appear a wonderful doctrine; for inasmuch as every individual is a part of humanity, how can humanity be unanimous and the individual conscience rebel? M. Mazzini's view, without the capital letters, falls into this remarkable shape. The universal consent of mankind is no proof of the truth of what it affirms, unless every individual man concurs in the affirmative; in which case "God is there." The united opinion of John, Thomas, and Peter, that two and two make four, proves nothing, unless John thinks so, and Thomas thinks so, and Peter thinks so; but if they do, it is irresistible. Candid critics may concede to M. Mazzini that a united opinion given by persons who do not individually agree is of very little value. They might go so far as to admit that in practice it rarely occurs.

Perhaps in order to avoid this difficulty, M. Mazzini gives a theory of Humanity. This mysterious being is quite distinct from individual men. It is "a Being whose life is continuous, whose faculties are the result and sum of all the individual faculties that have existed for, perhaps, four hundred ages" (why four hundred? Is there any particular reason for giving 40,000 years as the proximate age of the human race?); "a Being which, in the midst of the errors and crimes of individuals, yet ever advances in wisdom and morality; a Being in whose development and Progress God has inscribed, and from epoch to epoch does still inscribe, a line of his law." If any one finds a certain difficulty in seeing what this means, he may be pleased to know that "Humanity is the Word living in God. The spirit of God fecundates it and manifests itself in greater purity and activity from epoch to epoch." "Humanity is the *successive* incarnation of God." From this clear explanation of the nature of humanity we rise to an equally clear perception—which, however, requires the assistance of capitals and italics—of the Divine Law. "The Law of God is one, as God himself is one; but we discover it article by article, line by line, according to the accumulated experience of the generations that have preceded us, and according to the extension and increased intensity of *association* among races, peoples, and individuals." This is M. Mazzini's view of the Divine Law, and from it he deduces, in an equally satisfactory manner, all the duties of men. What he has to say on the matter is nothing but stilted commonplace, the stilts themselves being commonplace. There is a deal of talk about men's duties to humanity, to their country, to their families, to themselves. M. Mazzini points out the importance of education, and puts into big phrases a number of the oldest of commonplaces. He also dwells at great length on the importance of the principle of association; tells the well-known history of the co-operative stores at Rochdale, and of some similar institutions in Paris, and protests, on the usual grounds, against Socialism. There is one chapter in his book which deserves to be noticed (Chap. VIII.—on Liberty). He maintains in it that "the Republic is the only logical and truly legitimate form of government." As this conclusion is based on the strange jargon already described about humanity and the Divine Law, it is unnecessary to examine it. It is enough to state it as an illustration of the practical effects which may flow from the substitution of cloudy rhetoric for serious thought.

The most important reflection that M. Mazzini's book suggests is, that he, and those who talk like him,—and their number, both at home and abroad, is not inconsiderable,—persist with a perverseness which almost amounts to judicial blindness, in misunderstanding and misrepresenting the views expressed by those who have exercised, and do exercise, a real influence over the sober part of mankind. For that school of thought which has exercised the widest influence over English policy for the last half-century, M. Mazzini has no better words than egotism and materialism. He views all modern Liberalism as essentially oppressive and selfish, and his great object is to substitute for it something more tender-hearted. We have pointed out already how entirely he misconceives the fundamental doctrines of the great writers of this school on the subject of morality, and how, when he comes to the pinch of the case,—the question, namely, how we are to ascertain what the Divine Law is, assuming that such a law exists, he substitutes cloudy and inconsistent metaphors and rhetoric for anything like exact thought. But in order to show how great is the injustice as well as the absurdity of this way of writing, it will be necessary to point out, at the risk of repeating very elementary propositions, the manner in which English writers would deal with some of the problems which M. Mazzini involves in language so cloudy and pretentious. All moral speculations, handled as we in England handle them, may be resolved into two great questions:—What is morality? Why should I be moral? The answers usually given to these two questions are, Morality is the course of conduct which, as a rule, produces the greatest amount of happiness. You ought to be moral because God orders you. To the further question, Why should I obey God? there are two answers; one which addresses itself to persons who care for themselves only; namely, Because it will be the worse for you if you do not;—the other addressed to persons who are actuated by the common affections of mankind: Because you cannot doubt that an infinitely wise and good Being means well by you and your fellows. In practice each answer is addressed to every one; for we are all mixed beings, partly led and partly driven on almost every occasion. Of course it is possible to invent a scheme of morality on atheistical principles. If there were no God, it would still be true that some ways of acting increase human happiness, and that others diminish it. It is also true that, to a certain extent,—in most men to a very small extent,—the motive to be moral is independent of the existence of God. A man might say, Whether there is a God or no, my wish to benefit others is greater than my wish to benefit myself, and therefore I will act with that view. But such conduct would be not an act of obedience to law proper, but an act voluntarily performed in accordance with a certain principle, which is quite another thing. Moral rights and duties, in the proper sense of the words, cannot be recognized by an atheist, though an atheist may, no doubt, believe in morality and be moral himself.

This simple account of the matter solves every problem which M. Mazzini states, without all his cumbrous and unintelligible talk about humanity and the like. Show that a course of conduct—for instance, the establishment of co-operative associations—tends to promote human happiness, and it immediately becomes the duty of those who have the opportunity to follow that course of conduct. It is mere calumny or ignorance to assert that happiness, according to the doctrines of the English Liberal school, means pleasurable sensation. Of the fifteen pleasures into which Bentham divides the idea of happiness, two-thirds are not referable to sensation at all, except, indeed, in so far as sensation is essential to consciousness. The pleasures of intelligence, of piety, of benevolence, and of malevolence, form part of his notion of happiness, as well as those of the senses and of riches.

The great advantage of this concise and solid theory is that it stands on firm ground, tries things by intelligible tests, and does not profess to turn the world topsy-turvy; whereas M. Mazzini's cloudy nonsense professes to make great discoveries, when what he has to say is as old as the multiplication table. Look, for instance, at the place which co-operative associations hold in the two systems. According to M. Mazzini's view, they are something wonderful, and depend upon a principle of association quite distinct

Digitized by Google

from all old-fashioned principles. According to the English theory, they are a most useful and excellent form of the oldest of all contrivances—that of partnership. A working man's association is simply a firm in which the capital belongs to the workmen, an arrangement which has existed time out of mind amongst the fishermen on most of the English coasts. Can there be any doubt which of these views is the true one? Do not these firms work just like any others? Do not they make and execute contracts? Do not they compete with one another and with other firms? Of course they do, and in doing so they conform exactly to the established principles of society, principles which, whatever M. Mazzini may think, have shown themselves anvils capable of wearing out any number of metaphysical hammers, headed though they may be with the biggest abstract words printed at the beginning of the shortest paragraphs in every variety of type.

STANLEY'S LECTURES ON THE JEWISH CHURCH.*

THERE are few books of which the publication has in late years been expected with more eagerness than Professor Stanley's Lectures on Jewish History. Not only did those who care for accurate learning congratulate themselves on the prospect of a new work from the most prominent student of the Old Testament in the country; but the public, long harassed by conflicting arguments, and long disposed to believe in nothing so much as their own ignorance, looked forward with confidence to the manifesto of some authority whom they could respect as being not unlearned, and trust as not being too rash. It is a fortunate thing when a large number of the people have arrived at the conclusion that there is much to be learnt on any subject. The best state of mind for receiving information is that in which there is most belief in the possibility of its being conveyed. By this time the conviction has been thoroughly dinned into Englishmen, and not without some reason, that about the history and the criticism of their sacred books the best of them know but little; and there must have been many who confidently expected to hear, when a new work on Jewish history was announced, that there was never such a person as Abraham, and that Genesis was composed in the second or third century after Christ. Whatever was the state of popular knowledge on the subject, the appearance of this book is a marked event. It is difficult to imagine a greater responsibility than that which rested upon the author to make it everything that a history should be. The work is sure to be a standard one for many years; it will be appealed to as an authority, learnt as a text-book, read as an instructive manual. Any incompleteness or carelessness in this book will be a fault which will bear fruit in the theological knowledge of a great part of the coming generation. The first part has at length been published, containing the history of the Jewish Church from Abraham to Samuel, and destined to be followed by two others in course of time.

In every point but one, Professor Stanley is the best man that could have been found to execute the task proposed. He is clear-headed, versatile, and liberal; his style is admirably vivid; he renders interesting whatever he touches; by contrast he almost seems to render uninteresting whatever he leaves untouched. His "Sinai and Palestine" has achieved a popularity which shows how ready the world was to be taught; and it is a work which well repays not only a rapid perusal, but a strict and careful study. Still more "luminous," more fertile in fact, illustration, and explanation, are his articles in the "Biblical Dictionary," a book of which he often quotes, not only, we are glad to remark, the volume now before the public, but repeatedly also the forthcoming volume as well. It is not too much to say that no one unacquainted with foreign literature can have formed a really adequate idea of David's life till he has read Dr. Stanley's article in the Dictionary just mentioned. Such being the author's powers, we open this volume in high expectation. Partly it fulfils our hopes; it is picturesque, interesting, full of knowledge. Partly, in deficiencies not so easy to describe as are its virtues, it disappoints them.

Whatever the failings of this book are, the key to them lies in its title. It consists of lectures, not of a history; the subject is the "Jewish Church," and not the Jews. We said that, in every point but one, Professor Stanley was the best man that could have been selected to write such a book as this. That one point is, that he cannot persuade himself to work out and discuss fully a difficult and intricate position. His thoughts throw themselves spontaneously into the form of lectures. The method which he thus naturally professes and deliberately adopts is one which is particularly suited, it is true, to the history of the Jews, in so far as it enables its author to keep clear of polemic controversy. The different views, for example, which have been taken of the story of Balaam's ass, might lead an ordinary historian into a field of dispute and recrimination from which an easy deliverance is effected by the simple expedient of avoiding the topic altogether; and although the Professor has been rather too ready to adopt this safe and convenient device, we hardly grudge him, for the sake of peace, what an over-accurate critic might perhaps, in the cause of clearness, be disposed to challenge and refuse. Here, however, is the end of the licence which the system of lecture-history has any right to claim. When the author says that, as the chronology of the early books is so obscure, he will not enter into it at all, it must simply be observed that the omission very decidedly impairs the value of his work. It will be said that a writer may fairly be allowed to choose his own form of treatment. We reply, that we have nevertheless a right to criticize his choice. Lectures cannot discuss minute questions, or deal with facts simply as facts; and, in so far as they cannot do so, they are not the shape into which a history should be thrown which is more exposed than any other to the loose views which ensue from popularity, and the vagueness which, with many minds, is almost an ingredient of reverence.

These are lectures on the "Jewish Church." The Professor of ecclesiastical history at Oxford seems to consider himself bound to assume towards the world at large the position which he occupies towards his university. It is quite conceivable that Jewish history from a Church point of view may be useful to others besides undergraduates, and if Ewald himself were to write a discourse on apostolical succession from the time of Aaron to our own, it would, no doubt, be worth attending to. But is it not notorious that the history of the Jews has suffered enough already from being overladen, so to speak, with theology? It has its theological side, which can seldom be far absent from our thoughts during its perusal; but is not this the very reason that it should be treated for once in its practical and human aspect alone? The Jews were a people who claimed in every important act a heavenly guidance, and from every part of whose story a religious moral has ever been drawn by Christians. But they were men like ourselves, fought with the same passions, spoke the same kind of language, hated and loved, hoped and feared, rejoiced and sorrowed, as we do. When we want to look upon them for once as men, why should they be forced upon us as a church? Dr. Stanley is describing the speech of Jotham to the assembled inhabitants of Shechem. "It was in the midst," he says, "of this festive solemnity that a voice was heard from the heights of Gerizim, memorable in the crisis of Shechem, but memorable also in the history of the Church, for it is the first recorded parable." By what train of thought can the Professor have arrived at this idea? Parables once supplied a valuable form of religious teaching to a body of men who may, by a figure of speech, be considered as an ecclesiastical body—the nucleus, at all events, of the Church. Therefore, the antecedent introduction of religious parables is a memorable event. Therefore, the first casual narrative of such a thing must be a memorable event. Therefore, this apologue, which bears a religious application, and which is not supposed by any one to be an unprecedented form of rhetoric, is memorable in the history of the Church. Is this history, or is it church doctrine, or is it Professor Stanley's mixture of the two?

It must be confessed in candour, that whenever the author of these lectures is dealing with a vivid and picturesque incident, or with the special subject of geography, his treatment is objective and historical enough. But even in an excess of picturesqueness there is something which the true student of history should regard as suspicious. Many years ago Dr. Milman, in order to bring the person of Abraham more vividly before the eyes of his readers, called him a Bedouin sheik, and by doing so incurred the displeasure of many excellent people, who considered that it was disrespectful to the Father of the faithful to speak of him by so modern and so very practical a title. The prejudice has now died away, and it is allowed that the more closely we can study Eastern customs, and endeavour to reproduce by their means the habits and appearance of the patriarchs, the better. But this system of historical teaching bids fair at present to monopolize the field to itself. The "Bedouin sheik" school of interpreters, if we may so call them, almost seem to forget that there are many things recorded of early times upon which modern illustration throws no light at all. It is better, perhaps, to be too vivid than to be too obscure; but the constant aiming after "sensation" criticism may lead an historian into even more inaccuracies than the commonplace cloudiness of a sermon. Dr. Stanley has his good sense and considerable knowledge to guard him from signal mistakes of the kind. But we cannot read these lectures without noticing here and there a forced scene-painting which is attractive enough, but more than likely to mislead. Hophni and Phinehas are prototypes of "bloated pluralists;" Ehud's dagger, on the strength of a very obscure word in the Septuagint translation of Scripture, "flashes for an instant" before it closes in the flesh of the king; the story of Ehud and Eglon is a specimen of the "comic vein" of Sacred History. Dr. Stanley is rather fond of a comic rendering. In the same way as Mr. T. Hughes, in his preface to the "Biglow Papers," discovered a rich humour in a scene of the Acts of the Apostles, the Oxford Professor sees a "primitive and racy humour" in every act of Samson's career, not even excepting his death. As far as we can see, he even regards this picturesque method as the only true one. "How," he asks, "would Samson have fared with Milner? To what would Deborah have been reduced in the refined speculations of Neander?" Neither Milner nor Neander correspond to our *beau idéal* of an historian, and Gibbon and Niebuhr have treated far more difficult characters with success. But what, it may be rejoined, would have become of the battle of Lake Regillus, or the scene of Runnymede meadow, in the pages of a modern Professor of ecclesiastical history?

It is, however, with the omissions of this book, and not with its faults of style, that we are chiefly disappointed. One marked peculiarity of Jewish history is that its sources are almost entirely to be looked for in one particular series of national writings. A history of the Jews ought, therefore, to be in a great measure a commentary on the historical parts of the Old Testament. The present work explains a very large number of passages, and hints

at the explanation of very many more; but wherever some well known difficulty occurs, some topic upon which every reader would ask for his help who was not studying the books for the first time, Dr. Stanley dexterously evades it. It has often been asked, what is the explanation of the plural name of God, which, as is well known, is followed by a singular verb? The Church of England fixes one particular meaning on the usage, and many others have been proposed, with more or less plausibility. Dr. Stanley's one reference to it is a remark that, "if we may trust the conjecture of one distinguished writer," it betokens a transition from a polytheistic to a monotheistic belief. But the question is, whether we may trust this distinguished writer, in preference to other distinguished writers who say the opposite? It is surely a matter for a serious history to discuss. Again, it is a very interesting question, and one which "the refined speculations of Neander" would probably not have omitted, whether the Israelites were members of the same human family as the Canaanites. The most obvious arguments on the one side are, that the Phœnicians, whose language and religion seem to have prevailed in Canaan, were of Semitic race, and that such names as Melchisedec and Abimelech are undoubtedly Semitic; on the other hand, the ethnological list of the "Beni-Noah," in the tenth chapter of Genesis, a document of unquestionable antiquity, speaks of them as sons of Ham. What does the lecturer say? "To overlook the unity, the comparative unity, between Abraham and the neighbour races of Palestine, would be to overlook one of the most valuable testimonies to the antiquity of the record." In the first place we may remind Dr. Stanley that we do not adopt or reject views according as they seem to prove or disprove the antiquity of the Pentateuch, but according as they seem true or false. But, in the second place, we may ask him whether it is the absolute or the comparative unity that he wishes us to adopt, and, granting that in a later passage he does speak distinctly of the Canaanites as Phœnicians, whether he does not consider that the subject deserves any discussion. Later on, we have the book of Job introduced. It is rather tantalizing to be told that "when, where, and by whom that wonderful book was written, we need not here pause to ask;" because these are the very questions which we *do* pause to ask, when the book is brought forward in the history, and to which we naturally expect a reply. So, again, the author mentions that a certain religious usage separates those portions of the Pentateuch in which the word "Elohim" is used for the Supreme Being from those in which "Jehovah" is so used, with as calm indifference as though he had never heard of the hypothesis, now generally accepted, that the two words indicate the existence of two distinct original documents. "We need not here," he says at another place, "discuss the vexed question of the precise time at which the book of Deuteronomy assumed its present form." Nevertheless, considering that by a great many critics of modern times the book in question is believed to have been written at a later period than the rest of the Pentateuch, the topic would seem a very fit and proper one for discussion, whether the book be chiefly regarded as a narrative of events, or as an expression of the feelings of the Jewish Church.

With all its imperfections, we are almost ashamed of writing thus much in dispraise of Professor Stanley's book. Our excuse must be, that we expected so much from it. But, after all, there is probably no man in England who could have written it so well. If we have been obliged to urge the weak points of the lectures, it is not because we do not anticipate a great amount of good from their publication. In such a passage as the explanation of Deborah's song—though even here the lecturer might have made more use of Dr. Donaldson's ingenious essay—we see how much may be done by a skilful handling of words and apposite geographical detail. Scenic power, ready comparison, a liberal habit of thought, a reverent tone, a polished and graceful style,—to praise these in Dr. Stanley is almost to descend to commonplace. There are few theological writers for whom we feel more respect, and none to whom Biblical criticism in this country owes a greater debt. Since most of those who care for the study of the Old Testament will find out the merits of the work for themselves, it seemed chiefly necessary to point out what we consider its defects. Had the work been less valuable or less important, they might have passed unnoticed. As it is, they serve to remind us that the sacred narrative has yet to find its expounder. Professor Stanley may have some claim to be the Macaulay of Jewish history; he is not, and he is not likely to be, its Grote.

NO NAME.*

THERE are three methods of treating the human character, corresponding to the three principal classes into which the fraternity of novelists may be most appropriately divided. In the first of these classes are to be placed the favoured few whom Nature has gifted with real conceptive genius. They paint not so much what they have seen, as what imaginative intuition enables them to shadow forth from the recesses of their own minds. They form an ideal; and instinct, rather than experience, convinces mankind of its inherent truthfulness. Millions of people have felt Hamlet or Lear to be natural characters, not because they ever saw anybody like them in real life, but because a higher sense than sight is appealed to, and something within bears witness to their reality and consistency throughout. Of this highest order of story-tellers Charlotte Brontë may be accepted as the type. She goes to the very core of her characters, and works gradually outward. Their closest secrets are those she knows the best, and interests us most about. Their outward demeanour, the events of their life, the evolution of the tale, merely concern us as evidencing the process which is going on within. We compare them with nothing but our own consciousness, and unhesitatingly pronounce them to be true. There is a second order, of which Mr. Trollope is just now the most characteristic representative. He is intent on a life-like, external reality; he holds the mirror up, not to nature, but to the exterior of a highly artificial society; he strives that the people in his pages should precisely correspond in language, thought, taste, and behaviour, to the millions of ordinary beings who at the present moment form the population of Great Britain. He catches the last mode, and is never more than a month behind the Paris fashions. He has a great artist to sketch the lace shawls, and artistic bonnets, and undulating dresses, in which his performers go through their parts. The resemblance to contemporaneous life is much more exact than in the former case, and the slightest incongruity catches our eye and provokes criticism. We watch his young ladies and gentlemen with the same scrutinizing exactness that enables us, unhesitatingly, to define the social position of our fellow-guests at a dinner-party. We know, for instance, that the young ladies by no means belong to the cream of society, and lapse occasionally into absolute vulgarisms; and we know this by some one of a hundred tiny tests with which the author has provided us for the purpose of gauging them. Everything depends on resemblance, as the resemblance is one which everybody is able to test; the task of securing and maintaining it is one which few people like Mr. Trollope are clever enough to achieve successfully.

The third class finds its undoubted chief in Mr. Wilkie Collins; here there is neither insight into character, as in the first instance, nor careful imitation of externals, as in the second. On the contrary, the characters are moral monstrosities; not shocking only because they are too monstrous to suggest the idea of their possibility, while the resemblance to real life is the very faintest possible, and only just sufficient to enable author and reader to forget the fictitiousness of the whole. No such beings as Magdalen Vanstone, or Captain Wragge, or Mrs. Lecount, ever did or could exist; but they form admirable materials for the sort of superstructure which the author's ingenuity raises upon their characters. They possess in superhuman abundance the precise gifts which are necessary for the complicated, bewildering congeries of improbabilities which, by a thousand clever artifices, are formed into a harmonious and consistent whole. Each of the facts, taken separately, is unlikely; all, taken collectively, are nothing short of impossible; and yet, so cleverly is one piece of the story dovetailed into another, so fortunate are the conjunctures which rescue the whole at the moment when it is falling to pieces, so cogent a chain of circumstantial evidence is drawn around it, that, though we feel it lies outside the pale of belief, it is extremely difficult to lay one's finger on the precise point where the confines of possibility are transgressed, and the common laws of likelihood obtrusively violated. Mr. Wilkie Collins is, then, *par excellence*, a story-teller; everything depends on the interest which attaches to its gradual evolution, and to its crowning *dénouement*. We can say nothing for the characters, but a great deal for the circumstances in which the characters, as each scene shifts, find themselves placed. The action of the piece never ceases, and every detail leads up to the final catastrophe. The story is certainly not profound, but it must be read with the same care as a complicated law case, or the interesting points will be overlooked. The reader's inquisitiveness is constantly excited, as to how in the world some new difficulty is to be surmounted, or some suddenly disclosed danger escaped. Nothing but the most implicit belief in Mr. Wilkie Collins' power to extemporise an expedient, and to make everything come right at last, could enable ordinarily sensitive readers to peruse his volumes with unshaken nerves. We are for ever on the verge of a crash; a look, a word, a piece of riband, a stray envelope, a late train, a talkative maid, or a careless postman—may at any moment tumble the whole fabric to the ground. We hold our breath till the author has safely landed us in the next secure position, and allows us a few moments' rest before another entanglement, another crisis, another stroke of luck, another fortunate escape. Mr. Wilkie Collins has a great command of clever contrivances, by which this sort of thing may be kept going on indefinitely. He manipulates all his puppets with the greatest skill, foresight, and patience; he arranges about flys and post-horses, and express trains, with the mathematical precision and cool-headedness of a practised station-master. One of his characters is driving full gallop to catch the last up-train; if he misses it, all is lost. Another is searching in the enemy's bedroom for a missing piece of evidence; in fifteen minutes the enemy will be back, the evidence hopelessly gone. Another is speeding to the Continent on a false scent, and will be got home within a few hours of a marriage, which there is reason to conceal. A fourth is in full pursuit of a letter, which, if delivered, will be his "ruin." We turn dizzy at the proximity of so many dreadful contingencies and hair-breadth escapes: in the midst of all Mr. Wilkie Collins sits calm, calculating, unruffled, unanxious, and entirely master of the situation. He pulls this string or that, throws the train off the line, lames the post-horses, stops the telegraph, or burns the letter, just as the occasion demands, and once more we escape for some new and still more alarming combination in the next chapter

All this is, we think, a little overdone in "No Name:" the reader really gets too flurried, and his attention is too hard-worked, to be compatible with artistic enjoyment. We arrive at the close

* No Name. By Wilkie Collins. Sampson, Low, & Co., Ludgate-hill. 1862.

Digitized by Google

of the third volume almost as exhausted as at the end of a difficult cross-road railway journey; there have been half-a-dozen different trains, any mistake in any one of which would have marred our travelling for the day; the carriage which took us to the station was within a second of being too late; we have been within a few yards of a collision; in each train we have unexpectedly met an old acquaintance; we have several times lost our luggage, and recovered it again by miracle. All is over now; but one's nerves are shaken, the mind still continues to hope, calculate, prepare for disaster, or devise expedients for success; our host mercifully dismisses us to bed, and our troubles haunt us in our dreams. The thousands who have devoured "No Name," as it appeared, have probably experienced the same sort of fluttering spirits, nervous anxiety, and weary restlessness.

No amount of mechanical ingenuity would, however, account by itself for the popularity of Mr. Wilkie Collins's works. He has several other important qualifications. He writes an admirable style; he is thoroughly in earnest in his desire to please; his humour, though distinctly fashioned on a model Mr. Dickens invented and popularized, is better sustained, and less fantastic and affected than anything which Mr. Dickens has of late years produced. Captain Wragge bears a family resemblance to Mr. Pecksniff, but is extremely entertaining in his voluble, persuasive, respectable rascality. His definition of his trade of swindling as "moral agriculture," and the picture he draws of himself as a "great financial fact," living on the proceeds of a newly-invented pill, and "scouring the field of human indigestion with a triple ploughshare of scammony, aloes, and gamboge," are as good in their way as anything can be. His apology for cheating is characteristically humorous. Is it, he asks, or is it not the duty of a Christian community to help the needy? "If you say no, you simply shock me, and there's an end of it. If you say yes, then I beg to ask, why am I to blame for making a Christian community do its duty? . . . What! your pockets are full and mine are empty, and you refuse to help me? Sordid wretch! do you think I will allow you to violate the sacred obligations of morality in my person? I won't allow you—I say distinctly I won't allow you. These are my principles as a moral agriculturist."

Society has hitherto failed to recognize his claims, but he hopes, like other benefactors of the species, some day to be understood and appreciated:—

"When that day comes, don't drag me out of my grave and give me a public funeral: don't take advantage of my having no voice to raise in my own behalf and insult me by a national statue. No! do me justice on my tombstone; dash me off in one masterly sentence, on my epitaph: 'Here lies Wragge, embalmed in the tardy recognition of his species: he ploughed, sowed, and reaped his fellow-creatures, and enlightened posterity congratulates him on the uniform excellence of his crops.'"

Equally good is the picture of Mrs. Wragge, with her wits all astray, her cap awry, one shoe invariably down at heel and the other in the next room, offending her husband's sense of propriety by her habit of falling asleep crooked, and endeavouring to shirk the responsibility of her intellectual shortcomings by the unmetaphysical apology, "Please, sir, it's my head; it isn't me." Both of these are capital comical characters, and though nobody since Machiavelli was ever so astute as the Captain, nor anybody out of an idiot asylum so foolish as his wife, both serve admirably to relieve the graver portions of the picture. Nature, indeed, is not adhered to any more than society is reflected; but neither is it in the tragical personages of the drama. On the other hand, we have something racy, cheerful, entertaining; and, if we cannot give Mr. Wilkie Collins credit for insight into character, or that imitative ability which to a certain degree supplies its place, we may thank him for an entertainment the merits of which high and low are capable of appreciating, and which he has certainly spared no pains in making first-rate of its kind.

MRS. GROTE'S COLLECTED PAPERS.*

Mrs. Grote has published a volume of "Essays and Reviews" of her own, in which a surprising amount and variety of knowledge are skilfully employed to set many important social and historical questions in a clear and interesting light. She is equally at home, equally intelligent and confident, in farming, in art, in literary history, in village politics, the state of parties in France, the claims of labour, and the injustice of marriage. The result is a very agreeable and suggestive book, in which the variety and shortness of the papers, and a genial and vivacious style, prevent the weariness which commonly waits on the reading of miscellanies. We are effectually kept awake by the writer's fearlessness and freedom from conventionality, and we are amused by the heartiness and fulness of her expression. Opponents' arguments are shown to be not merely in a circle, but in a revolving circle; the young of the criminal population are happily described as the "countless larvæ of infant felony;" and a few pages supply a goodly list of such epithets as "plate-holders," "charity-crusaders," "alms-leviers," "humanity-preachers," "squad of humanity-foragers," and "Dorcas tribe," for those who order others to be charitable. There is something attractive even in the perpetual use throughout these pages of the first person; it gives an impression of sincerity, and of a wish that the thoughts should be valued according to the worth of the writer, and not as the utterances of impersonal reason pronouncing *ex cathedrâ*. Lastly, Mrs. Grote's clear arrangement and power of connecting particular facts with general principles, recall the lucid precision of French scientific writers. She can generalize as fast as she can write; indeed, her belief in general laws sometimes carries her so far as to forget the necessity of means for their realization.

Mrs. Grote has three especial bugbears: centralization, interference with property, and indissoluble marriage. She makes the parliamentary grants for education the occasion of some good remarks about the first of these:—

"When a nation has come to be pampered by extraordinary facilities of locomotion and intercommunication, and, indeed, by the adequate organization of most of the departments connected with material comfort, the few examples which remain of old systems strike us as intolerably clumsy, and inappropriate to the circumstances of the period. And, at this point of public sentiment, a lively conception of the comparative advantages of centralization lays hold of the imagination, and so gradually allows this principle to take root in our institutions. The spread of this principle in Great Britain I take to be fraught with injurious consequences to the national character; we are entering upon a changed state of things, wherein, for the sake of escaping the tiresome obligations involved in citizenship, the indolent man accepts the direction of the Executive Government."

In the "Case of the Poor against the Rich," Mrs. Grote states her opinion that foreign critics in general, and M. Léon Faucher in particular, when they condemn as inhuman the attitude of the rich towards the poor in England, show an entire ignorance of what we do for our poor. A great part of their sorrows are beyond our reach, and, for the rest, not only does the Poor-law of 1835 provide against starvation, which is all that law ought to regard, but the amount of private charity is injuriously enormous. Two nostrums, popular with French theorists, are disposed of, namely, a universal system of small holdings of land, and partnership between the employers and their workmen. Mrs. Grote's answer to the second of these is unsatisfactory. She regards it merely as a disguised method of raising wages. Its real object is very different: it is, of course, intended to raise wages, but only by giving the workmen a more intelligent interest in his work and so making the work of more value, to the advantage of both classes. Mrs. Grote regards "le droit de travail" as only another form of "la propriété c'est le vol." Her ideas of the sanctity of property are so absolute that at first sight they seem like a satire. It is "our 'ark of the covenant;'" and it is laid down as "the especial duty of the higher classes to cultivate this sentiment (respect for property) in their poor dependents." The only remedies for pauperism which are approved are, emigration, and moral training to induce the poor to refrain from marriage and check the increase of population. Even in these Mrs. Grote has not much confidence; for emigration, she says, benefits only the emigrants and not the mother country, and moral tone cannot be raised before, but only side by side with improvement in physical condition. She is probably wrong in saying that emigration drains the country of its best young blood; in reality, emigrants are oftener men who have failed to find a place at home, either from restlessness or stupidity, or some similar disqualification. It must be remarked, in conclusion, that if Mrs. Grote's fondness for rigorous demonstration and for laws of Political Economy makes her in this essay appear hard on the poor and deficient in sympathy for their feelings, on the other hand, her account of East Burnham, where she lived for some years, abundantly proves that she both understands and sympathises with them.

A few short poems conclude the volume, from one of which, written in memory of Mendelssohn, we select a few lines, to show the versatility of Mrs. Grote's powers:—

"These ancient groves and solitudes among
Lately a bright celestial Being strayed;
A brief retreat from out the admiring throng,
He sought and found beneath their leafy shade.

Ah! Mendelssohn, hadst thou but oftener sought
Calm Nature's presence—hadst thou oftener fled
The incense-offering crowd, and idly caught
The summer breeze to fan thy fevered head—

Haply, e'en now, within its earthly sphere
Had beamed the radiance of thy soul divine;
And spared had been the unavailing tear,
Which from a thousand eyelids falls with mine."

The last and perhaps the most interesting and characteristic piece is a poem which embodies Mrs. Grote's views on marriage. This is a delicate subject; but then if—

"The world's male chivalry has perish'd out,
Yet women are knight-errants to the last;"

and Mrs. Grote attacks it fearlessly. In the ideal state to which her aspirations on this subject seem to be directed—so far as her views of the ideal state can be gathered, from guarded hints and by implication—she agrees, though from a different point of view, with the theories of W. Von Humboldt, and also with many practical though unconscious and nameless philosophers in various parts of the world, but especially in the Polynesian isles, that an indissoluble marriage tie is barbarous and generally undesirable. Mrs. Grote is, indeed, of opinion that there are some cases in which marriage may for a time have its bright side:—

"Haply a pure and justly-kindled flame
At Hymen's shrine a happier lot may claim,
For those who, blest with beauty, health, and grace,
Seek on those gifts a crowning charm to place,
And crave a sanction on their promised bliss."

But, alas!

> "E'en here will steal—in destiny like this,
> That 'bitter drop,' which, mortal cup without
> May never mixed be, and turn to nought
> Their glorious inheritance."

And thrice alas! for those who may chance to be deficient in either, much more in all, of the requisites. Seriously speaking, the opinions held on this subject by a sensible and liberal-minded woman are of the highest value. A question which has been regarded as open, or even settled in the negative by such men as Plato, Rousseau, and Humboldt, cannot be considered as placed beyond discussion, even by the almost universal consent of the western side of the civilized world. Marriage, practically indissoluble, is by far the most important of the cases in which the right of the individual appears to come openly into collision with the good of the greatest number. Mrs. Grote has a strong case, and selects the arguments which are most striking and to the point, and though her statement loses in apparent force by its poetical dress, she is evidently in earnest. The chief blots which are pointed out in the present system of marriage are—the hopelessness of separation, however great the incompatibility of temper; the powerlessness of the wife to seclude herself even for a time from her husband, whilst he may seclude himself from her, under certain slight penalties, as long and as often as he likes; the unfairness of the wife's want of control over her property and earnings; and the demoralizing tendencies of the wife's position, which drives her to deceit, the weapon of the weak, and saps even the wish to be free. The end which the author seems to desire,—a desire rather implied than expressly stated,—is the sanction by custom of merely temporary connections, accompanied, of course, by certain limitations in practice. Meanwhile, in default of merely provisional marriage, two practical means of mitigation are demanded—facility and cheapness of divorce, and the concession to the wife of complete control over her own property. The chief objection to the ideal counsel of perfection is that it is, like other counsels of perfection, wholly unpractical. There cannot be the least chance that temporary connections, acknowledged to be such, will ever supplant marriage. Marriage is too closely bound up with all social order, and the evils of its derangement would be worse than the evils of its abuse. The idea of a husband and wife perfectly independent of each other and able to end their connection at any moment, is rather a metaphysical notion of what the freedom of the individual should be than a possible or practicable plan. In every such union, political or social, the magnitude of the interests which are involved in that union, and the consequent duty of maintaining it, and the right of either side to claim that it shall be maintained, constitute a principle of right which must override the more primary and personal right of the individual to be free in his own way. The right to be free, in fact, ceases to exist, at least in the view of the law, where it is inconsistent with the wider interests of the community and with the vital necessity of order. To take a single instance, such a plan must be wholly inconsistent with the interests and education of the children. But whilst the general recognition and custom of provisional connections, terminable at will, seems to be Mrs. Grote's ideal, she points out, as we have said, two less sweeping remedies for the evils of marriage. As to the desirability of cheap divorce, it may reasonably be contended that public opinion and the stringency of the courts would abundantly suffice to check the abuse of the remedy; and that is the most practicable means of reforming the injustice of marriage. The second remedy suggested is equally obvious. The common objection, that the husband's influence and the wife's weakness would still, in the great majority of cases, give to him hardly less absolute control over her property than he now has, is fairly met. "Law takes no cognizance of folly and weakness. If it was not thought right to interdict Mr. Wyndham from exercising absolute control over *his* property, although for foolish, vicious, and discreditable purposes, neither ought the law to prevent a woman from committing the folly of bringing herself to want in order to please a spendthrift husband. But if women were brought up to deal with money matters and to comprehend 'business,' they would acquire more solid habits of mind and firmness of character, and their property would not lightly be sacrificed to a misplaced sentiment." But the probable efficiency of this remedy is greatly overstated: in the vast majority of cases it could have no place whatever. Right of control over their own property and earnings would be of small practical benefit to that large class of wives who have no property at all, or only a very little, and who, on the most liberal interpretation of the word "earnings," cannot be said to do marketable work enough to pay for their living. Nor, to turn to a minor point, can we share Mrs. Grote's indignation at the fact that law compels women—

> "To frame
> A fiction and contrivance, would they hold
> A portion only of their rightful gold."

Men are not accustomed to attach any ignominy to the use of legal fictions. Mrs. Grote's grounds of hope that these two checks will at some future time come into play to redress the balance of the sexes are twofold. The first is, the augmenting impatience and clamour of women, which will storm the conscience of society; the second is, that men become daily more sensitive to the annoyance of seeing those around them in a state of distress, and that it is possible for women, by keeping themselves in a perpetual attitude of grievance, and their husbands in consequent perpetual discomfort, to induce those unjust judges to get out of bed and buy them off. Wives are "not to bate one jot," whatever may be the import of this awful and mysterious threat, until they are satisfied and the laws of marriage are revised. Mrs. Grote's suggestions are practical, and, if they were not, free discussion of customs, however firmly fixed, must have the good effect of preventing them becoming indurated, and of making more intelligible the grounds on which they rest. It must be remembered that the ideal change to which she aspires is not urged as a practical measure, on the ground that it is unlikely "to find favour with English thought and feeling."

We know no recent volume of miscellanies which is more pleasant reading or more suggestive than this. There is the ever-present stimulus of great questions treated so as at any rate to bring out their importance and their bearing on the times; and if they are not brought comfortably to a satisfactory conclusion, that is because they are questions which have as yet attained only half their development, and are incapable of a present solution. Above all, the style is lively, and rises to its subject, and we rejoice in the absence of all nonsense, of sentiment, and of woman's mission.

CLUBS FOR WORKING MEN.*

A VERY useful movement, which for some time back has been carried on in a quiet, unobtrusive way in shy nooks and corners of London and other large cities, has just received the patronage of an influential Union, with the indefatigable Lord Brougham as president, and Lord Lyttelton, the City Recorder, Mr. Layard, M.P., Dr. Guthrie, Professor Scott, of Owen's College, &c., among its members. The object of this movement is to establish clubhouses for working-men. Unfortunately, this class has been, of late years, the object of so much fussy and futile philanthropy; has been viewed, in regard to its condition and wants, in so ideal a light; and has been so absurdly provided with things for which it could have no more use than tropical savages for great-coats and flannel drawers, that it is not easy to excite public interest in any new scheme for its benefit. The present effort, however, is of a very different stamp from many which have preceded it. It is exceedingly plain and practical in design, does not aim too high, and requires no complex or costly machinery to set it in motion. It is certainly somewhat inconsistent, that while clubs abound for the use of those who already possess snug, luxurious homes, the necessity should have been overlooked of providing similar accommodation for those who stand so much more in need of it, on account of the discomfort of their dwellings. The average labouring man is not a very sensitive or impatient creature; but it is no wonder if his squalid over-crowded lodging, fretful wife, and squalling children, become, at times, rather unbearable, and drive him to seek comfort in the public-house. He has not much leisure after his day's work is done, but yet he is rather at a loss how to spend it. Even if reading be other than a sore task to him, he is too tired to enjoy it, and has, besides, no literature at hand. His wife is probably a poor conversationist, and can only discourse about domestic difficulties. It is less for the sake of the drink than of society that he goes to the tap-room; but when there he feels bound to "do something for the good of the house," and it is easy to guess in what a mood he often returns home. On every side the working-man is driven to the public-house: his very industry, foresight, and charity, lead him thither; for it is the head-quarters of his Friendly Society, and the house of call for his trade. Mr. Tidd Pratt, in his reports on Friendly Societies, is constantly reiterating that the holding of these societies at a public-house is the frequent cause of their failure. He found, for instance, that last year the number of societies enrolled and certified in Herefordshire since 1793 was 136, of which 123 were held at public-houses, and only 13 in schools or private rooms; of the former, no less than 42 had been broken up, while of the latter only one had failed. What else could be expected, when we learn that, in cases where the annual contribution is 15s. a head, 6s. additional is often spent in liquor; and that at one club in Southampton, comprising 120 members, 258 gallons were consumed in three years?

Hitherto the plans which have been set on foot to provide working-men with an escape from the beer-shop, have been pitched rather too high. As a rule, Mechanics' Institutes have long ceased to deserve that title, because they are frequented not by mechanics, but by clerks and shopkeepers. The Temperance Rooms are cheerless and forbidding. The Working Men's Colleges are for the choice, aspiring spirits, and are "caviare to the general." A place of meeting more genial and familiar than the Temperance Room, less ambitious than the College, is now proffered by the Union of which we are speaking. It seeks "to provide a club or institute, as members of which the working-men of the neighbourhood can enjoy rational, social intercourse with each other, coupled with opportunities for mental improvement, recreation, and mutual helpfulness; and, further, to give them facilities for carrying on various plans of social improvement, such as Co-operative Societies, Friendly or Benefit Clubs, Mental Improvement Societies, Building Societies, and the like, in the prosecution of which working-men are at present often obliged to resort to public-houses for the mere want of better meeting-places." It may be said that such clubs will tempt men to desert too often their own firesides, but we must remember that it is not a question between home and the club, but between the club and the "Pig and Whistle," and it requires no argument to prove which is most likely to be attended

with domestic benefit. "This is not the place," says the Union in its tract, "for enlarging on the beneficial effects of such a society in promoting the comfort and improvement of a man's home, in making him a better husband, father, or brother. It ought to be, and if wisely managed will be, full of blessings to that family club which gathers round the domestic hearth, and which should always have the first claims on a man's consideration."

The Union can add with truth, "these are no mere visionary ideas," for they have already been reduced to practice, with most beneficial results, in Westminster, Notting Hill, Paddington, Norwood, East London, Shrewsbury, Leeds, Carlisle, Southampton, &c. A better instance cannot be cited of the excellent results attending these clubs than is offered by the history of one which was established, in 1860, in Duck-lane, Westminster. This quarter of the city does not enjoy a very enviable reputation. The name of the Devil's Acre, which it once earned, still clings to it, and though much has been done of late years to eradicate the hot-beds of disease and crime which used to flourish here, it is still the haunt of an irregular and undisciplined population. Altogether, therefore, Duck-lane does not seem a very promising site for a sober, decorous, and improving club; yet the most complete success has attended the experiment. At first, the club was held in a single room, fitted up with deal tables, benches, and gas-lights; but the members increased so rapidly that another apartment had soon to be added. In the first room coffee is supplied, eatables and tobacco being brought by any who want them; but in the other rooms the members have, of their own accord, interdicted all eating and drinking, as they say it disturbs them. There is a small library, and a number of periodicals are taken in. Instructive and amusing lectures are given once a fortnight, and a simple religious service is held every Sunday. The club is open daily from 6 to 10 P.M., on payment of a halfpenny a week, and already it is almost self-supporting. Upwards of 2,900 subscriptions were taken out in 1861, and last year the attendance has been fully maintained. A similar institution has been established, with no less satisfactory results, in another "shy" quarter of London —Clare-market. At Southampton, a Club has rivalled the public-house in one of its most attractive features. "We were often told," says one of the managers, "that no one could play at skittles without beer. We resolved to test the assertion, and the result so far is, that while *our* skittle-alley is thronged every evening, those of the public-houses around are almost deserted, and our players are as noted for good words and good temper as most others are for the contrary."

An admirable feature in most of the clubs hitherto established is, that they are left to the management of the members, who are real working-men, and understand exactly what sort of regulations they and their fellows will endure and what sort of entertainment they require. Except at the starting, no extraneous aid is required; and all that the Union now formed seeks to do is, to encourage the establishment of clubs by disseminating the necessary information, and making occasional grants or loans, either in the shape of books or money. All who have the interest of working-men at heart will surely wish it success and second its endeavours.

ART AND SCIENCE.

THE CHORALE BOOK FOR ENGLAND.*

COLLECTIONS of psalm and hymn tunes are almost as plentiful as diaries and journals of travel. As the majority of tourists think it incumbent on them to give the world a record of their holiday rambles, so nearly every parish organist seems impelled to publish his "collection of psalm and hymn tunes;" in many cases only levying contributions on the congregations for whose use these "collections" profess to be compiled. With such a mass of stereotyped mediocrity, it is gratifying to find two such distinguished musicians as Professor Sterndale Bennett and Mr. Otto Goldschmidt co-operating in a work which deserves to take high rank as a standard collection of Church tunes, admirable alike in selection and arrangement. Congregational psalm-singing, so generally practised for some time after the Reformation, has, for many years past, fallen into great neglect in the Established Church, so that it is common to hear that musical portion of our Church service, which should be the united expression of the general voice, left almost entirely to the performance of charity children, who can scarcely be qualified, either vocally or intellectually, to fulfil the mandate, "Sing ye praises with understanding." Despite the efforts which have been made by various systems of class-teaching, to induce a more general co-operation in congregational singing, our Church service, in this respect, still offers much room for improvement. Some of the dissenting bodies have shown that such "loud uplifting of the universal voice" is still attainable, by earnest zeal in its constant practice. It must, however, be admitted, that many of their tunes are of a character far beneath the dignity of the purpose to which they are applied. We have heard of the saying of an eminent dissenting divine, that "he did not see why the devil should have all the good tunes." On this theory all sorts of secular tunes became impressed into religious service, until it was no uncommon thing to hear such strains as "Rousseau's Dream," or "Cherry ripe," allied to texts of the most solemn and sacred character. As Mrs. Ford says, "They do no more adhere and keep place together than the Hundredth Psalm to the tune of 'Green Sleeves.'" Nor has this distortion of secular tunes to sacred uses been confined to the Dissenters—for many years past, the psalmody of the Established Church has been vitiated by a large infusion of melodies which have even less analogy with religious sentiment than the incongruous association just quoted from Shakespeare.

It may be urged that some few even of the grand old orthodox Church tunes were originally derived from secular airs. On this subject the editors of the "Chorale Book" say, "It speaks well for the character of the secular music of that period, that any of its melodies should have taken a place in the Church, which they have retained undisputed to the present day." Our own impression, however, is that if we could trace these originals still further back, we should find that they were themselves popular adaptations of Gregorian or Ambrosian tunes of the Romish Church. It must be borne in mind that at that period there was little, if any, distinction of style between the music of the Church and that of the people. Music, as an art, owed its origin and cultivation entirely to the Church; and even the madrigals and love-songs of the early part of the sixteenth century bear the distinct impress of the Church style. It was reserved for the later development of the opera, and the consequent free expression of human sentiment and passion in stage music, to place a distinct and lasting barrier between the music of religious worship and that of the outer world. The results of this change may be seen in exaggerated force in the music of the Italian Church. During the sixteenth and seventeenth centuries, Italian Church music realized all that is sublime and earnest in religious expression, and chaste and learned in construction. It gave the laws to musical Europe—it furnished the models on which such composers as Bach and Handel were formed. Look at it now! It exists but in the past. The encroachments of a secular and frivolous style, unchecked by any power from within the Church itself, have destroyed what was once a school of art worthy of the country of Raffaelle and of Michael Angelo. The truth is that there must be as wide a distinction preserved between the sacred and secular styles in music, as that which ought to distinguish ecclesiastical from domestic architecture. While the temple of God should be a structure worthy of His worship, the language (musical or otherwise) in which we address the Deity, should be far above the commonplace of life. As already indicated, the music of the English Church, especially its psalmody (with which we are now chiefly concerned), has been for many years undergoing various processes of deterioration and secularization. The appearance, therefore, of a work of so wholesome and sound a character as the "Chorale Book," is worthy of special recognition.

It was the Lutheran chorale which first embodied the expression of sublime and devotional feeling in congregational music. Whereas, in the Romish Church, the musical service was chiefly a performance to which the worshipper listened inactively: the early Protestants largely advocated and encouraged congregational singing. They seem to have thought, Luther especially, with a quaint old writer, that "when Christians sing all together in some easy tune, accommodated to the words of their praise, and not likely to take off their attention from sense to sound, then experience shows they sing most lustily (as the Psalmist expresses it), and with the best good courage. The symphony of voice and the sympathy of heart may flow through the whole congregation, which is the finest music to truly serious persons and the most acceptable to God of any in the world." This opinion will be shared by all who have heard in the vast churches of Germany the grand old chorales sung in unison by the whole congregation to the accompaniment of a large organ—it is the highest and purest expression of the combined religious feeling of a multitude of worshippers. Those who have not heard them in the churches of Germany can scarcely fail to have noticed in Mendelssohn's oratorio, "St. Paul," the sublime effect of "Sleepers, wake," which is, in fact, the Lutheran

Digitized by Google

chorale, "Wachet auf." The symphony of brass instruments at the end of each strain represents the little interlude (Zwischen-Spiel) which the German organists are accustomed to play at the close of each musical phrase; the object of such interpolations being to give breathing time to the singers after the exhaustion of the long-sustained notes of the tune. Again, Meyerbeer, in his opera, "Les Huguenots," has made frequent use of the chorale, "Ein festes Burg ist unser Gott," a tune which was for many years the watchword of religious freedom in Germany.

The Lutheran chorales, collected (and in some instances composed) by Luther himself, formed the models on which many of our early English Church melodies were framed; and in proportion as this high and pure standard has been departed from, the sublimity and propriety of English psalmody have been lost sight of. It is therefore with much satisfaction that we welcome the appearance of the "Chorale-Book," as a collection of some of the grandest and purest old tunes associated with religious purposes. The work before us professes to be "a complete hymn-book for public and private worship in accordance with the services and festivals of the Church of England." The hymns, translated from the "Lyra Germanica" and other sources, by Miss Catherine Wiskworth, are classified according to the various occasions for which they are adapted. The translator tells us, in her preface, that whereas her former well-known publication "was intended chiefly for use as a work of private devotion, the 'English Chorale-Book' is intended primarily for use in united worship in the Church and family, as also in meetings for the practice of church-music." Our present purpose is, however, with the musical portion of the work. The editors, in a carefully-written preface, explain that, although intended and adapted for English use, the book is so especially a collection of German hymnology that they have "abstained, with one exception, from inserting either hymns or tunes of English origin." The preface gives a well-digested sketch of the history of German hymnology; and in a carefully-compiled index of tunes, dates and references to numerous old collections are copiously given. Especially commendable is their hesitation to fix the authorship of tunes which have hitherto been, with the recklessness of ignorance, most erroneously attributed. The editors seem to be fully aware that, in old collections of psalm and hymn tunes, the name affixed to the tune more frequently signifies that merely of the arranger or harmonizer than of the composer or author of the tune itself. Thus the English tune called "York," having the name of John Milton attached to it in Ravenscroft's Collection (1621), has been almost invariably accepted as the composition of the poet's father, notwithstanding the appearance of the same melody, in the same collection, with the name (unpoetical antithesis!) of Simon Stubbs,—the probability being that the tunes in both cases are merely arrangements. In like manner, the tune known here as the "Old Hundredth," after being attributed to various authors, has been confidently set down as the composition of Claude Goudimel, because coupled with his name in an early collection of psalm tunes. The fact is, that some of these old tunes are as difficult to trace to their origin as national legends and traditions; and the most that a conscientious editor can do is to give all the known dates and authorities on the subject, and leave the question as he finds it, conjectural and doubtful. This has been done by the editors of the present work, in the few cases where positive knowledge seems impossible; while, in most other instances, the authorship is determined on what appears to be indisputable authority. The "Chorale Book" contains upwards of a hundred church melodies, very purely harmonized in four parts—the tunes, of course, being given to the treble or upper part according to modern usage; the ancient practice of assigning the melody to the tenor having long been discontinued. This work, viewed in its musical aspect, is likely to cause a healthy reaction in English psalmody.

There has been but little novelty in the musical performances of the past few weeks. As usual at Christmas, the "Messiah" has been given in various localities. Mr. G. W. Martin's National Choral Society has greatly enhanced its reputation by a very praiseworthy performance (at Exeter Hall) of "Judas Maccabæus"—a performance so successful and attractive as to be repeated on Wednesday last,—when Mr. Sims Reeves was singing his best—his rendering of the great airs "Call forth thy pow'rs" and "Sound an alarm" being magnificent specimens of musical declamation. Mr. Martin's choir has been for some time steadily progressing in strength and efficiency, and has now fairly taken its place as one of the musical institutions of London. The "Creation" is announced for performance by this society on February 4th.

Other signs of musical activity are now becoming apparent. The Popular Concerts are to be resumed on Monday next. The first concert (of the season) of Mr. Henry Leslie's choir is announced for the following Wednesday; and the Sacred Harmonic Society are to give Mendelssohn's "Athalie" and Mozart's Requiem on Friday.

Mr. Balfe's new opera for Covent Garden is reported to be partly in rehearsal; the title is said to be "Marie Tudor." Mr. Vincent Wallace is in Paris, completing an opera for the same theatre.

La Presse has just published a letter from Alexander Dumas on the production at the theatre of San Carlo (Naples) of Auber's "La Muette de Portici" (Masaniello). Dumas begins his communication thus:—"If Garibaldi had not, one fine morning, conceived the happy idea of dethroning the King of Naples, and had not successfully carried out this idea, the public of San Carlo would have been ignorant to this day that there exists a score of 'La Muette de Portici' and a *maestro* named Auber." The living dramatist's jealousy of his deceased rival peeps out in his incidental remark that the libretto "is, like all that Scribe did, mediocre in invention and vulgar in execution." Defective as the book of "Masaniello" undoubtedly is, this sweeping censure of Scribe will scarcely be agreed to by those who are acquainted with such comedies as "La Camaraderie," "Le Verre d'Eau," and "Bertrand et Raton," and his opera books of "Le Domino Noir," "Les Diamans de la Couronne," and others. M. Dumas records the complete success of the music, and is loud in praise of Signor Armandi (the Masaniello) both as an actor and singer. The passages bearing on revolutionary principles were enthusiastically received. "La Muette" is to be revived at the Paris Grand Opera about the end of this month.

M. Louis Romani, of Milan, has recently published a history of the Theatre of La Scala, from its opening in 1778—a book that should contain much interesting matter relating to Italian musical history.

CONTEMPORARY SCIENCE.

Mr. Max Müller's recent work on languages has formed, for some time past, a prolific source of learned discussions; and during the last week, at the Philological Society, some of that gentleman's opinions have received rather severe handling in a paper by Mr. T. Hewitt Key, the Professor of Comparative Grammar at University College,—"Sanskrit as the basis of Philological Science, and the labours of the German school in that field—are they not overvalued?" Attention was first drawn to the theory of Prof. Max Müller (History of Sanskrit Literature, p. 507), that when Pânini composed his great work on grammar, in the middle of the fourth century B.C. (pp. 245, 301, &c.), the art of writing was yet unknown to him, so that the human memory must then have been capacious enough to retain not merely the Vedic hymns and the vast mass of Brahmanic literature, but a whole library of successive races of grammarians who preceded Pânini; and this at a time when every branch of letters was already flourishing in Greece! A second theory of the Professor's was then discussed, that which infers an extensive use of Sanskrit in the Indian peninsula so early as Solomon, from the sole evidence of the Hebrew names for the imported ape, peacock, ivory, and sandal-wood. These names he asserts to be clearly of Sanskrit origin; but it is contended without sufficient reason. Thus, to take one specimen—not the least plausible of the four—the theory assumes that *valyuka*, the Sanskrit for "sandal-wood," first lost its initial *v* and final *ka*, then assuming an *m*, became *algum*; and finally, by the transmutation of *gum* to *mug*, attained the exact form which appears in the Hebrew, *almug* (Lectures on the Science of Language, pp. 204-5). The rest of the paper dealt with separate etymologies deemed unsatisfactory, though sanctioned by Indian authorities and the Bopp school of Philology. Thus Prof. M. Müller, ever hostile to the Onomatopœic, or as he, by way of disparagement, would call it, the Bow-Wow theory, refuses to see in the various names of the "crow or raven," Sanskrit *kârava*, Latin *cor(o)uo*, English *c(o)row*, the sound *cor* as indicative of the bird's note; and would fain derive it (*ib.* p. 369) either from the Sanskrit verb *ru* of "general predicative power,"—denoting any sound whatever, and so, *a priori*, applicable, as he himself says, "to the nightingale as well as to the raven," and actually used for "the murmuring of rivers, the barking of dogs, or the mooing of cows,"—or else from the Sanskrit substantive *kâru*, "a singer," two etymologies which were thought wholly unsatisfactory, the latter as ludicrously inapplicable in respect of meaning, the former as being, to use legal language, void for uncertainty. The same objection of excess of generality was deemed valid against other derivations from various Sanskrit verbs meaning simply "to go," which are put forward by Oriental scholars, as our own *cow*, and Sanskrit *go* (*gau*), "steer or cow," from Sanskrit *ga*, "to go;" γαια, and γη, "earth," from the same verb *ga*, "to go;" Sanskrit *gma*, "earth," from *gam*, "to go;" our own *earth*, ultimately from *ṛi*, "to go;" Sanskrit *saras*, "water," from *sri*, "to go;" *salila*, "water," from *sal*, "to go;" the Ganges itself from a reduplicated *ga*, and so signifying "go-go;" our own *serpent*, ultimately from *sri*, "to go;" the German *schlange*, of like power, from *srang*, "to go;" our *worm*, through *krimi*, from *kram*, "to go;" and lastly, for words denoting time, as our *year*, either with Bopp from *yâ*, "to go," or with Lassen from *ṭr*, "to go;" and, Latin *ævum*, from *i*, "to go," &c. The paper is to be continued on Friday the 18th, and will then more particularly deal with Bopp's great work, the Vergleichende Grammatik.

The old wooden tanks lined with lead, so common a few years since in our houses, are fast being superseded by cisterns made of slate, and others of wrought, cast, and galvanized iron. To the slate cisterns no objection can be raised, except the placing them uncovered on the tops of houses, as is very often the case, and where dirt, leaves, and vermin will intrude, and the confervoid growth of vegetable matter take place, to the detriment of the water and the prejudice of those who drink it. Galvanized iron tanks are thought to be very cleanly, but it is doubtful if their use is altogether to be approved. The zinc with which they are galvanized must form salts soluble in the water, and which will have a tendency to produce various disagreeable and unhealthy effects. Moreover, it is very little use to take care of the tank if we do not take care of the pipes which supply it. These are usually of lead, with copper connections. There will be mutual actions and reactions of the salts of copper, zinc, and lead upon each other, the pipes, and the metal tanks; but the combined attack of the total result will infallibly be made upon the human system; and a little investigation would prove how very many slight and how many serious diseases have their origin in such contaminated water. It is better,

Digitized by Google

however, to have the tank at the top than at the bottom of the house; for in the latter situation, in large towns, a thin film of mucous animal matter will be commonly found on the surface — a prolific source of cutaneous eruptions and blotches.

But the worst position of all for a supply-tank is where, from handiness of connection with the general water and drainage pipes in a house, they are too commonly placed; and then, indeed, the water, becoming impregnated with the particles of decomposing animal matter, becomes a prolific source of morbid affections, gastric fever, and erysipelas. Nothing is of more importance to health than the purity of the water used in beverages and domestic culinary operations, and very good results would accrue from the habitual use of slate tanks, and the application of large filtering compartments, filled with sharp sand, from which all the water required for drinking or cooking purposes should be drawn.

A new Society—the Anthropological—has been founded under the Presidency of Dr. Hunt, and Capt. R. Burton and Sir C. Nicholson, Vice-Presidents. Its objects are to study man in all his leading aspects, physical, mental, and historical; to investigate the laws of his origin and progress; to ascertain his place in nature and his relations to the inferior forms of life. In short, to take up in a fair and unbiased spirit the investigation of one of the great exciting topics of the time. In the provisional council the appointments seem to have been made more with a view to obtain an efficient working body than with any wish for titled patronage. The purpose is work to be done, and works to be published. A quarterly journal will be published, which will give the subjects of the papers read at the meetings, and a volume of transactions and a volume of translations of important foreign books and papers will also be printed annually.

Mr. Coxwell has been lecturing on Balloons at the Tottenham Institution. It was not likely he would omit the memorable high ascent—nor did he; and although every one is now familiar with its main features, his description was not devoid of novelty or freshness. It is the first time he has described his own conduct on that occasion. The best comment that can be made on Mr. Coxwell's presence of mind, is the fact of the rapidity with which, while Mr. Glaisher was unconscious, he brought down the balloon to a lower level more congenial to human existence. Nineteen thousand feet were thus descended in nine minutes, when the balloon's further progress was arrested by a discharge of ballast.

During the past year a book entitled "Facsimiles of Certain Portions of the Gospel of St. Matthew, and of the Epistles of St. James and Jude," were published by Mr. Joseph Mayer, of Liverpool. The validity of the originals of this work has been a topic of great discussion for some time past; and on Wednesday, at the Royal Society of Literature, the Papyri themselves, which belong to Mr. Mayer, and were deciphered by M. Simonides, were exhibited, together with the equally celebrated "Utanius."

M. Simonides was present, and a number of the questions which have been raised respecting them were boldly discussed, chiefly the general nature of the writings and the material on which they were written, the result being an agreement that these documents should be laid on the Society's table for two days under the care of Mr. Thos. Wright and M. Simonides, for the inspection of learned men and others who might wish to see them.

At the Entomological Society an interesting exhibition was made by Professor Westwood, of a large tough pouch-like nest from Africa of some gregarious Lepidopterous larvæ suspended from the branch of a tree, and of the leaves of various plants mined by various larvæ of the same class, mounted on glass to show the miners inside, and the shape and peculiarities of their workings. Amongst the other numerous exhibitions was a Trichopterous insect new to this country—*Limnephilus nobilis* (Kolenati).

At the Geologists' Association a discourse was delivered by Mr. Carter Blake, "On the Fossil Animals of South America." The great extinct mammalia, of the New World, were brought into comparison with their European contemporaries. These remains are from deposits of Pliocene age, equivalent, perhaps, to our entire Mammalian era, for as yet we have no decisive knowledge of any division by an intermediate glacial period, as occurs in Europe.

CORRESPONDENCE.

To the Editor of "The London Review."

SIR,—I observe that in your last number I am charged with having dealt unfairly with M. Hautefeuille and Dr. Phillimore, in some letters I have recently addressed to the *Times* newspaper, by misquoting their opinions. I am not in the habit of noticing merely argumentative attacks, which do not seem to me deserving of a reply. This imputation of deliberate bad faith is a different matter. I have no fear that any one who has taken the trouble to look into the works in question, which your contributor does not appear to have done, will for a moment imagine that there is the slightest foundation for such a charge. As all your readers, however, may not have had that opportunity, I think it right to correct the serious errors of fact into which you have fallen.

You say, that M. Hautefeuille treats international questions under two heads, first, that of the "primary or divine law;" secondly, that of the "secondary law." You say that by the first M. Hautefeuille means the "dictates of international morality," and by the second the "customary usages of positive international law." It would not be difficult, if it were worth while, to show that M. Hautefeuille does not mean anything of the sort. But perhaps when an author, as Pope says, "does not mean, but only blunders round a meaning," it is of little use discussing that which does not really mean anything at all. For the sake of argument, I am willing to accept your interpretation of M. Hautefeuille's cant phraseology; the material point as regards the vindication of my good faith in the representation of M. Hautefeuille's opinion is, that he distinctly asserts that neutral trade in contraband within the neutral territory is prohibited not only by the "primary and divine law," but also by the "secondary law," which you interpret to mean the "customary and positive international law." He expends several pages in proving that Lampredi's statement, that the "secondary law" does not prohibit such a trade is an "error." Vol. ii. pp. 168—171. At the conclusion of the chapter, after stating his view of the "primary law," he says expressly, "la loi secondaire n'a rien changé, n'a rien modifié a cette disposition;" *i.e.*, that the primary and the secondary law, jointly and severally, prohibit such a traffic.

I do not object at all to a man putting forth the opinion that it is contrary to the "primary divine law" to assert that a grant to a man and his heirs conveys an estate in fee simple, if he can get anybody to attend to him. But if he proceeds to argue and to assert that the law of England does not lay down the contrary, I take the liberty of protesting against the statement, and of pointing out that such a writer is not a safe authority on conveyancing.

If M. Hautefeuille had contented himself with stating the clear law of nations as it is, and had then given his reasons for thinking that that law was founded on erroneous principles and ought to be reformed, such a mode of treating the subject would have been quite unobjectionable. But instead of this, he distinctly states the law to be as he thinks it ought to be, which happens to be precisely the reverse of what it is. If, as you say, this was intended by M. Hautefeuille as merely a "theoretical" proposition, permit me to ask in what page of his three big volumes, on the rights and duties of neutral nations, is the actual law and practical rule on this subject to be found; and if so material a point is wholly absent, what is the value of such a treatise as a guide to international law?

You say M. Hautefeuille "does not inculcate on the neutral government the duty of preventing its subjects from selling in its territory muniments of war to a belligerent." Does he not? He says that such *a traffic is unlawful and prohibited.* He adds that the neutral nation whose subjects engage in such a traffic incurs the liability of a just war. And this is not to inculcate on the neutral government the duty of preventing such a traffic! If that be so I have wholly failed to apprehend the first duty of a Government towards its subjects. I had always imagined that there was none more paramount than that of protecting its innocent inhabitants from the just retribution which the acts of guilty subjects, if not placed under proper restraint, might bring down upon them. I suspect that if the doctrine of M. Hautefeuille ever obtained any credit amongst nations, a feeble neutral would very soon have this duty "inculcated" upon it by a powerful belligerent in a manner which would prove anything but "theoretical."

Now one word as to Dr. Phillimore. I have never disputed that his work is "to a degree honest and laborious." Its defects are of a kind with which integrity and industry have nothing to do. I have not complained of want of diligence in the collection of materials, but of failure in that discrimination which is requisite to employ them with effect. But it is your contributor, and not I, who have misquoted Dr. Phillimore. You say, that what with M. Hautefeuille is the "primary divine law," is, with Dr. Phillimore, the "principle of universal justice." Now the favourite implement of Dr. Phillimore is not the "principle of *universal* justice," but the principle of "*eternal* justice." Whether "eternal justice" is the same thing or a different thing from "universal justice," or wherein they are distinguished from the justice of ordinary mortals, or whether, in fact, they either, or both of them, mean anything at all, I don't exactly determine. I do not go quite so far as a learned friend of mine, who said that, as far as he could perceive, "eternal justice" was only a fine name for "infernal nonsense." But I think in this matter, I may retort upon you the remark that, "at all events the author is entitled to have his opinion fairly quoted." Dr. Phillimore has a clear right to the epithet he profers, and, on the whole, as Mr. Weller observes, "eternal" is perhaps "the more tenderer word" of the two. Your contributor has wholly misapprehended the scope of Lord Redesdale's remarks. If he had practised at the Equity Bar, he would have found that neither Lord Redesdale, nor any of his successors, would have listened with much patience to an argument founded on the principles either of "eternal" or of "universal" justice against a well-established and firmly-settled rule of law.

No man who reads the passage of Dr. Phillimore's work, to which I referred, with candour and attention, can doubt for an instant that he intends to lay down the actual and practical rule established by the balance of the authorities, and not to hazard a mere speculative opinion. I venture to ask, as in the case of M. Hautefeuille, if this is intended only for theory, in what part of a work professing to treat of the actual law of nations, is the practical rule to be found? You say that Dr. Phillimore's opinion is not intended to "refer to the practices of war as they are." Is it not? Then, what is the meaning of the passage about Belgium, to which in my letter I expressly referred? He says, as an argument against the rule for which I have contended,

Digitized by Google

h at if it were admitted, "Belgium, bound by the very charter of her national existence to a perpetual neutrality, might allow Russia, *during the present war*, to purchase any amount of ammunition and military stores, without any infraction of neutrality." It is no justification for this unfortunate illustration, that it is copied out of the very flimsy work of the French Commentators on Valin. Not only *might* Belgium have done what Dr. Phillimore suggests it is impossible she could have been permitted to do, but she actually did it all through the Russian war. Liège was practically the armoury of Russia. Does anybody doubt that if the law, as laid down by M. Hautefeuille and Dr. Phillimore, had been well founded, England and France would have "inculcated" on the Belgian Government, if necessary, by an English fleet in the Scheldt and a French army on the frontier, the "duty" of prohibiting such a trade?

I am glad that your contributor, in the attack he has made upon me, has not thought fit to attempt to controvert the positions I have laid down, or to sustain the propriety even of the "theoretical" view of the writers, whose cause, as it seems to me, he has somewhat injudiciously espoused. Your contributor admits that the rule which M. Hautefeuille and Dr. Phillimore seek to invalidate, is "fixed upon a very reasonable basis," and that the doctrine which they have deduced from the "primary divine law" and the "principles of eternal justice," is "hard in principle and impossible in practice." A result somewhat unsatisfactory, perhaps, but by no means unusual in the case of speculations founded on transcendental absurdities. But it generally turns out that "wisdom is justified of her children," and the experience of mankind, in the end, puts to shame the theories of those who are sagacious only in their own conceit.

Temple. HISTORICUS.

LEARNED SOCIETIES.

LIST OF MEETINGS FOR NEXT WEEK.

MONDAY.

ARCHITECTS—Conduit-street, Hanover-square, at 8 P.M. "Building and Sanitary Arrangements." By John Taylor, Jun., Esq.

GEOGRAPHICAL—Burlington House, at 8½ P.M. 1. "Ocean Currents on the North-East Coast of South America." By Mr. J. A. Mann. 2. "Ocean Telegraphy." By Captain Rowett. 3. "Survey of the Natural Condition of the Atlantic, with special regard to Telegraphic Communication between Europe and America." By Dr. G. C. Wallich.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Sculpture." By Professor R. Westmacott, R.A.

MEDICAL—32A, George-street, Hanover-square, at 8½ P.M. "On the Artificial Hand of Sergeant Gallegos, and other cases." By Mr. Bishop.

TUESDAY.

ETHNOLOGICAL—4, St. Martin's Place, at 8 P.M. 1. "On the Commixture of the Races of Man as affecting the Progress of Civilization." By J. Crawfurd, Esq., President. 2. "On the Human Skull found at Kellet, in Lancashire." 3. "On some Ancient Indian Antiquities from Ecuador." By Mr. Bollaert.

CIVIL ENGINEERS—25, Great George-street, Westminster, at 8 P.M. "On Railway Telegraphs and the application of Electricity to the Signalling and Working of Trains." By Mr. W. H. Preece.

MEDICAL & CHIRURGICAL—53, Berners-street, Oxford-street, at 8½ P.M.

SYRO-EGYPTIAN—22, Hart-street, Bloomsbury.

ZOOLOGICAL—11, Hanover-square, at 9 P.M. 1. "On the Ornithology of the Island of Bourou." By Mr. A. R. Wallace. 2. "On Snakes collected by Mr. R. F. Burton in West Africa." 3. "On an Australian Venomous Serpent." By Dr. Günther.

WEDNESDAY.

ARCHÆOLOGICAL ASSOCIATION—Sackville-Street, at 8½ P.M. 1. "On the Proceedings of Charles I. from the Storming of Liecester to the Battle of Naseby," illustrated by Letters of Charles I. By Sir Henry Halford. 2. "On a Roman Villa at Marlston, Berkshire," and exhibition of the Antiquities found therein. By Dr. Palmer. 3. "On Ancient Brand-irons." By Mr. Syer Cuming.

MICROSCOPICAL—King's College, at 8 P.M.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Commercial Law." By G. W. Hastings, LL.B.

SOCIETY OF ARTS—John-street, Adelphi, at 8 P.M.

GRAPHIC—Flaxman Hall, University College, at 8 P.M.

THURSDAY.

ROYAL SOCIETY—Burlington House, at 8.30 P.M. 1. "Notes of Researches on the Poly-Ammonias, No. XXI.—Secondary Products formed in the Manufacture of Aniline." By Dr. Hoffmann. 2. "On the Form of the Crystals of Benzoyl." By Dr. W. H. Miller. 3. "On the Synthesis of Leucic Acid." By Dr. Frankland. 4. "On the Artificial Formation of Fibrin from Albumen." By A. Smee, jun.

ANTIQUARIES—Somerset House, at 8.30 P.M.

LINNÆAN—Burlington House, at 8 P.M. 1. "On Loranthiaceæ." By Professor Oliver. 2. "New Species of Aberia." By Dr. Anderson. 3. "Germination of Seed in *Cyclamen nefandum* and *C. persicum*." By Dr. Masters. 4. "Development of *Chlocon* (*Ephemera*) *dimidiata*." By J. Lubbock, Esq. 5. "Japanese Species of *Leiostraca*." By Mr. Adams.

CHEMICAL—Burlington House, at 8 P.M. "On the Atomic Weights of Nickel and Cobalt." By Dr. W. T. Russell.

NUMISMATIC—13, Gate-street, Lincoln's Inn Fields, at 7 P.M.

FRIDAY.

PHILOLOGICAL—Somerset House, at 8.15 P.M. "The Sanskrit Language as the basis of Linguistic Science, and the Labours of the German School of Philology in that field—are they not overvalued?" By Professor T. Hewitt Key.

LONDON INSTITUTION—Finsbury-circus, at 7 P.M. "Non-Metallic Elements." By Professor Field.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Arundell's (A.) Practical Treatise on the Law relative to Mines and Mining Companies. Crown 8vo., cloth, 4s.

Bailey's (Samuel) Letters on the Philosophy of the Human Mind. Third series. 8vo., cloth, 8s. 6d.

Barnes's (W.) Poems of Rural Life, in the Dorset Dialect. Third Collection. Fcap., cloth, 4s. 6d.

Bennett's (C.) The Stories that Little Breeches Told. Second edition, illustrated. Crown 4to., plain, 7s. 6d. coloured cloth.

Bernard (Saint), Life and Times of, A.D. 1091—1153. By J. C. Morison, M.A. 8vo., cloth, 14s.

Blomfield's (Bishop) Manual of Family Prayers. New edition. Crown 8vo., cloth, 3s. 6d.

Bowe's (Rev. G. S.) Illustrative Gatherings for Preachers and Teachers. Third edition. Fcap., cloth, 5s.

Boyle's Court Guide. New edition, corrected to January, 1863. 12mo, bds., 5s.

Bromfield's (J.) Lower Brittany and the Bible there: its Priests and People. Crown, 8vo., cloth, 9s.

Bryce's (A. R.) Second Latin Reader: extracts from Nepos, Cæsar, &c. Crown, 8vo., cloth, 3s. 6d.

Cassell's Illustrated Exhibitor of the Objects in the International Exhibition. 4to., cloth, 7s. 6d.

Census Tables of England and Wales. 6d. on a sheet.

Chambers' (T. K.) The Renewal of Life: Chemical Lectures on a Restorative System of Medicine. Second edition. Crown, 8vo., cloth, 6s. 6d.

Champneys' (Rev. W. W.) Drops from the Deep Well. 18mo., cloth, 1s.

Christian Advocate (The), and Review. Vol. 2, 1862. 8vo., cloth, 7s. 6d.

Cousin Bessie: a Story of Youthful Earnestness. By Mrs. C. L. Balfour. Crown 8vo., cloth, 1s.

Cumming's (Rev. Dr. John) Driftwood, Seaweed, and Fallen Leaves. 2 vols. Post 8vo., cloth, £1. 1s.

Curling's (T. B.) Observations on Diseases of the Rectum. Third edition, enlarged. 8vo., cloth, 7s. 6d.

Dublin Examination Papers for 1863. 12mo., bds., 2s. 6d.

Dublin University Calendar for 1863. 12mo., canvas, 3s. 6d.

Easy Lessons; or, Leading Strings to Knowledge. New edition. 16mo., cloth, 2s. 6d. plain, 3s. 6d. coloured.

Eric; or, Little by Little. By F. W. Farrar. Sixth edition. Fcap., cloth, 5s.

Every Man's own Lawyer: a Handy-book of the Principles of Law and Equity. 12mo., cloth, 6s. 6d.

Fowler's (Rev. F. W.) Answer to Bishop Colenso on the Pentateuch. 8vo., sewed, 2s.

Fyfe's (J. H.) The Enterprise beyond the Seas; or, the Planting of Our Colonies. Fcap., cloth, 3s. 6d.

Geldart's (Mrs.) The Sick Room and its Secret. Crown 8vo., cloth, 1s.

"Give ye them to Eat:" Plain Words on the Cotton Famine. 12mo., sewed, 6d.

Greenhow's (W. T.) The Shipping Law Manual. 8vo., cloth, £1.

Help Onward; or, Short Meditations for Every Day in the Year. 16mo., cloth, 3s. 6d.

Help and Comfort for the Sick Poor. Fourth edition. Fcap., sewed, 1s.

Henry and Mary; or, the Little Orphans. By Susan Cobbett. Fcap., cloth, 1s.

House (The), by the Churchyard. By J. Sheridan Le Fann. 3 vols. Post 8vo., cloth, £1. 11s. 6d.

Horne's (John) Works. Edited by H. Rogers. Vol. 4, 8vo., cloth, 5s.

Hunter's (Rev. J.) Examination Questions on Colenso's Algebra. Part I. 12mo., bds., 2s. 6d.

Huxley (Professor) On our Knowledge of the Causes of the Phenomena of Organic Nature. Crown 8vo., cloth, 2s. 6d.

Imperial Calendar (The) for 1863. 12mo., sewed, limp, 5s.

Indian Army (The) and Civil Service List, January, 1863. Fcap., canvas, 6s.

Jeptha: a Dramatic Poem. By John S. Edison. Crown 8vo., cloth, 7s. 6d.

Johnston's (A. K.) Atlas of General and Descriptive Geography. Imperial 4to., half-bound, £1. 5s.

Kenealy's (Dr. E. V.) A New Pantomime. Crown 8vo., cloth, 12s.

Koran (The) of Mahomed, with Notes &c. By G. Sale. New edition. 8vo., cloth, 7s. 6d.

Lancashire Homes and What Ails Them. By the Author of "Ragged Homes." 16mo., cloth, limp, 1s.

Landell's (E.) The Boys' Own Toymaker. Sixth Edition. 16mo., cloth, 2s. 6d.

Laurie's (J. S.) Standard Series of Elementary Reading Books. First Standard Reader. 12mo., cloth, sewed, 4d.

——— Second Standard Reader. 12mo., cloth, 6d.

——— Standard Primer. 12mo., cloth, limp, 3d.

Lays of the Pious Minstrel: Selections. By J. B. H. 18mo., cloth, gilt, 2s. 6d.

Lear's (E.) A Book of Nonsense. Tenth edition. Oblong bds., 3s. 6d.

Lowndes's Bibliographer's Manual. New edition. Revised by H. G. Bohn. Vol. IV., Part II. Crown 8vo., cloth, 3s. 6d.

McCulloch's Lessons from First Reading Book. On roller. 1s. 8d.

Mackenzie: Early Death not Premature, Memoirs of F. L. Mackenzie. By Rev. C. P. Miles. Fourth edition. Crown 8vo., cloth, 6s.

Manxland: a Tale, with Introductory Sketches of Manx Home Missions. By B. Stowell. Crown 8vo., cloth, 2s. 6d.

Mayhew's (H.) The Boyhood of Martin Luther. Fcap., cloth, 6s.

Metropolitan Tabernacle Pulpit: containing Sermons by the Rev. C. H. Spurgeon. Vol. IX. 8vo., cloth, 7s. 6d.

Midday Thoughts for the Weary. Third edition. 32mo., cloth, 1s. 6d.

Mill's (Jane) Kinder Garten: Educational Employments and Amusements for Children. 4to., cloth, gilt. 3s. 6d.

Mining and Smelting Magazine. Edited by H. C. Salmon. Vol. II. 8vo., cloth, 7s. 6d.

Monthly Medley for Happy Homes. Vol. for 1862. Fcap., cloth, 1s. 6d.

Moore's (Thos.) Poetical Works, complete. New edtion. Crown 8vo., cloth, 7s. 6d.

Murby's (T.) Musical Students' Manual. Division II. Crown 8vo., sewed, 1s.; or complete in one vol., cloth, 3s. 6d.

Newton's (Rev. Dr. R.) The Giants, and How to Fight Them. New edition. Crown 8vo., sewed, 1s.

Oliver and Boyd's New Edinburgh Almanack for 1863. 12mo., sheep, 5s. 6d.

Otto, the Miner's Child; or, Honesty the Best Policy. Fcap., cloth, 1s.

Parish Magazine (The). Edited by Rev. J. Erskine Clarke. Vol. for 1862. 8vo., cloth, 2s.

Pietrowski's (Rufin) Story of a Siberian Exile. Translated from the French. Crown 8vo., cloth, 7s. 6d.

Poems; from the Dawn of British Literature to 1699. Fcap., 3s. 6d.

Punch. Vol. XLIII. (July to December, 1862.) 4to., cloth, 8s. 6d.

Reeve's (Wybrow) Romance of Reality; or, Tales from a Wanderer's Diary. Crown 8vo., cloth, 4s.

Reminiscences, by a Clergyman's Wife. Edited by the Dean of Canterbury. Second edition. Crown 8vo., cloth, 3s. 6d.

Robs di Roma. By W. W. Story. 2 Vols. Post 8vo., cloth, 21s.

Rogers's (Mary E.) Domestic Life in Palestine. Second edition. Post 8vo., cloth, 10s. 6d.

Running the Blockade. By Lieut. Warneford, R.N. Fcap., boards, 2s.

Schonberg's (C. L.) The Chain Rule: a Manual of Brief Commercial Arithmetic. New edition. 18mo., cloth, 1s.

Sephas; or, Cloudy Skies: a Romance. By Michael Ford. 2 Vols. Post 8vo., cloth, 21s.

Shilling Books for Pleasure Hours. Remarkable Adventures from Real Life. Crown 8vo., sewed, 1s.

Stowe's (Mrs. H. B.) Reply to the Address of the Women of Great Britain to the Women of America. Fcap., bds., 1s.

Talbot's (Mrs.) Parochial Mission Women, their Work and its Fruits. 2nd edit. Fcap., cloth limp, 2s.

Ten Years of Imperialism in France. By a Flâneur. 2nd edition. 8vo., cloth, 9s.

Thring's (H.) Law and Practice of Joint-Stock Companies, including the Statutes, with Notes, Forms, &c. 2 vols., 12mo., cloth, 18s.

——— Vol. 2, separately (containing the Companies' Acts). 12mo., cloth, 7s. 6d.

Tuckwell's (Rev. W.) Latin Vocabulary. Crown 8vo., cloth limp, 1s. 6d.

——— First Latin Grammar. Part I., Accidence. Crown 8vo., cloth, limp, 2s.

Turner's Liber Studiorum, Photographed by C. Bertolacci (in 4 Parts.) Part I. Oblong, sewed, £1. 11s. 6d.

War Office List and Directory for the Civil Department of the British Army. By Denham Robinson. January, 1863. 8vo., cloth, 6s.

Weakness (The) and Inefficiency of the Government of the United States of America. By an American Statesman. Crown 8vo., cloth, 5s.

Webster's Royal Red Book, 1863. 12mo., cloth, 5s.

Young's (J. R.) Science Elucidative of Scripture, and not Antagonistic to it. Fcap., cloth, 5s.

BEN RHYDDING, ILKLEY, YORKSHIRE
A WINTER AND SPRING RESIDENCE.
PHYSICIAN.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.
SURGEON.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.
PRESIDENT.
His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.
VICE-PRESIDENTS.
The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.
DIRECTOR.
The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.
PROFESSORS.
Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

HOSPITAL for CONSUMPTION and DISEASES of the CHEST, Brompton, S.W., supported by Voluntary Contributions.—Liberal and continuous support is required to meet the current expenses of this Charity.
PHILIP ROSE, Hon. Sec.
HENRY DOBBIN, Sec.

DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

THREE STEEL ENGRAVINGS and the continuation of the ILLUSTRATED CATALOGUE are given with the

ART-JOURNAL for JANUARY, Price 2s. 6d. This, the Tenth portion of the Catalogue, comprises Minton's Majolica Fountain; the Great Prussian Shield; the Doncaster Cup for 1862; the Breadalbane Vase; Beauvais Tapestry; Sèvres and Wedgwood Ware; Glass Tazze; and numerous other works. The Line Engravings are "Olivia," engraved by T. Vernon, from the picture by the late C. R. Leslie, R.A.; Turner's "Regulus leaving Carthage," by S. Bradshaw; "The Angel's Whisper," by R. Artlett, from the group in marble by B. E. Spence. Illustrated articles are also included in the number on the "History of Caricature and of Grotesque in Art," by Thomas Wright, M.A., F.S.A., the illustrations by F. W. Fairholt, F.S.A.; and "English Landscape Scenery." The other literary contributions are as follows:—"The Revival of the Fine Arts in the Eighteenth and Nineteenth Centuries." Part I., by the Cavaliere M. A. Migliarini; "Science and Art."—No. I., the Representation of Water, by Professor Ansted, M.A., F.R.S.; "The Loan Museum at South Kensington," by J. Beavington Atkinson; "Notes on the Raw Materials used by Artists," by Professor Archer, Director of the Royal Scottish Museum: with numerous articles on topics that interest and inform the professional and general reader.

*** Now ready, the Volume of the ART-JOURNAL for 1862, cloth gilt, price 31s. 6d., in which are comprised upwards of One Thousand Engravings on Wood, and Twenty-four Line Engravings, which latter include twelve of the late J. M. W. Turner's principal works, &c.

LIST OF SOME OF THE PUBLICATIONS OF
DAY & SON, LITHOGRAPHERS TO THE QUEEN, GATE-STREET, W.C.

BEDFORD'S Photographs in the East, taken during the Tour of H. R. H. the Prince of Wales, &c. &c.

H.R.H. the Prince of Wales having graciously permitted Mr. Bedford to publish the photographic pictures taken for H.R.H. during the royal tour in the East, and as impressions will shortly be ready for delivery, the subjoined prospectus is now issued. For the guidance of those who may be unable to inspect the photographs before ordering, the following extracts from the criticisms of the most influential journals are appended:—1. The place of honour for perfection in all that relates to out-door photography in its widest and highest sense belongs to Francis Bedford. He stands alone in being the only one who can equal all, no matter how long they may have practised, or how peculiarly their own they may have made any single department of landscape photography.——2. We feel that there is a truly poetic rendering of the ruins of past ages. Silent though they be, they speak to us, in their solemn and deserted grandeur, of a past civilization, a past power, and a past wealth; they speak to us, in their carved columns, pillars, and friezes, of all that has been great and glorious, more eloquently and more forcibly than anything which the words of a ready writer could convey to us in poetry or in prose.——3. The student can study from photographs of this kind with almost the same advantages as from the monuments themselves.——4. It is impossible to laud too highly the perfection with which the grandest features and the minutest details are alike presented in these pictures. That disappointing paleness which disfigures many photographs seems in this instance, by great precaution or by rare good fortune, to have been altogether avoided.——5. The whole collection is remarkable for the clearness and brilliancy of the views.——6. Here (in the Holy Land) every spot is consecrated by some religious association, and this series will become intensely popular.——7. They are incomparably the finest that have been produced illustrative of the historical scenes of the East. I strongly recommend every one who is interested in the Holy Land, and particularly the theological student, to visit Mr. Bedford's gallery; and, by the aid of these superb pictures, realize with his own eyes the exact aspect and character of the spots made sacred by the life of Christ.——8. These pictures are severally and individually so admirable, as faithful copies, and so beautiful as works of photographic art, that we know not where to make a selection, and are at a loss to be able to define any particular examples.——9. The photographs are, without exception, clear and brilliant.——10. By this very artistic application of photography, we are enabled so completely to realize the scenes, that we feel as if we had actually visited them ourselves.——11. The photographs, indeed, probably present more than could be detected by the unaided eye on the blinding sands of Egypt and Syria. Mr. Bedford has, moreover, shown much artistic taste in the choice of the point of view. The collection is altogether of extraordinary interest and instructiveness.——12. Here, too, are the scenes so sacred to the student of Biblical history; Bethlehem, Bethany, and Jerusalem; here are the Mount of Olives, and the Garden of Gethsemane; and here the Lake of Gennesareth, whose face seems to wear an eternal calm in memory of the feet which once trod it. But the series abounds with associations of every kind which are full of interest, to which we have not space even to refer.——13. The Jerusalem views are, of course, especially interesting from their associations; but in addition to this they are mostly excellent as mere views. How soft and suggestive, for instance, is No. 52, "A General View of Jerusalem from the Mount of Olives!" Who can look unmoved on No. 63, "The Mount of Olives," or fail to speculate upon the precise spot where our Saviour used to sit with His disciples? Who, again, can view without emotion the "Garden of Gethsemane," as shown in Nos. 67 and 68?—or omit to conjecture where Mary stood when she turned at the voice of our Lord and pronounced the word Rabboni? The entire series of photographs is now exhibiting at the German Gallery, 168, New Bond-street. Admission 1s. Descriptive catalogues may be had, price 6d.

The various ways in which these photographs are published are shown in the following advertisements A to G inclusive.

A THE HOLY LAND, EGYPT, CONSTANTINOPLE, ATHENS, THE MEDITERRANEAN, &c. The entire series of 172 photographic pictures, with 3 special titles in photography, and 3 portfolios, £45. 3s.

RHYMES AND LINES ON ENGLISH GOTHIC CHURCH ARCHITECTURE, for the easier explanation to, and understanding of the principles by, children. 8vo., with 31 wood engravings, in paper cover, price 1s.

Water-Colour Painting, Drawing, &c.

The powers of chromo-lithography were never employed with such signal success or turned to such advantage as in the reproduction of the Course of Studies which form the illustrations to Mr. Aaron Penley's invaluable work of instruction in the art of water-colour painting. It has also since been equally successfully used in the illustrations to the other works and studies enumerated in this advertisement. All persons, whether students, teachers, or amateurs, will find these works of the greatest possible service.

PAINTING IN WATER-COLOURS; the Theory and Practice of the English School. Being a complete exposition of the Art as practised in the present day. By AARON PENLEY, Senior Professor of Drawing and Painting at the Royal Military College, Addiscombe, and Member of the New Society of Painters in Water-Colours. This work, alike invaluable to teacher and student, also addresses itself in a remarkable degree to those who, having gone through the usual course of teaching, desire to advance themselves to the perfect practice of the art, whether as an elegant accomplishment, or as a means of professional livelihood: it treats from the first holding of a brush, through a course of study of the most analytical and extended kind, up to the highly finished landscape, with all the sentiment and poetry of effect that can be conceived and realised by an accomplished master mind, directing a cultivated brush. The Author has enjoyed for a long term of years the reputation of being one of the most eminent English water-colour painters; he has imparted instruction in the art for 37 years to the noblest families in the kingdom, and has held, and still holds, high appointments under Government as Professor of Water-colour Painting. 46 water-colour studies. Folio imperial, handsomely bound, price £4. 4s. Proof Copies, half-bound, price £6. 6s.

SKETCHING FROM NATURE, in Pencil and Water-Colour; with Hints on Light and Shadow, and on a Method of Study, &c. By GEORGE STUBBS, of Alexander-square, Brompton. The text, brief and emphatic, is of the kind best calculated to impress indelibly on the student's mind the lessons it teaches so well. The studies, in black and white on tinted paper, and those of the progressive stages of Sketching in Water-Colours, possess great artistic merit, and completely illustrate the text. Imperial 4to., with descriptive text and 17 plates, 6 in colours, the rest on tinted paper with high lights, bound in cloth, price 21s.

DRAWING COPIES. On Tinted Paper, with High Lights. 24 full-page studies by CHARLES RADCLYFFE, Esq., of Birmingham. Loose in a paper wrapper, price 7s. 6d. These are excellent studies and quite a new series.

LESSONS ON TREES. 2nd Edition. By J. D. HARDING. Price 15s.

LESSONS ON ART. By J. D. HARDING. Price 15s.

THE GUIDE AND COMPANION TO LESSONS ON ART. By J. D. HARDING. Price 12s. 6d.

NEEDHAM'S LANDSCAPE ALBUM; a Series of Studies of Landscape and Trees. On tinted paper with high lights, 15 in. by 23 in. 12 plates, 18s. complete.

LIBER STUDIORUM: Illustrative of Landscape Composition. By J. M. W. TURNER, R.A. 15 plates, cloth, 21s.

THREE STUDIES OF FLOWER-PAINTING:—1. The Nasturtium; 2. The Camellia; 3. The Oleander. Flower subjects, produced for the Department of Science and Art; all executed in the highest style of chromo-lithography. By F. BEDFORD, from drawings supplied by the Department. Size of paper, 13½ in. by 20 in. Price, in colours, each 2s. 6d.

GROUP OF VASES. A Study of Objects serving as an Illustration in the use of these models in stage 5 A. By F. BEDFORD, in tinted lithography, produced for the Department of Science and Art. Size, 30 in. by 22 in. Price 5s.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, JANUARY 10, 1863.

CAPTAIN WRAGGE AT THE TUILERIES.

When Captain Horatio Wragge was particularly satisfied with the results of his "moral agriculture," his complacency found relief in a vein of fluent and unctuous platitude. Indeed, the style of "the Captain," when expounding his theory of moral sentiments, so closely resembles that of the Emperor of the French and his literary disciples, as somewhat to impugn Mr. Wilkie Collins' title to the claim of originality. It would not be difficult to demonstrate that "No Name" is, in reality, a covert political epilogue, and that the domestic economy of the Captain and Mrs. Wragge is intended to typify the relations between Louis Napoleon and the nation which has wedded him. The peremptory love of order which the master displays,—the manner in which, for its own good, the French people is kept constantly "up at heel," and compelled to "sleep straight,"—and the way in which the unhappy victim of domestic tyranny is permitted to indemnify herself for the loss of her personal liberty by the manufacture of fine clothes and occasional shopping, afford evidences of similarity, which clearly prove the political tendencies of Mr. Collins' last romance. Indeed, when the Captain states a debtor and creditor account, which is rendered by himself, audited and found correct by himself, and which ascertains a large balance in his own favour, it is impossible not to see that the author must have had in view the annual audit at the Tuileries. We ought to ask pardon of the ingenious author for thus divulging the clue to his work, as it may, perhaps, create some difficulty in the way of its importation at Calais. But as "Gulliver" was written to ridicule the prosecution of Atterbury, as the "Tale of a Tub" was intended for a theological discussion, so we cannot doubt that in Louis Napoleon we have discovered the original of "the Captain."

Altogether there is an unction about the French speech which shows that the author is particularly well pleased with the state of things in general, and of himself in particular. It is hardly necessary to say that he recommends to the "great bodies" of the State and their imminent successors the same happy frame of mind. He thinks, on the whole, the best thing everybody can do is to "accept the present system without reserve, and to prefer serious deliberation to sterile discussions." The distinction is an important one, and by no means peculiar to the ruler of France: a "serious deliberation" means a speech in laudation of the Government; a "sterile discussion" means a criticism on the policy of the administration. Louis Napoleon is decidedly beginning to "settle in life," and puts a little water in his wine. For once he has not denounced war against anybody—at least not anybody to speak of: for so long as he is concerned in vindicating the "honour of France" only at the expense of the Cochin-Chinese, the Mexicans, and, we may add, at his own, there is little which need disturb the tranquillity of Europe. Indeed, the Emperor, like a ranter who has come in accidentally to a good landed estate, is beginning to go to church. A very marked change has come over the tone of his mind and the language of his discourses since the Italian campaign placed him in a situation of political affluence. So have we seen a gentleman of questionable antecedents, with somewhat dubious belongings, gradually establish his position in the country. So the immortal Becky Sharp, partly by taking Lady Southdown's pills, and partly by reading her daughter's tracts, gradually arrived at a position in which she alternately played an appropriate part at the roulette table, and the religious bazaar.

When Louis Napoleon had everything to gain he was an interesting, though somewhat alarming character; he has now got something to lose, and he is having respectable rest not without a dash of concomitant dulness. He has given up going to war for ideas, and is going in for commercial treaties, and, generally, for what Mr. Carlyle calls a "calico millennium." He is for all the world like Mr. Disraeli in office, or a garotter turned parish clerk. In this point of view, his last oration, if not lively, is at least reassuring. Indeed, the speech is as decorous, dull, and uneventful as if even a real king's speech. He takes stock of the quinquennium, and professes his profound satisfaction with himself and with the "great bodies" to whom, with a somewhat transparent irony, he is condescending enough to attribute part of the merit. He has delivered Italy without quarrelling with Austria or abandoning the Holy Father, and, indeed, has settled the whole affair to the entire advantage of everybody except the Italians, the Austrians, and the Pope. "Duty," we are told, "always advances through danger." And certainly the duty of "adding two provinces" to France advanced through the danger of alienating the confidence and esteem of all the Governments of Europe. Whether it is this particular transaction which is referred to in the remarkable policy, which is announced of "erasing from diplomatic parchments the old questions of litigation," we know not. Orators who have denounced history as an old almanack, and who have treated charters as musty parchments, have not found favour with English audiences. But we must confess that this onslaught on "diplomatic parchments" is the only touch in the discourse which smacks of the old leaven; and it probably slipped in unawares, just as a polite disciple of the Bishop of New Zealand will in spite of himself occasionally betray an inclination for roast baby. We have heard something like it before, and we suspect that

Digitized by Google

"erasing diplomatic parchments" is only another and more elegant form of the formula, familiar to every Frenchman, "tearing up the treaties of 1815."

The allusion to the American business shows that the Emperor, as is his wont, is determined not to abandon an idea which he has once embraced. He speaks, however, with calmness, if not with good humour, of the repulse he experienced in his proposals of mediation to the great maritime Powers. We suspect that French politicians, though they may be unwilling to confess it, have discovered the truth which a writer in the *Revue des deux Mondes* has proclaimed, that the discretion of England in this matter saved France from a great scrape. Louis Napoleon seems still to flatter himself that the American belligerents will accept his arbitration. In this, we cannot help thinking that he is profoundly mistaken. His proposal of intervention has already made him odious to the North, whilst his position in Mexico makes him the object of intense suspicion and dislike to the South. However, we are by no means disposed to envy him the task he appears so eager to undertake, and we trust that the Emperor of the French may engross the whole responsibility and enjoy all the honour of determining the boundaries and the conditions of the new slave community which is knocking at the door of Europe.

In England we have seen that, in spite of the American disaster, the state of the revenue is flourishing and the financial prospects encouraging. The Emperor is not able to offer so promising a budget. He finds himself compelled to apologize for the condition of the empire, which *would* be flourishing if the American war had not dried up one of the sources of industry. This indicates how much restriction France has still to get rid of before she can establish that cosmopolitan system of trade which sustains itself by a principle of compensation in the midst of the most unexpected reverses. It is noticeable also that Louis Napoleon is obliged to announce a vote for the distressed cotton manufacturing population of France. The numbers of this population must be so much smaller than that of the corresponding districts in England, that it would be curious to know what proportion the private benevolence in that country has borne to the subscriptions in England. One of the most remarkable and lamentable results of the system of governmental centralization in France, is the paralysis with which it strikes the spirit of private charity. No man thinks of taking care of another under a system which teaches him to believe that it is the bounden duty of the State to take care of them both. In striking contrast with this paragraph of the French speech is the fervent hope expressed by Lord Derby and his son at the great Lancashire meeting, that their country would escape the "degradation" of having to apply for the aid of a Parliamentary grant.

It cannot be disputed that in the course of the last five years the Government of the Emperor of the French has acquired a solidity which was altogether wanting to the earlier period of its existence. The success of the Italian campaign, the development of commercial prosperity in a country remarkably economical of its wealth and resources, the comparative relaxation of restrictive measures of police, and, above all, the patent fact of protracted possession, have all contributed to a result which it were idle to deny. Some persons, fixing on these material indications of success, will conclude, like the "Flaneur in Paris," who seems to be a sort of modern Dr. Pangloss, that everything is for the best in the best of possible empires. But it is as true of politics as of religion, that man shall not live by bread alone. There is something more wanting to the life of a state than the mere brute enjoyments of physical prosperity. It is impossible to consider a Government in a sound and healthy condition which has made no progress whatsoever towards enlisting on its side the intelligence and education of the country. The worst feature of the Imperial system is, that it has not only not succeeded, but that it does not even seem to desire to assimilate and incorporate into itself that which is estimable in character or respectable in intellect in France. With a cynicism which is too often the weakness of the most acute politicians, Louis Napoleon thinks he can produce great results by worthless instruments. Independence of character and loftiness of talent alarm his suspicions and vex his indolence. The Baroches, the Walewskis, and the Mornys, are content to do his bidding without question. This suits his saturnine ambition and his constitutional apathy. The Emperor himself is an experienced politician and a sagacious tactician. He has the great quality which his greater uncle wanted—that of knowing when to stop. By the help of this invaluable self-restraint he is able to be his own minister. But the Government of France is essentially the government of one man. It has struck no roots into the intelligence of the country. It is supported by the tyranny of the masses against which the educated minority secretly but stubbornly revolts. The Emperor has founded an empire for himself, but he sustains it, like Atlas, on his own shoulders. He has not laid the basis of an institution, or secured the foundations of a dynasty. "The Empire is a man, and not a system," wrote a French journalist. The Minister of the Interior answered the epigram by the effectual retort of a warning. He silenced his critic, but he did not answer what was indeed unanswerable. Not having the fear of M. de Persigny before our eyes, we try to adopt and repeat the apophthegm.

PROSPECTS OF LANCASHIRE.

FROM time to time we have to guard against opposite tendencies in the public mind and opposite errors on the part of those whose profession it is to enlighten and inform the public. At first there was a strong tendency, on the part of several influential journals, to exaggerate the suffering and loss which would be brought upon the manufacturing district by the withdrawal of the American supply, and to represent it as equivalent to certain and speedy ruin, which it might be necessary and wise to avert even by a prohibition of the American blockade. We had to protest against this view, and to show that America, though our chief, was not our sole source whence cotton could be drawn, and that, in the words of Mr. Cobden, it would be cheaper to keep our operatives for three years on venison and turtle than to venture on an interference which must infallibly entail a war with the United States. It was then affirmed that Lancashire wealth was doing next to nothing towards the relief of Lancashire distress; that her manufacturers subscribed little to the general fund, and paid scarcely anything in poor-rates. We were then obliged to prove that these maligned manufacturers, themselves often considerably impoverished, were in reality subscribing silently, unostentatiously, effectually, and in their own way, to succour their distressed workmen, sums, in comparison with which those daily blazoned in the public papers and contributed by millionaires sink into real insignificance; and that mill property, which had ceased to yield any income at all to its occupiers or owners, was paying heavy rates, such as Lancashire has never known before, and such as no other county in England knows now. Next, the administrators of relief were charged with niggard hard-heartedness, because they declined to allot to the unemployed weekly contributions which would, with many of them, make employment almost a matter of indifference,—which would place the Lancashire operative out of work in a better position than the Sussex or Dorsetshire labourer in work,—and which would therefore, as a matter of course, encourage and create both idleness and imposture. We were again under the necessity of pointing out the danger and the mischief of acting on this ignorant advice, and yielding to this reckless pressure. We are now confidently told by the same misleaders that the distress is rapidly abating, that the worst is already over, that the subscriptions are ample to meet all demands actual and prospective, and that 25 per cent. of those who are living on this public charity are ascertained to be impostors. We are assured that the distress and stoppage of employment have in reality arisen much more from over production than from the interruption of our usual supply of the raw material; that we shall in a few months have cotton enough from India and elsewhere; that, in a word, the temporary calamity has made us virtually independent of America, and that we need no longer fear the competition of Orleans staple with Egyptian and Surat. With this farrago of fallacies we have now to deal, and we shall do so as briefly and clearly as we can.

In the first place, few acquainted with the cotton districts, or conversant with the peculiar position and necessities of the cotton trade, have much hope that the trifling diminution observable during the last three weeks in the number of recipients of relief—a diminution amounting successively to one, three, and five per cent.—arises from any systematic or permanent resumption of work. It may be that from some temporary orders a few mills have worked

Digitized by Google

four days which before were working only three, or that some applicants for charity have been drafted off into flax or woollen mills; but mills that have been closed cannot, we feel confident, have been re-opened except under rare and casual influences, nor to any extensive amount. The reason is very simple and very effectual: the price of raw cotton is still enormously high; the price of yarns and piece-goods has not risen in anything like a proportionate degree; and the result is that only a very few descriptions—and these of the finest fabrics, in which very little cotton is used—can be manufactured or sold without a heavy loss to the producer. Now, though manufacturers will often continue to work their mills long after work ceases to be remunerative, partly out of consideration for their hands, and partly because the loss incurred by working may, for a while, be less than the loss incurred by stopping; yet, when once things have reached a point which has necessitated stoppage, and the establishment has thus become disorganized, work will not be resumed till prices have again become remunerative. A great alteration in the relative values of the raw material and the manufactured article must be effected before mills will be generally re-opened. At the same time we fully admit that a demand for piece-goods has sprung up in the last few weeks; but it is far too soon yet to count on its continuance or its extent.

In the second place, we may at once admit and announce most gratefully that the present funds in the hands of the relief committees, and the present rate of parochial expenditure (which, when spread over the whole county, will not be very oppressive) are sufficient to maintain the *present* number of applicants for several months to come in decent health and comfort. Yet there is nothing in these facts which ought to discourage the continuance of the most liberal charitable donations; since we neither know how long the distress may be prolonged nor to what degree it may be extended. We know that numbers who have hitherto been rate-payers are now dropping into destitution; and at first have to be excused the payment of their quota, and shortly afterwards have to be themselves assisted. Many others, such as mechanics, machine-makers, small shopkeepers, warehouse clerks and warehouse porters, colliers, carters, and the like—who have, up to this time, lived on their savings, or on what they could pawn, or on the casual and partial occupation they could obtain, are now, by the mere prolongation of the distress, reduced to share it. They have exhausted all their resources; they are at the end of their means; and are week by week becoming just as destitute as the ordinary factory hand who had no savings and very little property. All these will shortly have to be provided for out of the Relief Fund or the poor's-rates, and may augment the drain upon these sources to an altogether incalculable amount. Nor can any man pretend to predict how long the pressure may continue, though we know for certain that the longer it lasts the more severe and extensive it must become. There will, in all probability, this year be cotton enough to allow three days' work a week on an average to the factories in the manufacturing districts; but *whether* they will work these three days, or *when* they will begin to do so, is a much more questionable matter. For, first, working half-time is (for reasons into which we need not enter now) so very costly and almost ruinous a system, that no manufacturer will adopt it if he can help. The same price which would remunerate him if he worked six days will not pay if he works only three. It is, therefore, far more probable—especially when we consider the number of millowners who have been ruined—that *half* the mills will resume *full work* when the time comes and prices have been adjusted, than that all will resume half-work. If so, then, though half the operatives will again be well off, the other half (that is, at least, a quarter of a million, besides those dependent on them) will be wholly without employment, and must remain, more or less, a burden on the country. Again, though there may be cotton enough to work half-time, it by no means follows that there will be a demand for half production. We know that the markets of many parts of the world are becoming comparatively bare of cotton goods, and that a demand for *a certain quantity* at certain prices will arise sooner or later, and has indeed begun. But what that certain quantity will prove to be we can only conjecture, and conjecture in the dark. We know pretty well what Europe and India and America consumed when cotton was at fourpence per pound; but we do not know at all how much these quarters will consume now that cotton is at sixteenpence. We are sure that the consumption of the world must be enormously reduced, and we cannot be at all sure that it may not be reduced below one-half. All we can as yet tell, is that nobody buys cotton goods who can help it, and that numbers who formerly bought cotton now buy linen and woollen articles instead, finding them quite as cheap and far more durable.

Thirdly. As to the assertion that 25 per cent. of the present recipients of relief in the distressed districts are impostors, it is simply as unfounded as it is reckless; and it was a sin to make it. With reference to the statement that over-production, and not deficient supply of cotton, is responsible for the present stoppage, there is just enough truth in it to make its falsehood more current and more mischievous. There can be no question that some markets of the world had been largely overstocked, especially that of India; and that the difficulty of effecting remunerative sales would have led to a certain amount of "short time," even had cotton been as abundant as ever. But this evil would have been comparatively trivial in degree, and no more than has often been encountered before; and, as Mr. Cobden well explained at Midhurst, would very speedily have worked its own remedy, since the fall of price, which must have ensued as necessary to force sales, would have opened fresh markets and increased the consumption of old ones, according to the natural and invariable operation of such causes. In this way a temporary inconvenience would have led to a permanent gain.

The remaining fallacy which we signalized—the idea of our liberation from future dependence on America for our cotton—is too wide a subject to be dealt with at the end of an article. We must reserve the exposure of it for another time.

FOREIGN INTERVENTION IN CHINA.

BLACKWOOD'S MAGAZINE for this month contains an article entitled "Progress in China," which is deserving of the attention of our readers. The gallant member for Aberdeen will probably take an early opportunity, after the meeting of Parliament, of favouring a reluctant auditory with a picture of the condition and prospects of the Taepings, as "evolved from his own internal consciousness" during the recess; while the member for Brighton—gifted with a less brilliant imagination, but possessing the advantages of personal experience—will have it in his power to mislead an ignorant public, as he has already done, upon the subject of the Foreign Inspectorate of the Customs in China.

The readers of the article before us may obtain, from a source evidently well informed, the truth upon both points; and it will be their own fault if they are taken in either by visionary Taeping enthusiasts, or by persons interested in having the trade of China conducted upon its old unsatisfactory footing. The concurrent testimony of all recent travellers has, indeed, almost entirely dispelled the illusions which so long existed with reference to those devastating hordes who have for some years past been laying waste the most fertile provinces of China; but the origin and progress of the Foreign Customs Inspectorate system in China, which has suggested to the Government of that country the creation of a foreign naval force for police purposes, has been but imperfectly understood. An impression has prevailed in this country that the gentlemen employed in the collection of the Chinese Customs were forced upon the Chinese authorities, and appointed by our Government; and one honourable member not long since actually applied to the Foreign Secretary for a list of the names of the gentlemen so employed. As neither Prince Kung nor Mr. Lay had done the Government the honour of communicating with the Foreign Office on the subject, the returns were naturally not forthcoming, and we learn, from the lists published in "Blackwood," that by no means the largest proportion of those filling the principal posts are British subjects at all.

The result of this total misconception of the constitution and scope of the Foreign Inspectorate has been to create an impression on the public mind, that it is the precursor of a system of intervention on the part of the Government of this country, which may entangle us in a war. We are perpetually haunted by the bugbear of a Chinese war, and any local complication we do not understand we assume is to lead us into one. Let us hear the opinion of Lau, the Governor-General of the two Kwang. In a memorial addressed to the Emperor in 1859, deploring the extent of contraband trade at Can-

Digitized by Google

ton, he says, "Your Majesty's servant sees no remedy for arresting this evil, but the adoption of a system similar to that in force at Shanghai, under which foreigners are employed for the control of foreigners; their thorough acquaintance with the language, and comprehension of all Customs questions will put collusion out of the power of the dishonest natives, and while our revenue will benefit, we shall avoid causes of quarrel with foreign nations." Experience has proved the truth of Lau's opinion. The *Arrow* case never would have been heard of, if Yeh had been advised by a foreigner, paid by the same Government as himself, in whom that Government had confidence, and whose advice he could not dare to disregard.

It is natural enough that the British merchants should see objections to any system which puts "collusion with them out of the power of the dishonest native;" but they have themselves to thank for it. We learn that in the early part of 1854, the Taoutai, or Intendant of Circuit at Shanghai, actually went into a smuggling partnership with two of the leading foreign firms, and the strength of this coalition roused the opposition of the other smugglers. Hence, in self-defence, the Chinese Government resorted to foreigners for assistance, and have found them so much more trustworthy than their own officials, that they are now employed at all the open ports.

The mode by which Mr. Lay's probity was tested in the first instance is amusing and characteristic: £30,000 were lodged in his hands by the Chinese Government for the purchase of a war steamer; circumstances prevented Mr. Lay from making the purchase, and he proposed to return the money. The Chinese authorities persistently declined to receive it, "telling him to consider it an *affaire finie*," that such a bagatelle was not worth talking about, that he had saved many times £30,000 to the exchequer, and so on. Years passed; at last, when Mr. Lay insisted on being relieved of the charge, the authorities owned that the sum had merely been left in his hands to test his honesty. "Oh," said the Taoutai, "I have had two men watching you and that money for years, by day and by night. It is our custom, but you have shown that your heart is sound; henceforward you shall be trusted with anything."

The opposition with which the Foreign Inspectorate has had to contend has not been confined to the British merchant. Her Majesty's consuls have, in many instances, done all in their power to thwart an agency which, by strengthening the hands of the Chinese Government, has deprived these gentlemen of the power of bullying the imperial authorities on the old-established principle. It has too often happened that our consuls, either from a desire to gain notoriety, or unable to resist the pressure of the English community, have adopted a line of conduct in their intercourse with the local Chinese authorities, calculated to endanger the peaceful relations of the two countries. Some unhappy mandarin whose acquaintance with civilized usage, under such circumstances, is limited, finds himself suddenly threatened with round shot from the British gun-boat lying under his windows. He is sure to be blamed by his own Government for making a concession if he yields, and for creating trouble if he resists. The dilemma being hopeless, and with no one to turn to for advice, he is just as likely as not to adopt the latter course in despair.

Under the present arrangement he is able to appeal to his European colleague, who drafts an official despatch; and her Majesty's consul, if he has exceeded the strict letter of the law, finds himself at once forced into his proper position. It is only due to many of our consuls to say that they have recognized the advantages of a foreign *intermédiaire;* and that Sir Frederick Bruce, in spite of the pressure, official and officious, which has been brought to bear upon him, has steadily given his support to a system which is so admirably designed to soften the asperities by which the diplomatic intercourse between Chinese and European officials was frequently characterized.

The working of the Foreign Inspectorate since its establishment has been so satisfactory, and the confidence with which it has inspired the Chinese authorities is so unlimited, that not long since they proposed to Mr. Lay the creation of a naval force which should co-operate with the Customs' officials in the suppression of piracy, and dispersion of those robber hordes who, under the dignified name of rebels, have for years past plundered some of the finest provinces in the empire. Hitherto the British Government has been saddled with the charge of protecting the open ports, and of putting down piracy on the high seas. Our fleets in China employed in these duties had, in the most peaceful times, generally exceeded forty pennants; and the lists of men who have been killed and wounded in this irregular and thankless service is far longer than that of our most celebrated naval engagements. The unhealthiness of the climate, the intricacies of the navigation, and the constant petty warfare in which we are engaged, combine to render the China station much more expensive to this country than any other. The Chinese Government proposes to relieve us of all our heavy work on this long line of coast; they will themselves seek out and destroy those fleets of pirate junks which infest their inner waters, and will attack, whenever they are approachable by water, those rebel hosts which have so long interrupted our commerce with the interior, and threatened the foreign settlements. For this purpose Mr. Lay has been entrusted with a large sum of money and a *carte blanche* to secure the services of the most skilful foreigners. Fortunately, our Government have not seen fit to throw obstacles in the way of an enterprise which depended for its success, to a certain extent, on their good will. They have permitted naval officers to take service with the Chinese, very much under the same precedent as that followed in Turkey, South America, and other countries. Six of the largest-sized gunboats have been purchased by the Chinese Government; Captain Sherard Osborn has been selected for the command of the fleet. This officer will, doubtless, also have supreme control over the Chinese fleets of war-junks now operating against the rebels, will fly the Chinese flag, wear the Chinese uniform, and be as much of a mandarin as may be. He will owe no allegiance to our Government, and we trust that England will not be considered responsible either for him or his acts. He and his officers receive large salaries, and they must take all the risks of a change of humour on the part of their somewhat capricious masters at Pekin.

He will best acquire their confidence by denationalizing himself as much as possible, and by keeping clear of British officials from one end of the empire to the other. We trust that, under no circumstances, will our Government assume any liabilities in behalf of Captain Osborn and his comrades; and that, on the other hand, Captain Osborn will remember that he is a Chinese and not a British officer for the time, and will not allow himself to be influenced by the views of our Government when they conflict with the interests of China. Those interests in commercial matters must be identical with our own. How they can best be served it will be for Prince Kung, Mr. Lay, and Captain Osborn, to judge. We wish them every success in their undertaking; we do not see that anything but good can come from it; and the only intervention we fear is that of an ignorant public, whose untimely interference may prevent the only enlightened Administration, which China has had for a century, from working out the political problems of the country in their own way.

THE IONIAN ISLANDS.

THE proposed cession of the Ionian Islands to the Kingdom of Greece is no longer the child of rumour. Mr. Elliot's mission to Athens, and the publication in the *Gazette* of the memorandum presented by him to the Provisional Government, have laid bare to the public the desire of Lord Palmerston's Cabinet to abandon the Protectorate which England has exercised since the treaty of 1815. The feelings of the Greeks themselves upon this subject, may be gathered from the language of deputations that have been received by Mr. Elliot; and most strange and unexpected is their sublime indifference to an offer which will largely increase their territories, give them the possession of a fine harbour, and add 250,000 souls to their scanty numbers. The Greeks are grateful for the goodwill of England, of which the proposal to surrender the Islands is an earnest and guarantee; but this is not what they asked us for. We have piped to you, they seem to say, and ye have not danced; we asked you for bread, and you have given us a stone. All that they want is a constitutional king to rule over them, and we alone can supply them with just the kind of article that they are in need of. Vainly did Mr. Elliot attempt to comfort the deputation for the loss of Prince Alfred by dangling before their eyes the glittering prospect of having the Ionian Islands all to themselves. "Greece"—was the mournful reply to his well-meant efforts—"is more in need, at all events just now, of an honourable and sincerely constitutional prince than of

Digitized by Google

an increase of territory. Great Britain, above every other royal dynasty, honours and respects the constitutional system." And so they parted,—Mr. Elliot recommending to them King Ferdinand, whom the Greeks do not wish for, and who will have nothing to do with them,—and the members of the deputation hoping and praying that somehow it would be all right, but profoundly convinced that everything would go wrong if they were not allowed to have Prince Alfred for their king.

That the cession of the Ionian Islands to Greece will be an act both just and politic we have never doubted, and we have a full belief that it will be ratified and approved by the good sense of the English people; but it would be idle to hope that a measure so bold, and at the same time so contrary to the spirit and traditions of our foreign policy in times past, will be suffered to pass without an effort to defeat it. In the Conservative organs may already be heard the mutterings of the storm that will break when Parliament meets. The kinds of charges likely to be brought against the Government are not difficult to foresee. Until that "better future" comes, for which the nations yearn, and which Louis Napoleon does so much to hasten, there is much to be said, we mournfully admit, for the good old plan, that he should keep who can; and of this John Bull has an instinctive perception. The mere pride of vast dominions and the habit of chuckling over common-places about the empire on which the sun never sets, have, to a great degree, died away among us; but there remains, firm as ever, the conviction that we must hold the strong places of the earth, lest they fall into the hands of others less scrupulous than ourselves, and be turned against us and the general peace of the world. For our own part we are persuaded, as we have declared on a former occasion, that Corfu is a source of heavy expenditure to us in time of peace, and of weakness rather than of strength in warfare; but the events of the great war, and the successive occupations of the Ionian Islands by different belligerent powers, have bequeathed to us a tradition that Corfu is a place of vast importance as the key of the Adriatic, and necessary for the maintenance of our maritime supremacy in the Mediterranean. Against the force of this respectable tradition, rendered doubly impressive by warnings that the citadel of Corfu will soon pass out of the weak hands of Greece into the strong hand of France or of Russia, and against denunciations of the illegality of a proposal to cede a part of the Queen's dominions without the consent of Parliament, the Government will no doubt have to contend. We abide, however, in the faith that the wise initiative of the Government will be confirmed by a majority of the legislature as well as of the nation. Public opinion even now rules the world, and every day adds to the might of this ruler. And that we shall gain in moral power by giving to the world an example, too rare in history, of the generosity of "a strong man armed," will hardly be denied by the most fanatical believer in the material advantages that we derive from the possession of Corfu. The events of the Greek revolution have placed us in a splendid position before Europe; and to enhance the greatness of our prestige nothing is wanting but the surrender of seven useless islands with their troublesome inhabitants.

No man has a better right than Mr. Goldwin Smith loudly to express his satisfaction at the cession of the Ionian Islands. To him belongs the honour, beyond cavil or dispute, of having been the vigorous advocate of this very measure, at a time when what he preached was foolishness to the mass of the public. Content, however, as Mr. Goldwin Smith is, with the cession of the Islands, he is dissatisfied with the conditions annexed to it. He would have had an unconditional surrender of the Protectorate. Unless the Greeks are prepared, as they have been told by Mr. Elliot, to maintain constitutional monarchy, to abandon all thoughts of an aggressive policy towards Turkey, and to choose "a sovereign against whom no well-founded objection could be raised," the Ionian Islands will not be handed over to them; and it is against these conditions that Mr. Goldwin Smith has raised his voice in a recent letter to the *Daily News*. "Did any professor," he asks, "even in Laputa, ever dream a more chimerical dream than this of bestowing constitutional monarchy on all the nations of the earth, old and young, trained and untrained, whether monarchy has a root in them or not?" It is clear, however, that there is nothing in this condition repugnant to the Greeks themselves; indeed, it is only the echo of their own wishes as declared by the Provisional Government, when the throne was left vacant by Otho's abdication. Illegal and iniquitous as was the tenor of Otho's rule, the faith of the Greeks in constitutional monarchy seems to have undergone no diminution. Year after year they went on hoping against hope that the king would mend his ways and begin to respect the constitution. We are far from thinking that constitutional monarchy is a panacea for all evils, but when Mr. Goldwin Smith points to the present attitude of the king of Prussia as an argument against its introduction on foreign soils, we may, on the other hand, bid him turn his eyes towards the Italian kingdom. There, constitutional monarchy is not the slow growth of centuries. It may almost be said to have been the creature of Cavour, and, wielded by his skilful hand, it has been chief among the instruments of Italian regeneration. Mr. Goldwin Smith would have the Greeks look about among themselves for some man "on whom nature has set something of the true royal stamp," and take him to be their ruler. Were there such a man among them, he would probably have come to the surface ere this; but a Greek State, ruled by a native Dictator, or a Greek Republic, would be an object of distrust and suspicion to every crowned head in Europe. Dynastic prejudices still count for something in courts and cabinets; and the Greeks are too weak to set them at nought with impunity.

With the second condition, that the Greeks should abstain from aggressions upon Turkey, Mr. Goldwin Smith seems to be even more dissatisfied than with the first. If the Turk is past all hope of redemption, and there is vitality enough in the Greek to start on a new career, the Greek will hereafter displace the Turk, and it will be well for the world that this should come to pass; but, looking to the exigencies and the duties of the present hour, we do not see how the Government could propose to strengthen the hands of the Greeks without demanding of them some securities against the abuse of their increased strength in an attack upon the Sultan's dominions. It would be too much, of course, to expect that any Ministry of which Lord Palmerston is a member should deliberately stultify the whole policy of the Crimean war, and that within a very few years; but setting aside these considerations, the second condition is also dictated by good faith towards the other Powers, from which we received the Protectorate as a trust. Mr. Goldwin Smith makes light of the "balance of power;" but, rightly or wrongly, the treaties of 1815 were made with a view to this balance of power, and one of the arrangements to secure it was the English Protectorate of the Ionian Islands. Whether the balance of power be a mischievous chimera or not, the parties to the Treaty of 1815 still regard it as a prime object of policy; and so long as the purpose for which a trust was made exists, we are bound, in releasing ourselves, to see that its purpose be not defeated in other hands than our own. But to the Greeks themselves—at least, in their present frame of mind—this second condition appears to be as little irksome as the first. The lessons of adversity have been laid to heart by them; their patriotism looks to the development of the resources of their cruelly neglected country, and they give no present indications of a temper to embark upon the perilous game of aggression.

THE AMERICAN PROCLAMATIONS.

THE cause of American Union, which might have survived a bloody and internecine war, a rapidly increasing debt, a profligate waste of national expenditure, and a desolation of whole provinces, daily becomes more desperate through the blind mistakes of its champions. This week brings news that cannot but disappoint America's best friends. A war of principles is growing into a war of passions. At Richmond and at Washington alike the hated and fatal black flag appears upon the scene. The President of the Southern Confederacy, exasperated by the not unprovoked though brutal severity of General Butler's régime at New Orleans, has taken on him the terrible responsibility of a step which must add new horrors to the contest. From the northern capital, at one and the same moment, issues a hot blast of hatred and defiance, which seems indefinitely to adjourn all hopes if not of reconciliation, at least of re-union. Each, in undoubted honesty of purpose, but with a blindness at which the evil Genius of America might smile, appeals to the Providence, which rules all human events, to prosper his own intemperate designs. Never has the irony of Fortune been

Digitized by Google

more conspicuous than when she equipped on the one side a bad cause with enthusiastic followers and with able and chivalrous leaders, while she marshalled on the other ill-trained troops, incompetent generals, and a feeble and foolish Government, under the banner of a great principle which claims the sympathy of the civilized world. A moderate policy, an able administration, combined with even an ordinary allowance of military and political genius, might have preserved to posterity a great empire, which, though full of blemishes, of vulgarities and of bravado, would have grown under the salutary influence of time into something worthy of the admiration of mankind. It seems to be the will of Heaven that the hopes of a future for America, which led all liberal minds to pardon her shortcomings in the present, should be cast down. The Union, if it is to perish, will perish not from the weakness of its constitution, not from any irreconcileable diversity of interests among its component parts, but from the folly of an administration. The stars, in their courses, have fought against Lincoln and his ministry.

Divûm inclementia, Divûm
Has evertit opes, sternitque a culmine Trojam.

The emancipation scheme of the Washington Executive is not of such a nature as to have appealed to the sympathies of either a Buxton or a Wilberforce. A slave-holding and slave-breeding nation, however brave and loyal in itself, cannot deserve the genuine respect of England or of France. The South has not merely broken up the American Union, it has actually broken it up because slavery was at stake, and in order to protect the domestic institution which, disguise it as best we may, is an outrage on the nineteenth century. But though the South have been slaveholders, the North, with the exception of a minority, are not at heart Abolitionists by principle. Suddenly, and as a desperate military resource, they propose to give freedom to the slaves of those who have beaten them on the field of battle. This is not Abolition, but a wild and wanton incendiary movement. Athens, when she encouraged the Helots of Lacedæmon to revolt, played no very dissimilar part. No concession was made to the cause of humanity by a policy which fastened on the Spartan frontier the servile revolution, which would have been repressed with a bloody hand, had it shown itself in the Athenian silver-mines of Laurium. The manifesto of President Lincoln does not convert the war into a war of emancipation. All that it does is to make a certain amount of military and political capital out of a sacred principle. West Virginia is exempted from the measure, which is to convert North and South Carolina into a cottonless wilderness. Thirteen parishes in Louisiana escape the fate reserved for the remainder of the State. Nor does the Government of Washington profess to be actuated by any nobler motives than despair. What is done is done, we learn from the lips of the chief actor, "as a fit and necessary war measure for repressing the rebellion." The rights of humanity will take but little benefit from it, except so far as the unforeseen current of human affairs may drift the American ship in the direction of the ultimate emancipation of the slaves. No political prophet can foresee with certainty the result of this last move upon the condition of the slave population of the South. Viewed, however, as part of the policy of a religious Abolitionist, it is too feeble and too temporizing to justify the President of the Union in claiming for it what he claims so ostentatiously —"the gracious favour of Almighty God." As a political expedient it will fare as ill in the war, as in that which he invokes with the same breath, namely, the considerate judgment of mankind.

The pressure under which Lincoln and his immediate advisers have been placed, is evident to all serious observers of the situation. The fitful and inconsiderate outbursts of Abolitionism among many of the Northern generals, contrasted with the silent and stern attitude of the remainder, compelled the chief of the executive to make his election. The Republic was driven to choose some official line to be pursued about the slaves. It was idle any longer to continue to sow hopes of emancipation with one hand, and to weed them out carefully with the other. But though the dilemma had become obvious, more resolution and a clearer conception of the only policy that could save the country might have averted the difficulty altogether, if firm measures had been taken in the first instance. Imprudence and weakness prevented Lincoln either from observing into what perils he was drifting, or from arresting his downward course by a show of vigour towards the party whose honest folly was seriously compromising him. Flirtation with the Fremonts of the North was a natural error for the President to fall into, considering his political antecedents. A wiser and more experienced politician would have understood where he was being dragged by an injudicious clique. Two years ago Mr. Lincoln would have repudiated the notion that he would so soon throw overboard his inauguration "platform." Nor have the two years been marked by a steady progress on his part. He has hesitated, vacillated, wavered, turned back, returned again, looked, trembled, and at last jumped. It has taken two years, or nearly two years, to drag him over a Rubicon which Cæsar would have crossed at once, or, better still, never have crossed at all. There has not been a particle of selfishness or unpatriotism attaching to his conduct. No more honourable man could have been preferred to the station which he fills. It is, as we have said, simply the irony of fortune, which is often wont to raise up weak men to cope with great events.

Whether the North will accept with cheerfulness an arbitrary programme, which in letter and form is a violation of constitutional law, while in spirit it is opposed to the wishes of one-half of the still loyal states, time alone can show. Mr. Lincoln has been careful to conciliate the Democratic portion of the community by resting his decision solely upon military grounds. So transparent an artifice will probably be understood both at New York and Boston. Half of the New York press may naturally denounce the step from old prejudices and political sympathies. The quieter and less conspicuous wellwishers to the Union will remark, with dismay, that one more irreparable affront has been offered to the Confederates. The truant sheep of the Union are gone; and the Union shepherd puts upa bristling fence to prevent them from returning. Whatever bitter memories have hitherto been evoked in the progress of the struggle will be embittered a hundredfold. Even if the slaves of Louisiana and Virginia exhibit an indifference to the promises held out to them, and no serious conflagration follows the lighted torch which Mr. Lincoln has recklessly flung into the cotton fields of the South, the South will still have been uselessly alienated by a desperate and deadly threat. Hitherto they have been fighting for their hearths and homes in no very different sense from that in which the North have been fighting for the same. Henceforward they may truly say that they are fighting to preserve themselves from domestic ruin. The Washington Government has only supplied the South with a new motive for vigorous resistance. The arms of Lee and Jackson will be stronger by reason of the menaces of Lincoln. Nor can the North expect to win sympathy from Europe. They have no right to bid us choose between the prospect of perpetual slavery and a servile war in the South. Probably the arrow they aim at the joint in the armour of the slaveholder will be less dangerous than is anticipated by the Boston philanthropists. For the sake of humanity we cannot but hope that slavery may draw closer to its end, even during this war; yet for the sake of humanity we cannot wish that this storm may break on the South, which Mr. Lincoln has at last determined to invoke upon their heads. Intervention in the contest would be useless, and therefore would certainly be unwise; yet the friends of the Union will feel, not without regret, that Mr. Lincoln's recent stroke brings European intervention nearer. A time may come, when the leading powers of Europe will have it in their power to weaken the hands of slavery in America. They will not find it easier to do so, because the Executive in Washington have begun to fling about fire in a way that is not so much determined as simply wanton and desperate. The Lincoln Cabinet have burnt not so much their own ships, as the ships of the Confederates. They may yet have reason to repent so hasty and inconsiderate an act.

THE NEW HIGHWAY ACT.

A CONTEST of considerable importance has been carried on with great keenness during the last ten days in not a few of the counties of England. The point in dispute was the management of the highways, and the contest lay between the public, who wish to have the roads kept in good repair, and the parishes, who wish to maintain their ancient privilege of repairing them as badly as possible. In this struggle the public was represented by the county magistrates assembled in Quarter Sessions, who, under the Act of last Session, have the power of forming

Digitized by Google

highway districts by the union of several parishes. The parishes appeared on their own behalf, and strenuously defended their ancient right of a separate and independent control over the roads within their own limits. Success has varied, but on the whole Victory has inclined to the side of the public. But parochial authorities are proverbially tough, and generally die hard. And they have never made a harder fight for any of their ancient privileges than for this power of managing the highways by separate parishes. They successfully resisted any change in Parliament for more than a dozen years. Every Ministry, both Whig and Tory, since the time of Sir Robert Peel, has attempted to take the management of the highways out of the hands of vestries. Every Secretary of State since 1849 has brought in a bill with that object, and after all these repeated attempts, the Act which was at length passed last year did not itself enforce a change of management, but gave the power of enforcing it to the Justices in Quarter Sessions. Hence it happened that the whole battle had to be fought over again in every Quarter Sessions through the country. Each of these assemblies was turned for the time into a local parliament, which was vexed with petitions from alarmed ratepayers, and besieged by importunate vestries, who were making a last desperate effort to ward off any change. Happily the justices have, for the most part, stood firm against this pressure, and the new Highway Act will now be very generally adopted through the country.

The nature of the change will be readily perceived by calling to mind the existing system of management. It is well known that all the roads forming the great arterial communications of the country were long since taken out of the management of the parishes, and included in local turnpike acts. But all roads not thus converted into turnpike roads, or included in some other local act, are repaired by parishes as highways, each parish repairing the part of the road lying within its own limits. For the purpose of maintaining them, a surveyor was appointed, and the expense attending their repair was defrayed by a parochial tax called a highway rate. The defects of this system are manifest. The extent of road which lay within a single parish was seldom sufficient to warrant the employment of a paid surveyor, and the office was generally taken in turn by the tenant farmers who knew nothing about road-making, and were no more fit for the business than for the conduct of a department of state. Besides, even if the surveyors possessed the skill, they could not give much time to an occupation for which there was no sort of remuneration. It could not be expected that farmers would leave their own business to look after roads for which they received nothing. Moreover, in the time and manner of making the necessary repairs, the interests of the public were made entirely subservient to those of the parish. The repairs were made, not when they were required, but when it was convenient for the farmers to send their horses to draw the materials. And with the view of keeping down the poor-rate, it was the custom to employ on the roads all the halt and the lame of the parish, who were too old or too weak to get work from any of the farmers, and who were quite incompetent for labour on the roads. This had been practised so long that vestries came at length to regard roads as made not for the service of the public, but for the employment of persons who were fit for nothing else, or for the accommodation of the horse and cart of the farmer.

The small size of the districts into which the country is divided, according to the parochial arrangement, for highway management, is the main objection to the present system. In some instances, the sub-division is still more minute, and each township, instead of each parish, has a separate surveyor. There are at the present moment in England more than 17,000 districts, each with a separate surveyor and a separate highway rate. These officers are elected annually, and, from the nature of the case, have no professional knowledge of the science of road-making; and are indeed, for the most part, ignorant that there is any such science. A sum of more than £2,000,000 is annually expended in the repair of the highways by this army of amateur road-makers,—with what poor results most people are aware. The wonder is that so primitive a system should have lasted so long. And it was, in fact, abandoned more than a century ago, with respect to the great arterial communications of the country, which are now included in turnpike acts, and more lately, with respect to roads in the neighbourhood of towns, which are under various local acts. All these roads were originally under parochial management, and continued to be so till the inefficiency of that system became apparent. But abuses often linger in quiet by-ways long after they have been removed from places of bustle and resort. The parish surveyor and his feeble assistants have long since been swept away from the turnpike roads. Some amount of skill was necessary for the maintenance of roads on which there was heavy and continuous traffic. But these functionaries have kept their ground on the parish roads up to the present time, and would have kept it much longer but for the change made by the introduction of railways. This has altogether altered the relative importance of parish roads and turnpike roads. The latter have given place to railways, and are no longer the leading communications of the country. Many of the parish roads, on the other hand, in consequence of their connection with railways, to which they act as feeders, have become of great importance. As might have been expected, the parochial system of management, with its necessary consequence of unpaid, and therefore unskilled, direction, has not been able to meet the demands of this increase of traffic. The parish surveyors have, therefore, at last got the word to move on.

The natural remedy for the evils of the present system is to increase the size of the divisions which are under separate highway management. Accordingly, under the new Act, several parishes will be grouped together, so as to form a single highway district, the roads in which will be managed by a highway board, formed partly of persons elected by each parish, and partly of the justices residing in the district. This board will elect a surveyor, who will receive a salary. The country will probably be able to furnish 200 or 300 professional surveyors, though it could not supply 17,000. There will not, however, be any change in the incidence of the taxation necessary to meet the expense. The estimates of the repairs required in each parish will be made separately by the district surveyor, and the parish will continue as before to pay for the repair of its own roads, with the addition only of its share of the common expenses connected with the officers of the board. The principle of the new system is to make the highway districts of such extent, as to enable the board to obtain skilful management, and thus secure efficiency as well as economy. The system of unprofessional surveyors, must in the end prove the most expensive, even though these officers receive no salary. Want of skill, wherever professional knowledge is required, is always want of economy. The advantages of enlarged districts are so obvious that it might have been supposed that the parishes would have willingly accepted the change. The very reverse has been the case. The opposition of the ratepayers has been mainly founded on the idea that the employment of paid surveyors would lead to increased expense. This fear seems to be without foundation. The expense that will be saved by more skilful management may fairly be set against the salaries of the surveyor and the other officers of the board. But on this point we are not left to mere conjecture. The experience of the six counties of South Wales is sufficient to reassure the alarmed ratepayers on the head of increased expense. In those counties, highway districts, similar to those now proposed, have existed for several years, and there is a unanimous concurrence of opinion that since that system came into operation there has been a very marked improvement in the state of the roads without any addition whatever to the annual expenditure.

Another objection is urged against the new system on the ground that it tends to the destruction of local self-government. Centralization and bureaucracy are words of fearful import in English ears, and there is little doubt that this objection had great influence on many persons who opposed the new act. It is, however, manifest that sub-division may be carried to such an extent for the purposes of local management, as to become an absurdity. The question in such cases always is, what ought to be the size of the district on which separate powers of government are bestowed. And it is manifest that if the sub-division be so minute as not to warrant the employment of professional knowledge when it is necessary, local self-government has been carried to an extreme. If the ratepayers of every street in a town had the separate control of the paving of their own street, that would, doubtless, be local self-government, but it would be government reduced to an absurdity.

CHARITY *versus* WIT.

On one question of the day, and not an unimportant one, the world is at present showing a disposition towards primeval chaos. It would be just as sensible to go without clothes and eat boiled babies as to go back to the beginning of all our knowledge and work out everything afresh. The subject of charity is one upon which there is yet a great deal to learn; it is impossible to say, at the present moment, how far the dictates of natural benevolence and of political economy contradict one another. But we are, after all, not quite at the commencement of the inquiry into such topics. Any doubt as to the merits of casual and unmethodical charity is about as reasonable as a doubt on the burning of witches or the virtues of a pure despotism. If there is anything on earth about which human certainty is possible, it is this: we are as certain that giving away money at random is not wise, as that the moon is not made of green cheese. Society can hardly be conscious of the trouble that it will cost, if all the philosophy of modern civilization has to be worked out over again.

If alms are to be given to the poor, they should be given systematically and cautiously; they will thus do least harm and most good. In order to relieve the distress of the London poor with some degree of order and intelligence, a Society was formed two years ago, on the principle that its funds should not be wasted on the machinery of management, but administered personally by such of the donors as had time to spare. To the appeals of this Society the *Times* generously opened its columns, and gave it what indirect assistance it could; the scheme found supporters, and has hitherto seemed to prosper. But the Lancashire distress, and the general understanding among Englishmen that, whether charity under ordinary circumstances were advisable or not, the sufferings of the operatives should at all events be relieved, has turned the heads of the charitable. There is a longing to give, even if it be at random. The same journal that supported the systematic scheme has also given its countenance to a number of small cases of distress, which must of necessity be capriciously selected, and the support of which must drive other deserving people mad with jealousy. It was the same mode of proceeding which led some well-meaning families in the country to select for their private alms other casual families in Lancashire, relieving them continuously and bounteously at what ought really to be considered the expense of their neighbours. One "wife of an officer" obtains a hearing in print; but how many wives of officers are there whose grievances never see the light? We begin to think that the *Times* heart is better than its head. Still, if it is injudicious in supporting the casual bounties of some, the organized bounty of others finds in it a ready assistance. Its offences on the one score may be fairly set against its utility on the other.

Meanwhile a weekly journal, which, whatever its other virtues may be, is not in general distinguished by a very profound knowledge of facts, conceived that it was able to throw some light upon the question by treating it from a satirical point of view. The public mind must be very much at sea upon the subject, when it can seem possible to any reasonable thinker that such a method of treatment will be generally acceptable. To dilate with humorous irony upon the details of an important battle, or indulge in some hard hits at the death of a near friend, would in ordinary times appear about as fit an application of style to matter. The question, whether public benevolence is most successful when organized or disorganized, contains in our judgment as little of a comic element as any question that can be started. But the *Saturday Review*, with an ingenuity which does it credit, managed to discover a way of rendering it comic; and this way is so simple and so easy of execution, that it is worth some study. The scheme for organizing charity affords no field for humour; then, what can be more obvious than to represent it as a scheme for doing something else, and so make fun of it? The inventor of this idea is clearly a person of a delicate and skilful perception. Here is the intellectual process. "W. D. B.'s" plan was for giving charity with some order and method. But all charity necessitates visiting the poor. Some schemes of visiting the poor involve the giving of religious advice. Religious advice is sometimes misapplied. Misapplied religious advice is susceptible of humorous treatment. Therefore, the scheme of "W. D. B." is susceptible of humorous treatment. Therefore, any amount of silly ill-nature may be given to the public in connexion with it; which was to be demonstrated.

But that the tone of the article which we have mentioned is an example of a distinct vein of unworthy thought, traceable for a long time past in the pages in which it appears, it might have seemed hardly worth a notice. It is, however, part and parcel of a connected thread, and must be taken with the rest. Whenever the reader sees in those columns a subject mentioned which can by any skill be tortured into an allusion to Dissenters, or to popular religion, or to the alluring topic of immoral indulgence, he knows what treatment will be adopted, and what kind of hand will guide the pen. He guesses beforehand that whatever is not in accordance with some pedantry of ecclesiastical formalism, will be represented as gross and ridiculous; he knows that the untaught devotion of the poor will be regarded only in the one light of its vulgarity; he knows that whatever opportunity is offered for lightly hovering round the lives and persons of the fallen victims of vice, for pleasantly twitting their habits and appearance, for cutting jokes at the titles by which they are known, will be seized upon with an eager pleasure. He feels, probably, himself, that the treatment is as far removed from manliness as it can possibly be; he may possibly not be without a passing fancy that if he were offered his choice, between having his hand cut off, and putting it to a suggestion that the promoters of "midnight meetings" are not the better for the intercourse they cultivate, he would infinitely prefer the former alternative of the two. But he does well to read on: his knowledge of human nature will be enlarged, and he will be the more able to appreciate a somewhat loftier tone when he sees it. For example, if he should ever chance to see an active, rich, pleasure-loving man, a hero in athletic toils, a proficient in intellectual work, quietly writing to decline a day's amusement on the ground of previous engagement; if he should manage to discover what this engagement was, and should find that it was a walk on a winter's day to the recesses of Whitechapel, to spend hour after hour in furtherance of the scheme of "W. D. B.;" if he should hear the narrative afterwards, and listen to the speaker as he told the new and awful experiences of the day's work, he will be able, as we are able, from having seen and heard it, to judge between the spirit which does this work for the love of God and man, and the spirit which endeavours to write it down for the love of "sensation" and paradox.

"Visiting the poor," ironically remarks the writer, "forms an essential portion of the received ideal of a Christian man or woman." The deplorable error may possibly have arisen from the stress which St. James unfortunately lays upon the practice in his epistle, in an allusion to pure and undefiled religion. But, however unnecessary and injudicious it may be, it is hard to see how charity can be given to the poor without going to their houses to give it. The idea of a guardsman presenting half-a-crown to a starving family in their own home may have something richly comic in it. It may even be a vulgar idea,—though we should rather have said that the vulgarity lay in conceiving an officer of the Guards as a man who, by his position in society, is debarred from sympathy with the poorer classes. But how is the unfortunate guardsman to present it? By handing it to the clergyman, the writer would probably reply, under some indistinct impression that there must be something in the rubric to forbid officers to associate with silkweavers, except under ecclesiastical sanction; or, it may be, some historical recollection that the centurion, Cornelius, used invariably to give his alms through the medium of the clergyman of his parish. But, supposing that the object of "W. D. B." is to take the labour from the already overworked clergymen, and that his guardsman make a point of consulting them beforehand, what is to be said? "One cannot help feeling some nervousness at a suggestion which proposes to turn the whole Household Brigade loose upon the London parishes in the unwonted guise of district visitors." We should have thought that the unpleasant feeling might have been avoided by the very simple means of not making the suggestion. No one but the writer ever made it. The proposal which has been made, and which for two years has been carried out, is that those men who have the time should personally distribute the money subscribed. They are not supposed to act as spiritual guides, though if any poor man or woman should choose to talk on religious subjects to their benefactor, we can see no objection to their doing so. "It will form a material assistance in the way of getting rid of Sunday afternoons, which in a Protestant community is a serious recommendation." It is not our business to defend the Protestant respect for Sundays from facetious criticism; but we do look with some admiration at the idea thrown out that the reason why guardsmen bring the money to the poor is because they can think of nothing else to do on the first day of the week. The notion is so felicitous, so apposite, so full of happy sarcasm. It is quite worthy of the only other theory advanced, that they do it by way of "spiritual plate-powder." Whoever wishes to understand thoroughly the furthest limit to which mere silliness can bring the human mind, ought, we think, carefully to

Digitized by Google

study, analyze, and examine the bearings of this last phrase, remembering the circumstances of the case, and the nature of the subject at issue.

But have we been treating all this absurdity in the right sense? There are those who may think that no sentiment but pure indignation applies to the method which we have described of handling the topic of public charity. They may hold that such a style of writing should be mentioned by no honest man except with downright anger. We cannot wholly agree with them. We, probably, feel as much dislike as they do to the tone of thought, and perhaps even more contempt; but a great part of the blame we prefer to lay upon the readers. If the public would care a little more for the theory of those subjects, and take more pains to understand distinctly what charity means and what it does not, an article of the kind would be impossible. As it is, we are glad to find that it is not highly valued. There are some kinds of faults which the world can readily appreciate. "People whose profession it is to preach," says the writer, "like clergymen or Scripture-readers, are saved by their official position from the appearance of gratuitous insolence." Perhaps so. People whose profession it is to prattle, like certain journalists, are by no means saved by any position of theirs from the appearance of feeble folly.

MOSES AMONG THE ESSAYISTS.

THE unwary traveller, whose course lies down Oxford-street or the Strand, finds the dangers and difficulties of his voyage terribly increased by the high literary art with which the enterprising shopkeeper now baits his advertisements. A sensation novelette displayed at full length in a large plate-glass window breaks off at the most thrilling part of the page to reassure the public as to the excellent quality and low price of Griffin's family teas. Poetry of the most exalted description invites the passer-by to try somebody's patent candles; and the modern Ulysses is sung on one side of the road into the dangerous abode of a poetical siren of a haberdasher, or on the other into the web of a spiderlike and subtle-minded undertaker, whose object seems to be to combine at once rapidity, economy, and decorum. At such a time of enormous literary high-pressure, a new and hitherto untrodden path has been struck out by the noblest and most famous of their profession. This is the season at which tailors and millin:rs, and all aspiring tradesmen, usually salute the rising year and their numerous customers in some light madrigal or whatever else is at once appropriate and novel. It has been reserved for Moses & Son to soar above the beaten track, and to distance all their literary rivals. Poetry may be said to be only in fashion with the mob. Every snob of a tailor has his poet now. Moses & Son accordingly will have nothing more to do with verse. The stranger who enters London through the gates of Euston-square is no longer gratuitously informed, by means of a shower of hand-bills, that

"It certainly were best
To try our winter Oxford vest;"

or warned in didactic strains that "The man of taste and fashion flies to Moses in the Minories." The Minories are no longer in favour of rhyme; Parnassus is at a discount; epic poems are no longer buoyant; and the highest firms would no more think of bringing out a professional "Idylls of the King," than of resorting to a common-place advertisement in the *Times*. This is the age of Essays, of *Saturday Reviews*, of sensible and smart prose writing; and Moses & Son have accordingly dismissed their private poet, and set up a private Essayist and Reviewer. The production with which they welcome the New Year is of the highest moral and literary tone, is entered at Stationers' Hall, and the "right of translation" is, of course, strictly "reserved." No foreign house can expect to be allowed to command the services of the authors of the highest distinction whose assistance Messrs. Moses & Son, at an enormous outlay, have been enabled to secure.

We are all more or less desirous, on some ground or other, begins the philosopher of the Minories, to win the respect of our fellow creatures, and the ways of winning it are infinitely diversified. To obtain influence and position, the majority of mankind will labour an entire life, and continue to toil in some particular trade or profession long after their actual necessities are supplied. "The merchant still speculates in the mart, the seaman still ploughs the deep, the goldhunter still digs the mine, the scholar still collects additional lore by the midnight lamp." It is the Roman poet over again. *Sunt quos curriculo pulverem Olympicum*—each of us has his own way of aiming at honour and at fame. But there is one way, pursues the essayist of the Minories, which the whole human race adopt, with rare exceptions—namely, an attention to personal appearance, or an endeavour to produce favourable impressions by the fashion, or propriety, or becomingness, or neatness, or splendour of their habiliments. He is not the first person who has remarked on the necessity of this part of the paraphernalia of human life. A modern poet has put the same truth as forcibly, and very nearly as delicately:

"Dicite cœlicolæ: squamosi dicite pisces,
Ni tegerent braccæ crura, quid esset homo?"

Some philosophers and men of genius, Moses & Son regret to think, have been great slovens, and affected to consider attention to personal appearance as effeminate or foolish. This mistake is less common than it used to be. "Most of our *literati* now dress like gentlemen." The considerate and high-principled House in question have not thought it right to mention more explicitly who are the exceptions to the rule. But they evidently have their eye upon them; and it is probably for the benefit of those "of our *literati*" who cannot be brought to a proper sense of the importance of a winter outfit, that the reviewer proceeds to detail the various anecdotes on the subject which may be collected from the *Spectator*, the "Life of Dr. Johnson," and other similar sources. The following story bears with it its own moral:—

"When Gérard, the famous French painter, called on Lanjuinais (a leader of the Girondists), with a letter of introduction, his first reception was cold and discouraging; but in the course of conversation the artist's good sense and amiability dissipated the unfavourable impression produced by an ill-arranged and shabby attire. When he rose to take leave, Lanjuinais accompanied him to the lobby with marks of respect and good-will. Gérard could not help expressing his surprise. 'My young friend,' said Lanjuinais, 'we receive an unknown person according to his dress; we take leave of him according to his merit.'"

Not much is to be said for the orthodoxy of this anecdote. We are afraid Lanjuinais cannot have been one of those persons who entertain angels unawares. He would have thought nothing of the angel unless the angel had his wings about him; and upon his theory he would have been justified. But Moses & Son are not disposed to throw out raw theories of moral conduct without showing how each is capable of a practical application to the affairs of everyday life. The major premiss is, that we ought to attend to dress. The minor informs us very minutely of the way in which the major may be put in operation.

"'I remember,' says the *Spectator*, in continuation of the article just quoted, 'that Mr. Osborn (the author of 'Letters to his Son') advises his son to appear in his habit rather above than below his fortune; and Lord Chesterfield, who understood the world, gave his son the most earnest instructions on the same point. Mr. Osborn observes, that a man will always find 'a handsome suit of clothes procure him some additional respect.' If the writer in the *Spectator* had lived in these days, it is by no means improbable that he would have advised his readers to go to E. Moses & Son for a *handsome suit of clothes*, such, for example, as their cheap yet elegant and useful attire, so widely known as *the Indispensable Suit*. Gay, the poet, tells us 'that everything must be suitable to the season, and there can be no propriety in dress without a strict regard to time.' This is a very obvious and yet often neglected truth, but one which E. Moses & Son have done their best to uphold and illustrate, in their selection and preparation of stocks especially suited to the several seasons of the year."

This sagacious reminder completely proves that it may be said of Messrs. Moses & Son, as of John Gilpin's wife, that,—

"Though on pleasure they were bent,
They had a frugal mind."

It would, however, be unfair to their essayist and philosopher to suppose that he has an *arrière pensée* in all the morsels of information which he spreads before us. This is far from being the case. In return for the slight scraps of puffery which he inserts in some places, Messrs. Moses & Son give him his head in others. Two pages are devoted to the subject of enamelling in ancient and modern times, which wind up with a satirical allusion to Madame Rachel. There is nothing niggardly about the great literary work turned out by the Minories. It is not filled, as commonplace professional houses might have tried to fill it, with such literary or intellectual remarks alone as can be brought round to end in a professional assertion of the superior merits of Messrs. Moses. Occasionally, it is true the great and undoubted superiority of that distinguished firm breaks through the literary veil; but it is rather as if their superiority was a matter of course which the essayist took so thoroughly for granted, that, without any effort on his part, his conviction must now and then dawn through his writing. His object is not to argue on the point, or to establish by reasoning a fact which is indeed as clear as the hills. He only seeks to give a "half-hour's amusement" to "our friends and constituents." The authors who work in this spirit have to do with nothing except the very highest art. Their

Digitized by Google

task is far removed from the paltry daubing and sign-painting of lower professional artists. They are called upon not to descant upon the paletots of this or that tailor, but to take a high and bird's-eye view of the theory of dress, and its moral influences on the soul and the character. They cannot be said to digress if, in this exalted view of their duty, they occasionally wander into digressions, into which even the agile Moses & Son might be unable to follow them, and into a region where the voice of the Minories is altogether silent. Thus we have historical and even classical information, which is useful for its intrinsic value.

"In Rome, in the days of Poppæa and Agrippina, the fashionable lady was attended by cosmetæ, or slaves initiated in all the mysteries of the toilette, the moment she left her bath. We mention these little matters to show how long some fashions, contrary to nature and true taste, may endure, in contradiction to the assertion of some philosophers that a false taste must be of comparatively brief duration. The old-fashioned hoop-petticoat that was put down by an edict of George IV. because it was inconvenient in his crowded drawing-room, is now revived, and is more prevalent than ever, under the name of crinoline.

* * * * *

"Even in point of cost, the dresses of the gentlemen have often been more extravagant than those of the fairer sex. Sir Walter Raleigh's doublet was embroidered with pearls; his buff shoes were covered with precious stones of the value of £6,600; his armour blazed with diamonds, rubies, and pearls. The Duke of Buckingham, King James's favourite, sometimes had his diamonds so loosely put on his garments that when he pleased he could, with a sudden shake, sprinkle the ground with them, that the Dames de la Cour might pick them up; he had a suit of white velvet, embroidered with diamonds, the value of £80,000. Some of the English nobles at the Field of the Cloth of Gold carried their whole fortunes upon their backs."

Instruction so valuable and so varied as the above is not to be obtained every day, nor indeed in every shop. Mr. Harrison Ainsworth himself might pause and admire an anonymous artist who rivals him in knowledge of the upholstery and haberdashery of the past. It is a great credit to Messrs. Moses & Son that they should have procured the services of a writer of such learning and high moral purpose. Nor is it possible to think without a flush of generous emotion of this liberal-minded and open-handed firm strewing gratis these pearls of literature up and down the streets of London, over highways and byeways, in at cab windows and down kitchen areas, contenting themselves with no more immediate reward than the approbation of their age. The schoolmaster, it is said, is abroad. He is indeed abroad, for he lurks unsuspected behind the advertisements of the British tailor. We are gently lured on by gossip about Dr. Johnson and Agrippina, to the "celebrated sixteen shilling trowsers." For though the Essayist of the Minories is far from obtrusive on the point, this is the point to which his labours all converge. The pamphlet ends, as it should end, with a blaze of fireworks, in the midst of which the name of Moses & Son is conspicuous against the nightly sky, extinguishing by its brilliancy all minor stars.

"A good tailor enjoys a sort of monopoly. Messrs. E. Moses & Son may speak to this point from long experience. Ever since they proved to their customers that they had the very best cutters in the world, and had always on hand the largest supplies of the best materials from all quarters of the globe, and could produce on their premises better articles at lower prices than any other house in the trade, they have been overwhelmed with business, and have been compelled to go on increasing their establishments to an unprecedented extent, and to toil night and day in the public service—and certainly not merely without regret, but most gratefully, eagerly, and happily, for, as Shakespeare truly says:—

'The labor we delight in physics pain.'"

We cannot but sympathize with those who are worn out by their daily and nightly labours in the way above suggested. May the constitution of Messrs. Moses & Son be supported against the ravages of their incessant toil! They wish to impress upon the gentlemen of England the importance of dressing well. They are also anxious that Messrs. Moses & Son should have the opportunity of dressing the gentlemen of England. Their petition, therefore, is a double one,—that we may have a passion to dress, and that we may gratify it by repairing to the Minories,—and it would be is a terrible thing if it ever should be said of them that

"Jove heard in heaven and granted half their prayer,
The rest the gods dispersed in empty air."

MUNICIPAL INSTITUTIONS IN GREECE.

We have recommended a reform of the municipal institutions of Greece as most necessary to the future prosperity of the country. It will now be our task to explain the grounds on which this recommendation is based. Capodistrias and the Regency utterly destroyed the popular municipal system of Greece, and substituted for it a communal organization by which both the urban and rural populations were brought directly under the power of the central administration. All feeling of individual independence was obliterated in the people; they were not permitted to promote local improvements or to share in the administration of their own local affairs. They were even compelled to submit to the undisguised and continuous misappropriation of the municipal funds by royal authority. The Greeks submitted sullenly to this despotism, and would doubtless have resented it far earlier than 1862 had not Otho succeeded in irretrievably dislocating their internal social and political organization, which had been powerful for good under the Turks.

For the territorial sub-divisions instituted by the Othmans in Greece, the Regency substituted a division of the country into Demarchies of three classes, viz.:—

First Class Demoi, to consist of at least			10,000	inhabitants.
Second	„	„	2,000	„
Third	„	„ of less than	2,000	„

By thus dividing the country the people were virtually separated from each other; they ceased to have any one interest in common. Their independence had been crushed; anything like a combined action amongst them became nearly impossible. Hence we find, as resulting from the exercise of a despotic royal authority over the municipal institutions of Greece, that up to the present day the boundaries of Demarchies have not been defined as prescribed by law. There has been no real or legal control established over the municipal receipts and expenditure; even the prescribed account-books have never been kept at the Demarchies. In 1859 neither the Minister of the Interior nor the Minister of Finance could inform the Financial Commissioners, then sitting at Athens, of the amount of the communal revenue.

Following out the history of the Communes, we find that the Turkish system existed up to 1821. In that year the Council of Epidaurus tried to establish a more uniform system. Their decrees were approved by the Assembly at Astros in 1823. The kingdom was then divided into departments; each department into provinces; and each province into communes. The President Capodistrias preserved their organization; but by laws, dated 16th April, 1828, and 7th January, 1830, he brought the municipalities entirely under the control of the central power, and deprived them of the right of electing their mayor.

Under the Regency, by a law dated 8th January, 1834, which is now the organic law of the communal system of Greece, the old popular municipal system was abrogated, and the communal authorities were placed in direct dependence on the Eparchs as representatives of the central executive. This administrative subordination has created the abuses which have rendered the communal system inoperative for producing local improvements. Here, again, the Greek system contrasts most unfavourably with the Turkish. One essential difference between the two systems is to be found in the mode of electing the municipal officers. The Turks permitted these officers to be elected by the people, and, in accordance with the essence of a communal system, caused it to be constituted by the people, and made the magistrates, like the individual citizens, responsible to the law alone for their acts. Although the communal Magistracy were employed by the Turks to perform certain fiscal duties, their paramount duties were local, and intimately connected with the prosperity of the people who were their constituents. The Greeks are now denied the right of electing any but the lowest officials of the provincial government. In the election of the mayor or Demarch, the people were, under Otho, powerless. The members of the municipal council were elected by universal suffrage. But the aldermen (paredroi) were appointed by an oligarchical college of electors, created merely for this election; and the Demarch, the magistrate who is supposed to represent the commune, and to attend to its local wants and duties, was selected by the king from a list of three names, chosen, not by the people, but by the oligarchical body constituted to choose the aldermen. This body, or college of electors, is composed of an equal number of municipal councillors and of the highest taxpayers in the commune. The people, who are the electors of legislators, are not allowed to elect their own local officers. Even the Greek communal system, created in order to act for the people, does not sanction elections of a nature to render it probable that the elected magistrates will consult popular interests, or represent popular feelings.

A communal magistracy is, as a rule, created to perform certain local duties which lie beyond the sphere of the national government. The central administration and its agents ought therefore to possess only the right of inspection over communal authorities, and not a right of control. Consequently, its interference for correction or punishment ought to be exercised only by application in the ordinary form to the courts of law. By directly subjecting

Digitized by Google

the communal magistrates to the central administration, the communal system is virtually brought to an end.

This iniquitous system of rendering the communal magistrates subject to the Eparchs, and dependent on the arbitrary authority of the Minister of the Interior, gives rise in Greece to many evils. In the first place, it encourages the Eparchs to neglect their duty. They transmit orders to the Demarchs, which they know cannot be executed, merely to escape responsibility, though they know they are acting a farce; and the Demarchs pretend that they have so much business to perform for the Eparchs, that they neglect the duties which they were elected by their fellow-citizens to execute. The fruits of this negligence have been long ripening over the whole country, and are visible even to casual travellers. They see that under this *quasi* communal system, which has now been in active operation for nearly thirty years, and has consumed above 60,000,000 of drachms of national produce, no local improvements have been undertaken; that the roads and bridges made by the Turks have been allowed to fall into ruin, and that the people are generally discontented.

A second result of the system is to offer a direct impediment to all material progress: it paralyzes the action of the central administration, and tends to make all men politicians, to merge all local interests in central party strife, to arrest the consolidation of civil order, and to retard the carrying out of social improvements. The Demarchs have become petty tyrants, by acting as agents of the central government. In this way it is that the communal system has been converted into an arena for the antagonism of two adverse principles. Local and central interests contend for the mastery. Yet the field of battle was created, nominally, to relieve local claims from the oppression of central interests. On the one hand, the municipalities are regarded as a popular and national institution, existing for the express object of enabling the people to take the initiative in developing their local prosperity. The legal recognition of this popular and national character of the Greek communal system is consecrated by the provision of the law, which declares that the members of the municipal council shall be elected by universal suffrage. They are chosen, like the elected members of the national legislature, by the body of the people. Thus the municipal councils are interwoven, as a national institution, with the political and social life of Greece.

But, on the other hand, the communal magistrates are withdrawn from all responsibility to their fellow-citizens, and reduced to the character of mere ministerial officials. Obliged to act as subordinates of the Eparchs, they are sunk into the lowest class of civil *employés*. Thus the people elect and pay local magistrates, who forthwith become officials of the central administration, antagonists of local interests, and agents for central party purposes. To give vitality to the communal system of Greece it is necessary to reform these evils; and this can only be done by restricting the action of the local magistrates to local business, as intrusted to them by the mandate of their electors, and by the communal law. If the central administration require more provincial officials, let them be named and paid by the Minister of the Interior. They will then be dependent on his will, and responsible to the regulations of the central administration.

In order to constitute a communal system on a proper basis, the magistracy must be elected by the people, and must be responsible to the law alone. No Demarch ought to be liable to suspension, except by a unanimous vote of a municipal council, or by the sentence of a court of law. The Minister of the Interior ought only to possess the right of inspection in the general interests of the State. In case of any neglect or violation of duty by the municipal authorities, the Minister ought only to have the power of instructing the Attorney-General (Eisangeleus) to apply to the court of law for a remedy. During the thirty years of existence which the communal system of Greece has enjoyed, with ample funds at its command, no steps have been taken to make roads, even in those localities where the value of agricultural produce might have been doubled by enabling the cultivators to bring it to market in carts. The facilities of travelling have been diminished by the abolition of post stations, which existed under the Turks. No attempt has been made to improve agriculture by opening new markets, or to extend commercial enterprise. The accounts of the communes have been uncontrolled, and their funds have been despotically misappropriated. No further evidence is required to show that the system is essentially bad and corrupt. Let a true communal system be tried in Greece, and let the existing system, which is nothing more than the installation of deputy eparchs in the Demarchies, be abolished. The prosperity of the communes constitutes the prosperity of the State; the prosperity of the State is the only guarantee held by the three protecting Powers for the loan of 1832; and to England it offers the only hope that constitutional liberty can ever be made to take root and flourish in Greece.

NEW THEATRICAL MANAGERS.

The saturnalia of pantomimic inanities which convention has determined shall regale the sight-seeing public from Christmas to Easter, has this year been agreeably diversified by two new appearances in the world of theatrical administration. Mr. Boucicault has come out with a monstrous puff, and Mr. Fechter with an admirable play. Nothing could be more laudable than the former gentleman's design of realizing a modest income of twenty thousand a year by delivering our playhouses from the perils of asphyxia; and we regret that a sensible scheme should have been ushered in with such extravagant self-glorification as to inspire all but the most credulous section of the community with the natural scepticism which attends the announcement of prospects too brilliant to be entirely real. Mr. Boucicault is, however, on the right track for success when he makes fresh air, comfortable seats, and convenient passages as essential a part of his programme as an amusing performance. There are thousands of people in London with leisure on their hands, and a long evening to be disposed of, to whom the theatre is the readiest, pleasantest, and most innocent of all resources. The detestable discomforts which at present beset the playgoer's career from beginning to end, have rendered playgoing almost an unfashionable amusement; and by rendering it unfashionable, have robbed the theatres of the support by which alone they can be maintained at a level of real efficiency. First-rate actresses have disappeared from the world as completely as the extinct Dodos and Icthyosauri which Professor Owen reconstructs from a single antediluvian fragment; and even second-rate performers are a scanty band. The deficiency of the one class is perhaps irremediable; Nature is parsimonious of her greatest gifts, and grants even to France a Rachel only once a century; but for the want of the other we have nobody to thank but ourselves. Decent mediocrity is always to be had at its price in any quantity desired; and a comedy, sufficiently well acted to be amusing, is a marketable article, which might be purchased with as much certainty, if people chose to pay the money, as a picture, a concert, or a flower-show. Unfortunately, the sort of social stigma which at one time attached to the profession, has driven many young women of spirit and ability to earn their livelihood in other and less congenial lines of life. A well-paid actress, enjoying her profession and commanding a reasonable success, is, one would think, more happily employed than an oppressed, overworked, and solitary governess, struggling in silence against starvation upon the miserable pittance which is the reward of her labours. The experience of private life would seem to suggest that a considerable percentage of women are, or might easily become, tolerably good actresses; and if such is the case, it is a real misfortune that people whose gifts happen to lie in this direction should not employ them in a manner which would be equally advantageous to the public and themselves. A clever determined governess, with dramatic aptitudes, who took to the stage, might perhaps raise a passing outcry of ruffled propriety, but she would in all probability make her fortune, and, at any rate, would secure a competence; and it is a curious instance of the tyranny of convention that such an opening should fail in its appeal to courage or discontent, and so tempting an experiment be left untried.

In the dearth, however, of dramatic ability, both Mr. Fechter and Mr. Boucicault deserve real praise for the vigour with which they have carried out their respective schemes. "Astley's" will no longer witness the "damnable iteration" of circulating equestrians, who with dreary exactness imitated, one from another, year after year, the perilous evolutions proper to Mr. Batty's amphitheatre. The daring steeds which rushed, at a moment's notice, from behind the scenes, and neighed a warlike accompaniment to the military tragedies of the occasion, have rushed and neighed their last, and have, we would fain hope, retired to some equine Elysium, where, for the first time in their lives, they will be allowed to gallop straightforward, where no fugitive lover conducts his courtship on their backs, and no terrible being, arrayed in full evening costume, cracks his unerring lash at the slightest symptom of diminishing alacrity. It is difficult to think, without regret, of the long succession of houri-like Amazons arrayed in gauze and glittering with spangles, who, for a century past, have violated all known laws of gravitation in the arena from whence they have now definitely disappeared. Who can look back without a wild gush of sentiment at the horrible suspense of the moment when Angelica, in a cloud

Digitized by Google

of muslin, flies from an indignant father's roof, and relieves her overstrained sentiment by a *pas seul* upon the neck and shoulders of her milk-white Arab steed; while her adorer, upon a "jet-black child of the desert," follows at an impetuous canter, and piques himself on maintaining an equilibrium still more extravagantly impossible than that which his mistress has attempted? Who can forget the rising enthusiasm of boyhood as the band struck into a feverish galop, and the rival steeds rushed on more and more wildly, and the gentleman in black cracked his whip with more inspiriting emphasis than ever, till at last Love triumphed over every difficulty, and the enchanted Angelica sank blushing into her adorer's embrace, amidst the applause of the galleries, the derisive exultation of the clown, and the condescending approval of the gentleman manager? All this is past; but Mr. Boucicault's "Siege of Lucknow" is scarcely less exciting, and certainly to the full as melodramatic. What the taste of the Westminster sight-seers may be, it would perhaps be rash to define; but we presume that Mr. Boucicault is right in imagining that they like gunpowder, sabres, hair-breadth escapes, sanguinary Indian chieftains, and comic Irish subalterns. The piece, viewed otherwise than as a lively spectacle, is simply ridiculous; but Mr. and Mrs. Boucicault have a true vein of pathos, and the broad farce of the one, and the gentle sentiment of the other, throw a certain zest into a performance which would otherwise prove intolerably bombastical and commonplace. The manager has, no doubt, better things in store; and will, we hope, spend a modest portion of his first year's £20,000 in paying some really clever writer either to make him a new play, or to adapt a French one to the capacities of a Westminster audience. Meantime, the theatre, though far from Elysium, is not quite the Inferno which stifling passages, narrow seats, glaring lights, and insufficient doors, have rendered unhappily familiar. Its painting is light and pretty, and the plan of numbering the seats saves a great deal of unnecessary confusion.

Mr. Fechter's "romantic drama" well deserves the success which it has already secured. If the duty of "sensation-pieces" be to harrow up the feelings by a series of wonderful adventures, mysterious characteristics, and conflicting sentiments, Mr. Brougham and M. Paul Féval may be considered to have achieved all that the most exacting critic could demand. Complicated as the story of the "Duke's Motto" is, and glaring as are the improbabilities which in more than one place are essential to its evolution, the consummate acting of Mr. Fechter, and the nicety with which every detail has been arranged, make it thoroughly intelligible and interesting to the beholder. Mr. Fechter has everything in his favour as an actor of refined melodrama; and can play such a part as that of Henri de Lagardère to perfection. His expression of face, his dignified attitudes, his graceful movements, his ready play of feature, enable him to assume the part of a soldier, lover, high-bred courtier, or interesting adventurer, with signal success. He is one of the very few people who can make love without maundering, who can declaim without bluster, and whose fine passages do not seem frothy rhodomontade. Nothing can be better than the skill with which, after having killed "the hunchback," who is the evil genius of the play, he assumes his garb, simulates his movements, and at last, after a series of desperate escapes, makes his disguise the instrument of his enemies' humiliation. The part of heroine is played by Miss Kate Terry with a great deal of delicacy and feeling; and one scene, in which Henri de Lagardère, disguised as the hunchback, reveals himself to her in the presence of bystanders, warns her of impending danger, and pretends to have influenced her by mesmeric action, is as well done by both performers as anything of the sort could be. Its excellence is best attested by the breathless anxiety with which the audience attend its consummation. Altogether, if falling short of the highest essentials of a drama, the "Duke's Motto" secures all that most sightseers care for—pathos, incident, play of character, and a sufficient versimilitude to escape the obvious violation of possibility. Mr. Fechter will, of course, vary the performances with those higher and more metaphysical conceptions which he has already attempted with so much success; and with Mr. Vining as principal gentleman, Miss Kate Terry as interesting young lady, and Miss Leclerc for everything in which good looks and liveliness are essential, he may certainly hope for a more permanent popularity than of late years has proved the destiny of most theatrical administrators.

THE UNDERGROUND RAILWAY.

TIME and money have at length done their appointed work, and the Underground Railway is now opened for traffic. It is no longer a mysterious cavern peeped into by children, gaped into by full-grown idlers, gossiped about in tap-rooms and parlours with more or less incredulity, and watched over lovingly by graphic and statistical reporters. It is no longer a withering nuisance to blighted shopkeepers, and a source of perpetual alarm and vexation to quiet housekeepers. Its course has been often marked by local earthquakes, and its capital has been called in to heal those gaping wounds of property. It has threatened utter destruction to workhouses and mansions; and it has itself been threatened with utter destruction by an unruly sewer. It has been nearly ten years before the public upon paper, and three years round them and under them on clay and gravel. As much nonsense has been talked by friends about its "mission," and as many doubts have been expressed by enemies about its powers, as if it had been the first railway ever planned and constructed. The fine old ignorant love of wonders, and the fine old conservative hatred of novelties, have both found abundant food in the Underground Railway.

The origin of the enterprise, if clearly traced, will show what the new railway was really designed to be and to do. To a certain extent it is the last desperate throw of a board of directors who manage the finest and the least profitable main line in the kingdom. The Great Western Railway, originally planned by a man who was a dangerous compound of the showman and the engineer, has been sinking commercially, year by year, though it is still one of the most striking sights of the country. Its expenditure has been a broad gauge expenditure. Its rails and carriages, if we except the second class, are all on a grand scale, and it has the proud distinction of standing almost alone amongst its fellows. Its gauge is not the gauge of other lines, and, therefore, when it visits its neighbours, the costly preparation of an extra rail has to be made for its reception. An ordinary commercial engineer would have built it in harmony with the general railway system; but the late Mr. Brunel was far above all such vulgar considerations. His father constructed the Thames Tunnel—and he constructed the *Great Eastern*. It was a family failing not to care for shareholders, and to show a lordly contempt for dividends. The Great Western Railway is only suffering the usual penalties of a Brunel enterprise, and its chance of fruitfulness has probably not been increased by its many extensions. Most of these extensions, however, were forced upon it by railway competition, and we are not inclined to blame it for struggling with its opponents. When it can fairly earn 4 per cent. annual net profit, we shall think it has done its duty. The public ought not to pay more for the use of railway capital, and the shareholders ought not to expect more. Railway investments being quite as secure as the national funds, ought not to produce higher gains than the natural rate of profit.

The managers of the Great Western, in their competition with two or three other main lines, thought it wise to draw nearer to the heart of London. Instead of waiting for goods and passengers to flow to Paddington, they determined to push out and meet their customers on the road. They were helped in this scheme by powerful and interested allies. The Corporation of the City of London, in its zeal for exterminating rookeries, had become the possessors of a vast unprofitable desert. New Victoria-street, Clerkenwell, which was hailed as a great city reformation nearly ten years ago, was suddenly checked in its progress. Like all incomplete things it gradually fell into decay, and was found out to be rather overrated as a metropolitan improvement. It had destroyed many disreputable lodgings without destroying the lodgers; it had caused a low neighbourhood to be more crowded by creating a rise in rents; it had provided a muddy playground for troops of poor little ragamuffins, and had opened up rather depressing views of Field-lane and Frying-pan Alley. Its black slimy arches were sometimes used as a tomb for murdered infants, and always as a school for teaching pitch and toss, and the rudiments of "the noble art of self-defence." Some of these things might have been tolerated if the thoroughfare had encouraged building speculators, but neither warehouses, shops, nor model dwellings rose on either side of its footway. Under these circumstances the Metropolitan Railway was welcomed as a deliverer; and doubtless in the hope of encouraging the erection of a great goods station, and reaping plentiful harvests of created ground-rents, the Corporation went into partnership with the promoters of the Great Western extension. Out of the million and a quarter sterling sunk in the Underground Railway, the city, we believe, finds two hundred thousand pounds, the rest being supplied by the shareholders of the Great Western and the Great Northern Railways, assisted by the general public.

The fact that the city has taken a large interest in this railway seems to have led a great number of writers to predict the immediate relief of the city traffic. The Common Council is certainly goaded into unusual activity at the present moment by the difficulty

Digitized by Google

caused by the crowds of passengers and vehicles in the city thoroughfares; but there is no more real connection between the city railway investment, and the desire lately shown by the Common Council to take the whole business of the city into custody, than there was between the Goodwin Sands and old Tenterden steeple. One is a commercial sprat thrown out to catch a salmon; the other is a wild aspiration of embarrassed Authority, which will struggle to gain its ends by a new police bill.

The ability of the Underground Railway to relieve the city traffic has been ridiculously overrated. The line starts from the Great Western at Paddington, and reaches King's-cross in a direct line under the New-road—a thoroughfare always able to accommodate at least ten times the vehicles ever seen upon its surface. From King's-cross it goes close to the foot of Holborn-hill, along the bed of the Fleet valley, and casts out all its goods and passengers to struggle up Snow-hill, and increase the agony of the traffic in the narrow gorge of Newgate-street. What it may do in the future—supposing its contemplated extensions to Ludgate-hill and Finsbury-circus are ever carried out—we will not discuss. We are only examining it as it now exists; and can see in it a feeder, but no reliever of the traffic. Its influence may be very slightly felt at Holborn-bars—a point next in importance to London-bridge as a feeder of the city traffic: but Cheapside will not have cause to thank it for one truck the less, or for the absence of one jostled and impatient passenger. There are at least a dozen more crowded thoroughfares in the city, where it can never have any effect either in reducing or increasing the traffic, and it ought not to be puffed into popularity for purely imaginary powers.

Of its prospects as a commercial speculation, we are fortunately not called upon to speak, as we cannot bring ourselves to look upon it as a free and independent undertaking. We are told that the cost of its construction, which amounts to something like £350,000 a mile, is very moderate compared with the cost of viaducts through cities. We are very glad to hear it. As a dozen similar projects are before Parliament for the east, west, south, and north of London, we presume that shareholders can be found who are satisfied with these investments. Our estimate of just railway profits is not a very high one, and probably the gains of the Underground Railway will reach that modest estimate. In any case, however, the undertaking, after having been a nuisance for two or three years, may now be fairly praised as a great public convenience. No regard need be paid to the trifling difficulties which have sprung up during the first few days of working. The rumoured choke-damp, the fainting porter, the rawness of the arrangements, the engines with defective smoke-consuming apparatus, and half a dozen other drawbacks, will be remedied as quickly as they are recorded. No railway was ever opened for business in a perfect condition; and when we hear that the Underground Railway was inspected for nearly three months by the officers of the Board of Trade, we are surprised that so few faults can be found in its working. The travelling on the line, on the second day of its opening, was rapid and comfortable. The carriages are broad, and well-lighted with gas; the first-class carriages contain five seats on each side. The lowest fare is threepence for travelling from one end of the line to the other, and the highest is sixpence. Starting from Farringdon-street, King's-cross is reached in three minutes; Gower-street, the next station, is reached in about the same time; and so on to the Portland-road, the Edgware-road, and the terminus at Bishop's-road. The stations, though lighted with a sickly reflection from porcelain tiles, seem well-built, and supplied with every accommodation. The time consumed in the journeys is about one-half of the time taken by omnibuses: and although the fares of these latter vehicles have been very generally reduced, the railway still has the advantage in point of cheapness. Without praising it for engineering points, which are beyond our area of discussion, or joining the cry which hails it as the one traffic reformer of the age, we may congratulate its proprietors on its safe completion, and the public on the possession of another railway.

LE FILS DE GIBOYER.

Under this title there is now being acted, at the Théâtre Français, a comedy, by M. Emile Augier, a writer who had already taken rank as the chief of a school of political dramatists peculiar to France. The piece has excited more than usual interest with the public, as, apart from its merits as a play, it embodies a telling attack against the Legitimists, or Ultramontane party; and its appearance at the present moment, after running the gauntlet of censors, is thought, not without reason, to indicate the political bias, for the time being, of the Emperor; and a wish, perhaps, to show to the public that the appointment of M. Drouyn de Lhuys is not so retrograde a movement as was at first expected. In the present gagged state of the press, any straw which indicates, however faintly, which way the wind blows, is anxiously caught at by a people who, though outwardly quiet, are as certainly eager for change and for political excitement as ever.

The plot of the "Fils de Giboyer" is complicated; it takes its origin in the schemes of a coterie of ladies and gentlemen of the Legitimist party, the heads of which are a Baronne Pfeffers and a Marquis d'Auberive. The Baronne is represented as an artful and ambitious widow who, originally of low birth, has successfully thrust herself into the position of the head of a religious *salon* in the Quartier St. Germain. The marquis, on his part, is a nobleman past the middle age, who has enjoyed life after the manner of the *ancien régime;* he has had a *liaison* in his younger days with the wife of M. Maréchal, a *bourgeois*, who has since become wealthy; the issue was a daughter, the true parentage of whom the marquis is constantly boasting of, and whom he wishes to marry to his nephew and heir, Count Hugues d'Outreville. In order to facilitate this match, and to reconcile the count to such a *mésalliance*, he proposes to raise Maréchal's position in society by getting him chosen by the coterie as their representative in the Chamber of Deputies to lead an attack intended by the clerical party against the University.

The play opens with a discussion of these plans between the Marquis and the Baronne, in which each probes the other's weaknesses with evident pleasure. In the midst of it M. d'Outreville is shown in; instead of the fine specimen of his race expected by the marquis, his nephew turns out to be a lean, ungainly young man, more like a sacristan than a nobleman of the old school; he is a representative of the young Legitimist of the present day, a *dévot*, and of an innocence which almost amounts to idiocy; he quotes Latin frequently, and refers his conduct to the rules laid down by the Père Saint-Agathe, his confessor. The Baronne soon perceives that he is a man likely to suit her for a husband; she wishes to marry, finding that her position, though secure with the men of her party, owing to her personal charms, is insecure with the ladies in consequence of her antecedents; and her ambition would be well suited by a husband who would strengthen her religious claims, at the same time that he would not be strong enough to assert independence. With this aim she at once goes to work, and the Count speedily falls under the spell of her fascination. In the meantime, the Marquis is full of his own plans for his nephew's marriage, and after the ladies' departure discloses them to him, proposing to give the young lady a considerable fortune. The count is at first unwilling to agree, but is not insensible to the money prospects of the match. M. Maréchal, a vulgar toady of the marquis, is delighted with the prospect of such an alliance, and with the task imposed upon him. He becomes a Legitimist on the spot, and employs himself with learning by heart a speech made for him under the direction of the coterie by a literary hack, Giboyer, while his wife occupies herself with flirting with his secretary, Gérard, the son of Giboyer. The daughter, Mdlle. Fernande, alive to the weaknesses of her step-mother, and despising Gérard for the part which he appears content to play, accepts the addresses of the count, in order to get out of the atmosphere of guilt. Gérard, who is far from perceiving the full drift of the advances of Madame Maréchal, is stung by the conduct of Fernande to him, and demands an explanation.

The result of this interview is, that an attachment springs up between Gérard and Fernande, which speedily becomes most violent. Gérard confesses this to Giboyer, who, unknown to him, is his father. This Giboyer is the character of the piece. He is of that wholly genteel order of vagabonds which is so well known in the lowest literary depths of Paris. He is willing to sell his pen to any bidder, no matter of what politics, so long as he has his price. But he has his redeeming qualities, in his strong affection for his son, whom he has brought up under another name, without disclosing his paternity, that he may not share the dishonour of his father. For this son's sake, he is ready to go through anything. To educate him, he has lived in the very dregs of society: at one time as a keeper of an office for the hire of nurses; for two years he received pay for going to prison for a newspaper; he is still ready to do anything, and determines, at any cost, to gain for his son the object of his attachment.

In the mean time the Baronne, intent upon gaining the count for herself, intrigues so as to prevent his marriage with Fernande. She secretly contrives that the coterie shall take from M. Maréchal the duty which they had entrusted to him, and give it to a Protestant deputy, from whom they are led to believe the attack on the University will come with great effect; the speech, therefore, of Giboyer is taken from Maréchal and entrusted to a Protestant.

Digitized by Google

Maréchal is furious; in a scene between him and Giboyer he expresses his disgust, and the latter suggests to him that he should speak on the other side of the question and demolish the arguments of the speech which he had already learned, and advises him to get Gérard to compose this for him. This is done; Maréchal has complete success in the Chamber over his adversary, the Protestant; the Legitimists are furious with him; the match between his daughter and the Count becomes impossible, and is broken off. Maréchal is in an ecstacy of joy at his success; he denounces his quondam friends; he comes forward with the air of one who has just discovered and is announcing a grand moral sentiment, and says, "Je méprise la noblesse; la seule distinction que j'admette entre les hommes c'est la fortune." It is impossible to speak too highly of the foolish air of confidence with which this part is invested by M. Provost. Madame Maréchal is furious; her husband pays no attention to her, he glories in being a *roturier*, and taunts his wife with her low origin; he ends by promising his daughter to Gérard, in order to keep him at hand for the purpose of making further speeches for the Chamber, and the play winds up with Giboyer disclosing his paternity to Gérard and Maréchal, whom not even this degrading connection diverts from his plan. We are left to suppose that the Baronne succeeds in marrying Count Hugues and getting his escutcheon. Enough has been thus indicated of the plot to show that it affords abundant opportunity for the pungent satire of the clever author against the clerical and Legitimist party. More than doubt is thrown upon their morals, their sincerity, and, hardest cut of all, upon their pedigrees. The story is sufficiently immoral to suit the prevailing taste of the Paris theatres; while the only noble sentiments in the piece are put into the mouth of the very lowest of mankind, Giboyer, the pariah of society, the bravo of the newspapers. The piece is throughout a political pamphlet dressed up for the stage, and little disguise is used in the satire which is expended upon Louis Veuillot and his Ultramontane employers. To the honour of French critics, and the Liberal party in particular, who cannot be accused of any sympathy with the party thus abused, they have spoken out freely against Augier—not so much for the merits of his play, as from the feeling that fair play is not conceded to the party who are thus held up to contempt. The author, by carefully avoiding anything which could hurt the feelings of the party now in power, has been able to hit hard a party who have been long *hors de combat*, and who are obviously unable to retaliate upon the stage. It is felt by all the really liberal that a true man could have been better occupied in showing up the same faults that are here laid bare in a party who use them to some purpose, rather than in trampling on the fallen. A play that would show to the public fair samples of the Maréchals and Giboyers of the Napoleonic order would be infinitely more amusing and more telling, and would probably conduce to a speedy overthrow of the dynasty: as it is, the analogy is patent to the crowds who go to hear this play, and it is probable that it will do more harm to the government of the day than to the party whom it was intended to ridicule.

THE PAST WEEK.

The speech of the Emperor Napoleon, at the opening of the French Chambers, reviewed in a few sentences his policy for the last five years. He remarked that people generally are pleased to seek, in the acts of sovereigns, for hidden motives and mysterious combinations; but that his own objects have been simple enough. They have been to increase the prosperity of France and her moral ascendancy, without abusing, but without weakening, the power committed to his hand. Abroad, he has sought to encourage the legitimate aspirations of "the peoples," while observing treaties and international law; to develope French commerce with the countries to which, by a community of interests, France is most closely drawn; to settle the old questions still in debate, that all pretexts for a misunderstanding may be removed; lastly, to pursue the reparation of every insult to the French flag, and of every wrong which a Frenchman has suffered. How, then, have these principles been applied? In the East, by the assistance of the Emperor's Government, the Danubian provinces have effected their union as a single people, in fulfilment of the national wish; while, as for the grievances of Servia, Montenegro, and the Syrian Christians, so far as those grievances were well-founded, he has, without disregarding the rights of the Porte, supported their claim for redress. His arms have defended the independence of Italy, yet he has not made any compromise with "the revolution," nor has he abandoned the Holy Father, whom France, by her honour and by her past engagements, was bound to support; and, except on the actual battle-fields of Magenta and Solferino, the good relations between France and Austria have remained unchanged. The differences with Spain about the frontier and about the old debt of 1823, as well as the difference with Switzerland about the Valley of Dappes, were causes of dispute which have now been set at rest. Treaties of commerce with England, Belgium, Prussia, Italy, and Switzerland, have been or are about to be concluded. The expeditions to Cochin China and Mexico prove that there are no countries so distant as to allow the honour of France to be attacked there with impunity. He could not do all things without some "complications." Nevertheless, France has been aggrandized by two provinces; the barriers which separated her from her neighbours have been lowered; a vast territory in the far East has been opened to her activity; and, what is better than conquests, she has won the sympathy of peoples without losing the esteem of governments, so that the Emperor has had the most friendly interviews with a majority of the Sovereigns of Europe. Nor has the peace of Europe been disturbed by the late events in Greece. With regard to the internal state of the French Empire, he has sought, by a complete amnesty, to efface the reminiscences of civil discord. He has, at the same time, endeavoured to increase the importance of the great bodies of the State. He has called the Senate and Legislative Body to take a more direct part in public affairs, surrounded them with all due guarantees for liberty of discussion, and renounced a prerogative hitherto deemed indispensable, that he might enable the Legislative Body more absolutely to control the expenditure, and that he might give more solidity to the basis of public credit. For the diminution of expenses, the army and navy have been reduced. The floating debt has been lessened, and by the successful conversion of the Rentes, a great step has been taken towards the "unification" of the whole national debt. The revenue from indirect taxation is continually augmented by the increased prosperity of the country, which would be still more flourishing if it were not for the stagnation of one part of the trade and industry of France, occasioned by the American war. It is proposed to ask the Legislature for a grant to relieve the distress of the French cotton manufacturers, who endure, with so much resignation, a misfortune which it does not depend on their Government to arrest. The Emperor, however, has tried to make his counsels, inspired by a sincere sympathy, reach the other side of the Atlantic. His offer of mediation was intended to stop further bloodshed and to prevent the exhaustion of "a country whose future cannot be indifferent to him;" but as the other great maritime Powers do not yet consider themselves able to join him in that offer, he must defer it to a more convenient period. He then mentions different administrative improvements: the army reserve, the reconstruction of the fleet, the institutions for the benefit of the poor, the great public works, the encouragement of agriculture, science, and art, the growth of French colonies, the suppression of negro immigration, the firmer hold of French dominion in Algeria, and the conciliation of the Arabs there. He refers the Chambers to a ministerial report on the situation of the empire, which has since been published. Finally, he charges the members of the Legislature to get through the useful work of their session; and when they go home to their departments, let them promote harmony, spread just ideas, lead the country to rely upon itself, and, of course, to rely upon him, since he is ready to accept whatever may be for the interest of the people. This being the last session of the existing Legislative Body, the Emperor observes that he has not thought proper to anticipate its legal dissolution, for that would have been an act of ingratitude towards the Chamber and of distrust towards the country. The days are gone by when it was requisite to seize a happy incident to ensure the votes of a restricted constituency. There is no longer, in the masses of the French population, the fickleness of former times; nor do their convictions waver with every breath of the political atmosphere. He trusts the electors will send to the new Chamber men like the last, who—accepting without an *arrière pensée*, the present form of government, resolving to avoid vain conflicts and to strengthen the constitution, preferring the stability of the State to the barren contests of party—are, indeed, the truest patriots, animated by the spirit of the age. Such is the Emperor's last political lecture, upon which some comments are made by us in another page. Prince Napoleon's journey to Egypt is thought to have been arranged by order, that he may not impugn the Imperial policy on the Roman question in the debates of the Senate. The *Courrier du Dimanche* has been visited with a third warning by the censorship for an article by M. Prevost Paradol on the coming elections, which will not take place till next September. The *Temps* has got a first warning for an article on the Emperor's speech. The funeral of the late Archbishop of Paris has taken place with great pomp in Notre Dame.

President Lincoln, in fulfilment of the promise or threat of his proclamation in September last, has put forth another proclamation, dated on New Year's Day, to declare all the slaves free in the rebellious States. He says that the United States Government, with its military and naval authorities, will henceforth recognize and maintain the freedom of the slaves. But he does not expressly pledge the military and naval forces of the United States Government to set them free. Those who can make good their escape may be received into the Federal military service for garrison duty, or on board ship. He recommends all emancipated negroes to abstain from violence, unless in necessary self-defence; and to labour faithfully, where allowed, for reasonable wages. He sincerely believes this decree to be an act of justice, warranted by the constitution, upon military necessity; he therefore invokes upon it the favour of God, and the considerate judgment of mankind. The States designated as in rebellion are Arkansas, Texas, Louisiana, except New Orleans and the part occupied by Federal troops; Mississipi, Alabama, Florida, Georgia, North and South

Digitized by Google

Carolina, and Virginia, excepting West Virginia, and the cities of Norfolk and Portsmouth, which are in possession of the Federals. The President has given his assent to the bill for erecting Western Virginia into a separate State.

On the other hand, Mr. Jefferson Davis, the Confederate President, has issued a proclamation ordering that General Butler and the officers under his command shall be put to death as felons, if any of them be captured, in retaliation for the various outrages, a long list of which is set forth, which have been perpetrated at New Orleans and elsewhere. Besides these outrages, President Davis refers to the emancipation decree of President Lincoln, by which the slaves are incited to an atrocious servile war. He directs that all escaped slaves in the Federal army who may be taken prisoners by the Confederates, along with the United States' officers commanding them, shall be dealt with not as prisoners of war, but as criminals against the law of the States to which they belong. But at the very moment when the Confederate President thus denounces Gen. Butler as a robber and murderer, and sentences him to be hanged, the Federal Government sends General Banks to New Orleans to supersede him in his command. This was the final, though it may not have been the original destination of Gen. Banks' expedition to the shores of the Mexican Gulf. He addresses a proclamation to the people of these States, including Texas, which he styles collectively, "The Department of the Gulf," assuring them that the North does not suffer from this war any loss of population or wealth, but that the disloyal South is a prey to desolation. He promises to treat as enemies those who are enemies, but as friends those who are friends; putting no restrictions, however, on individual liberty, except those which the public safety requires. He has begun by stopping the sale of confiscated property at New Orleans.

Among the other political news from America is to be noticed the inaugural address of the new Governor of New York State, Mr. Horatio Seymour, a leader of the Democratic party. He declares that he shall consider it his first duty to uphold the State sovereignty; from which it may be inferred that he will oppose any unconstitutional exercise of authority by the Federal Government. The Confederate steamer, *Alabama*, which has made prize of one of the Californian mail-boats, but without much gold on board, still provokes the alarm of New York merchants and shipowners. Their Chamber of Commerce has passed fresh resolutions, complaining that the war on American commerce, by ships built and manned in Great Britain, is not effectually put down by English public opinion, and by the strong hand of our own Government.

The chief war news this week is, that a fierce battle has taken place at Murfreesborough, in Tennessee, which seemed to turn against the Southerners, though we are not sure, from the last reports, what would be the actual result of it; the Federals, however, claimed to have broken their enemy's centre, forced the entrenchments, and driven them back for a mile. The fighting had lasted three days, and was not yet done. The Federals, namely, a portion of the force of gunboats and troops on board the transports, with which General Banks entered the Mississippi, have made an attack on Vicksburg, and bombarded that town for three days, but were each time repulsed with heavy loss. The guerilla Captain Morgan, notorious for his feats of audacity, has been defeated in Kentucky, but got away with the loss of a few score of his men.

The Prussian Chambers have met once more, when a royal message, or speech from the throne, was read to them by Count Bismark Schönhausen, the Prime Minister. The King says it is his wish to come to a fixed understanding with his Parliament upon the questions left unsettled in their last session. Having just declared, in his reply to the municipal address of Berlin, that the present state of things, "which they call a conflict," proceeds from a confusion in the minds of the Chamber of Deputies, and that he will allow nobody to doubt his sincere intention to preserve the constitutional charters of the country, his majesty now addresses the representatives of the people. They must abide, he says, by that position which the constitution assigns to them, and all the different branches of the legislature must respect, mutually, each other's constitutional rights. He promises that his Ministers shall lay before the two chambers a communication in reference to the revenue and expenditure of last year, and ask a Parliamentary sanction for those expenses which have been incurred without their previous consent. The Government will also submit to the Chambers the modified budget for 1863 and the budget for 1864, and propose an alteration in the law of military service. The Government is resolved not to postpone the advantages of the commercial treaty with France after the expiration of the Zollverein treaties.

Some more despatches on the Roman question are published. It appears that England has proposed to the Pope to withdraw to Malta; and on the 20th December, in an interview with Monsignor Chigi, the Papal nuncio, M. Drouyn de Lhuys expressed a hope that in the event, which he trusted might never happen, of the Pope being compelled to leave Italy, his Holiness would retire to France in preference to England. Again, M. Drouyn de Lhuys points out complaints made by England of armaments going on at Rome, and that 600 Austrians and Bavarians had been sent from that city into the Neapolitan provinces in uniforms much resembling those worn by French troops. In answer to this, the French ambassador at Rome, the Prince de la Tour d'Auvergne, states that, having made inquiries, he believes himself justified in denying the statement that these 600 Bavarians and Austrians had been sent from Rome. M. Drouyn de Lhuys, on another occasion, replies to the complaint made by England, that the presence of the ex-King of Naples, Francis II., encourages brigandage in Naples. He expresses his regret that Francis II. has persisted in remaining at Rome. He adds that the French Government has not hesitated to express its opinion upon this subject to the ex-King; but the English Cabinet will understand that France cannot use the authority she possesses in Rome to bring about the compulsory removal of the ex-King, which she desires to effect by persuasion only. Prince de la Tour d'Auvergne states that Mr. Odo Russell, during the Christmas fêtes, renewed his proposal to the Pope to leave Rome, expressing regret that the offer of England had not been accepted, and adding that he had reason to believe His Holiness would very shortly find himself forced to profit by it. M. de Sartiges, the French ambassador at Turin, states that he has had an interview with Signor Pasolini respecting the declaration that no agreement was possible between France denying Rome to the Italians, and Italy unalterably bent upon acquiring Rome. Signor Pasolini replied that for the present the question of Rome must be laid aside, although the new Ministry shared the opinion of the country, that Rome was the natural capital of Italy.

At home, we have had no events of any importance this week. Parliament has been finally prorogued to the 5th of February, when the business of the country will recommence. Sir Charles Wood, along with Mr. Stansfeld, the other M.P. for Halifax, has made a speech to his constituents, taking credit to the present Government for whatever has been going on well. He touched on the commercial treaty with France, the state of our national defences, the moral support given to Italy, and the tranquillity with which a change of rulers had been effected in Greece. He justified the prudent refusal of our Government to mediate between North and South, in the dreadful American struggle. He wished he could see any prospect of its speedy end. He admired the fortitude of the suffering Lancashire people. As for getting a sufficient cotton supply from India, that was a mere question of price. If it were made worth while for the ryots in India to grow cotton, they could do so to any extent. It was not for the Government to grow cotton; it had been suggested, however, that the Government should offer a premium on the exportation of cotton from India, or that land growing cotton in India should be exempted from the land-tax; but as he had to consider, not the benefit of Lancashire, but the benefit of India, he could never be a party to such a proceeding. The Indian public works were progressing so fast that, by the time next year's cotton crop was ready, two main roads would be ready for its transport. No less than eleven or twelve millions sterling of the Indian revenue had in the past years been expended on public works.

Mr. Kinglake, speaking to the Bridgewater electors, thinks this country has had a lucky escape from being mixed up with the Mexican affair; France has been guilty of a base and wicked fraud. He hesitates to approve the cession of the Ionian Islands.

Archbishop Whately has written to Mrs. Harriet Beecher Stowe, telling her that those in England who do not sympathize with the party of the North in America have as much dislike to slavery as she herself can have; but they understand that the war is waged, not for the abolition of slavery, but for the restoration of the Union, and they think that the Southerners have a right to claim their independence. He recommends, for the safe and effectual emancipation of the slaves, the plan of Bishop Hinds, that there be an *ad valorem* tax upon slaves, their value to be fixed by the owner, and that the Government have the option of purchasing their freedom at that price. He fears, however, that the time is gone by for trying this experiment in America.

Mr. Bright has been speaking to the Birmingham Chamber of Commerce, at their annual dinner. He touched on the question of further changes in the maritime law of nations, and the abolition of commercial blockade. He thought it very wise of our Government to give up the Ionian Islands, and would also give up the rock of Gibraltar, with a view to closer amity and commerce with Spain. In reference to the "strange paralysis" of our Lancashire cotton industry, he complained that Lord Russell and Mr. Gladstone, by their careless predictions of the speedy triumph of the Southern Confederacy, had checked the commercial demand for Indian cotton, and thus discouraged its supply. He denounced the "folly and malice" of the *Times* in its treatment of the North.

The Duke Ernest of Saxe Coburg, Prince Albert's elder brother, who has been named by the Austrian papers as the new candidate proposed by England for the throne of Greece, is now stated by *La France* to have declined the nomination.

The Italian government has put an end to the exceptional powers vested in the provincial governors of Naples and Palermo since Garibaldi's last escapade.

Sir Henry Bulwer, dining with the English residents at Alexandria, praised both the Sultan and the Viceroy of Egypt for their equitable and reforming policy; but he ridiculed the project of the Suez Canal, and said that, if Said Pasha was so amiable as to be taken in by that scheme, he ought to pay for it out of his own private purse.

The Directors of the Bank of England have raised the minimum rate of discount from three to four per cent. This movement has tended to confirm the check to the stock market, but has not produced any bad effect.

The Great Western Railway has come to a most important agreement with the London and South Western, and the London and North Western Companies. They are henceforth to desist from injurious competition, to suit each other's convenience, as well as that of the public, in their traffic arrangements, and to refrain from unnecessary expenditure in the making of new lines.

Reviews of Books.

THE SCIENCE OF LANGUAGE.*

The publication of the third edition of Mr. Max Müller's "Lectures on the Science of Language," is a nearly unexampled instance of the success which may be obtained by a scientific book written so as to be popular in the true sense of the word. It gives the pith of most abstruse studies in a form intelligible to any person of fair education, and explains their connection with topics of wide and lasting interest to mankind. Philology, in the technical sense of the word, can, from the nature of the case, interest only a few persons largely provided with special knowledge; but every one who cares to attach any sort of accurate or definite meaning to his words must be interested in knowing the general nature of language, the great instrument, and, in some respects, the master of thought. It is from the extreme richness and variety of knowledge with which it handles this topic that Mr. Max Müller's book derives its principal interest. It may be well to describe shortly the general character of the author's doctrines, before considering the inferences to be drawn from them. They are as follows:—

The science of language is physical and not historical; that is to say, its changes are regulated not by conscious efforts of the human will, but by hidden causes independent of it, the operation of which is capable of being explained by fixed principles. The most important of these are two, namely, phonetic decay and dialectic regeneration. Phonetic decay is the process of clipping and changing words by use which is continually in progress; as for instance, when the abbreviation "'bus" takes the place of "omnibus," or when "cab" is substituted for "cabriolet." Dialectic regeneration is the process of inventing new words, a process which goes on to some extent in the most civilized literary languages at the period of their fullest maturity; as in our own time and country such words as "shunt" and "nugget" have been added to the dictionary. Amongst barbarous tribes it proceeds so rapidly that some of the dialects of South America and South Africa have been known, in the course of a single generation, to lose their identity and become altogether unintelligible to those who had studied them carefully at the beginning of that period. The energy with which these processes are carried on varies inversely with the degree of civilization and literary cultivation with which a given language is associated. It is at a maximum at such a period as that of the dissolution of the Roman Empire, at a minimum at such a period as our own. By studying the ways in which the two processes are carried on, several operations may be performed which, till within the last forty years, were not suspected to be possible. In the first place, the genealogy of different languages may be traced. It may be shown which tongues can be proved to have had, in point of fact, a common historical origin; and some highly curious observations may be made upon the time when one was derived from another. In the second place, languages may be classified according to their form, that is, according to the ways in which words are clipped or invented. In the third place, the original component parts of language, its ultimate atoms, so to say, may be demonstrated by analysis; and some opinions may thus be formed on philosophical problems of the highest interest which have hitherto been treated in an arbitrary manner. Some conclusions on each of these points appear to be established even in the present state of the science of language. Most of the languages spoken in Europe, Asia, and Africa, if not all of them, may be arranged genealogically, though there are some, with regard to which this is not possible. The distinction is that, in some instances, the difference between languages with a common origin has been made by phonetic decay—by clipping and garbling the old words; in others, by dialectic regeneration—by inventing new words. In the first case, it is generally possible to trace a connection between different members of the same family, as what were once words come to be grammatical forms, varying slightly according to circumstances. For instance, many grammatical forms in Sanscrit, Greek, Latin, Spanish, Italian, and French, are all corruptions of words more ancient than any of these languages, and the common ancestors of them all. On the other hand, where the difference has been made by the invention of new words, it is very possible that there may be no similarity between the result, as the inventions which happened to suit the genius of different races and nations may have been altogether unlike each other. The best marked families of languages are the Aryan, the Semitic, and the Turanian. Of the Aryan, the Sanscrit is the most ancient existing member, though its structure affords traces of predecessors still more ancient. Most of the languages of modern Europe, and many of those spoken in the Indian Peninsula, are junior members of it. The Semitic family includes Syriac and Chaldee, Hebrew and Arabic. The Turanian family is rather a general name than a family proper, as the derivation of its different members from each other or from a common stock is not well made out. It includes the different languages and dialects spoken by the wandering tribes of Asia.

By analysing languages of all these families, it has been discovered that all known languages may, finally, be traced up to certain roots. They are all monosyllabic, and are of two classes,—roots predicative and roots demonstrative. A predicative root conveys some thought; a demonstrative root connects that thought with some determinate object. For instance, the word "*lux*" consists of the predicative root "*luc*," which means "to shine," and the demonstrative *s*, which means "there;" so that *luc-s* means "shining there," or light. This result is in many ways most important. One of its consequences is, that it forms the basis of a classification of languages according to the way in which their roots are combined. In some languages the predicative roots are used as words—either substantives, verbs, adjectives, or adverbs. This is especially the case in Chinese, in which every word is a syllable and every syllable is significant, taking its meaning from its position in the sentence. When, for instance, a Chinese wants to say "men," he has no separate grammatical form to express the plural, but does so by saying "man-many." Our own word "man-kind" is exactly like Chinese, and the whole language is formed in this way. Chinese is the only language which still remains in this perfectly primitive stage. As soon as any of the roots of which language is ultimately composed cease to have their original meaning, and become mere signs of derivation or case, the language becomes what is called "agglutinative." It consists, that is, of roots preserved in an entire and significant state, but succeeded by other roots which, though still partially significant, act principally as terminations. The peculiarity of such languages is that the original root is always maintained in a distinct and significant shape. Languages in which all the roots run into each other (as in the Aryan languages), so as to form inflected words, are said to belong to the inflectional stage. The distinction is illustrated by such a word as "age." The original root is the Sanscrit "æ," life. Hence come *æ-vum*, *æv-itas*, *ætas*, *ætaticum*, *edage* (old French) *eage*—age. In an agglutinative language the æ would have been preserved unaltered through all these changes, whatever syllables might have been affixed to it. In the Aryan languages, through which it passed from Sanscrit to French, it was absolutely lost.

This double classification of languages by family and by form leads ultimately to a most curious result. Every known form of human speech, and therefore of human thought, comes at last to be exhibited in the form of artful combinations of a surprisingly small number of roots. Mr. Max Müller thinks that Sanscrit can be reduced ultimately to about 500 roots, from the combinations of which all the languages of the Aryan family may be derived. Strange as this may sound, it is rendered not merely credible, but in a certain sense conceivable, by illustrations which show the wonderful variety of purposes to which a root once formed is capable of being applied. For instance, the root *spec* means to look; hence come the English spy, the looker, the Greek σκεπτ,—whence sceptic, an examiner or inquirer, and episcopos, an overlooker or bishop; respectable, or one who is worth looking back at; with respect to; respective; respite, the looking back on a case; despise, looking down upon; suspect, looking up at from below; circumspect; prospect; aspect; auspicious; speculum, a mirror, whence speculative; species, special, specify, and a thousand other words of the most dissimilar meanings. This illustration shows that a small number of roots would go a very long way towards providing the number of words required even by the richest languages. It lends directly to the two deepest and most interesting problems connected with language, its origin and its exact meaning.

With regard to the origin of language, it may be and has been asked how came *spec* to mean to see, *ar* to plough, *dâ* to give, and so forth? The answer which the investigations partly made and partly recorded by Mr. Max Müller afford to this question, is partly negative and partly positive. One popular theory on the subject was that all words were originally interjections, exclamations of surprise, pleasure, or the like, forced from the primitive men by the contemplation of the world around them. According to another they were imitations of sounds, such as the cries of animals, the splashing of water, the breaking of wood, &c. Each of these theories is exploded by the discovery of the fact that the oldest words are verbs and demonstrative particles. It is impossible to suppose that the meaning "to see" was affixed to the syllable "spec" either by imitating any natural noise, or by systematizing any exclamation. All that can be said is, that in point of fact, at the greatest distance we can reach to, we find that people did use the word "spec" in the sense of seeing; and this is an ultimate fact, beyond which, for the present, we cannot go, and on which we must be contented to rest. Whether we can go further and say that there was a time when the whole human race used the word "spec," or some other such word in this sense, and whether all languages can thus be reduced to a common origin, is a question on which, at present, science says nothing either way. Mr. Max Müller thinks that it is possible that the affirmative may be true, though there is no positive proof of it. Two things, however, appear to be clear, namely, that the formation of words to denote things is natural and peculiar to the human race, as a certain form is natural and peculiar to them; and that the earliest sounds which they used for this purpose were sounds bearing the meanings already stated.

To persons unaccustomed to metaphysical inquiries, these may not appear to be very important discoveries. Should they be fully verified and stated with precision they would, in fact, go far to revolutionize all metaphysical and philosophical inquiry. They afford the first glimpse of a possible solution of the questions which have exercised for centuries the curiosity and ingenuity of philosophers, about the nature and origin of knowledge; and which have hitherto so completely baffled the subtlety which has been

* Lectures on the Science of Language, delivered at the Royal Institution of Great Britain in April, May, and June, 1861. Third edition. By Max Müller. Longmans. 1862.

Digitized by Google

devoted to their study that they have been viewed rather as topics fit only for a very early age than as subjects deserving of serious inquiry. The greatest question of this class has always been whether ideas are or are not innate. Now, it is perfectly clear that all our thoughts are limited by and clothed in language, and that men can no more think without words than they can breathe without air. Knowledge is only a kind of thought; knowledge, therefore, is dependent on language, and therefore if we can arrive at the origin of language we arrive at something very like the origin of knowledge. Now, suppose it is proved that there once was a time when human beings opening their eyes and ears to the world around them, said "luc," and thereby conveyed to each other the notion of "shining," and -*s*, and thereby conveyed to each other the notion of "there," it would follow that the origin of all knowledge was the combination of sensible experience with some mental power for which we have no name, and which we can hardly represent to our imaginations. It will also follow that all knowledge was at first vague in the highest degree. "Spec" may have meant, in general, "to look," and "ar" "to plough," but who can affect to say or even to guess what the precise meaning of looking or ploughing may have been? Was "spec" equivalent to the English word "look," or to the word "see," or to "stare," or to "gaze"? Did it convey any meaning to a blind man?

To attempt to answer such questions would be obviously absurd. It seems natural to suppose that the original roots were, like the language of a child, ductile and indefinite, though, probably, extremely vivid. Even after the first stage was past, and roots had been combined into regular words, many of the most important words—perhaps most of them—were metaphors, sometimes exceedingly striking. "Man," for instance, means "earthy" or "mortal"—he who is of the dust, he who dies. Sin is "the throttler," and so on. Hence it would appear that to the first burst of vague though vivid names applied to particular acts, succeeded a set of metaphors assigned as names to objects; and, by degrees, experience and the multiplication of wants introduced the wonderfully elaborate and accurate languages of modern times. The inference from all this is most important. It is that there is no foundation for the doctrine of innate propositions which have a transcendent authority of their own, and are exempt from all criticism, and the arbiters of it. If language was originally made up of the vaguest kind of verbs, and grew by degrees into a series of hardly less indefinite metaphors, it is idle to try to arrive at the ultimate truths from which all lower truth is to be inferred, by seeking for a set of verbal propositions known to be true by internal consciousness. Nothing but a proposition can be the subject of belief. Every proposition must be expressed in words, and all words can, in some way or other, be examined and accounted for, and shown to be attempts to reduce to a definite meaning some vague name or poetical metaphor. In other words, knowledge lies before, and not behind us, and must be reached by applying our faculties to the things without, and not to the words within us. Words are of inestimable value as the records of what we have learnt by observation, but it is by further observation only that we can learn more.

THE CHANNEL ISLANDS.*

The work before us contains a very full and interesting account of a remarkable district. It is divided into four parts, relating respectively to the Physical Geography, Natural History, Civil History, and Antiquities, and to the economical characteristics of the Channel Islands. Each of these divisions is interesting, and the book is also handsomely printed and illustrated by very beautiful woodcuts from the drawings of Mr. Paul F. Naftel. It seems strange that there should be so much to be said about such a very small place. It is almost impertinent for a population of ninety thousand people to have a history of their own, two constitutions derived from time immemorial, and to consider themselves entitled to all the peculiarities of independent states. Thus we find that they have a currency of their own. The Jersey pound is about equal to 18s. 5½d, and the Guernsey pound to 19s. 2½d. The Jersey pound, again, is 1·08 lbs. avoirdupois, and, what seems more remarkable, as it appears at first sight to involve even an insular system of mathematics, the Jersey square foot is a space twelve Jersey inches in breadth, each such inch being twenty-four Jersey feet long by one inch broad. Of all ways of claiming independence, this seems to be one of the most irrational. They have, however, more interesting national characteristics than these, and an excellent general notion of them may be obtained from the volume before us.

Their geographical position would alone be enough to give them an interest, even in the absence of other advantages. By the possession of a strongly fortified position on these islands, we should go a long way towards obtaining an absolute command of the Channel in time of war. The fact has been acknowledged, but the way in which we have acted upon it can scarcely be called satisfactory, especially by financial reformers. At an enormous expense, nearly a million sterling, a breakwater has been built which has secured the different recommendations of having to be built up in water twenty fathoms deep, of cutting across an excellent anchorage, and of making an inconvenient harbour. It has also involved a great deal of blasting and clearing out of rocks to make the harbour secure. In addition to this, we have the pleasant reflection, that though the accommodation is far less and far worse than it ought to have been, it would be impossible or absurd to stop the works in their present state. As we have waded so far in we may as well go right through and secure such advantages as are to be obtained, and which will no doubt be considerable. The cost of the forts necessary to defend five miles of coast in one part of the island and two miles in another might almost suggest the idea that it would have been cheaper to build an impregnable island from the foundations in some more favoured spot. It is, however, doubtless agreeable to have an effective harbour and fortress so near Cherbourg. It would be a convenient place for our gunboats or iron-clad steamers to collect; to take in coal and stores; to refit and be ready for an enemy issuing from the fortified harbours of France. Whenever this should become necessary the Channel Islands may make a more conspicuous appearance in warlike history than they have hitherto done. The only occasion in modern times on which they have been the subjects of invasion was the attack on Jersey in 1781. The French passed through a difficult channel by the help of a treacherous pilot, landed by night, and before daylight had marched into the market-place at St. Helier's, and seized the lieutenant-governor. Having got him, they determined apparently to make the best of him. They not only forced him to sign a surrender, and to order the royal troops to confine themselves to their barracks, but put him in front of their own lines as they marched up to attack Elizabeth Castle. Fortunately the English troops do not seem to have attached too high a value, under these circumstances, either to the governor's commands, or his person. They laughed at the capitulation, attacked the French, and drove them into the market-place, where they were compelled to give themselves up as prisoners of war. The notices of former wars in the islands are not numerous, and, indeed, if we may judge from the results of Dr. Latham's industry, we may say that remarkably few events seem to have happened in the islands at all. That there was a naval battle off Guernsey in the reign of Edward III.; that Mary burnt some of the inhabitants for being Protestants, and Elizabeth punished others for being Papists, seem to be the most startling facts he has to mention. We next have a fragment of a poem by the famous Prynne; not unlike in style to a celebrated prize poem whose first lines are:—

> "There is an island in the Western seas
> (At least I've heard so) called the Hebrides."

Prynne begins:—

> "Mount Orgueil Castle is a lofty pile,
> Within the eastern part of Jersey Isle;"

and informs us that—

> "The castle's ample, airy, healthy, and
> The prospect pleasant both by sea and land."

The history became a little more exciting in the Civil War, when Jersey took the royal side and Guernsey the parliamentary. Dr. Latham modestly states that he is unable to explain this difference in political feeling. We should say that Guernsey was probably against the King, because Jersey was for him, and *vice versâ*. The loyalty of the inhabitants of Guernsey is amusingly displayed in two petitions; in the first, they inform Richard Cromwell that, "having shared the general consternation" on the death of his father, "they have also participated in the great exultation which possesses the hearts of all who profess piety" at the accession of Richard, and suggest that they would like 1,000 tods of wool yearly. In the next petition directed to Charles II., who had sent them a pardon for their submission to usurpers, they state "that we can never sufficiently admire and acknowledge your majesty's incomparable goodness and mercy towards us, for which we bless God and your majesty, devoting ourselves and services, and all that is near and dear to us, to your majesty's service." The men of Guernsey evidently knew how to behave to the ruling powers.

Of the earliest historical period in the islands we know but little; and the tendency of Dr. Latham's remarks is to make the little that we do know more doubtful. There was, indeed, a famous Saint Helerius, who gave his name to the town of St. Heliers, in Jersey, and who seems to have been a jovial character. He once, it seems, dug two holes, knee-deep, filled them with freezing water, laid sharp stones at the bottom, and stood on them till his feet bled. To prevent himself falling backwards or forwards, he erected a board at his back, with two sharp nails projecting behind each shoulder-blade, and in front of him he placed a platform full of awls. We are hardly surprised, after this, to hear that, when a snake had crawled down a man's throat as he lay asleep with his mouth open, an accident of frequent occurrence, it immediately crept out again at Saint Helerius's request. But as to who were the original inhabitants amongst whom the said saint preached we have little or no information. We are told, indeed, that in the year 515 A.D., the Chattuarii, who inhabited Normandy, were attacked by the Northmen under Chochilaichus; but whether Chochilaichus ought to be called Hugleikr, a Dane, or whether he is not rather Theodoric, King of the Franks, seems to be questionable. Doubt is even thrown upon the pedigree of Rollo, the ancestor of William the Conqueror, and finally we are left to choose between nine different origins of the population, all of which may have had some share in the honour of being the forefathers of the Channel islanders.

Without prying into these questions of remote history, the present inhabitants seem to be a prosperous race. Their lines may be decidedly said to have fallen in pleasant places. The mildness of

* The Channel Islands. By D. J. Ansted and R. G. Latham. Allen & Co. London. 1862.

Digitized by Google

the climate is specially favourable to the cultivation of fruit-trees. We are told of the great Chaumontel pears, of which those weighing 16 oz. are considered first-rate. But one monstrous pear, the giant of his race, was grown at Laporte, in Guernsey, in the year 1849. It measured 6½ inches in length, 14½ in girth, and weighed 38 oz. What are the gigantic gooseberries or huge turnips of the country newspaper, compared with such noble fruit as this? Besides these pears, grapes, apples, and other fruit, and large quantities of early potatoes, are important articles of export from Jersey and Guernsey. A considerable quantity of cattle is also exported. We are told, however, as a useful warning, that the whole stock of cattle in Alderney does not exceed 400 head. The greater part of the animals sold in England as "Alderney cows" consists of small Breton cows, worth little more than £5 in Brittany. The chief attractions, however, of the islands to English visitors are the mildness of the climate and the beauty of much of the coast scenery. The peculiarities of climate resemble, in a general way, those of the West of England. A general mildness and equability of temperature prevail. The summer is cooler than in England, but autumn is warmer, and prolonged into those months which in England are regarded as mid-winter. The daily range of temperature is remarkably small. The average daily range of different months in Guernsey varies from 6·1° in November, up to 11·6° in June; whilst at Greenwich, the greatest range is in July, 21·3°, and in the least is 9·5° in December. One peculiarity, due to the climate and position of the islands, is the beauty of the sunrises and sunsets, and especially of the latter. The most striking part of the island scenery is the bold and varied line of coast. A fine example of this is the vertical wall of rock which surrounds the little island of Sark, which forms a kind of tableland, some two miles in length, and at an elevation of 350 feet above the sea. This cliff is everywhere penetrated by caverns, vaults, and tunnels, where the action of the waves has gradually eaten away the softer parts of the rock. The most singular of the natural wonders thus formed is called the Creux du Derrible, and is a kind of natural shaft communicating with the sea, and opening above into a field. At high water the foam of the sea rises high up this chimney, and in former times, when the rock had not crumbled so much and the entrance was narrower, used to be splashed up to the top in severe storms. Close to this is the singular little Creux harbour, formed by a breakwater, which only leaves space for one small boat to pass. Even from the breakwater, no way of approaching the interior of the island discloses itself. The united wisdom of the Lords of the Admiralty, who recently landed on this breakwater in the course of a tour of inspection, was incapable of discovering the artificial tunnel by which alone the road can be reached. They were compelled at last to give the case up as hopeless, and returned on board in search of less difficult landing-places. These peculiarities of scenery are, of course, due to the geological characteristics of the island. They are composed of a succession of spurs of porphyrite rock pointing westwards, and denuded by the action of the sea of all the covering of stratified rocks which they may once have possessed, except a patch here and there in sheltered positions. They are the mere bare skeleton of the varied structure which we see elsewhere. But the comparative anatomy of the coast, as of its inhabitants, is best to be learnt from its skeleton. The points of interest are thus numerous, though, as Mr. Ansted says, "at the two extremities of the geological scale." They are illustrations of the mode of production and change of crystalline rock and mineral veins on the one hand, and, on the other, of the most recent changes that have taken place on the earth. We can observe the causes of the stratified form of the crystalline rocks; the nature of the fissures and veins which have split them up; and the changes of elevation, depression, and weathering to which they have been subject. On the other hand, we find also an admirable ground for the study of those phenomena, which form, as Mr. Ansted says, "the very grammar of geology." The deposit of beds of peat, of rolled pebbles, and stratified sand, the way in which such deposits are broken up and altered, and the effects of small upheavals and depressions imperceptible to the eye, are all admirably illustrated.

In addition to a very excellent account of the geology of the islands, we have extremely full information given as to the botany and zoology, with lists of all the species known to exist. The study of the rocky bays and pools which surround the shores of every part of the Channel Islands supplies unbounded wealth of material for the observer. "The great range of the tide, the complicated character and gloom of these vast natural vaults, whose deeper recesses are not accessible more than a few hours in the year, are among the causes of this wealth. They may, with truth, be regarded as the '*grüne Gewölbe*' of the Channel Islands. They are green treasure-houses, where, instead of the stores of Mediæval art, such as are lavishly spread out in the chambers so named in Dresden, we find all that is brightest and richest and most varied in Nature's work."

In conclusion, we may safely say that no one can visit the Channel Islands without finding very much to interest and inform in the work before us.

THALATTA.*

This volume is more of rhapsody than a romance: it consists of a number of well written and spirited studies on almost every subject in the whole range between the two titles which stand on its opening page. There is a great deal about the sea, a good deal about politics, and a good deal about everything that a highly-trained, polished, and rather humorous mind comes across in a journey from a fishing village on the coasts of the Northern Ocean to a prime minister's reception-room in Downing-street. The author is a lover of Oxford, an admirer of Mr. Disraeli, and a profound believer in "men" as opposed to "measures." Modern liberalism seems to him but the political tinkering necessitated by the absence of a commanding nature, and of a moral will, which might secure the confidence even of dissentients. The hero of the story is an ideal creation, for which the characters and careers of Pitt, Canning, and Sir Robert Peel, have been alike laid under contribution. The story is slight, uneventful, and indistinctly told: many passages skirt the region of absolute absurdity, still more violate every principle of dramatic likelihood; so far from keeping out of sight, the author hardly ever leaves the stage, and forbids us for an instant to forget that he is close at hand. Such a volume might easily have been detestable; but "Thalatta" has been rescued from such a fate by various redeeming qualities, and is on the whole extremely pleasant reading. In the first place, such narrative as there is breathes a true pathos and energy. The word-painting—for word-painting it certainly is—is careful, vivid, and effective. There is a description, for instance, of a storm overtaking a fleet of fishing-boats, and of the loss of one of them, which is admirably life-like and natural. One of the sailors on board has parted with his sweetheart in a huff, and the interest of the scene is made to centre upon the catastrophe, which removes the possibility of reconciliation. The evening is fine and still, but a strange murmur in the air, and the fitful glimmering of the northern lights, predict the approaching disturbance. "Swiftly the fire of fight gathered along the northern horizon—swift charges—swift retreats—a kindling onset, as the northern chivalry swept the field and the shadowy shafts of the archers rang against their burnished corslets, until the battle streamed away and was lost upon the distant firmament behind the northern star."

One by one the sleepers awake, to find the gale rattling fiercely from the north, the huge white breakers sweeping across the bay and roaring hoarsely on the coast, and "here and there amid the tumult a solitary boat visible—a scrap of sail hoisted on one of the masts, the other bare of canvas—plunging deeply and heavily among the waves, and vainly attempting, by lying close to the wind, to escape the rocky headlands." Gradually the night darkens, the white ridge of surf marking the line of rocks outside the bar alone stands out distinct, and an agonized crowd of on-lookers, in all the anguish of suspense, gathers on the beach to watch, as one by one the struggling craft outside are hurried by the fierce swell round the weather-pier, and the crews as they sweep past the light and the troubled faces of the crowd, pull down the sheet that has just saved, and in a few seconds more would destroy them. Then follows the appropriate tragedy. One of the boats has just eluded two heavy waves that broke close upon its bow, and is nearing the harbour mouth, when the rope that holds the sheet gives way, and the doomed craft in an instant is swept away like a cork towards the line of breakers.

"An involuntary cry of horror escaped from the crowd. They saw the steersman rush from his seat in the boat and make a vain attempt to clutch the sheet ere it escaped; they could almost hear the deep and bitter curse which broke from his lips at the ill luck or folly which had delivered them up to death. They could note this, but little beside, for the tragedy was consummated with terrible rapidity. The oars of the men were of no avail against the deadly gripe of the current, and although they strove gallantly for life, it was clear from the first that they were drifting hopelessly to death. A rope, as they were hurried past the pier-head, was flung to them, but it snapped like a reed before it could be fastened. Past the sickened on-lookers they went, not thirty yards away, the light streaming on the white horror of their faces, as they struggled helplessly with their oars. The next wave that broke upon them bore them out of sight, and shivered the craft against the Witches' Rock.

"'Merciful heavens!' some one exclaimed as the light fell upon the steersman's pale, resolute face, 'it's young Peter Stephen.' What cry is that? It is the cry of a despairing woman—of a woman whose heart is broken. Poor Elsie!"

Scenes like this look less impressive when transplanted from the surrounding circumstances, which give them verisimilitude by surrounding them with a natural and appropriate colouring; and the art of a story-teller consists very much in introducing them at a judicious moment, and in gradually preparing the mind for their reception. It is scarcely a disparagement to the author to say that these portions of his work are infinitely better done than those in which he forgets the artistic evolution of his plot, and abandons himself to the casual meditations to which its incidents give rise, or throws so transparent a veil over the personality of the performers, that it is impossible not to recognize the same individuals using one after another as the mouthpiece of a favourite sentiment or a momentary mood.

Sometimes in this way really excellent scenes are spoilt by the dramatic proprieties of the occasion being neglected in order to allow the author to indulge in a little sentimental sermonizing, to air some favourite fancy, or be borne along on the gentle current of a well-trained, polished, and half good-natured cynicism. On one occasion, for example, we have a description, first, of an opera at Venice, and then of a supper-party afterwards at the rooms of the prima donna. Nothing could be more spirited and vigorous

* Thalatta: or, The Great Commoner. A Political Romance. Parker, Son, and Bourn. 1862.

Digitized by Google

than the one, scarcely anything more languid and unnatural than the other, for the simple reason that in the first scene the author is thinking about the personages of the story, and in the second about himself and his lucubrations. Here is the entrance of Catarina as Lady Macbeth upon the stage.

"She had little to say—a few passionate words of anger and entreaty; but the vignette was perfect in its way; an elaborate picture could not have been more curiously finished. She stood before the house for one breathless moment, a white-armed fury; very beautiful, but fierce and merciless as the panther, as, raising her white arms, she points pitilessly to the chamber wherein lies the king. Such an arm! I have never seen its match. It spoke to the people expressively, eloquently as her face. What often becomes an incumbrance to an inferior artist, was with her the highest spell of her craft. In its strained and agitated muscles you could read anger, contempt, defiance, detestation; most womanly weakness, when, at the end, it dropped exhausted and helpless by her side. She cast it up to heaven, and its grand vehement curve invoked the vindictive gods; it clasped the neck of her Roman lover with the passion and tenderness of an Italian Aphrodite."

Those who have shuddered at Rachel in "Les Horaces," or at Grisi's famous oath-scene in "Don Giovanni," will be at no loss for the originals of the sketch, and will readily admit its forcible reality. The last act is still more exciting:—

"She had taken off her jewels and the rich robes which befit a noble's wife; there is nothing save her white night-gear around the queen. Her small feet are bare; and though they are blue with cold, the marble floor does not chill her. She advances coldly, calmly, stilly—like the visitant of a dream. What wants the queen? She knows well, no doubt; for there is neither hesitation nor embarrassment in her gait. But look into her eyes. They are blank, expressionless, like a statue's. The lamp is there, but the light has been extinguished, or rather inverted, turned in, to illumine that inner life men call the conscience. For see, a spasm of pain contracts the pale lips, and the white hands wring each other in a fierce pressure. 'Out, damned spot.' 'Tis in vain. That white arm and that little hand, all the perfumes of Arabia will not sweeten again. Ay! she knows it. She will give up the fight. The fever has devoured her life, and the damned spot has eaten into her soul. What a sigh is there! 'Twas that sigh snapped the heart-strings. Back to bed, fair queen, an you list; but it matters not. The hours are numbered. No man or woman could groan that bitter groan and live. So the pale apparition passes away to her doom,—pale, but with the flush of pain still upon her cheek."

A supper party with a young lady who could act like this, ought, one would think, to have been amusing; but the guests whom Catarina had invited to her table, behave like the young ladies and gentlemen of the Sir Charles Grandison epoch, discuss high art and high morals with a chilling propriety, season their talk with classical quotation and historical allusion, and are, on the whole, a great deal more pompous, well behaved, and well informed, than anybody at a *petit souper* has the least right to be. Catarina herself, though she is described as "brilliant and bewitching, saucy, bitter, tender and pathetic, as the mood changed," adds but little to the enlivenment of the narration, and winds up a rather chilling festivity by carrying off her guests to the Duomo, and behaving in an extremely hysterical and uncalled-for manner before one of the shrines of the silent and dimly-lit edifice. All this is unnatural enough, and the author is of course far too sagacious not to perceive it. The supper parties of famous actresses are not, as a rule, devoted to ethical and political discussions, nor do they usually conclude with devotional visits to a neighbouring cathedral; and if the author's good taste and refinement disincline him from depicting the scene as it would naturally present itself, he may reasonably suspect that he is travelling out of his appropriate limits, and occupying himself with a subject-matter which involves the abandonment either of truthfulness or propriety. He appears on the stage and gives a monologue on history and art, simply because the actors and actresses are drinking champagne behind the scenes, and are far too hilarious to be entirely correct. But where no such obstacle to dramatic exactness exists, and where the author really loses sight of himself in his characters, the painting is often full of grace, pathos, and expression. The account of a great debate at Westminster, and of the speech of an almost dying statesman, is, if anything, almost too serious and life-like to be pleasant; and proves that the author, if he chose, might achieve a really brilliant success as a political biographer. Equally good are the conversations of the country people, the account of a county election, a travelling theatrical company, and of the narrow escape of two lovers, who, too busy with their flirtation to be watchful sailors, are overtaken by a squall, and rescued only by a fortunate shifting of the wind. Perhaps the best story in the book is one borrowed, we believe, from the chronicles of Irish disturbance, and certainly not in the least spoilt by the process of transplantation to a Scotch village. It appears as an episode in the youth of an old woman, to whom some mystery is known to attach, and whose strange ways have invested her with a sort of prestige in the eyes of the villagers. The tale is told by a veteran poacher, who has been reclaimed into a gamekeeper, and who is lying in wait with his master for a flight of ducks:—

"'I ken it weel,' he said, 'and guid richt I have—nane better noo. I was a wean at the time, and she was a bit lassie hersel—a bonnie lassie wi' bricht een, and curly red hair, that happed her roun' like a hood. It was in the hard time afore the war, when the hail country was fairly wicked wi' hate and hunger. Her feyther was verra chief wi' the yerl,—a strang, stout chiel, that spoke his mind freely. But he was hard on the starvin' folk, and "the boys" swore that he shudna live past Marymas. Sae it chanced that ae mirk nicht in the fa' a band o' them cam to his hoose—he was a fearless man, and wudna steek the door for a' the deevils oot o' hell, he wad say—and into the room where he was sittin' wi' his wife Marion, and little Elsie upon her lap, beside the fire. There was a dull licht, for the peats were low, and they dragged him oot, and never a word spoken; for man and wife kent what was come upon them, and that it behoved not to pray to them that shed innocent bluid. They stickit him like a stirk at his ain door. Weel, the wife jaloused that they wad finish wi' her (for she had ever backed her man up—he was aye richt, the rest were aye wrang); and when they were awa', she grippit little Elsie, and steekit her into a closet in the wa'. There was a chink in the buird, and she says to her—"Noo, lass, they are killin' your feyther ootside, and when they hae kilt him, they will come back and kill me. Look weel at them when they come, and mind you swear to them when you see them in coort. I'll cast a peat on the fire the last thing to raise a bleeze, and struggle hard that you may take a guid look." The bairn keeked thro' the chink, and saw them murder her mither. It's a terrible but true story. But she had marked them weel, and swore to them afore the lords. I was there mysel; and weel I mind it, tho' I was but a wean at the time,—it's sixty year this very fa'. There were the twa lords, sitting crackin' in their red gowns like twa howdies, and a wheen glib lads wi' horsehair wigs, and the prisoners ahint them. There was unca little against them, though, and the writer body—a fat man, wi' a red roun' face like a haerst moon—was cock-sure they wad wun aff, till the lass was fetched in. Her face was deadly white, but her een burned like live peats. The writer-bodies were no for lattin' her speak at first; but she was sae quiet, and douce, and keen, that the lords pit her in the box, and speert at her aboot the Catechism, and the Testament, and the Ten Comandments, and she answered every word freely and fairly. Then she looked lang at the men, and says quite quiet, pointing to ane and anither o' them, "You were there, and you were there, and you were there." It was like as if she had spoken in a dwam, or aff a buik: there was nae dauntin' her. The three loons were hangit, and Elspit gaed hame wi' Whitey, that was sib to her feyther's gude brither. She grew lang and bonny, and Sandy Gray courted her; but they say she never leuch again. And 'deed, sir,' he concluded, 'it was a burnin' trouble for a young bairn.'"

WILD WALES.*

In these days, when among the educated classes it is almost the exception to find a person of ordinary intelligence who has not, at some time or other, rushed into print, the public is yearly afflicted with a large number of "Books of Travel." A large percentage of those who live abroad for a few months feel themselves bound—or, at least, fairly entitled—to entrust their experiences to a confiding public. If the writer be a young lady, she serves up an insipid *rechauffé* of the information derived from her guide-book, flavoured here and there with a few pages of rapturous sentiment. The young gentleman traveller, on the other hand, when he does not attempt to be archæological or profound, and abstains from filling his volume with crude generalisations and inaccurate architectural descriptions, usually imitates the style of the "Italian Notes," or the "Kickleburys on the Rhine." He thinks himself graphic and amusing if he describes what he had for dinner in the various inns at which he stopped, and cracks jokes on the toughness of the fowls or the badness of the wine. If one may judge from a good many volumes of recent "Tours" in various parts of the Continent, no conversation is too absolutely trivial, no adventure too commonplace to be first recorded in the diary, and in due time transferred to the manuscript intended for publication, provided only that the conversation or adventure did not take place in England. Such writers see everything through the magnifying medium of their own self-importance; whatever happened to themselves at once becomes valuable and interesting in their eyes; they forget how utterly insignificant it will appear to others when it is no longer invested with the bright halo with which it has been glorified by the weaksightedness of self-love.

It would be a great injustice to class Mr. Borrow with writers like these. His former books have won him a distinguished and honourable place in literature, and even this book, which is perhaps his worst, will live longer than the little volumes of those literary butterflies who flutter through an immortality of three weeks in the advertisements and the circulating libraries. Mr. Borrow starts with some of a traveller's best qualifications. He is a linguist, a pedestrian, an enthusiast; he has a genuine and wholesome hatred of affectation and gentility; he has genial sympathies and a cultivated mind. A man with such advantages could hardly write a book altogether poor and valueless, and accordingly in Mr. Borrow's three volumes we find a good deal that is positively interesting, and a good deal more that we can at least read with tolerable equanimity. Among these portions we may mention the derivations of various names, the quotations from various Welsh bards, and the criticisms upon them, the occasional accounts of popular superstitions, and such brief biographies as those of Grouwy Owen and Tom of the Dingle. Many, too, of the conversations with peasants of all countries and tourists of every class, are racy and amusing. Mr. Borrow has a very happy knack of making himself at home with every one whom he meets. Wherever he is—on the high-road, by the fireside of the village inn, in the railway carriage, or on the moors at midnight—he seems to make it his first object to enter into perfectly unconstrained conversation with all whom

Digitized by Google

chance throws in his way. The very name of conventionality is detestable to him, and he does not hesitate for a moment to take long walks with weavers and carters, and even to sit down and drink ale with a ragged and slatternly Irish girl whom he finds tramping and fortune-telling near Chester. In this way he manages to see and hear a great deal more than the common run of travellers, and the use which he makes of the confidence inspired by his pleasant manners and his knowledge of the language, enables him to give us an insight into the feelings and character of the Welsh peasantry for which we might look in vain in the pages of a less eccentric writer. But it happens curiously that some of his most interesting conversations are not with Welshmen at all. As a specimen we may quote, in a greatly abbreviated form, his account of an interview with some Irish tinkers. After describing them, he says (using one of his favourite expressions):—

"I gave them the seal of the evening.

"'Good evening to your haner,' said the man.

"'Fine weather,' said I.

"'Very, sir,' said the elder female. 'Won't you please to sit down?' and reaching back into the tent, she pulled out a stool, which she placed near me.

"'And what trade or profession do you follow?' said I.

"'We do a bit in the tinkering line, your haner.'

"'Do you find tinkering a very profitable profession?' said I.

"'Not very, your haner; but we contrive to get a crust and a drink by it.'

"'That's more than ever I could,' said I.

"'Has your haner, then, ever followed tinkering?' said the man.

"'Yes,' said I; 'but I soon left off.'

"'And became a minister,' said the elder female. 'Well .... Oh, it was kind in your honour to come to us here in the Sabbath evening, in order that you might bring us God.'

"'What do you mean by bringing you God?' said I.

"'Talking to us about good things, sir, and instructing us out of the Holy Book.'

"'I am no minister,' said I.

"'Then you are a priest. .... Yes, I see you are a priest. Oh, your reverence, give us God! Pull out the crucifix from your bosom and let us kiss the face of God.'

"'I am no priest.'

"'Then you are a minister. .. Oh, sir, pull out the Holy Book, and instruct us from it this blessed Sabbath evening. Give us God, sir, give us God. .... Oh, sir, do give us God. We need him, sir, for we are sinful people. We call ourselves tinkers, but many is the sinful thing ...'

"'Bi-do-hosd,' said the man; Irish words, tantamount to 'Be silent.'

"'I will not be hushed,' said the woman. 'The man is a good man, and will do us no harm. .. Oh, sir, give us comfort in some shape or other, either as priest or minister; give us God! give us God!'

"'I am neither priest nor minister,' said I, 'and can only say, Lord, have mercy upon you!' Then, getting up, I flung the children some money and departed.

"'We do not want your money, sir,' screamed the woman after me; 'we have plenty of money. Give us God! Give us God!'

"But I hastened across the meadow, which was now quite dusky, and was presently in the inn with my wife and daughter."

When we tell the reader that this is by far the most interesting passage in the three volumes, and that, unabbreviated, it occupies six pages, they will rightly conjecture that a great part of Mr. Borrow's book may have been very easy writing, but is frightfully hard reading. All that is in the slightest degree useful or entertaining might be easily compressed into a hundred pages, instead of occupying, as it does, *one thousand two hundred and ninety-seven!* But if a writer is to tell us all that Mr. Borrow thinks fit to tell us, there is no reason why he should ever stop. We do not care to know that Mr. Borrow's wife "is a perfect paragon of wives—can make puddings, and sweets, and treacle posset, and is the best woman of business in East Anglia;" or that his step-daughter "has all kinds of good qualities, and several accomplishments, knowing something of conchology, more of botany, drawing capitally in the Dutch style, and playing remarkably well on the guitar—not the trumpery German thing so called—but the real Spanish guitar." Still less do we care to be informed of Mr. Borrow's proleptic opinions on Chester cheese and ale, and how, having tasted the cheese, he found it like soap, and ejected the half-masticated morsel into the street," and soon after "spirted out the ale after it." Yet, with experiences like the last—less nauseous but equally contemptible—a large number of Mr. Borrow's pages is occupied. If life were not short, and Mr. Borrow's book very long, it would be amusing to count the number of times he criticises the ale which was brought to him at village pothouses, and enumerates the precise dishes which he ate at breakfast, dinner, or supper. Then, again, it is interesting to know that Mr. Borrow could and did talk Irish with several vagabonds at different places; that he blessed them in Latin; that he addressed a stonemason from California in Spanish, a black beggar in Arabic and French, and a certain pedlar in Italian. We do not think that the mention of these circumstances was due solely to vanity, and even if it were, the vanity is, perhaps, excusable; but we should certainly be content with having been informed *once or twice only* that Mr. Borrow can speak Welsh, whereas that one fact is most needlessly obtruded upon us in almost every chapter of the book. We are quite disposed to forgive Mr. Borrow's undisguised and transparent egotism, but he should try not to make it so very fatiguing to his readers. Above all, a man of his ability and position should abstain from permanently recording the vulgar incidents and disjointed chit-chat of a very ordinary tour. Half of the things which swell out these three thick volumes would have been wholly uninteresting had they happened to, and been related by Shakespeare himself. What possible good does Mr. Borrow think that he is doing to any single person by the tedious narrative of such trivialities as this?

"Left to myself, I began to discuss my dinner. Of the dinner I had nothing to complain, but the ale which accompanied it was very bad. This was the more mortifying for remembering the excellent ale I had drunk at Bala some months previously," &c.

Has Mr. Borrow ever faced the fact that if his pages were weeded of this kind of thing, and of its every-day remarks on every subject which allowed of a digression, his book would dwindle down to about a quarter of its present size? If he really supposes that there was any necessity for him to write a little disquisition on health because he meets with a young man who is sickly; and an essay on the advantages of umbrellas, suggested by going out on a wet day, he would have had quite as much right to inflict thirty volumes on us as he had to present us with three.

We never quarrel with a few wholesome prejudices, and we are fond of a little occasional eccentricity in opinion. But here, too, Mr. Borrow tries our patience severely. He believes in the wisdom and necessity of negro slavery. He is very hot indeed against the "Papists," being convinced of "the original identity of nuns and nautch-girls, begging priests and begging Brahmins (!);" feeling some satisfaction in teaching a Welsh peasant to call the Pope "the arch-thief of the world;" and calling Joost van Vondel, "perhaps the *only pure and virtuous character* that ever went over to Rome." He is "*ashamed* to say that he is an Englishman;" and he "*despises* railroads and those that travel by them." If these sentiments, which constantly recur, are intended as jokes they are not very amusing; if they are meant in earnest, they are perhaps more original and equally innocuous. In any case they are quite unworthy of a sensible writer; and as it is impossible to read Mr. Borrow's books without feeling a great regard and admiration for many points of his character, we will conclude by the sincere wish that his next appearance as an author may be more to his own credit, and the advantage of his readers. The obtrusive frivolities of his present volumes would not be so easy to forgive and pass over, had he not been a man whose past services to literature are still gratefully remembered.

COX'S TALES OF GODS AND HEROES.*

THE myths of the Scandinavians and Germans may be, and have been, transplanted with success into English literature. Their blood flows in our veins; actions and heroes of theirs are mixed up with our historical traditions, and the earliest conditions of their national existence were much like our own. Widely as their history and ours have differed, there has been enough of parallelism and even of coincidence between them to enable us to enter into the spirit of their legends. Not only have we, as it were, many bilingual inscriptions, many common myths to act as a key to the rest, but the mythical faculty has throughout worked under not dissimilar conditions, and employed itself on nearly the same subject-matter. The legends, again, of early Rome are within the reach of our retrospective imagination, and can be told in English without losing their characteristics. The interval which divides their age from us is bridged over by many continuous trains of thought, and the legends themselves are of that semi-historical or political kind which does not suffer in being repeated. Their interest is that of incident and of character, not of fancy; they are legends proper, not myths. But with the Greek myths the case is altogether different. Many obstacles combine to make their adequate reproduction almost a hopeless task. In the first place, they are peculiarly un-analyzable. It is impossible to assign their proper parts, on the one hand, to the linguistic phenomena of a primitive age before the separation of the races; and on the other, to the elements added by the period in which the Hellenic peoples passed through the first slow steps of culture and thought; or, thirdly, to the creative imagination of individual poets. It is impossible to say how much was the object of religious regard, how much bore plainly an allegorical character, and how much was recognized as poetical and artistic. We cannot understand them, and we have no parallels of native or borrowed thought to help us. If, in trying to reproduce them, we do not alter them at all, then they are unintelligible; and if we alter them to make them intelligible, then we spoil them. The very nature of their excellence is such as to elude expression in another form. The imagination of the Greeks, taking the common mythical materials to which it was heir jointly with the Indo-European nations, clothed them in more beautiful forms; but that simplicity which is the essence of their beauty is the most intangible of all perfections. It is the work of native genius, which cannot be copied, because it was not produced by any means which are at our command. The very causes of this beauty are as yet only half understood. We are only now beginning to appreciate, and have not even begun to understand that profusion of artistic power which was so lavishly given to every common artisan that he could not make anything which was not beautiful. A further difficulty is, that the myths are inseparably bound up with the words in which they are conveyed. As little can they be

* Tales of Gods and Heroes. By the Rev. G. W. Cox, M.A. London: Longman, Green, & Co. 1862.

Digitized by Google

perfectly rendered in another language as one of the great statues could be reproduced in wood. The two things are entirely different in kind. Lastly, a large part, and that, perhaps, the most beautiful, cannot be well detached from their places in the literature which gave to them their full proportions and expression. The Greek myths may be compared to that golden fleece which plays so prominent a part in them. Between us and them lie stormy seas, which must be crossed without a compass. There are long years to be spent in toilsome wanderings over the world of Greek thought, and there are dragons in the way which can only be overcome by the help of the enchantments of the highest poetical genius.

Mr. Cox is a veteran navigator of these dangerous seas, and has already made at least two voyages amidst much-deserved applause. In his present enterprise he is less successful; but still he deserves our thanks, both for having attempted a great subject and because he has brought to his difficult task much labour and some scholarship. He has read Grote, Professor Max Müller, and Dasent, and has adopted the formulas of a good master. The causes of his failure, notwithstanding all these qualifications, are not very difficult to see. They are of two kinds,—one in the matter, and the other in the manner of his book. As for the first kind, we may distinguish two stages in the growth of myths. At first they are little more than phenomena of language, the fragmentary anthropomorphism of a lively imagination which treated things as persons and named them accordingly, and again divided synonymous names into new persons. In this stage the myth is in its most genuine and interesting form; but it is as yet only the first idea, the sketch, the memorandum, which is to be filled in at a later time. Such are the myths of Kephalos and Procris, of Phœbus and Daphne, of Selene and Endymion. These are not fit to be made into long prose stories. The shortest possible expression of them is the most natural and sufficient, and any unnecessary verbiage or additional personification or incident is simply useless and impertinent. In his first books, Mr. Cox generally avoided these, and escaped many dangers. But whilst many of the myths never went beyond this stage, there were others which received a further development. The most pliable or the most impressive of them were selected by the poets, were enlarged and made consistent, and, perhaps, used as vehicles of some moral lesson or view of life. Exactly in proportion as they cease to be genuinely linguistic myths and begin to receive these more artificial and fuller proportions by the later additions of incident and character and poetical adornment, they become more capable of reproduction in forms which, if they seem poor to those who know the originals, may still be valuable to those who do not. Mr. Cox's first efforts were more closely confined to this latter kind, and were, consequently, more successful. In his new volume he has introduced more of the genuine myths of the first kind, and these have been inevitably spoiled by the amount of "padding" and modern feeling which he has found it necessary to introduce. There are also some more general mistakes which infect the whole and spoil even those which do not fall under the first head. The chief of these are a childish style, a want of historical exactness, and a failure to appreciate the point of view, both of the myths and of the early writers from whom the author borrows.

It is a very common mistake to write childishly for children, but it is a very great one. Children are not in the least degree edified by seeing their instructors put on intellectual pinafores and talk down to their level. Besides, it is perhaps the most striking characteristic of the Greek myths, that whilst they are always told with perfect simplicity, they are never childish; if the Greeks were boys, they were not juvenile. So, in the reproduction of them, simplicity is indispensable; but it must be in the point of view, not in an infantine style. The only way to attain it is to choose a simple subject, master it thoroughly, and express it in the most natural and straightforward manner. Mr. Cox's plan is to begin his sentences with "so," and to use a great many false vocatives. It is said that an archbishop once puzzled a roomful of people by asking them the vocative of "Cat," and that it was finally left for him to tell them that it was "Puss." The correctness, indeed, even of the archbishop's vocative, depended on the sex of the specimen in question, but it will serve as an illustration. Mr. Cox's vocatives, "O man," "O race of men," "O maiden," are not in the least better English than "O cat."

Again, the whole character of the myths or legends is often greatly altered under Mr. Cox's treatment. He has taken his work too easily, and is perpetually inexact. Nothing is, indeed, harder than to tell a tale as it was told originally, without altering its spirit or its setting. It is difficult even where the story concerns men and things of our own day, and where there is, consequently, no unusual obstacle to a full appreciation; and the difficulty is almost infinitely increased when, as in the case of the early legends of Greece, the spirit is entirely different from our own, and the interest depends not on one or two salient points so much as on the character and imaginative cast of the whole. Not only is the difficulty of appreciation added to that of reproduction, but it is almost impossible to reproduce without insensibly bringing in some modern, and therefore incongruous, thought or expression. This kind of fault can never perhaps be entirely avoided, but it has not by any means been reduced to the smallest possible amount in this book. In every page some modern sentiment is introduced, or Greek sentiments of one age are transferred to another. In the Greek legend, for instance, Daphne was changed bodily into a laurel, Narcissus into a flower. In Mr. Cox, Daphne plunges into a river and Narcissus pines to death, and a laurel grows up by the river-bank, a flower by the grave. This is just the difference between the genuine and the artificial states of the myths. So, again, Phaethon's sisters moralize out of Ovid, the Apologue of Prodicus is inserted in the Labours of Hercules, and Darius talks of the sons of Javan, as if he had been acquainted with Genesis.

In the same spirit the morality of the heroic ages receives a modern tone. We learn for the first time that the Greeks of that period had "a system of law, with judges to administer it." They are men, we are told, "who, if their life is passed in wars and battles, yet hold that the man who loves war deserves exclusion from law, and hearth, and clan." This lofty morality, somewhat in advance of our own, depends on a single quotation from the Iliad, so entirely opposed to the general spirit of that poem, that it would be of no weight, even if it was correct. But in reality Mr. Cox has unaccountably omitted the one important word in the passage, in fact the one which contains the subject of the proposition. In the original, Nestor is content with saying, "he who loves strife *with his countrymen* is likely to lose the benefits of clan, and home, and justice." It would not be fair to Mr. Cox to accuse his language of perpetually distorting the effect of the original, without giving a specimen. We will select a passage from the charge delivered by Apollo to the priests whom he has newly established at Delphi:—

"Only guard ye my temple well, and keep your hands clean and your heart pure; for if ye deal rightly, no man shall take away your glory; but if ye speak lies and do iniquity, if ye hurt the people who come to my altar, and make them to go astray, then shall other men rise up in your place, and ye yourselves shall be thrust out for ever, because ye would not obey my words."

All that Apollo really says, so far as the sense of the hymn can be made out at all, is:—

"Live at your ease, and slaughter the flocks which men will bring. All that is required of you is to say what I tell you, to take care of the temple, and not to damage its credit, and my revenue, by playing any tricks with the strangers. If you disobey me, men shall come and make slaves of you for all your days."

There is a further question, which we have not space to discuss; how far, namely, the Greek myths can be made available for children. There is much to be said for introducing them early to the thoughts and poetical creations which are to be the subject of their reading for years. Again, that they do take pleasure in them is often asserted, and is probably true; but it is, in all likelihood, only that unintelligent pleasure which they may take in the plot of a play of Shakespeare. The incidents alone are within their reach; the artistic pleasure which the myths give to educated men is the result of long training and countless associations. It seems, at any rate, quite certain, that any attempt to bring them down to a child's level, otherwise than by telling them with the utmost simplicity, can only succeed in spoiling them altogether.

SCOTLAND UNDER HER EARLY KINGS.*

Mr. Tytler begins his History of Scotland with the reign of Alexander III., giving as his reason for this his conviction, that only after the date of that prince does the history of Scotland become interesting or instructive. He might have added, that only after the same date does the history of Scotland become authentic. Undoubtedly, as its authenticity grows beyond the possibility of dispute, its power to command interest and impart instruction increases in proportion. Than the war of independence, no nobler war was ever waged for freedom; in the memorable words of the Scots' Parliament to the Pope, "Not for glory, riches, or honours, did we fight, but for liberty alone, which no good man abandons but with his life." Than the subsequent troubles of Scotland—more especially her ecclesiastical difficulties—few more useful subjects of study could engage the attention of the statesman. But before the war of independence all is vague and doubtful, and most is ignoble. Milton has recorded his opinion that the transactions and battles of the Heptarchy are not more deserving of a particular record than the quarrels of tribes of crows. The observation applies with tenfold force to the transactions and battles of obscure northern magnates, of whom we cannot certainly say that they ever existed. The historical part of Mr. Robertson's work begins about the year 842, and ends about 1280; that is, it ends precisely where the interest of Scotch history begins. We cannot but think this a sad waste of labour—the more to be regretted because the labour has evidently been honest and arduous. Not even the most enthusiastic Scotchman, we should imagine, could patiently struggle through page after page in the following style:—

"Boedhe, the death of whose son has been already noticed, left a daughter, Gruoch, who by her marriage with Gilcomgain, the son of Malbride MacRory, carried the claims of the line of Duff, after the death of her brother, into the family of the Moray Mormaors. Finlay MacRory, the antagonist of Sigurd Lodverson, lost his life in a feud with his nephews Malcolm and Gilcomgain, to the former of whom the earldom reverted according to the Gaelic rule of succession, until his death in 1029, when it fell into the possession of his younger brother Gilcomgain. Three years later the Mormaor was surprised and burnt in his *Rath* or fortress, with fifty of his immediate followers, leaving an infant son, Lulach, who, after the death of Boedhe's son in the following year, became the sole remaining representative of the

* Scotland under her Early Kings: a History of the Kingdom to the close of the Thirteenth Century. By E. William Robertson. In 2 vols. Edinburgh: Edmonston & Douglas. 1863.

Digitized by Google

line of Kenneth Macduff. Gruoch, the widow of Gilcomgain, was married eventually to Macbeth Mac Finlay, who had succeeded her late husband and his own cousin in the Mormaorship of Moray, when, as the husband of Gruoch and the guardian of the infant Lulach, Macbeth became the representative during the minority of the latter of his claims upon the crown of Scotland.

"Bethoc, or Beatrice, the eldest of the late king's daughters, carried her claims to the race of Atholl by her marriage with Crinan, Abbot of Dunkeld, who was also the head of the Atholl family. Their son was Duncan, the heir and successor of his grandfather, who before his accession to the throne of Scotland, had been placed by Malcolm over the dependent province of Strath Clyde."

One name alone here interests us. But few readers will greatly care to learn that the strife between the Thane and the King was really a struggle between rival dynasties; that the latter, when he met his death, was not "the meek and hoary Duncan," but a prince yet in the morning of life; and that the fortunate competitor for the crown was a great and good king, whose memory was long celebrated in tradition as that of one whose reign was a happy time of prosperity and peace. Those, however, who are unwilling to give up their early prepossessions may rest undisturbed; for the fact is, that this whitewashed character of Macbeth is hardly more authentic than that which Shakspeare gathered from the pages of Holinshed. Winton, indeed, can be quoted on his behalf:—

"All his time was great plenty,
Abounding both on land and sea;
He was in justice right lawful,
And til his lieges all, awful."

Most of the old chronicles agree in his praise. But, after all, the matter is mainly one of tradition. Now the great fault of Mr. Robertson's book is, that throughout he deals with tradition as if he was narrating undoubted history. He makes no attempt to reconstruct, like Niebuhr; still less does he give us the myths themselves for what they are worth, like Grote; but he sets forth the most remote and fabulous legends as gravely and prosaically as the best-known facts in history. It is this which makes a great part of his book wearisome on the one hand and valueless on the other. We have neither stories to amuse nor information which might enrich our minds. The truth is, that Mr. Robertson wants the historical faculty. To narrate everything which any authority, good or bad, sets down as an event which once occurred, is not to write history. Yet this is precisely what Mr. Robertson has done. Of discrimination he is utterly destitute. He seems to think that all authorities are equallly reliable, and that all recorded events are equally true. His style of reasoning often reminds us, not to be irreverent, of Mr. Justice Stareleigh: "How could I have it in my notes, sir, if you hadn't said so?" The result of this style of writing, we fear, must be that at least one of Mr. Robertson's volumes will be read by very few, and will be remembered by none. Of the early kings of Scotland we really learn quite enough, and that in the most appropriate way, in the "Tales of a Grandfather," with, perhaps, one exception. No one can hold it doubtful that King David I. was a great and benevolent prince. His title to fame is established by evidence far beyond tradition. He enriched the Church; he regulated the baronage; he called the burghs into existence. It is not too much to say that he created Southern Scotland. He was the Justinian of Scotland in a far higher sense than Edward I. was the Justinian of England; for he was not only the founder of law, he modelled institutions and framed the structure of society. It was long before reformers, clamorous against wrong, ceased to invoke the laws of the good King David, or legislators eager to recommend their measures forgot to claim for them the sanction of that high authority. Far beyond any in the list of Scottish kings, he possessed that surest mark of greatness—the power of leaving the impress of his character on the ages which have succeeded him. He has been compared by Scottish writers to Charlemagne and Alfred, and he was inferior to them in this only, that they were fortunate in a wider field. He was their equal in power and breadth of view; while the following traits, preserved by his friend and biographer Alred, remind us of St. Louis himself, as sketched by the pen of Joinville. "I have seen him," says the abbot, "with his foot in the stirrup, going to hunt, at the prayer of a poor petitioner leave his horse, return into the hall, give up his purpose for the day, and kindly and patiently hear the cause. He often used to sit at the door of the palace, hear the causes of the poor and old, who were warned upon certain days as he came into each district." But to this theme Mr. Robertson is unequal. He is too diffuse, too deficient in imagination, and too abounding in learning to bring before us a simple and life-like picture of the great Scottish prince. A far more vivid, and, though a shorter, yet a more complete portraiture, is given by Mr. Cosmo Innes in his volume called "Scotland in the Middle Ages." Mr. Innes is not an especially lively or picturesque writer, but he is a Froissart compared with Mr. Robertson.

The greater part of Mr. Robertson's second volume consists of appendices—all of them the result of great research, some of them conveying information of considerable value. In his preface he apologizes for the number of them, but the apology was unnecessary. They treat of matters far more important than the exploits of apocryphal kings, and are worth all the rest of the book put together. The dissertations on the "Celt and the Teuton," on "Tenures," and on "the Kin," will repay careful study. Yet here, too, we find the same fault which marred the purely historical part of Mr. Robertson's work. There is no discrimination. Matters with regard to which certain information is unattainable are explained with the same decision as matters which come before us in the full light of historical knowledge. We have no discussion from Mr. Robertson. He does not argue out his theories; he merely asserts that so and so was the case; and he does this equally as to matters with which we are familiar and as to matters which we know nothing at all about. His sun shines alike on the true and the untrue. He will tell us the nature of the office of the Cen-cinneth and the Toshach as unhesitatingly as if he was telling us the nature of the modern sheriff. This fault is one which detracts from the value of historical disquisition not less seriously than from the value of historical narrative. Great labour devolves upon the reader who has to separate the tares and the wheat thus growing up together. And with regard to matters so obscure as those with which Mr. Robertson's Appendices are concerned, no labour will enable ordinary readers to effect this separation. They must be content to rely on the author, who thus gives them stones for bread. In fact, Mr. Robertson's learning is too much for him; it overpowers him, as the armour of Saul did the stripling David; he cannot wield it. He puts it all forth with a profuseness which suggests the idea that its acquisition has been the result of immediate "cram." Long familiarity with his subjects has not taught him the most important of all lessons—what to keep back. What a contrast between his elaborate knowledge and hasty conclusions, and the cautious discussions and dignified reticence of a writer like Hallam! And when we find among these conclusions assertions so startling as that free socage was not a Saxon tenure, and that William the Conqueror did not introduce any new system of tenures into England, we cannot resist a fear that the haste with which they have been arrived at has been more remarkable than the carefulness of the investigations on which they were based. Worse than all this, Mr. Robertson seems to us to have neglected reliable sources of knowledge in his zeal for fanciful research. Not only does he appear to want that historical insight which distinguishes, as if instinctively, between truth and falsehood, but he seems possessed of an unhappy preference for the false. We strongly suspect that the origin of civil institutions, even in Scotland, is attributable to the influence of Rome; and we are quite sure that the best authorities for the early history of Scotland are the Lives of the Saints. In Mr. Robertson's book we have nothing at all about Rome, and not nearly enough about the early Scotch Church as illustrative of Scotch history. Reeves's "History of St. Columba," though professedly an ecclesiastical work, throws far more light on secular affairs.

We have already said that Mr. Robertson's work must have been arduous; had it been more discriminating, it might have been at once less arduous and more useful. As it is, we doubt not that his book will be often consulted by those who read in order to write, but we fear it will never be a favourite with those who read for the sake of reading only.

ART AND SCIENCE.

LANCASHIRE FUND EXHIBITIONS.

One of the most interesting of the many schemes which the prevailing distress of the cotton districts has called into existence, is that of a collection of works of art. Two such exhibitions have been set on foot; the one which was first opened and which is now just about to close, was the "Water-colour Painters' Lancashire Relief Fund" Collection at the German Gallery, 168, New Bond-street. Members of both the Water-colour Societies, other professional painters, and a sprinkling of amateurs, contribute to this exhibition. The artists make a free gift of their works, and the money for Lancashire is raised both by way of the payments at the door, and by subscriptions of a guinea a head received on the spot and at branch collecting-places, entitling the subscribers to a chance in a forthcoming lottery, whereby the works of art will be distributed among them. Our reference to this exhibition, though not in time to induce readers to visit the Gallery, may still serve to direct their attention to the chance which a well-bestowed subscription would give them in the allotment of the pictures.

The second exhibition, which opened on Tuesday last, is upon a

Digitized by Google

different plan. It is "for sale of paintings, drawings, and other works of art, for the relief of the distress in the cotton districts," and is held at the Suffolk-street Gallery. The volume, "Poems, an Offering to Lancashire," is produced in connection with this gathering; also an amateurs' and artists' exhibition. The proportions, however, of the first-mentioned exhibition are reversed, the amateurs being in a great majority, and the artists coming in chiefly to give tone to the project, and to mark the desire of individuals to aid in the good cause. The muster of professional men in this gallery is not so strong as to relieve them from the obligation of taking any further measures which their sense of the requirements of the case may dictate. We are aware that Mr. Lance made some while ago a suggestion for a combined movement at the British Institution, but have not heard of the prospects of that plan. No doubt many professional artists find that they do the duty which lies before them better by direct subscriptions of money than by making the distressed operatives a present of their hand and brain work. The conflicting claims which may fairly be recognized in this case do not affect the case of amateurs; and we are glad to find that they have come forward handsomely with the products of their skill. The catalogue gives 790 numbers of contributions, and several more might be made out by reckoning up all one by one. The list of patrons and patronesses is powerful; and the attendance on the private-view day was such as to show active interest, in many influential quarters, in the success of the scheme.

This is a case in which good sense and good feeling alike exempt the critic from the necessity of rigidly appraising the artistic value of the show, and drawing up an exact balance-sheet of merits and defects. Pope demurs to the notion of breaking a butterfly upon a wheel: and, if we substitute for the butterfly a small creature of positive well-deserving, such as the bee, we shall make out a still stronger case. In the present instance, every contributing amateur occupies the laudable position of the bee; and, though it may be a fact that Lady Augusta Cadogan is not the only one of them who exhibits "The Fine Arts in their Infancy," we shall say no more of that side of the question here, but, coupling with Pope's maxim that of Dante—

"Non ragoniam di lor, ma guarda e passa,"

we shall pause only upon such of the contributors as may be honestly complimented.

To begin with the professional painters. We find in this gallery Mr. Stanfield represented by able landscape-studies and old figure-drawings in sepia; Mr. Cope, by several studies of heads and details; Mr. Mulready, by a water-colour of his "Disobedient Prophet," and an academy-model in pen and ink outline; Mr. Calderon, by a female oil figure, which he names "Olina," being one of the ladies in his last year's Academy-picture of Queen Katharine of Arragon; Mr. Millais, by a pencil sketch of his fine concluding design to Tennyson's "Dora;" Messrs. W. B. Scott, Uwins, and John Chalon. With Messrs. Roberts, Naftel, Cooke, Creswick, McCallum, Sutcliffe, and Fenn, we return to the landscape painters. The "Binsey, near Oxford," of Mr. Boyce, is perhaps, on the whole, the most perfect thing in the collection, lovely in its sunny verdure and pollard willows: it has been exhibited before. "The Valley of the Ticino," by the same artist, is an earlier and also a valuable study. Mr. Arthur Severn, a professional student of painting as yet very young, shows a skill far outstripping his years. "St. Paul's from the Thames at Westminster—view from our window," is especially successful. There is real promise of excellence in the calm water, with burnished streaks reflecting different colours; the blueish-grey of the receding buildings; the sun setting in a horizon of salmon-red tinge, and with flocks of scattered clouds. Others of Mr. Severn's landscapes are meritorious in a similar way, but not in quite the same degree. Mr. Bottomley's vigorous "Head of West Highland Bull" is the best of the animal pictures. Other classes of contributions are well exemplified in the flower-pieces of the two Misses Mutrie, the engraving from Mr. Watts's head of Tennyson, and the large photograph of the Elgin Fates.

We now turn to the amateurs, and, among them, first to the figure-designers. The Hon. Mrs. Robert Boyle sends three of her drawings, almost invariably distinguished for delicate sentiment and handling. The best of the three, "Oh! that I were where I would be!" is from her first and ablest book, "Child's Play." The "Nativity" we have seen before. "In the midst of Life we are in Death" pourtrays a dead child on the bier. "The Virgin and Saint Catharine" is a large, complete, and accurate copy, by Mrs. C. T. Newton, from the Borgognone in the National Gallery. Another of this lady's contributions, "Portrait of H.R.H. the Princess Louis of Hesse, with autograph—drawn for this exhibition by permission," will probably be the popular favourite among the whole collection. Mr. F. W. Dicey's Italian heads, the boy goat-herd "Carmine" and the peasant-girl "Stella," have a superior character of breadth, vigour, and national portraiture. Mr. H. J. Lucas, in "Old Letters" and "Gossip," sends two more than usually complete pen-and-ink designs in the style wherein Mr. Millais is the chief master. Mrs. Blackburn's oil-picture, "Oh! that I had wings like a dove!"—an elderly, worn Scotchwoman with pigeons, and with a good background of the roofs of a city-view—is marked by the seriousness and honesty of this fine designer's productions. We may name also an "Early Christian" version, by Mr. Boddington, of "The Flight into Egypt;" a sweet "Sketch of a Girl's Head," by Miss E. Epps, more than commonly painter-like in its colour and flesh-painting, combined with extreme simplicity; "The Cottage-window," by Mr. Boughton, a successful figure of a peasant girl, in a style recalling partially those of Edouard Frère and Frederick Goodall; and two Algerian subjects, by Miss Leigh Smith.

Landscapes, however, as usual in amateur collections, predominate; and in these, also as usual, Mrs. Bodichon takes a leading position. "Near Algiers" is a good study of grey landscape, blueish in the hills, drab-tinged in the soil. "The Sussex Coast" has vigour and poetic feeling; with gulls flying athwart the ragged, breeze-tormented brushwood, which crosses a slaty-blue sea and slatier-clouded sky. "Near Maenturog, Wales," is solemn in dim light and blue hill-distance. Solemn, too, and of a similar class of merit, is the "Ancient Aqueduct near Algiers," by Mrs. Ludlow, a member of the same family as Mrs. Bodichon. Miss C. Jenkinson gives a simple yet interesting study of "The Matterhorn at Sunrise, from the Riffelberg;" Miss Ewart, a strongly tinted view of "San Giorgio Maggiore, Venice;" Mr. Jenyns, a back view of quaint old brook-side houses at "Troyes," with a cat crossing the tiles, singularly well chosen for picturesqueness, and modestly realized,—also a view of "Angers" well expressing a difficult rayed effect of rainy light; the Countess Grey, a view of "Nice from Mont Biron," simply efficient in its rendering of the light and the hill-contours; Miss Courtauld, a well-conceived treatment in oils of "Cattle in the Highlands," grave and somewhat mournful in impression; Mrs. Russell Gurney, a "View near Bex," *simplex munditiis*. We cannot dwell upon a number of other pleasing or meritorious contributions in the landscape section; but must do their authors the justice of naming Lady Eastlake, the Rev. Mr. Tyrwhitt, Mr. Cheney, Mrs. James Alderson, Miss Townsend, Miss Ellen Beale, Mr. Brabazon, Dr. Deakin, the Rev. Mr. Bury, General Lewis, Mrs. Lawes, Mr. Kempe, Lady Leighton, Miss A. Tyssen Amhurst, Mr. Gambier Parry, Mr. Henry Kingsley, Miss Hampson, Miss V. Thompson, Mr. Walter Severn, and Mr. Talfourd.

The still-life, etchings, and other miscellaneous sections, equally present various points of interest. Mr. Ruskin sends a valuable selection, including samples of his thoroughly faithful and delicate foliage-studies, and of his etchings after Turner, published in the "Modern Painters." Other skilful etchers are Dr. Haden, only inferior to his evident model, Mr. Whistler; Mr. A. J. Lewis, in a highly-finished style; and Mr. Walter Severn in one simpler and more decisive. Miss Lane's "Magnolia Blossom" is a very vigorous, straightforward sketch. Misses C. Bright, North, Richmond, and Fordham, should also be mentioned.

With these observations, we commend the Artists' and Amateurs' Exhibition to the attention and purses of visitors, with whom it rests to convert into a practical success the good intentions of the contributors. Indeed, we believe that the scheme has the best prospects; the sales at the private view, long before the closing of the rooms, having exceeded £500. We return, in conclusion, for a few moments to the Water-colour Painters' Exhibition. It would be out of date by this time to enter here into details such as we have given concerning the more recent collection. In the fewest words, therefore, we recognize the eminent artistic excellence of two of the works sent—the "Mauvais Sujet" of Mr. Madox Brown, and the mediæval "Backgammon" of Mr. E. Burne Jones; and we indicate the standing of the exhibitors by naming, as among their most prominent members, Messrs. Wehnert, Maplestone, Waller Paton, Dawson, George Fripp, Haghe, Raven, Oakes, Cave Thomas, Henry and Edmund Warren, Peel, Bennett, Boyce, Cope, Goodall, Penley, Cooke, Jopling, Glennie, Rosenberg, Werner, and Spencer Stanhope.

MUSIC.

Among the several causes which have contributed to the pre-eminence of the Germans as a musical nation, one of the chief is undoubtedly to be found in their cultivation of instrumental chamber-music. The various forms of the sonata, the quartett, quintett, and the orchestral symphony, (which, however, belongs not to the class of *home* music specially referred to here), although derived from Italian origin, have been thoroughly developed only by the Germans; who, alone, have infused into these forms of the art the highest poetical idealism and the deepest human sentiment. There are few more agreeable features of modern English society than the rapid increase of the taste for such performances among all classes of the community. It is to Germany that we most naturally betake ourselves for the gratification of so legitimate a taste. We look elsewhere in vain for anything comparable to the glorious collection of works for chamber performance bequeathed to us by the great German composers, from Bach to Mendelssohn,—works infinite in variety and inexhaustible in interest. Well may the Germans be proud of such a national treasury of cultivated art and noble thought,—national in production, but destined for universal enjoyment wherever high musical taste exists.

Digitized by Google

The chamber-music of the great German masters has, of course, always been familiar as household words to all accomplished English amateurs; but it was reserved for the "Monday Popular Concerts" to create and maintain a taste for these works among the great mass of the London public.

A few years since it would have been considered little better than insanity to call together an assemblage of two or three thousand people to listen to music intended for a small and thoughtful audience, and performed by some six or eight executants. Noise was held to be indispensable to the attraction of a listening crowd. A blatant orchestra, a loud-tongued chorus, and a programme plentifully spiced with the exciting rhythms of dance music, were requisite elements of former "Popular Concerts." Now it is a frequent thing to see the large St. James's Hall filled with an audience whose rapt attention to music of the highest and most intellectual class, if it does not always imply universal comprehension, at least betokens a widely-spread desire to cultivate a taste for what is thoughtful and refined, rather than for that which is merely amusing, if not vulgar. It is true that large audiences are simultaneously attracted to professedly musical entertainments which can only be classed under the latter description; but the success of the "Monday Popular Concerts" forms a powerful and satisfactory compensating balance to such lower influences.

After the usual Christmas recess, the "Monday Popular Concerts" were resumed this week, with every prospect of a continuance of their former success. Herr Joachim, who took his farewell at the last concert in December, has been replaced (as principal violin) by M. Sainton, than whom it would be difficult to find a better substitute for the great German artist—M. Sainton's style being peculiarly fitted for *concertante* playing. The chief novelty on Monday was Hummel's Military Septet for pianoforte, violin, flute, clarinet, trumpet, contrabass, and violoncello—a work which was performed here for the first time, Mr. Charles Hallé being the pianist. The Military Septet is of a more popular and melodious character than Hummel's better known and earlier work of the same form in D minor. It abounds in clear flowing melody and brilliant passages of display for the pianoforte; and is characterized throughout by that exquisite refinement and grace which are marked features in Hummel's music. The *military* spirit, however, is scarcely perceptible, excepting in the first movement—the *finale* ending in the gentlest and most tranquil manner; probably typical of the peace which is the usual object and end of war. The Septet was admirably performed by M. Hallé and his coadjutors, Messrs. Sainton, Pratten, Lazarus, Ward, Severn, and Piatti; some exception being taken to the extreme speed with which M. Hallé played the trio, the effect of which was somewhat to embarrass the trumpet in the execution of the difficult passages assigned to that instrument. M. Hallé's solo, at the end of the first part of the concert, was Beethoven's Sonata in A, from Op. 2. The whole of this work was given in the most masterly style. Every movement bore the impress of deep study and clearly-defined intention, while the mechanical execution was literally faultless. Although, with the exception of the first allegro and the final rondo, we might be disposed to differ with M. Hallé on some of his readings, we too gladly recognize the character and individuality of the performance to cavil at minor points on which some discretionary license must be conceded to the interpreter.

Mendelssohn's Sonata in B flat, for pianoforte and violoncello, by M. Hallé and Signor Piatti, presented about as perfect a combination of executive skill as could well be imagined, the rich tone of the latter gentleman's instrument being matched by one of the most superb "Broadwood Grands" ever heard in a concert-room. Some agreeable vocal music by Miss Banks (who appeared instead of Madame Sainton-Dolby) and Mr. Winn, with Mr. Benedict as accompanyist, contrasted pleasantly with the instrumental pieces; and Beethoven's Violin Quartet in C minor (No. 4) closed a concert which may fairly be cited in proof of the growth of a sound popular musical taste.

Another sign of healthy progress is the multiplication of choral societies, both public and private. Not many years ago, English chorus-singing was too frequently characterized by coarseness and want of sympathetic expression. Handel's choruses, it is true, we could give with a bold, broad vigour; partly owing, probably, to traditional influences descended from the composer's own time; but even in these, when the lighter graces of refined expression and gentle pathos were required, it was seldom that our choristers were competent to the demand. Thus, in the very same concert, we might have heard the "Hallelujah" or "Hailstone" chorus given with "trumpet-tongued" effect; while such choruses as "Galatea, dry thy tears," and others of like character, would be listlessly drawled through, the voices sinking a quarter of a tone below the pitch.

Here, again, we must acknowledge the benefits which musical art owes to the German people. The various performances in this country of the Cologne and Berlin choirs completed the lesson which was perhaps first taught us by the admirable choral singing of the German opera company introduced here by Mr. Monck Mason. It was then seen how skilled training of a body of intelligent artists could command all the varied shades of expression, contrast of effect, and sympathetic feeling, without which music is but a cold and passionless language. Who that heard that company sing the "Prisoners' chorus" in "Fidelio," can ever forget the sublime effect of the multiplied expression of deep poetic sentiment? These examples, combined with the gradual substitution of the contralto voice for the male alto, have had the best influence on English chorus singing.

Mr. Henry Leslie's choir presents a happy exemplification of these effects. This institution, now in its eighth year, gave its first concert of the season on Wednesday evening, when it offered ample proof of the progress of English chorus-singing, by its refined and expressive execution of various part-songs, madrigals, psalms, &c., several of the lighter pieces being encored. In addition to these, the programme contained part-songs by Messrs. Hatton, Pearsall, and Benedict, besides one of Mendelssohn's eight-part psalms, a Kyrie Eleison of Leo's, and madrigals by Morley and Dowland. Most of these were sung with great steadiness of intonation, admirable contrast of *piano* and *forte;* and that general sympathetic expression which is a sign not only of excellent training but of individual aptitude.

During the evening Herr Coenen performed various pianoforte pieces; displaying considerable execution, but a somewhat hard style, with an excessive use of the pedal. With some modification of these tendencies, this gentleman might probably be an effective player of the dashing brilliant order.

CONTEMPORARY SCIENCE.

In the case of old documents the evidences of their discoveries are far more difficult to obtain than proofs of their originality. Something in the documents themselves may prove or disprove this, but discovery is as likely to be made by some individual in a solitary place, nay, even very probably in secrecy; for who, seeking for old documents, is likely to ask or to obtain any one to accompany him on such an uncertain mission; and who, discovering them accidentally, is likely to be accompanied by any witness? Moreover, how such documents come into learned men's hands, we all know it is not always convenient to tell. These remarks apply very generally, and are not meant to apply specially to the "great row" now going on in the British archæological world. We, last week, noticed the exhibition of papyri and manuscripts by M. Simonides before the Royal Society of Literature, and stated that these objects would remain two days for free inspection. The learned have availed themselves of the occasion, and many have been, seen, and departed, we will not say believing, but some perhaps as wise, some perhaps wiser, and some perhaps less wise than they came. For the present, at least, we had rather not express much opinion as to who is right and who is wrong, as the Royal Society of Literature will, probably, comment on the exhibition at their next meeting. M. Simonides professes to be a champion of truth. The very numerous manuscripts he is reputed to possess, must have come into his hands, no doubt, by very various means. For some we have his special statements; and the two now causing the greatest excitement are the Mayer papyri and one volume of a reputed set of twenty-four or twenty-five palimpsest volumes—the Uranius.

With regard to the disputed papyri, in Mr. Mayer's valuable museum at Liverpool were numerous unexamined papyri. M. Simonides having a celebrity for deciphering ancient writings was requested some three or four years ago by Mr. Mayer to examine some of these, and a few were selected by him and unrolled in Mr. Mayer's museum. Papyri, as is well known, are the prepared broad leaves of a species of rush, said by some to have been cultivated only by the ancient priests, and to be now extinct. Their exportation was prohibited under penalty of death. Amongst the Egyptians were three principal classes,—priests, soldiers, and cultivators of the soil. In the interments of the first, the Hieratic or high style persons, were placed papyri containing the whole or portions of the Egyptian Ritual-Book of the Dead; and others containing historical, or legal documents, or having been used as note-books by the scribes have been found. Unwritten papyri, therefore, except in case of fraud or accident, are not likely to be found. Sir C. Nicholson, however, stated he had seen considerable pieces in Egypt.

The papyri which Dr. Simonides unrolled in the Mayer Museum he took away (by consent) to decipher. Some time after, he handed Mr. Mayer his readings, and these were published, with fac-similes of some of the papyri now exhibited and under discussion. Now, the bearings of certain passages and statements in these manuscripts are not in accordance with certain opinions and current doctrines—theological as well as antiquarian. Consequently, their authenticity *is* contested; and it has been surmised that the documents under discussion are *not* those selected by Dr. Simonides from Mr. Mayer's collection, but fabrications of his own substituted for them. Mr. Mayer believes they may be his, but having been out of his possession he cannot swear that they are. Moreover, there appears to have been some commixture of documents in Mr. Mayer's collection, and this has led to further uncertainties and contradictions. For example, one of the papyri purporting, according to Dr. Simonides, to be a "Letter from Hermippos to Horos," written from Thebes, was supposed to have been one of a number brought thence by the Rev. Mr. Stobart some eight years since.

Of this letter, Dr. Simonides asserts his belief that it is a document of the first or second century, and, as according to the Suidas lexicon, the age in which Hermippos lived was during the first and second century, the papyrus, he considers, is probably an original or an early copy of one. This letter contains a passage of six lines in Hieratic letters, which Dr. Simonides, in his reading, gives as the inscription over the door of a temple, and which Hermippos has given again in Greek letters, adding, also, a Greek translation to explain to his friend Horos what it is—Horos living then at Alexandria. The version given by Simonides, of the inscription quoted, being adverse to the

Digitized by Google

readings of Egyptologists under the Champollion system, is one very evident reason why this letter should be a subject of attack; for, if Simonides were right, the Egyptologists were wrong; and if the letter bore out the statements of Simonides, his authority it was for those statements, and the case then rested on the genuineness or falsity of the letter. On this position has been raised a suspicion of forgery against Simonides, and one says he must have unrolled the papyri, forged the writing and re-rolled it; another, that these are not the documents he took from Mr. Mayer's museum, but others substituted; others, that this, and all the other papyri of the set under exhibition, are in the same handwriting, and so on. If fraud has been committed in such matters, it is not very easy to prove how it has been done, and at this moment the case stands thus:—Simonides asserts their originality, Mr. Mayer sends them from his museum for exhibition, and justice demands it should be stated that both Mr. Mayer and M. Simonides have afforded every facility for their examination, although M. Simonides objected to copies being made. The learned who have inspected them refuse to admit their genuineness, but decline, so far as we can gather, to state their objections in writing. This is to be regretted, as evidently the right course for a true decision is for M. Simonides to write his statements on his side, and for his opponents to commit to writing their contrary opinions and their objections. No actions for libel could hold against their authors for such opinions, and if any be deterred from expressing fully what they think by such fear, Simonides should guarantee their immunity from legal proceedings. As to the case of a papyrus being unrolled and re-rolled, the brittle state of such objects forbids, we think, the recognition of such an objection. Substitution might take place—the original papyrus might be valuable to the purloiner—but if so, whence did Simonides get his blank papyrus? If he took old written papyrus, and washed out the original writing and re-wrote the matter, what did he, or could he gain by such a fraud? And would no evidence of such washing remain? A small fungus or vegetable growth, it is said, exists on and under one of the letters of the writing—we looked, but could not see it; it may be there, however, for all that—but what it was supposed could be made out from it we could not gather from the general conversation. It might, however, be of moment to examine this fungus, for if under and over the writing, and any competent botanist could prove that it was an Egyptian species, it would be presumptive evidence that the writing was written in Egypt, where no one presumes Simonides has taken the Mayer papyri; or, if a British species, it would be presumptive evidence that the writing on the papyrus had been done in England. This then is another of those unsatisfactory cases with which for years M. Simonides' name has been mixed up. He has not been without sufferings. He has been arrested, prosecuted more than once or twice, but never convicted—always a verdict of not proven in his favour. Humboldt, it is said, declared him to be "an enigma," and the Mayer papyri affair seems to be a harder riddle for the archæologists than the late celebrated "feathered enigma" for Owen and the naturalists. A glance at the condition of matters in respect to the Uranius shows no more satisfactory aspect. There is the same suspicion against Simonides, the same absence of counter-proof—or certainly the same hesitation on the part of his opponents to speak out decisively. The volume of some eighty or ninety parchment leaves, called the Uranius, is one of those documents known as palimpsests; that is, it is one of those manuscripts which are written over an older manuscript on the same parchment—the older writing having been rubbed down or washed out, but which subsequently has reappeared in a faint colour.

Now the story of this volume, as far as we can make out, is this:—Uranius lived some time about the third and fourth century (between A.D. 290 and 360), and is said to have written seventy books concerning the ancient nations. His name is mentioned in Stephanos the Byzantine. These books were lost to knowledge, but M. Simonides professed to have discovered the whole of them at St. Sabbas, in Palestine, through Nikolaos Melissenos, the librarian and confessor of that monastery.

Besides these seventy palimpsest books, Dr. Simonides states that he brought away a catalogue of the Alexandrian Library, the works of Charon of Naucratis in seven books, each consisting of 500 palimpsest leaves, and a Lexicon of Chremon, of the Egyptian language, and of the hieroglyphics explained in the Greek language.

Now, it is imputed, also, to Dr. Simonides, that this volume of the Uranius is another of his forgeries. It may be, or it may not be; we do not profess in the present state of our knowledge to be able to judge; but it is certainly worth while to take a glance at the amount of matter suggested to be probably forged. The vellum leaves are of the size of those of our ordinary ponderous quarto books, and the volume contains some ninety leaves, or 180 pages, in close-written double columns of antique Greek writing, and written a second time by the same man—if both the writings be the forgery of Simonides—it contains 360 pages or 720 columns of forged writing so like the writings of two different ancient periods that the most eminent paleographists shrink from recording in writing the opinions they verbally express. But the matter does not end here; Simonides professes to have twenty-four or twenty-five more of these books, which are in his brother's charge at Syme, under circumstances intelligibly stated, at any rate, whether true or not. If this one volume be condemned as an imitation, what will be said when Simonides produces the twenty-five. Will it then be said he has forged some 18,000 columns of antique writing of equally close imitation? If this be proved, it will, indeed, be a miracle of forgery unprecedented for audacity and unequalled in execution, and surpassing, even the famous Annius of Viterbo. One volume, however, only is before us, and it remains for Dr. Simonides to produce the rest in his own justification. This volume of the Uranius now exhibited contains a genealogical history of the kings of Egypt, and has been shown not only at the Royal Society of Literature, but also at Liverpool; the last meeting of the British Association at Cambridge, and at several other places in England, and to almost all the professors of antiquities in Europe. Long is the list of men in array against him; his supporters at present are few.

There is yet another work, the "Hermas," exciting attention under similar disputed circumstances.

Pulmonary consumption, the disease especially of the young, the gifted, and most beautiful of the human race is an almost hopeless complaint. Can it be cured? How many earnest labourers in medical science have done their best to answer yes, but have miserably failed, and felt the bitter mockery of the war they have waged against its merciless ravages. Who has not witnessed the almost despairing search of mother, sister, brother, for some relieving condiment, some healing atmosphere, some—no matter what—means of release for the dying patient,—some one or some thing to snatch the loved one from death's icy grasp? But how seldom found! From a watery death how many have for ages been recovered by the clumsiest of means; to obtain renewed respiration, what out-of-the-way processes have been resorted to! and yet only five or six years ago a young physician conceived the natural and simple idea that as the muscles of the arm are connected with the muscles of the lungs, so, by raising and depressing the arms, we can use the lungs like a pair of bellows, and fairly pump air in and out of the chest. Within the last year only a medical committee have tested this plan and pronounced it good. It only awaits general practical application to testify to its real efficacy. To a man who could think so good a thing other thoughts were not likely to be wanting. Consumptive patients would be before him in his daily practice, and his thoughts, whether fertile or not, must, if his heart be human, be drawn towards their fatal malady. On this subject, as on drowning, Dr. Silvester's ideas are eminently practical; his design is to show, in the first place, why tubercular matter is deposited in a certain part of the lungs, and then how that deposit is to be removed. He confines himself to the early stages of consumption, and enters into no disquisitions on the origin or nature of the tubercular diathesis in the little pamphlet in which he has published his views. It is well known that the morbid deposit in the lungs is not placed indifferently in any part of their tissue, but under ordinary circumstances, one certain portion of the lungs is, from some cause or other, more liable to a deficiency of aëration than any other part, and this part—the upper lobes—is the very part which is most liable to the deposit of tubercle. Dr. Silvester proposes, therefore, to operate beneficially on the lungs and blood by a principle of aëration. To effect a perfect aëration of these lobes, and by that means to cause the expulsion of the tuberculous matter, is his plan.

Various methods of aërating the upper lobes may be made use of either in the standing or sitting posture. The latter being the more generally useful, a chair has been made expressly for this purpose by Mr. Bigg, of Leicester-square; but an ordinary chair is available for the purpose, the patient placing his hands on its arms to lift the weight of his shoulders off his chest, and give a fixed point of attachment for the muscles of respiration during the breathing.

In the standing posture, the patient is provided with two poles, one of which he clasps in each hand as high as he can conveniently reach, so as to allow the weight of the upper extremities to be borne by the poles; expanding the chest, he should draw a deep inspiration for about the duration of two seconds, and then give a steady forcible expiration for another two seconds, thus making fifteen deep respirations in a minute, or about the number made by an ordinary healthy person. By this method the upper ribs are raised to their fullest extent, and air is drawn into the highest cells alternately with the expulsion of the products of respiration from that part of the chest most frequently containing the seeds of the disease.

After putting these methods of treatment into practice in a considerable number of cases, Dr. Silvester states that he has obtained very satisfactory results. It has been observed, that after the plan has been adopted for a short time, *gurgling* respiration or gurgling cough may be heard at the apex of one or both lungs; the expectoration is considerably increased in amount, the tubercular matter after a time appears to achieve its own expulsion, and a remarkably clear sound of vesicular breathing succeeds.

The object of aërating the upper part of the chest is not only to get rid of any deposit which may exist there, but, by removing that deposit as soon as it forms, to restore the function of the lung, and to render it less liable to the attacks of disease. Dr. Silvester thinks that the reason of consumption being so commonly regarded as incurable, arises from the fact that the real nature of the case is not recognized or brought under treatment before the second or third stage of the disease has set in, when the complant is too frequently beyond medical aid. Alleviation of the symptoms is all that can then be looked for.

At the Archæological Institute, the Rev. C. H. Campion gave a full description of the mural paintings lately found in the church of Westmeston, Sussex, and of which some notice was offered by Mr. Blaauw at a previous meeting. Mr. Birch, keeper of antiquities in the British Museum, then delivered a very interesting discourse on the gold jewelled ornaments discovered by M. Mariette near Thebes, in 1859, and which were sent by the Viceroy to the late International Exhibition, where they had been inspected with eager curiosity. A fine series of drawings of these articles was displayed, made by Mr. Kiddle, who had thus preserved memorials of objects unrivalled in beauty of workmanship and in historical interest. Mr. Birch placed their date, at the lowest computation, at B.C. 1500 or 1510, but they are possibly of even higher antiquity. A notice was given by Mr. J. Hewitt of an ancient weapon of the 13th or 14th century, called the "Godenag" or "Good Day." The Hon. W. O. Stanley, M.P., sent for exhibition a drawing of a bronze cauldron found in Denbighshire. The Marquis de Casa Soring presented two lithographed fac-similes of the inscribed bronze tablets found near Malaga, in 1851. A series of the earliest documents relating to Reading Abbey was sent by the Marquis of Westminster; Lord Clifford also exhibited the fine cartulary of Chertsey Abbey, preserved in the library at Ugbrooke. Various other antiquities were exhibited. Dr. Rock announced that the unique French version of the *Modus* for holding Parliaments, belonging to Lord Winchelsea, would be given in the next *Archæological Journal*, under the editorial care of Mr. D. Hardy. He mentioned, too,

Digitized by Google

that the first vol. of the work on "Christian Epigraphy," edited by the Cavalière de Rossi, had just appeared.

The important subject of "Railway Telegraphs, and their application to the signalling and working of trains" was brought on at the Civil Engineers by Mr. Preece. He did not advocate the adoption of the telegraph as a primary power in the working of railways, for it was, like many mechanical arrangements, an uncertain agent, but he considered its secondary or auxiliary capacity invaluable.

In the "block system," Clarke's, Tyer's, Walker's, Regnault's systems, and the German bell-system, Mr. Preece thought the two signals "danger" and "safety" were not sufficiently opposite in their indications to be unmistakeable. An obviation of this difficulty had been recently applied on the Great Western Railway by Mr. Spagnoletti. In this method (Highley's), written words were given in the place of the deflection of the needle. In all the ordinary systems the signals were so dissimilar to those used out of doors that the signalman had to master two systems, one of "line-signals" to regulate the trains; the other, electric signals, to regulate those of the line. Mr. Preece then described how he had assimilated on the South-Western Railway the electric to the line signals. The instrument he employed was an exact counterpart, on a small scale, of the signals employed on the line, whether semaphore, disk, or otherwise, and it was worked in precisely the same manner. The electric signal was thus simply a "distance-signal;" and it was contended that if a system of signalling was found sufficient to work the trains by manual power, the same system must be equally efficient when manipulated by electrical agency. The conclusions of Mr. Preece were, that with a well-managed speaking telegraph to regulate the trains, and a reliable signalling apparatus to regulate the signals, safety and regularity were assured. Indiscriminately used, the telegraph might become a positive source of danger; but carefully used, it was the greatest element of security.

Before the Royal Society, Mr. Francis Galton gave his "Development of the Theory of Cyclones." His opinions were that as a limited area of very low barometer is a locus of light ascending currents, which are in-draughted from all sides in cyclonic spirals, so a similar area of very high barometer is a locus of dense descending currents, which disperse on all sides in *anti*-cyclonic curves. The curvature of the cyclone being retrograde in this hemisphere, that of the anti-cyclone is direct, owing to the same well-known fundamental cause, though acting in a modified manner. The area of the cyclone is marked by storm and rain; that of the anti-cyclone by calms and fair weather. An anti-cyclone is enabled to feed a cyclone without abruptness, for the very reason that its curvature has an opposite character; just as a contrary rotation on the part of two wheels is a necessary condition of their moving in gear or in unison.

The experience of simultaneous charts of the weather of Europe, extending over ninety-three epochs of observation, compiled and shortly to be published by Mr. Galton, show an almost invariable deflection of the wind-currents in the sense mentioned above, and occasional instances of exceedingly well-marked systems of anti-cyclones. The loci of highest, and lowest barometer were separated in his charts by distances of from 1,000 to 2,000 miles, and Mr. Galton concludes that whenever there are limited areas of very high and very low barometers at distances not exceeding the above, a line drawn from the former to the latter will be cut in all cases by winds coming from the left.

Mr. Hardwicke has published the first number of his new edition of that well-known standard work, Sowerby's "English Botany." The number is five shillings, and contains twenty-seven nicely-coloured plates. The new edition is edited by Mr. Syme, and the popular descriptions of the plants are by Mrs. Lankester.

LEARNED SOCIETIES.

LIST OF MEETINGS FOR NEXT WEEK.

MONDAY.

MEDICAL—32A, George-street, Hanover-square, at 8½ P.M. "On Alcoholic Phthysis." By Dr. Richardson.

ASIATIC.—5, New Burlington Street, at 3 P.M.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Sculpture." By Professor Westmacott, R.A.

ROYAL INSTITUTION — Albemarle-street, at 2 P.M. Special meeting of Members.

TUESDAY.

PATHOLOGICAL—53, Berners-street, Oxford-street, at 8 P.M.

ETHNOLOGICAL.—4, St. Martin's-place, at 8 P.M. 1. "On the Nations and Tribes inhabiting British Burmah." By Colonel Phayre. 2. "On the Jews of Aden." Communicated by M. Bronkhorst.

CIVIL ENGINEERS—25, Great George-street, Westminster, at 8 P.M. Continued Discussion on Mr. Preece's paper "On Railway Telegraphs."

STATISTICAL—12, St. James's-square, at 8 P.M. "On the Cotton Trade and Manufacturers as affected by the Civil War in America." By Dr. Leone Levi.

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Professor Marshall, "On Animal-Mechanics."

WEDNESDAY.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. Soirée.

GEOLOGICAL—Burlington House, at 8 P.M. 1. "On a Northerly Extension of the Upper Silurian Passage-beds to Linley, Salop." By Mr. George E. Roberts and Mr. John Randall. 2. "On some Crustacean Tracks from the Old Red Sandstone near Ludlow." By Mr. George E. Roberts. 3. "On the Parallel Roads of Glen Roy, and their place in the History of the Glacial Period." By Mr. T. F. Jamieson.

ROYAL LITERATURE—4, St. Martin's-place, Trafalgar-square, at 4½ P.M.

SOCIETY OF ARTS—John-street, Adelphi, at 8 P.M.

METEOROLOGICAL—25, Great George-street, Westminster, at 7 P.M. "On the Average Height of the Barometer in London during the last Eighty-three Years." By Mr. Eaton.

THURSDAY.

ROYAL SOCIETY—Burlington House, at 8.30 P.M. 1. "On some new Compounds obtained by Nitrogen-substitution, and new Alcohols obtained therefrom." By P. Griess, Esq. 2. "Researches in some of the Artificial Colouring Matters; II.—On the Composition of some of the Blue Derivatives of the Tertiary Monamines derived from Cinchonine." By Professor A. W. Hoffmann. 3. "On the Differential Quotiaries of Dynamics." By G. Boote, Esq.

ANTIQUARIES—Somerset House, at 8.30 P.M.

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Professor Frankland "On Chemical Affinity."

FRIDAY.

PHILOLOGICAL—Somerset House, at 8.15 P.M. 1. "On the Origin of the terminal *m* of *am*;" and 2. "Some English Etymologies." By Mr. Henaleigh Wedgwood. 3. "Some Points in Sanskrit Grammar." By the Rev. G. Small.

ROYAL INSTITUTION—Albemarle-street, at 8 P.M. "On Radiation through the Earth's Atmosphere." By Professor Tyndall.

LONDON INSTITUTION—Finsbury-circus, at 7 P.M. "Non-Metallic Elements." By Professor Field.

SATURDAY.

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Mr. W. Savory "On Life and Death."

BOTANIC—Inner Circle, Regent's Park, at 3½ P.M.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Adams's (E.) Geography Classified: a Manual of Mathematical Geography. Post 8vo., cloth, 7s. 6d.
——— (Rev. H. C.) School-Boy Honour: a Tale of Halminster. New edition, Fcap., cloth, 2s. 6d.
Amy Thornton; or, the Curate's Daughter. By E. Burlend. Crown 8vo., cloth, gilt, 3s.
Ascham's (Roger) The Scholemaster. Edited by the Rev. J. E. B. Mayor. Fcap., cloth, 6s.
Aurora Floyd. By M. E. Braddon. 3 vols. Post 8vo., cloth, £1. 11s. 6d.
Beatrice Storsa; or, the Progress of Truth. By W. Brewer, M.D. 3 vols. Post, 8vo., cloth, £1. 11s. 6d.
Begbie's (E. A.) Answers to Questions in the "Instructions in Musketry." Crown 8vo., cloth, 2s. 6d.
Braithwaite's (Drs. W. & J.) Commentary on Midwifery. No. 4. (July to Dec. 1862). Fcap., sewed, 2s. 6d.
Brierley's (Benjamin) Tales and Sketches of Lancashire Life. Vol. II. Fcap., cloth, 2s. 6d.
Bunyan's Pilgrim's Progress. Large paper edition. Crown 8vo., cloth, 7s. 6d. MacMillan & Co.
Calendar of State Papers. Colonial series.—East Indies, &c. Edited by W. W. Sainsbury. Royal 8vo., cloth, 15s.
Carter's (William) The Power of God in the Results of Theatre Preaching. 12mo., sewed, 1s.
Church and State Gazette. Edited by Archdeacon Denison, Vol. I. Folio, cloth, 9s.
Comic Adventures of the Young Man from the Country. Photographs. 16mo., bds., 3s. 6d. plain; 5s. coloured.
Craik's (Dr. G. L.) Manual of English Literature. New edition. Crown 8vo., cloth, 7s. 6d.
Crompton's (Sarah) Tales of Life in Earnest. Fcap., cloth, 2s. 6d.
Demosthenes' Midias, with English Notes by A. Holmes. Crown 8vo., cloth, 5s.
Drew's Bishop Colenso's Examination of the Pentateuch Examined. By G. S. Drew, M.A. Fcap., cloth, 3s. 6d.
Eadie's (Dr. J.) Concordance to the Bible, with Introduction by Dr. King. 23rd edition. Crown 8vo., cloth, 5s.
Florist (The) and Pomologist. Vol. for 1863. Royal 8vo., cloth, 14s.
Frost's (Rev. P.) and Wolstenholme's (Rev. J.) Treatise on Solid Geometry. 8vo., cloth, 18s.
Ganot's (Professor) Elementary Treatise on Physics. Translated by E. Atkinson. Crown 8vo., cloth, 12s. 6d.
Gatty's (Mrs. A.) British Seaweeds, drawn from Professor Harvey's Phycologia Britannica." Plates. 4to., cloth, £3. 3s.
Gaussen's (L.) Theopneustia. Edited by Professor Scott. Fcap., cloth, 3s.
Grace and Glory; or, Believers' Bliss in both Worlds. By Author of "God is Love." Fcap., cloth, 5s.
Graham's (G. F.) English Synonymes Classified and Explained. Fourth edition. Fcap., cloth, 6s.
Gray's (Dr. J. E.) Hand Catalogue of Postage Stamps. Second edition. Fcap., bds., 1s.
Hall's (Rev. H. B.) The Fulness of the Manifestation of Jesus Christ: Epiphany Sermons. Fcap., cloth, 2s.
Hallday's (R.) Digest of Examination Questions in Common Law. Third edition. 8vo., cloth, 15s.
Jaeger's (A.) New Pocket Dictionary of English-Dutch, and Dutch-English Languages. 16mo., cloth, 4s.
Johnson's (Samuel) Life. By Boswell. New edition. 8vo., cloth, 5s.
Kinglake's (A. W.) The Invasion of the Crimea: its Origin and Progress. Vols. I. and II. 8vo., cloth, £1. 12s.
Lee's (H.) Lectures on Syphilis, &c. Second edition. 8vo., cloth, 10s.
Little Effie's Cowslip Bell. 8vo., cloth, 1s.
Macnaught's (Rev. John) Christianity and its Evidences. Fcap., cloth, 3s.
Miller's (Hugh) Tales and Sketches. Edited by Mrs. Miller. Crown 8vo., cloth, 6s.
Minnie's Birthday, and other Stories for Children. By Marietta. Fcap., cloth, 2s.
Neale's (Rev. J. M.) Essays on Liturgiology and Church History. 8vo., boards, 18s.
——— Mediæval Hymns and Sequences. Second edition, with additions. 32mo., cloth, 2s.
North and South. By The White Republican of "Fraser's Magazine." Crown 8vo., cloth, 9s.
O'Neill's (H.) The Fine Arts Civilization of Ancient Ireland. Plates. Imperial 8vo., cloth, 15s.
Perry's (F.) The Fruits of the Spirit. Fcap., cloth, 5s.
Practical Mechanics' Journal Record of the Great Exhibition of 1862. 4to. cloth, £1. 8s. 6d.
Pulpit (The). Vol. LXXXII. 8vo., cloth, 7s. 6d.
Rankine's (W. J. M.) Manual of Civil Engineering. Second edition. Crown 8vo., cloth, 16s.
Rawlinson's Municipal Corporation Acts. Fourth edition. By W. N. Welsby, 12mo., cloth, £1. 2s. 0d.
Remarks on Bishop Colenso's Recent Work; or, Rationalism shown to be most Irrational. 8vo., sewed, 6d.
Revival (The). Vol. VII. 4to., cloth, 3s.
Robinson Crusoe. Illustrated by Zwecker. New edition. 8vo., cloth, 5s.
Royal Blue Book (The) 1863. 12mo., boards, 5s.
St. John's (Spenser) Life in the Forests of the Far East. Second edition. 2 vols. 8vo., cloth, £1. 12s.
Shea's (Dr. J.) Manual of Animal Physiology. Fcap., cloth, 5s. 6d.
Shepherd's (Rev. C. P.) The Argument of St. Paul's Epistle to the Christians in Rome. 8vo., cloth, 10s.
Skyring's Builder's Price Book, 1863. 8vo., cloth, 4s.
Stanhope's (Earl) Miscellanies. Crown 8vo., cloth, 5s.
Sunshine. Vol. I. (1862). Crown 4to., cloth, 1s. 6d.
Taylor's (Isaac) Considerations of the Pentateuch. 8vo., sewed, 2s. 6d.
Thom's Irish Almanac and Directory, 1863. 8vo., cloth, 10s. 6d.
——— ditto, complete edition. 8vo., cloth, 15s.
Thomas's (Rev. Dr.) Resurrection: Thoughts on Duty and Destiny. Crown 8vo., cloth, 2s. 6d.
Tracts on Practical Subjects, addressed to the Working Classes. 12mo., cloth, 1s. 6d.
Transactions of the National Association for the Promotion of Social Science, 1862. 8vo., cloth, 12s.
Uncle Tom's Cabin. By Mrs. H. B. Stowe, with Preface by the Earl of Carlisle. New edition. Crown 8vo., cloth, 3s. 6d.
Watson's (Joshua) Memoirs. By Archdeacon Churton. Second edition. Crown 8vo., cloth, 7s. 6d.
Wild Animals. Coloured illustrations. 2 parts, 1s. 6d. each, sewed, or in 1 vol., 2s. 6d. cloth limp.

OFFICE: 11, SOUTHAMPTON-STREET, LONDON, W.C.

ADVERTISEMENTS.

ROYAL ENGLISH OPERA, COVENT GARDEN. Under the Management of Miss LOUISA PYNE and Mr. W. HARRISON, Sole Lessees.

On Monday, Jan. 19, and Friday, 23rd, Howard Glover's Popular Opera, RUY BLAS. Miss Louisa Pyne, Mr. Santley, and Mr. W. Harrison. On Tuesday, 20th, and Thursday, 22nd, Wallace's new and brilliantly successful Opera, LOVE'S TRIUMPH, in which Miss Louisa Pyne will appear. On Wednesday, 21st, and Saturday, 24th, Balfe's Grand Opera, THE PURITAN'S DAUGHTER. Mdlle. Parepa, Mr. Santley, Mr. Weiss, and Mr. W. Harrison. Every Evening the Grand Original Zoological, Comical Christmas Pantomime, written by H. J. Byron, entitled HARLEQUIN BEAUTY AND THE BEAST; or, the Gnome Queen and the Good Fairy. The Grand Transformation Scene, Moonbeam and Sunlight; or, the Descent of Morn's First Ray. Invented and painted by W. Callcott.

Notice.—A MORNING PERFORMANCE of the New Pantomime will take place on Wednesday, January 21th, and each succeeding Wednesday at Two o'clock. Carriages to be in attendance at half-past Four. N.B.—Children under Twelve years of age Half-price to the Morning Performances, to all parts of the House except Pit, price 1s. 6d.

Private Boxes, from 10s. 6d. to £4. 4s.; Orchestra Stalls, 10s.; Dress Circles, 5s.; Upper Boxes, 4s.; Amphitheatre Stalls, 3s.; Pit, 2s. 6d.; Amphitheatre, 1s. Box-office open daily from Ten till Five. No Charge for Booking or Fees to Box-keepers. Doors open at Half-past Six, the Overture commencing at ten minutes to Seven.

MONDAY POPULAR CONCERTS, St. James's Hall. On Monday Evening next, January 19. Pianoforte, Herr Pauer. Violin, M. Sainton. Violoncello, Signor Piatti. Vocalists, Miss Banks and Mr. Sims Reeves. Conductor, Mr. Benedict. Sofa Stalls, 5s. Balcony, 3s. Admission, 1s. Tickets to be had at Chappell & Co's., 50, New Bond-street, and at Austin's, 28, Piccadily.

CHRISTY'S MINSTRELS.—Christmas Week.—SPECIAL PERFORMANCE. The Celebrated and Original CHRISTY'S MINSTRELS will appear at ST. JAMES'S HALL every Evening at Eight (except Christmas-day), and on Wednesday, Friday, and Saturday Afternoons at Three o'clock. Proprietor, W. P. COLLINS.—Stalls, 3s.; Area, 2s.; Gallery, 1s. Tickets at CHAPPELL & CO.'S 50, New Bond-street; and at AUSTIN'S, 28, Piccadilly.

ESTABLISHED A.D. 1844.

GREAT BRITAIN MUTUAL LIFE ASSURANCE SOCIETY.

Empowered by Special Act of Parliament, 25 & 26 Vict. cap. 74.

WILLIAM HENRY DICKSON, Esq., Chancellor House, Tunbridge Wells, Chairman.

THOMAS R. DAVISON, Esq., 2, Royal Exchange-buildings, Deputy Chairman.

This Society is established on the tried and approved principle of Mutual Assurance. The funds are accumulated for the exclusive benefit of the members, under their own immediate superintendence and control. The profits are divided annually.

101, Cheapside, E.C. C. L. LAWSON, Sec.

SEVEN PER CENT. PERPETUAL PREFERENCE STOCK of the

DEMERARA RAILWAY COMPANY,

Incorporated by Act of the Colonial Legislature, and confirmed by Her Majesty in Council.

Applications for the remaining portion of this Stock may be sent to CHARLES CAVE, Esq., Colonial Commissioner, at the Banking-house of Messrs. PRESCOTT, GROTE, CAVE, & CAVE, 62, Threadneedle-street, London.

SOUTH AUSTRALIAN BANKING COMPANY. Incorporated by Royal Charter, 1847. Letters of Credit and Bills issued upon Adelaide, Port Adelaide, Gawler, Robe, Kadina, and Wallaroo. Approved drafts negociated and sent for collection. Every description of Banking business conducted with Victoria, New South Wales, and the other Australian Colonies, through the Company's Agents.

London: 54, Old Broad-street, E.C.

F. W. DICEY, Hon. Secretary.

BEN RHYDDING, ILKLEY, YORKSHIRE
A WINTER AND SPRING RESIDENCE.

PHYSICIAN.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.

SURGEON.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

THE Proprietors of a Printing Establishment in the Country, possessing a splendid Assortment of TYPE, excellent MACHINERY, worked by steam-power, are desirous of making arrangements with Companies or Firms, requiring large or small quantities of Printing, and are prepared to execute either Bookwork or Jobbing Printing in first-rate style, and at moderate prices. Estimates given for any description of work.—Address, D. W., care of the Publisher of *London Review*.

MONEY.—£330,000 to be advanced upon MORTGAGE, in various sums. Freeholds averaging from 3 to 4 per cent., according to the amount required. Leaseholds, 4½ to 5 per cent. Also, some smaller sums, to be lent upon personal or any other tangible securities.—Apply, by letter only in the first instance, to REGINALD ADOLPHUS, Esq., 4, St. George's-square, Regent's Park, London.

GEOLOGY.—KING'S COLLEGE, LONDON.—Professor TENNANT, F.G.S., will commence A COURSE OF LECTURES ON GEOLOGY, on Friday Morning, January 23, at Nine o'clock. They will be continued on each succeeding Wednesday and Friday, at the same hour. Fee, £2. 12s. 6d. R. W. JELF, D.D., Principal.

UNIVERSAL EXHIBITION, PARIS, 1855.
FIRST-CLASS MEDAL awarded to T. COOKE,
"For Astronomical Instruments."

INTERNATIONAL EXHIBITION, LONDON, 1862.
PRIZE MEDAL:—"Equatorial Telescopes—For their Excellent Object Glasses and Equatorial Mountings."

METZLER & CO.,

37, 38, 35, and 16, GREAT MARLBOROUGH-STREET, LONDON, W.

DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

Now ready, 2 vols, 8vo, with Maps and Illustrations, price 24s.

LIFE IN NORMANDY: Sketches of French Fishing, Farming, Cooking, Natural History, and Politics, drawn from Nature. By an ENGLISH RESIDENT.

From the "TIMES."

"It is one of those books which at once fascinate and humiliate the reader,—the former because it is full of good matter, put in a most interesting light; the latter because the material and the interest are derived from such simple and obvious sources that we wonder to think how these good things have been missed so long. It is the same sort of feeling which that delightful book, White's *Natural History of Selborne* suggests. What is *Selbourne* more than the other villages of England? Which of us is confident that, taking up some obscure hamlet, keeping our eyes open, and merely recording what we see from day to day in the dull neighbourhood, we could produce a book which should be one of the treasures of every library? The scope of the present work is wider than that which Gilbert White set himself, but is similar to it."

Edinburgh: EDMONSTON & DOUGLAS.
London: HAMILTON, ADAMS, & CO.

Third Thousand, now ready at all Libraries, with Portrait and graphic Illustrations,

"CHRISTOPHER NORTH:"

A Memoir of JOHN WILSON,

Late Professor of Moral Philosophy in the University of Edinburgh.

Compiled from Family papers and other sources, by his Daughter

MRS. GORDON.

2 vols. crown 8vo. 24s.

"We do not believe that the most practised and able critic could have done more to put Wilson's literary labours in a favourable light than his daughter has done."—*Saturday Review*.

"Of Mrs. Gordon's two most charming volumes we can only speak in terms of cordial commendation. We do not know that we have ever read a biography which has, on the whole, satisfied us better."—*Spectator*.

"The authoress has related its details with so much feeling and pathos, that, as a true expression of natural affection, to praise it would be impertinent."—*Times*.

Edinburgh: EDMONSTON & DOUGLAS.
London: HAMILTON, ADAMS, & CO.

This Day is published, price 32s., cloth,

SOVEREIGN LIFE ASSURANCE COMPANY

48, ST. JAMES'S STREET, LONDON, S.W.

Trustees.

THE RIGHT HON. THE EARL OF SHREWSBURY AND TABLOT.

SIR CLAUDE SCOTT, BART. | HENRY POWNALL, ESQ.

Directors.

CHAIRMAN—THE LORD ARTHUR LENNOX.

DEPUTY-CHAIRMAN—SIR JAMES CARMICHAEL, BART.

JOHN ASHBURNER, ESQ., M.D.
T. M. B. BATARD, ESQ.
LIEUT.-COL. BATHURST.
JOHN GARDINER, ESQ.
J. W. HUDDLESTON, ESQ., Q.C.
CHARLES OSBORNE, ESQ.

Bankers.

SIR CLAUDE SCOTT, BART., AND CO.

FOUNDED IN 1845.

REPORT

OF DIRECTORS, AND STATEMENT OF PROCEEDINGS AT THE ORDINARY MEETING OF PROPRIETORS, held on the 7th of MAY, 1862,

LORD ARTHUR LENNOX in the Chair.

THE REPORT OF THE DIRECTORS, made in the Spring of last year, appealed to the Proprietors and others interested in the Office, to assist the Directors in making 1861 the most successful year of the Company's operations; and, notwithstanding the absence of general commercial prosperity throughout the country, the Directors are happy to say that in many respects the desired result of their appeal has been realised.

This year was, however, remarkable in the experience of this Office, as it is believed it was in that of other similar Institutions, for the number of lapsed Assurances, especially in those districts where industry has been impeded by the suspension of our commercial relations with America.

At the same time the business effected has been greater than at any former period, the New Premiums amounting to £6,055 11s. 3d. Assuring £171,250 by the issue of 722 Policies.

The point, however, on which the Directors have most reason to congratulate the Proprietors is, that after a very careful and rigid investigation into the position and prospects of the Company, made in pursuance of the requirements of the Deed of Settlement, by Mr. PETER HARDY, the eminent Actuary, the result, as embodied in the following Report, is of the most satisfactory character.

"TO THE CHAIRMAN AND DIRECTORS OF THE SOVEREIGN LIFE ASSURANCE COMPANY.

"GENTLEMEN,—I have the honour to submit herewith a full statement of the result of the valuation, just completed, of the Assets and Liabilities of the Sovereign Life Assurance Company, up to or as of the 31st December, 1861.

"This investigation has been, on the present occasion, a work of considerable magnitude and labour, as the number of Policies actually in force exceeds 5,000, covering Assurances to over One Million Sterling, and embracing almost every class or description of Life Assurance.

"I am happy to be able to assure you that the condition of the Company is sound and prosperous, and holds out every prospect of increased success. The Bonus, which the Directors may safely declare as the result of this valuation, is larger in amount, both as regards the Shareholders and the Assured, than that declared on any previous occasion; and this Bonus has been fairly earned by the past operations of the Society, *without in the smallest degree touching any portion of the future profits.*

"The valuation has been made with the greatest care and exactness, and the reserve for the future is most ample for the purposes of safety, and quite sufficient, with care and management, to maintain hereafter a proportionately favourable rate of improvement.

"I have the honour to be,

"Gentlemen,

"Your very faithful servant,

(Signed) "PETER HARDY,

"April, 1862." "Actuary."

It may be remembered, that on the declaration of the last Bonus the Actuary strongly urged the propriety of postponing the Actual Division of Profits until the alternate triennial valuation; the prudence of which course, though it naturally occasioned disappointment in some few instances, is now apparent; and it is most gratifying to the Board, while reviewing the peculiar difficulties which those alone who are actively engaged in the business of Life Assurance know to have existed during the last six years, to present so favourable a Report, especially as it emanates from a gentleman of such high character and professional standing as Mr. HARDY.

Without in the smallest degree encroaching on future profits the addition sanctioned by this investigation will give to each Share a Bonus of 4s. 6d. or 9 per cent. on the paid-up Capital, being three times the sum allotted on the last occasion, and 75 per cent. of the divisible Surplus will be added to all Policy-holders, assured at participating rates, on the 31st December last, in proportion to the premiums paid since the last Division.

The Circulars, announcing the allotment to individual Policies, will be issued as soon as practicable.

The Directors recommend that the usual Dividend of 5 per cent., free of Income-Tax, be paid on the Capital for the half-year ending 31st December last.

The Directors retiring are LORD ARTHUR LENNOX, T. M. B. BATARD, Esq., and JOHN GARDINER, Esq., who, being eligible, offer themselves for re-election.

(Signed) ARTHUR LENNOX,
Chairman.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, JANUARY 17, 1863.

THE TORY MANIFESTO.

THERE are few sights more comical and absurd than that of a man who is under the professional necessity of putting himself into a passion which he does not feel. The actor who is painfully conscious that "Hecuba" is nothing "to him, or he to Hecuba"—the jovial widow who can scarcely conceal her satisfaction at the departure of the dear defunct—the doctor who is expected to look sad at a funeral—the clown who is called upon to appear merry in a pantomime—have all difficult and tiresome tasks enough in their way. But in these days the professional political grievance-monger seems to us to have a more laborious job than any of them. We really feel a sincere compassion for the Quarterly Reviewer, who had to sit down to write two sheets of political denunciation in the present state of public opinion. There is nothing in the world so disheartening as to play to a dead and indifferent audience, except it is to endeavour to flog into a passion a contented and complacent public. To say that the *Quarterly Review* has uttered a great deal of rubbish in a tolerably smart style, is only to admit that he has acquitted himself respectably in an unprofitable situation. The political article in the last *Quarterly* is a sort of "Brutus and Cassius" oration, such as might be delivered by a clever school-boy in a sixth-form debating club against some ideal tyrant. The ball opens, of course, with a tremendous philippic against Reform and all Reformers. The "general remodelling of all our valued institutions," we are told, has been "happily checked." "The great Reform delusion has been dissipated." The dangerous belief that a "constant degradation of the suffrage was to be the inexorable law of our growth" is at an end. In fact, *nous sommes sauvés*. "Our statesmen have awoken to the fact that the imagined Reform agitation was nothing but an intrigue among themselves, and the nation was far too sensible to desire any further approximation to the government of the multitude." These are "brave 'ords," but gentlemen, who deal in sneers of this description, should have the acuteness to remember that taunts are implements which have two edges, one of which may happen to wound the hands of those who wield them. To listen to the *Quarterly Review*, one would suppose that the records of the past were all obliterated, and that the memories of mankind could not reach over the space of four years. We should like to know who it was that, in the year 1858, gratuitously undertook the task of "remodelling our most valued institutions?" Who were then the fuglemen of the "great Reform delusion?" Whose Administration proposed, as the condition of its existence, to produce a bill for the "degradation of the suffrage?" Did the *Quarterly Review* never hear of Lord Derby's Reform Bill, or is it from that performance that it derives the idea that "Reform agitation was nothing but an intrigue among statesmen?" Lords Russell and Palmerston are bitterly reproached with having used Reform as a stepping-stone to power. In this, at least, they acted according to the traditions and principles of their party; but upon what grounds and for what objects did a Tory Administration pledge itself to a Reform Bill, and for what objects did Mr. Disraeli in the last agonies of the final struggle offer even to surrender the borough franchise? These are questions to which we recommend the Reviewer, before he prepares his next tirade, to provide himself with some plausible, if not satisfactory, answer.

The next head of the indictment against a "Reforming Administration" is that it has wickedly endeavoured to conciliate the Radicals. This, in the opinion of the *Quarterly Review*, is the head and front of Lord Palmerston's offending. We don't stop to inquire into the character or enormity of this offence. But if it is a high misdemeanour on the part of a Liberal minister to attempt to satisfy the Radicals after their several kinds, "commercial, religious, and sentimental," what are we to think of a Conservative leader of Opposition whose whole conception of policy is to entrap the affections of these gay Radicals, and allure them into little conspiracies by which he alone is to profit? The conduct of Lord Palmerston towards the gentlemen below the gangway is said by the Reviewer to be like that of a "flighty wife to a husband whom she dreads and detests." If we may be allowed to pursue this singular image, we should say that the behaviour of Mr. Disraeli towards the same gentlemen is most of all like that of a faithless husband towards a lady who is *not* his wife, but whom he desires at once to seduce and to desert. What has been the history of the Tory party, ever since they broke up the Government of Sir R. Peel and placed themselves under the guidance of their present leaders, except a series of meretricious alliances with politicians whose principles they abhorred, in order to gain possession of the offices they coveted? The *Quarterly Review* has actually the audacity to attribute to Lord Russell the expulsion of Sir R. Peel on the Irish Coercion Bill; as if all the world did not know that it was the work of the malignity of Mr. Disraeli, and the hatred of Lord G. Bentinck. For office, the Tories threw overboard their vaunted principles of Protection in 1852. For office, they coalesced with Mr. Cobden on the Chinese Resolution. For office, they allied themselves with Mr. Milner Gibson to defeat Lord Palmerston on the Conspiracy Bill. To retain the offices they had thus acquired, they sanctioned without remorse the "great Reform delusion." For office, they have intrigued and are intriguing with the rump of the Irish Papacy, in order to catch a few Irish votes at the expense of the dearest principles they have ever professed, and to the dishonour of the

Digitized by Google

Church for whose interests they pretend an exclusive regard. For office, the advocates of national interests and efficient establishments have permitted their authorized leader to denounce "bloated armaments," and to bid for Radical support. And this is the party, and these are the men, who have the face to make it a charge against Lord Palmerston that he has sold the interests of the country in order to purchase Radical support. These are the men who venture to deal in charges of insincerity, and to challenge inquiry into their own good faith.

But then, for want of something better to say, the Tory Reviewer is fain to raise the stale cry that "the Church is in danger." Indeed, the passages which are devoted to the Church-rate question read more like ravings extracted out of a sermon of Sacheverel than the pages of a reasonable journal in the year 1863. We are told that the Church has been "offered up as a victim." The "supreme hour of the Church" had well nigh arrived when "the few leading Constitutional Whigs filed into the Dissenting lobby." "To this Government, among all Whig Governments, has been reserved the honour of attempting an enterprise of which Walpole and Fox never dreamed, and from which Lord Grey and Lord Melbourne recoiled. Never before, since the days of Cromwell, have the servants of the Crown voted as a body for the direct spoliation of the English Church." What balderdash is this? Has this unskilful writer forgotten that this senseless vituperation falls on other heads besides those which he hoped to break? When "the few leading Constitutional Whigs filed into the Dissenting lobby," did they go there alone or attended only by their "religious Radical" allies? Has the Quarterly Reviewer, who must needs go back to the days of the "elder Cromwell" for a parallel to such atrocities, forgotten that the heir of Derby of Latham joined in that "enterprise of which Walpole and Fox never dreamed, and from which Lord Grey and Lord Melbourne recoiled?" Does he not know that the eldest son of the Tory Prime Minister —the *spes surgentis Iuli*—the Secretary of State of the late and future Conservative Cabinet,—was a party not by his vote only, but by his writings, to the "direct spoliation of the English Church?" Nor did Lord Stanley stand alone. If we are not much mistaken, Sir J. Pakington, that other light of Tory wisdom, has lent on this subject his countenance and support to "the most spoliating Administration our history records." Yet Mr. Gladstone is denounced in unmeasured terms, for not speaking, though he voted, against a measure for which Lord Stanley wrote and which Sir J. Pakington supported. These are the sort of inconsistencies and absurdities into which journalists are betrayed, who are forced to talk nonsense simply because they have nothing to say.

Upon the question of Foreign affairs this ill-advised writer is equally unfortunate. His attempt to vilify the Italian policy of Government is a conspicuous failure. It is only a foolish repetition of that unhappy essay of Mr. Disraeli last session upon Papal independence, which received at the hands of Lord Palmerston so effective a castigation. It is, forsooth, the moral sympathy and support which Lord Russell has extended to the Italian cause which is the real cause of all the difficulties of the Italian Government. If only Lord Malmesbury had been at the Foreign Office, the Cabinet of Turin would have had a much easier time of it; the Pope would have quietly left Rome by this time; the Emperor of the French would have been accommodating; in short, by a policy of "complete abstinence," everything would have been arranged in the best possible manner. If the *Quarterly Review* were written exclusively for circulation among the Marines, this sort of stuff might perhaps be expected to go down; but does the writer suppose that the English people, and, what is more, the Italian people, do not know that the firm but prudent support of the English Cabinet has achieved for the cause of Italian liberty more even than the bayonets of France? Does he suppose that the world is unaware that it was the moral influence of England which enabled the Italian Government to break down the wretched compromise of Villafranca? Does he imagine that any one is ignorant that from one end of the Italian peninsula to the other the name of England is more cherished and respected than that of any other Power in Europe?

On the American question the Reviewer shows a little more caution. He attributes, indeed, *more suo*, the "ruin of the staple industry" of England to the policy of the Whig Government, reminding one of the celebrated inquiry,—

"Who made the quartern loaf and Luddites rise?
Who filled the butcher's shops with large blue flies?"

The practical difference between the Administration of Lord Palmerston and that by which the *Quarterly Review* would fain replace it is that the latter, in addition to "the ruin of the staple industry of the country," would have given us the agreeable interlude of a war with America. However, we are happy to observe that even the *Quarterly Review* has had the wit to discover, since its October number, the general sense of the country on this subject, and we hear no more of the clamour for recognition and intervention, which is the staple commodity of the Tory daily press. Possibly the *Quarterly* has got "the office" on this subject from its friends, who are hoping for office themselves.

On the subject of the Ionian Islands, the *Quarterly* can find nothing better to say than that the Government have dismembered the British Empire in order to gratify the economical prejudices of Mr. Bright. If it were so, we don't see why the party who are pledged to the reduction of "bloated armaments" should object to the process of depletion. We suspect that, if this is the best card in the Opposition hand, they will not win the trick. The country will require some more reasonable and probable ground for quarrelling with a decision the good policy of which, on political and military grounds, is equally admitted.

In finance, the Tory essayist of course harks back to the threadbare topic of the Paper Duty. But in spite of all the lugubrious vaticinations which have issued from the Opposition benches, Mr. Gladstone has not yet ruined the country. On the great feature of the Chancellor of the Exchequer's scheme—we mean the Commercial Treaty with France—the Tories observe as profound a silence as that with which they habitually treat the topic of Free Trade. The signal and opportune success of the Commercial Treaty must be gall and wormwood to the gentlemen who opposed it with a malignity almost personal. They will gnaw the file in vain, in endeavouring to convict of misdemeanour a financier who has given to the country the only compensation possible for the disaster which has befallen our American trade. The reviewer concludes by endeavouring to develope a theory to account for the fact, to him incomprehensible, of Lord Palmerston's popularity and success. We cannot follow him into all the *ambages* of this intolerable nonsense. But we will offer him in a single sentence our own solution of the difficulty. Lord Palmerston is popular and successful because he is in every respect the exact opposite of the right honourable gentleman who leads the Tory party in the House of Commons, and who has the honour to enjoy the confidence of the *Quarterly Review*.

INDIAN *versus* AMERICAN COTTON.

IT is exceedingly difficult to establish fairly and conclusively in the popular mind any facts or principles involving much purely technical information. Readers easily forget what they haue never heard before, and do not very thoroughly understand; and writers who have never mastered the subject continue to put forth old fallacies, and to argue on superficial knowledge. We have endeavoured more than once to explain the peculiarities of the cotton supply, and the reason why the American staple has always been preferred to the Indian; and why, even now, the notion so constantly repeated by ordinary journals,—that a little exertion on the part of our Indian authorities, and a little emancipation from prejudice on the part of our British manufacturers, will soon make us independent of the United States, cannot be sustained. But as the exploded errors reappear from time to time, so must the old corrections be from time to time repeated. The case is really not difficult of comprehension, if only the simple facts are clearly stated and made generally known.

It is customary to speak of "cotton" as if it were one and the same article, like tea or coffee, only a little better or a little worse in quality according to the country it comes from, or the care taken in gathering it and packing it. No idea can well be more inaccurate, or rather more incomplete. Cotton is a production including almost as many varieties as corn; and, like corn, each variety has its special use and adaptation. Wheat, oats, and barley, are all available for food. Orleans, Surat, Egyptian, and Brazilian cotton are all available for calicoes and yarn. But the Brazilian staple is almost as distinct from the Indian as oats from wheat;

Digitized by Google

and Surat cotton can no more make muslin or fine thread, or Egyptian make *weft*, than wheat can be malted or barley made into good household bread. The different cotton pods are distinct from each other not merely in length, in colour, and in cleanliness, according to the several climates and soils which produce them; they are originally different plants, some, we understand, being annuals and some biennials, —some even being plants and some being trees,—and though one quality may, to a considerable extent, be substituted for another—just as horses may be fed on barley and mankind on oats, when the price and the supply tempt to such a departure from ordinary practice,—yet this substitution has both its limits and its inconveniences in the case of cotton as well as in the case of grain.

Let us exemplify our meaning. The finest quality of cotton is known as *Sea Islands*. This grows on the low-lying islands off the coast of Georgia and Carolina, and has been produced also in Queensland, Australia. It is long, fine, and silky in fibre, and beautifully white in colour, and is used only for the highest numbers of yarn, from 150's to 300's, either for muslins or for doubling into the finest threads for lace. It sells, in ordinary years, for about 2s. and 3s. per lb., and only about 40,000 bales a year are produced or wanted. When this is scarce, or when, as now, the supply is interrupted, the best quality of Egyptian can, to a great extent, be substituted for it, though at a certain disadvantage, as it is less easy to work, more irregular in length of fibre, and of a very inferior colour.

In value and cost, *Egyptian* and *Brazilian* cotton rank next to Sea Islands, though at a long interval. The former can be spun into fine numbers, and the latter is very strong. Both are largely used in spinning what is called the *warp*, or the *longitudinal* threads of the cloth, which have to bear the friction and tension of the loom, and in which, therefore, tenacity is the quality required. The warp for muslins and for some threads is always, and almost must be, made from Egyptian cotton; and Brazil or West Indian, which has the same harsh and strong character, is largely used for the warp of the coarser fabrics, such as fustians and velveteens. None of these three sorts, however, are available for *woof* or *weft*, *i.e.*, the *transverse* threads of the fabric, for which softness, not strength, is needed, and where colour and cleanliness in the fibre are in consequence more valuable qualities than length.

Surat, or Indian cotton, ranks lowest of all. Its characteristics are shortness and irregularity of fibre, a rich white colour, and great admixture of leaf and dirt, which makes it not only troublesome but wasteful to use. It is employed chiefly in producing the coarser numbers of yarns, from 10's to 30's, and in making *weft* for calicoes, shirtings, and what are called *Domestics*—*i.e.*, the strongest sort of cotton textures. For these purposes it is well adapted, and would be more suitable still if it were transmitted in a cleaner state. Its ordinary price used to range from 2½d. to 5d. per lb. It has now reached the enormous figure of from 13d. to 16d. per pound.

Now *American* cotton combines and includes the characteristics of all the other qualities. Part of it, the Sea Islands, as we have seen, is longer, silkier, and whiter than the best Egyptian. Some of it, the best Orleans, is as strong as the Brazilian, and at the same time softer, cleaner, more regular, and far more workable. The remainder, the great bulk of the crop, known as "Upland," "Mobile," &c., is longer, cleaner, and, to use a technical expression, *kindlier* than the Surat, and a pound of it will go considerably further in producing yarn or cloth. American cotton is available for making both *warp* and *woof;* it can be applied to any purpose; it will spin any numbers, from 10's up to 250's. No wonder, then, that it should be more sought after than any other kind. The manufacturer has a preference for it—not, as it is customary to say, "a prejudice in its favour." He is prejudiced in its favour, just as the baker or the consumer is prejudiced in favour of the best wheat. He prefers it to Surat because it makes more yarn, and makes it better, just as the baker prefers wheat to oats, because it contains more nutriment and makes better bread. The price of American cotton used to range from 4d. to 8d. a lb.; at present it ranges from 18d. to 28d. a lb.

We have now explained sufficiently, we think, why the cotton of the United States is so much called for, and so much preferred to that of any other quarter of the world, and to that of India especially. There is another reason for what is termed the objection of manufacturers to Surat. It usually, indeed almost invariably, comes forward in a very filthy state. It is carelessly gathered, carelessly packed, and damaged in transit; so that it not only contains an enormous amount of seed, leaf, and dust, which has to be beaten out of it, and which when beaten out leaves a comparatively small residuum of actual cotton,—but the process of eliminating this rubbish is a very costly one. Surat requires more manipulation than American cotton. Being shorter in fibre also, the machinery has to work more slowly when engaged upon it, and as the yarn produced from it is weaker than that produced from the Orleans variety, it is more difficult to weave, and yields poorer wages to the operative, and a poorer result to the manufacturer. It is, in a word, in every way an inferior article, and can only be forced into consumption by its lower price or by the absence of its rival.

But it will be asked, "Cannot the quality be improved?" Certainly it can. The indigenous Indian cotton might, by care and honesty and common sense on the part of native merchants and producers, be forwarded in a far cleaner condition, and its transmission would then cost less per pound, and a higher price would be given for it. But little progress has yet been made in this direction. On the contrary, the higher price we give, the worse is often the average quality of the article sent; because the natives, being anxious to send as much as possible, pick the cotton more closely and include more dirt with their pickings. The American variety, too, might be produced in India, and indeed is and has long been produced in certain quantities; and, when forwarded to England, has always commanded the same price as a similar article produced in the United States. But two difficulties stand in the way of an *extensive* production of the superior quality in India—viz., the habits of the natives and the nature of the country. An Oriental people can scarcely ever be induced, except under the strongest pressure and the most unceasing supervision, to alter their system of agriculture or their articles of growth; and it is always difficult to substitute an exotic for an indigenous production. It is not, therefore, that Orleans cotton *cannot* be grown in India, but that it cannot be grown either so easily or so cheaply as in the United States, nor, when grown, can it be so easily transmitted. For the profitable and extensive growth of a crop so bulky as cotton, four requisites are indispensable—favouring soil and climate, cheap labour, intelligence and capital, and easy and abundant water-carriage. India has labour as cheap as the United States; its soil and climate are good, though not *so* good; but in intelligence and available capital it is far behind, and in means of carriage, either by rail or by water, there can be no comparison between India and America. These are the reasons why English manufacturers still retain their "unhallowed" longing for slave-grown cotton, and why they are convinced that, as soon as it again comes into the market, it will recover its old superior position.

THE LATIN HOBBY-HORSE.

THE flights of divine folly which Mr. Disraeli's imagination takes on the subject of the Jews and the "Caucasian mystery" have found a parallel at last. Each of the various prophets of Mumbo Jumbo is sure to have a chosen tribe that is destined to regenerate mankind. The pious Mr. Disraeli, who is never more at home than when he is executing sacred Hebrew dances after the agile and solemn manner of King David, prefers the Hebrew nation. The O'Donoghue, whose ceremonial consists in worshipping a wild Irish Mumbo Jumbo of his own upon the Irish harp, is for restoring the world by the medium of the Celt. In his turn, — last but not least, — the Emperor of the French takes up the Latin race. It is probable that Mr. Disraeli's ideal heroines, but for the exigencies of the world of fashion, would all have had hooked noses, and all performed upon the timbrel. The Emperor's ideal pleasure, in like manner, would be to be permitted to wear the diadem of Augustus and to revive a second Imperial Rome upon the banks of the Seine. His passion for a "Latin mystery" is as constant as that of the right honourable member for Bucks for a Caucasian. It invests him, moreover, with the same air of unutterable and lonely grandeur. In the daytime Mr. Disraeli and Louis Napoleon mix with the busy crowd of men; in the night-time they retire to the wild and desolate mountain-tops, to commune with the nationalities of the past. From the mountain-top of Hughenden Manor we catch at times weird murmurs

Digitized by Google

about Asiatic regeneration, and occasional and fitful snatches of Jewish melody. The mountain-top of the Tuileries, with equal solemnity, gives out a sound of Latin tongues and the rustling of imperial purples. When we hear these mysterious noises, we know that they are part of the solace which great minds permit themselves. Mr. Disraeli is marshalling the tribes for a march through Asia Minor upon Jerusalem. Napoleon III. is redistributing the national frontiers of Europe or America, with the view of providing for the comfort of the Latin race.

It will be a consolation to the Latin race—whatever and wherever that mysterious nationality may be—to learn that an Imperial patron has got his eye upon them. So great an honour has, however, its corresponding drawbacks. The Latin race must "sleep straight," and never be "down at heel." The interests of civilization require that they should keep moving and always be in a state of the highest possible political polish. They must not disgrace their name, or bring indirect discredit on their historical origin. Mexico is a striking illustration of a country that forgot her position as member of the Latin race. In direct violation of her duty, she began to show symptoms of internal lassitude, disorder, and decay. His Imperial Majesty, from his lonely mountain-top, fixed his visionary eye upon her, and determined to take in hand so neglected and degenerate a branch of the Latin community. Ignorant, perhaps, of the first principles of ethnology, the Mexicans at first may have been at a loss to account for the sudden slap in the back which they received from France. They had for many years been going on comfortably murdering one another, without troubling themselves to recollect from what quarter of the globe their first ancestors had come. Nor were the wondering Governments of Europe much wiser. Nobody could conceive what possible interest his Majesty could take in the welfare of the Mexican commonwealth. A throne, perhaps, was wanted for Prince Napoleon, or for the Archduke Maximilian, or even for a troublesome Bourbon. As time progressed, all these shadowy suggestions were scattered to the winds. Even the return of Almonte and of the clerical exiles seemed likely to be abandoned, as by no means essential to the prime object of the expedition. After an interval of uncertainty, Mexico, and the world in general, have been enlightened as to the cause of the Mexican invasion. The interests of the Latin race account for all. General Forey, in obedience to his master's order, is by this time no doubt explaining the affair to the puzzled Mexicans. This poke in the ribs, they are informed, is to remind them of their privileges. "There will not be wanting people who will ask why we expend men and money to found a regular government in Mexico." The General is to enlighten these sceptics as to the real reason. France desires "to restore to the Latin race on the other side of the Atlantic all its strength and its privilege." Rarely has a more humorous spectacle been seen than that of a dreamy Imperial ethnologist sitting down, cigar in hand, to explain to one of his generals of brigade the necessity of invading Mexico for the sake of the destinies of the descendants of Latium. It is pleasant to conceive of the confusion of mind with which the honest general,—who, perhaps, had never heard of the Latin race before,—received so recondite an announcement, and retailed it in due turn to his *sous-lieutenants*. Going to war for an idea is plain sailing compared with going to war for the sake of the prospects of Latinity; and the perplexity of the French camp, when the news came of this new military mission, must have been extreme. We can well imagine how the corporals of Zouaves laid their heads together over the camp fires on receiving the intelligence, and wondered what in the name of Heaven was the Latin race. The Mexican Government had better give in at once without further bloodshed. If a treaty or a subsidy could have bought off the French, it would have been a different thing. As it is, nothing is left for it but submission, when they have to deal with an assailant who makes war across the Atlantic on ethnological principles. His Majesty is mounted on the most alarming of hobby-horses. A nation which is unfortunate enough to belong to the Latin race can do little except letting him have his way.

When Mexico has been conquered, Mexico—so runs the Emperor's programme—is to be put to rights. The condition of that unhappy country is in all conscience bad enough. It can hardly, however, be more gloomy than the sentimental picture given of it in the French papers. The *Moniteur*, with inimitable gravity, descants on the tyranny of the Mexican Government and the subservience of the the Mexican press. Incredible as it will seem, the Mexican press is not allowed to criticise in a hostile spirit the Mexican Ministry, or to express enthusiasm at the advent of the French. They have no M. de Persigny to maintain inviolate the rights of free discussion. The Mexican finances are also in a sad way. That profligate empire is immersed in debt. General Forey's orders are plain and straightforward—to reform all abuses, and to make Mexico as much as possible like France. "You will aid the new Government to introduce into the Administration, and particularly into the finances, that regularity of which France affords the best model." There is a cool simplicity about this which baffles all comment. It would be irreverent to suppose it possible that his Imperial Majesty can have been making game of his faithful general. But the prospects of the Latin race, the gagging of the Mexican press, and the "regularity" of the French finances and of French administration in general, must have afforded a quiet amusement this week to the politicians of Paris. It is possible, they will think, to have an almost too delightful regularity in administrative matters. Irregularity will certainly be banished for ever from the administration of Mexico, if the Emperor's plan is carried out of admitting only "the principal persons of all political parties, *who shall have embraced our cause*" to share in the discussion as to the new Government. This is introducing French administrative regularity with a vengeance, and insuring harmony and union among the framers of the future Mexican constitution. It will be convenient for General Forey to be able to remind them that for insuring regularity in the administration there is nothing like the French institution of Prefects. A few prefects judiciously scattered up and down Mexico, if they were active and intelligent, would bring about a wonderful unanimity of opinion among the delegates of the nation. Nothing serves so well as a Prefect for keeping the Latin race thoroughly up to the mark. It is thus the Latin race is enabled at once to enjoy liberty and order—the order being for the people and the liberty for the police.

That even French administration, with all its severities of discipline, would be at present a boon to Mexico, nobody can deny. Nor does England watch with any jealousy the military progress of the French eagles in the direction of the Mexican capital. General Forey may perform his mission, and do what he likes with Mexico and that section of the Mexican population which can boast a Latin origin; nor will a single voice be raised on this side of the Channel to protest against the cleansing of such an Augean stable as the Mexican Republic. What America will think of the Imperial letter remains to be seen. Some weeks ago we pointed out that the whole Transatlantic policy of the Emperor was probably based, not on the commercial interests of France, so much as on some hidden dreamy crotchet which belonged rather to a fanciful student than to a statesman. The secret is out at last. Napoleon III. wishes to play off the Latin race against the Anglo-Saxon, in the New World as well as in the Old. It is the shadowy phantasy of a visionary who has by a rare stroke of fortune obtained the chance of manipulating the world and resettling it on his own designs. The Emperor sees the English tree spreading its branches over the globe from America to Australia, and he is afraid lest the tree should absorb all things into itself. With the natural error of a politician whose early life has been passed in study and reserve, he attributes too much importance to his own generalizations. The phantoms of his brain take too palpable and real a hold upon him. The distinction between Anglo-Saxon and Latin is a distinction of more value to a pedant than to a statesman. The days are gone in which confederacies grouped themselves according to ethnological instinct. An Anglo-Saxon or a Latin league is a vain shadow, and need disquiet none but a bookworm. The Northerners hate the Southerners, and both hate England. So much for the strength of Anglo-Saxon blood. The Mexicans hate Spain, and the Italians have no great natural affection for the French. So much for the harmony of the Latin race. The Syrian intervention was based on more intelligible grounds. It can hardly be denied that France has much in common with the interests of Eastern Christianity. If Napoleon III. had based his Mexican intervention on the ground of the interests of Catholicism, criticism would have been silent, for Catholicism and France, in many respects, have common interests too; but to put it on so unsubstantial a ground as ethnology is

Digitized by Google

simply idle. It is, however, of a piece with the whole conduct of the French monarch. His sympathies are excellent; it is only his elaborated schemes that fail. He falls into the common mistake of powerful statesmen. He thinks the world is a chessboard, and that he has only to put the pieces where he wishes them to stand. He forgets that he has to do with living pieces, which go on moving of themselves the moment he takes his hand off the board. If intervention between Federals and Confederates belongs to this grand design, and is planned for the benefit of the Latin race, perhaps Napoleon III. may find himself as far out in his American map of the future as in his Italian. We shall see whether the South will set their heart less on Mexico after they have been separated from the North. It may turn out that what was a few years back for Southerners merely a lawless fancy, may a few years hence be to them a political necessity.

THE NEW POLICE OF MILITARY SOCIETY.

THE wreck of the *Colombo* having delayed for a while the arrival of the heavy mails from Calcutta, we have only within the last few days been placed in possession of the formal statement published by the Committee of the Bengal United Service Club, recapitulating the circumstances which have eventuated in the expulsion of Lieut.-Col. Priestly, of the 42nd Highlanders; and in the subsequent withdrawal of his Excellency Sir Hugh Rose from that society.

There appears to be no dispute possible as to the actual facts of the case. An appendix annexed to the statement of the committee comprises *pièces justificatives* completely substantiating every paragraph of that clear and temperate document, of which we shall proceed to give a brief *précis*. About the beginning of August, 1862, two military officers, Lieut.-Col. Priestly and Major Fitzgerald, D.C.G., of the Indian Army, were residing in the club-house at Calcutta; taking their meals together daily at the public table, and meeting daily on the footing of ordinary acquaintances. They were both members of a Commission then occupied in inquiring into the commissariat department of the Bengal Presidency.

One evening they chanced to sit next each other at dinner, and in the course of conversation came to discuss the subject of the commissariat department, on which they appear to have entertained antagonistic views. In reply to a remark made by the colonel, that he thought that department would be improved if it were placed under the immediate orders of Sir Hugh Rose, Major Fitzgerald replied, "I do not think so. I have no respect for the Commander-in-Chief's public or private character." From this view of Sir Hugh Rose's merits Colonel Priestly quietly dissented, and shortly afterwards the party broke up, without any display of high words or intimation of ill-feeling on either side.

But, on the following day, Colonel Huyshe, the president of the Commission of which Colonel Priestly and Major Fitzgerald were members, informed the latter that he had received from Colonel Priestly an official letter declaring that he could not continue to act on the same Commission with an officer who entertained no respect for the character of the Commander-in-Chief in India. A letter of the same date, addressed by Colonel Priestly to the Adjutant-General of her Majesty's forces in India, officially reported that Major Fitzgerald, in private conversation at a club dinner-table, had grossly insulted him by saying that he had no respect for the character of Sir Hugh Rose.

When Major Fitzgerald became aware of the abuse which Colonel Priestly had made of his incautious remark, he wrote to assure him that he had had no intention of giving offence by what he had said, and tendering an apology, if he had done so inadvertently. Colonel Priestly declined to accept the apology offered, on the plea that the affair was no longer in his hands, having been officially reported by him to the superior authorities.

When these circumstances came to the cognizance of the committee of the Club, they met to consider, after communicating with Colonel Priestly, "whether an officer who had reported private conversations, not suddenly on the spur of the moment, but coolly and deliberately after an interval of about twelve hours, without in the meanwhile informing the gentleman whose conduct he reported that he even felt aggrieved by his remarks, was a proper person to remain a member of a Club composed of the servants of her Majesty, civil and military, in India."

The committee unanimously came to the conclusion that "unless that institution were to be allowed to degenerate into a vehicle for making known to those in authority the private thoughts of its members, it was obviously essential that the first member of it, who had ever acted upon such an extraordinary and unusual principle, should cease to belong to it." But in order to lessen the scandal as much as possible, they gave Colonel Priestly the option of retiring; intimating, at the same time, their resolve, if he did not do so, to bring his conduct before a general meeting of the Club. Colonel Priestly declined to profit by the alternative offered to him, and an extraordinary general meeting of the Club was accordingly convened for the 25th of September.

At this point of the affair Sir Hugh Rose interposed. He expressed his entire approbation of the conduct of Colonel Priestly, declaring that the rules of military discipline necessitated his reporting Major Fitzgerald's private remarks to his superiors, and issued a circular ordering the officers of the army to take no part in the approaching meeting of the Club. Four officers on his Excellency's staff—members of the Club—about the same time protested against the proceedings of the committee.

The meeting was nevertheless held on the appointed day, and, in obedience to the orders of the Commander-in-Chief, it was attended only by the civilian members of the Club, who, however, held nearly 200 proxies of absent members, military and civil. The result was, that Colonel Priestly was unanimously expelled the Club, the only dissentients being the four protesters on the staff of the Commander-in-Chief, who were not present.

Upon this Sir Hugh Rose thought fit to address to the committee and the civil members of the Club, in his capacity as its president, a severe official reproof, which is extremely amusing, from its strength of language and its debility of argument. His Excellency reminded them that Colonel Priestly was an officer of unblemished character and long service, who had displayed gallantry in the field; he pointed out to them that the corps which the gallant informer commanded was "the 'Black Watch'—a regiment whose name is never mentioned in the army but with veneration;" he affected to believe that the civilian members of the Club had been the only movers in bringing about that officer's expulsion, and declared his own opinion that, in "the painful affair" which had necessitated that strong measure, the offender "had acted with the perfect propriety of an officer and a gentleman." He reproached them with not having seen the propriety of leaving the matter to his arbitration as their president, and concluded by declaring that he could no longer remain connected with a Club whose members objected to have their private conversations officially reported to him. To this reprimand Mr. Crawford, the honorary secretary of the Club, politely replied that the Committee deeply deplored his Excellency's secession from amongst them, and explained that the reason they had not consulted him as to their conduct towards their erring member was simply because his Excellency was not a member, of the Club; the presidentship which his Excellency held being a purely honorary and *ex officio* distinction, carrying with it neither membership duties, responsibilities, nor privilege of voting. They further explained that his Excellency was in error in considering Colonel Priestly's expulsion as the act of the civilian members of the Club alone; that it had, on the contrary, been the unanimous opinion of every member of the Club not on his Excellency's staff that the expulsion should take place, but that their military members had been deterred by his Excellency's circular—as his Excellency must well know—from attending to record their votes to that effect.

Such is the disgraceful story which the *Colombo* would have brought home if she had not been wrecked, adding another to the long list of the deplorable military scandals, at home and abroad, which must of late have served to enliven the leisure of the Duke of Cambridge. A copy of the documents, of which we have here given a *précis*, has been forwarded by the Committee of the Calcutta Club to the Committees of the principal Clubs in England, inviting their opinion, "whether, in removing from among them a member who had so contaminated the one great bond of gentlemanlike intercourse, viz., the inviolability of social confidence, and who upheld his right to do so, they have done more than was forced upon them by their feelings as gentlemen and men of honour."

The pretensions put forward in this case by the Com-

Digitized by Google

mander-in-Chief in India appear to be that, both in his public and in his private character, he is to command, *ex officio*, the respect of every officer in the service, no matter whether his public or his private conduct be of a nature to command respect or not; that no officer under his command is justified in expressing, in private conversation, any doubts upon such points; and that every officer under his command is, moreover, bound, as "an officer and a gentleman," to report to head quarters such doubts, if he hears them expressed in private conversation by any of his acquaintances.

We are of opinion that Sir Hugh Rose will find it as difficult to induce the army and the public at home to endorse this new and startling social theory as he has found it in India. Supposing, for instance, that a Commander-in-chief were an injudicious or unjust man, apt to behave as the military journals inform us Sir Hugh Rose has behaved in the matter of the Mhow court-martial; or, supposing he were a notoriously immoral man, disposed to avail himself of the advantages conferred upon him by his high position in order to corrupt the wives of his adherents, and to purchase the compliance of their husbands—does Sir Hugh Rose pretend that in such a case no officer in India should express in private his contempt for such a character; does he pretend that it would be the duty of the Priestlys of military society to inform against such of their club-fellows as gave vent to the just feelings of men of honour on such subjects?

The supplementary despatches of the Duke of Wellington recently published, show how that great man acted in a nearly similar position. About the year 1809, a Committee of the House of Commons investigated certain charges which had been made against the Duke of York, the then Commander-in-Chief of the British army.

Major-General Sir Arthur Wellesley defended his chief in public as well as he was able; but he appears to have made no scruple in writing daily to the Duke of Richmond, a lieutenant-general in the army, his private opinion of the Duke's guilty complicity with his concubine in selling commissions in the army to unworthy individuals for her private emolument; and from what may be read in Sir Arthur Wellesley's letters of that date, it is very clear that, entertaining no respect whatever either for the private or the public character of the Royal Duke, who was Commander-in-Chief in 1809, he made no scruple whatever in communicating that opinion to a lieutenant-general in the army, who did not, however, feel bound, as Colonel Priestly has done, either to report the circumstance to the Adjutant-General, or to pretend to consider it a personal insult to himself.

We wait with considerable interest to see what steps the Royal Duke who is at present at the head of the army will take in this matter; whether he will refer it—as in the case of Colonel Burnaby—to a secret and packed court of inquiry composed of four officers of Colonel Priestly's own regiment—"the Black Watch whose name is never mentioned in the army but with veneration;" or whether, as in the case of the Robertson court-martial, he will allow the scandal to fester on unnoticed. Meantime, Sir Hugh Rose's position in India, as well as that of the Lieutenant-colonel commanding the Black Watch, cannot be considered creditable either to the public or private character of the service in which they unhappily hold high rank.

The view taken of the affair by the Governor-General of India may be inferred from the fact that Lord Elgin has not thought it necessary to interfere in the squabble; nor has he removed his name from the books of the Club, of which he is, *ex officio*, the honorary patron. Under such circumstances as those which we have detailed, it is clear that if Lord Elgin is not with Sir Hugh Rose and Colonel Priestly, he is decidedly against them.

THE BATTLE OF MURFREESBORO.

VOLUMINOUS as are the details in the American papers as to the five days' fighting which took place in Tennessee at the close of last year, it is by no means easy to collect either the plans of the rival commanders or the manner in which they were carried into effect. Even the numbers of the opposing armies are not ascertained. It may, perhaps, be assumed that the army of Rosencranz, the Federal commander, amounted to 45,000 men, with 100 guns; but no estimate whatever has appeared of the numbers of the Confederate forces under General Bragg. It is probable, however, that they were at least equal to the Federals; for it appears that instead of waiting to receive the attack, the Confederates on those occasions assumed the initiative. The difficulty of understanding the details of this series of engagements is increased by the fact that General Rosencranz, in his official despatch to the Commander-in-Chief at Washington, apparently omits the account of what took place on Wednesday, the 31st of December, and the three preceding days—or, at all events, alludes to them in the vaguest manner.

At present, the North have divided their military forces into three great armies. First, there is the army of the Potomac, under Burnside, which is still at Falmouth, on the Rappahannock, opposite Fredericksburg. To this position it withdrew after its repulse from the Confederate intrenchments on the southern side of that river. For the present, operations in this district are completely suspended, nor are they likely to be resumed unless the Confederates again threaten Washington. Second, there is the army of the South-west. This army, which consists of the corps of Grant, advancing from the north, and the corps of Sherman, which came to New Orleans with Banks by sea, is now engaged in the siege of Vicksburg. This city, which lies near the junction of the Yazoo river with the Mississippi, is 400 miles above New Orleans and about the same distance below Memphis, which is in the hands of the Federals. So long as Vicksburg remains in the hands of the Confederates, they can connect together the country on both sides of the great river, and thus supply their armies in Arkansas and Louisiana with recruits, arms, and ammunition to any extent. On the other hand, if Vicksburg falls before the Federals, the whole course of the Mississippi will be under Federal control; and, if that control be retained, it will be practically impossible for the Confederates, even if they achieve their independence, to extend slavery beyond this line. There are conflicting accounts as to whether Vicksburg has actually surrendered. According to some accounts, the Federals have been compelled to re-embark; according to other accounts, the Federal troops had carried three lines of intrenchments, and the place was on the point of surrendering. Third, there is the army of Tennessee, under the command of Rosencranz. Its head-quarters were, at the end of the year, at Nashville, in the State of Tennessee. If Rosencranz can succeed in holding that State, the result will be that the new Confederation, even if its independence were to be recognized immediately, would consist only of the five States of Alabama, Florida, Georgia, North and South Carolina, part of Virginia, and part of Mississippi. Leaving Florida out of the question, it is tolerably clear that such a Confederation would be but a feeble power. Whether the North have acted wisely, or according to the established principles of war, in undertaking so much at the same moment may be very questionable. But, on the other hand, they have certainly adopted the right course by devoting the winter months to prosecute, with energy, the war in Tennessee and on the banks of the Mississippi. If they can conclude this part of the war before the spring, and if peace is not concluded, the Federals will then be able to turn all their efforts to attack the Confederates in front of Richmond, and, if possible, to compel the surrender of the Virginian capital.

But to return to the army of Tennessee. At the close of last year this army had for some time been at Nashville, which is the capital of that State and stands upon the Cumberland river. To take this city had been for long the passionate desire of the Confederates. Its capture would probably have compelled the Federals to retire out of Tennessee and even right across Kentucky, to Louisville, on the banks of Ohio. By the capture of Nashville the control of the Tennessee and the Cumberland rivers would be restored to the Confederates. The railroads north and east would be at their service, so that their communications through Eastern Tennessee with Lee's army in Virginia would be completely secured. On the other hand, if Rosencranz with his Federals could succeed in holding Nashville, and in advancing southwards by force, he would not only succeed in restoring the warlike spirit of the North, broken by the disasters of Virginia, but he would isolate the Confederate army of the West, by cutting off its communications with

The nearest point to the Mississippi is 150 miles west, or to the left of Nashville.

Digitized by Google

the Confederate army in the east, and would at the same time allow Sherman and Grant leisure to complete, if possible, the conquest of Vicksburg. But, besides these motives for fighting, Rosencranz had others even more powerful. He had a difficulty in provisioning his army. It is true that he had the railways behind him and the rivers; but the Cumberland had not yet risen, and whilst railways enable an army to move with great rapidity, they are so easily broken up by cavalry raids, that it is extremely dangerous to rely upon them entirely for supplies. By obtaining possession of Murfreesboro, which lies in a very fertile plain, the supplies would not only be ample but close at hand. Perhaps, also, Rosencranz had information which induced him to believe that he could inflict a severe blow upon the Confederate army in his front.

Whatever may have been his reasons, Rosencranz began his march from Nashville on Friday, the 26th of December last. He advanced in three columns towards Murfreesboro. This town is about thirty miles south-east of Nashville, and is intersected by the Stone River, a tributary of the Cumberland. The country is difficult: it is wooded, and broken by constant streams with precipitous banks. After considerable delay and constant skirmishing, the enemy were found posted in a strong position on the banks of the Stone River in front of Murfreesboro. According to the accounts, Rosencranz expected that Bragg would assail his right, overwhelm it, and so cut off his retreat to Nashville. For this purpose it had been strengthened, and the officers in command were desired to stand fast. On Wednesday, the last day of the year, there was a serious engagement; but the Federal right, instead of standing fast, lost all its artillery and was driven back. This seems to have compelled Rosencranz to retain his left, in order to support the discomfited right wing; and thus he was prevented executing the attack with his left which he had designed. At the close of the day the advantage was clearly on the side of the Confederates. On the 1st and 2nd the battle was renewed. On both days most determined attacks were made by the Confederates; but in both cases they were repulsed. On Saturday, the 3rd, or early on the morning of Sunday, the 4th, General Bragg retreated southward, and General Rosencranz now occupies Murfreesboro.

This retreat of the Confederates is of the utmost importance to the Federals. If Rosencranz had been defeated, he must have been annihilated. His retreat to Nashville, over thirty miles of a broken and difficult country, must have completely demoralized his troops; and as he could not have remained there, his subsequent retreat still further north must have been still more disastrous. It may seem a remarkable circumstance that the Federal troops should have displayed so much obstinacy, or that Rosencranz should have persisted with such resolution in the contest. But the truth is, that such confidence was justified by the character of his troops. These troops are not like the mercenaries of the East. They are recruited from the yeomen and farmers of Illinois, Ohio, and the North-west. They have a real and almost personal interest in the war. They are determined that the mouths of the Mississippi shall remain in their hands, and that the area of the slave power shall not be extended. This is the reason why the Federal armies of the West have fought, during the present war, with so much more resolution than the armies of the East, and is at the same time the justification of the tactics of Rosencranz.

The army of the Confederates has retreated southward to Shelbyville. Perhaps the fact that the East Tennessee and Virginia Railroad has been broken up, so that Bragg can no longer draw reinforcements from the army in the East, may have dictated this resolution.

BRIGANDAGE IN THE NEAPOLITAN STATES.

THE Commission appointed by the new Italian Cabinet to inquire into the causes of brigandage in the States of Southern Italy, and to suggest a remedy for them, has arrived at Naples. We shall be curious to observe the course which these gentlemen adopt in the pursuit of their investigations, and interested to learn the measures they will have to propose when the inquiry is terminated. More than two years and a half have elapsed since Piedmontese rule was established in the Neapolitan Provinces; during the whole of that period some of the most fertile districts in the country have been a prey to incessant brigandage; and we may accept the appointment of this Commission as a proof that the evil is increasing rather than diminishing. Under these circumstances, we might well inquire why it had not been appointed sooner, were we not met by the still more pertinent question,—what will be the use of it now? The fact is, that this Commission can tell the Government nothing that it did not know before, nor furnish it with any materials which General La Marmora has not all along had at his disposal. If the Commissioners remain at Naples they will be no more competent to form an opinion of the state of the Capitanata or Basilicata than if they remained at Turin. If they proceed to those provinces they will only recapitulate the views and statements of the Piedmontese civil and military authorities, who have studied the subject before them. They will find their task neither agreeable nor profitable. They will have two classes of brigands to encounter,—those who will seek to rob them of their purses, and those who will try to steal from them their patronage. So they will find two causes of complaint most common among the respectable classes: first, that they are plundered by their own peasantry, who, under the name of Bourbons, and in the guise of brigands, pillage the farms on which they have been accustomed to labour; and next, that an ungrateful country has not compensated them for their losses by bestowing upon them places under Government. These gentry will attribute to Government the disorganized state of the country; they will insinuate that, in the time of the Bourbons, life and property were comparatively safe; but they will not venture, in the hearing of the Commissioners, to inveigh against the "Piedmontization" of the country, partly because freedom of speech is not yet a habit among them, and partly because a lingering hope of employment is always present with them. It is true that there are Neapolitans on the Commission; but even they, as Government emissaries, will fail to obtain a true perception of the animosity which is felt towards the existing *régime* in the provinces, not on account of any affection for the departed dynasty, but because no dynasty can ever be popular in a country, where the most false and cringing servility to authority is combined with cowardice and avarice among the middle and upper classes. If the Commission observe truly, they will report that the immediate cause of brigandage in the Neapolitan provinces lies, not in the existence of dynastic sympathies, not in a degraded peasantry, not in mal-administration on the part of the officials employed—though all these elements may combine in varied proportions towards producing the grand result,—but in the utter demoralization of that section of the community upon which, in every free country, the Government is accustomed to rely for co-operation and support.

The experiment of entrusting to Neapolitans the internal administration of their own country has failed signally in almost every instance in which it has been tried. The majority of the higher officials throughout the Southern Provinces are Italians from the North, whose education and training have better fitted them for the task of imposing upon a reluctant people the responsibilities of free institutions. The popular conception of liberty in the Neapolitan mind, on the arrival of Garibaldi, was an absence of care and responsibility; the people little imagined that the *dolce far niente* existence which they enjoyed under a despotic form of government was incompatible with the order of things they so ardently desired; they still demand a paternal form of government, but they claim the privileges of manhood; and, while they decline the trouble of governing themselves, they object to being governed by the Piedmontese. The landed gentry in the provinces where brigandage is rife pay large sums in black mail to the brigands, but are too timid to organize any armed resistance among themselves; the National Guard, when not actually in league with the brigands, are worse than useless; the peasantry find it more profitable to plunder than to work, more especially as their masters have all taken refuge in the towns, and, abandoning their country houses, have left their farm servants to their own devices.

The civil and military authorities from the North, unable to obtain the co-operation of any class, have found themselves forced into a line of conduct more or less arbitrary. A feeling of antagonism has thus gradually sprung up between the governing and the governed. Contempt on one side breeds fear and dislike on the other; the Northern and Southern States of America are scarcely more widely estranged in feeling and sympathy than the Northern and Southern States of Italy; and the slaves, who avail themselves of President

Digitized by Google

Lincoln's proclamation, will certainly not be so troublesome to manage, as those emancipated by Garibaldi and presented by him to Victor Emmanuel some three years ago. We trust that the Commission will have the courage to suggest the only remedy which is to be found for a state of things so entirely exceptional, and requiring an exceptional mode of treatment; and that, disabusing their minds of the policy enunciated by Rattazzi on his assumption of office, which was, in fact, one of selfish expediency, they will recommend to the Cabinet the abandonment of a uniform system of government for the whole Peninsula. However well this principle may sound in theory, the conditions to be dealt with in Northern and Southern Italy are so entirely opposite, that what is a wholesome medicine in the one case, is poison in the other. If the treatment which is adapted to the people of Piedmont is equally applicable to the population of Naples, it is clear that the rule of the house of Bourbon must have been as enlightening in its tendencies as that of the house of Savoy; and that Francis II. had completed the education of his people up to the point at which they were fit to be passed on to the next "remove." Such, we confess, has never been our view of the rule of the Bourbons. We consider that the political education of the Neapolitans has yet to be undertaken, and that to expect the lowest class in the school to pursue the same studies as the highest is a manifest absurdity. The existence of brigandage is only another form of political ignorance and incapacity. If the Commissioners are so limited in their range of vision as not to see it in this light, they might as well have spared themselves their journey, and the unpopularity which it will, under any circumstances, involve. If, however, they have the courage and the patriotism to look the evil fairly in the face, and, instead of attempting to deal merely with the local symptoms, will strike boldly at the root of the disease, we have no fear of the ultimate cure of the patient, however disagreeable the process may be. There is nothing to fear from the Neapolitans themselves; a race which never ventured to organize a successful resistance against the grinding tyranny of the Bourbons may complain, but will never dare to rebel under a little wholesome discipline, if exercised by the Government at Turin. The King of Italy and his advisers, however, if they desire to restore order to these provinces, and establish throughout them safety to life and property—those first fruits of good government—must not be deterred, either by the sneers of their reactionary, or the opposition of their Democratic, enemies. If the treatment involve in the first instance some departure from the recognized principles of free institutions, it will only have been applied to qualify those subjected to it for a more thorough and complete enjoyment of the privileges of free men at last. Whether these views be adopted or not, we are perfectly ready to hazard the prophecy, that, without a radical change in the whole administrative system of these provinces, the labours of the Commission now pursuing its inquiries in them will have been in vain.

ST. THOMAS'S HOSPITAL.

THE discussion on the new site of St. Thomas's Hospital has reached another stage. Wandsworth, and the other suburban spots along the South-Western Railway which were under consideration, have all been given up. The notion of erecting the new hospital on an open common, remote from any populous district, has been definitively surrendered. It was from the first apparent to the medical officers of St. Thomas's and the public generally, that an institution, which was chiefly intended for the relief of cases of recent injuries and acute attacks requiring immediate attention, would be shorn of half its usefulness by its removal to a distance from the population who were to reap its benefits. The Grand Committee, who have been singularly slow of comprehension on this point, from whatever cause it may have arisen, have at length come round to the same opinion. After "mature consideration and reflection," which has extended over more than two years, they think it would be better to build the Hospital in the most central spot which can be found in town. The only question that remains is, What is the best site that can be selected within the metropolis? The chief point in dispute must now, therefore, be regarded as settled. The danger which for so many months was impending over this noble foundation is now at an end, and the public may wait with some degree of calmness for the result of the further inquiries which are to be made with respect to the several sites within the metropolis that have been proposed. It is seldom of use to pursue a controversy after the object in dispute has been gained. The Grand Committee got hold of a mistaken idea, and held it with singular pertinacity against the plain dictates of reason, and the general voice of the public. But they have now retreated from their false position, and the public are quite satisfied that the material point at issue has been yielded, and do not care to go back upon past disputes. It would have been prudent in the members of the Committee if they had observed a similar reticence. The very reverse, however, has been the case. The same Report, which announces to the governors the change of opinion on the part of the Committee, contains an elaborate defence of the whole of their own proceedings from the beginning of their contest with the Railway up to the present time. This defence involves an attack on all the persons who have differed with them, or called their proceedings in question. It is somewhat remarkable that the Committee should choose the moment at which they are withdrawing from the position which they have hitherto occupied, to attack the persons who counselled the very step they are now taking. The Committee level their chief attacks at their own medical officers and at the press; but it is evident that they are also in very ill humour with the public, who suffered themselves to be misled by the representations of those parties. The framers of such a Report can scarcely hope that it will escape criticism.

Mr. Tite is the chosen champion of the Grand Committee. He and the Treasurer have been such active members of it that they have not seldom been mistaken for the whole body, and Mr. Tite is put to the trouble of continually reminding the public that the Committee is not the compact family party commonly supposed. At the meeting of the governors held on Tuesday Mr. Tite moved the adoption of the Report, and in his speech he took occasion to defend himself and the Treasurer. They have, it appears, been exposed to much misrepresentation. The public, in fact, have all the while been under a strange delusion. It was very generally believed that these gentlemen had been labouring for the last two years to remove St. Thomas's Hospital to the country. Mr. Tite assures the governors that the whole thing was a mistake. Neither the Treasurer nor himself ever had any intention of the kind. It was all the invention of the newspapers. The papers will say anything. So says Mr. Tite, borrowing an idea from Theodore Hook, who assured a credulous old lady at the entrance to the House of Lords, that the death of Cardinal Wolsey was all a mistake, and that the papers had invented it. Mr. Tite and the treasurer would have saved the public much uneasiness and themselves much obloquy, if they had disclaimed at an earlier period the intention that was attributed to them. During two whole years all the persons interested in this foundation were kept in alarm, lest the new hospital should be erected in some uninhabited spot along the South Western line. The vestries of most of the metropolitan parishes south of the Thames presented petitions in favour of keeping the hospital in a central position. The medical officers of the institution joined in a unanimous protest against the contemplated removal, and offered unanswerable arguments in favour of keeping the hospital in town. Were they, too, deceived in the intentions commonly attributed to the Grand Committee? As those intentions were gathered from the statements made from time to time by the members of the Committee at the meetings of the governors and other occasions, we can only say, that, if every one has been deceived by them, the Committee have been as unfortunate in the selection of words to express their meaning, as in the selection of a site for the new hospital.

It soon appears, however, that Mr. Tite is only playing with words. He explains his meaning in the next sentence. When he denies an intention, on the part of himself and the treasurer, to remove the hospital to the country, he only means that they did not intend to remove the whole of it. They would leave a few bricks behind. St. Thomas's Hospital proper was no doubt to be erected in the country, and to be a model to the nation; but they would build or hire a few temporary rooms somewhere in the heart of London, where wounds and bruises might be looked after. It is on the strength of this miserable apology for a Hospital—this wretched substitute for the noble institution whose walls are now level with the ground, that Mr. Tite ventured to tell the meeting of the governors that he and the Treasurer

Digitized by Google

never intended to take the hospital out of town. The thing is a quibble, a mere ruse to cover their retreat. This plan is nearly as objectionable as the other. There is little difference between taking the whole of the hospital away and taking the larger part of it. If three-fifths of the beds are likely to be used, as the medical staff affirmed, for cases requiring prompt assistance arising in the heart of a dense population, a few temporary wards would ill supply the place of a complete and well-conducted hospital. The arguments of the medical officers, founded on the convenience of the neighbourhood, on the facility of obtaining on all occasions the highest medical advice, and on the utility of the hospital as a medical school, apply with equal force to the scheme of division, as to that of complete removal. It is, however, idle to argue the question over again, as the Committee now themselves admit that it would be better to build one great Hospital in a central spot in London than to divide the institution into two parts. At the same time, they endeavour to find a justification for their original view of this subject by quoting passages from the opinions of various medical authorities which were received by them previously to the present discussion. In opposition to the clear and convincing document lately put forward with the authority of the entire medical staff of their own Hospital, they quote the earlier opinions of some of the same gentlemen. Very great complaint was, however, made at the meeting that some of those opinions were not fairly quoted. One instance was particularly referred to. Mr. Elliott produced a letter from Mr. Simon, one of the most distinguished medical men in London, in which the writer declared that the Committee had made "a singularly unfair and disingenuous use—a use which bordered very closely on misrepresentation—of his letter written in 1856 to the treasurer." With this instance before us, it would be rash to conclude that these medical gentlemen have shown so much inconsistency in their opinions. It is highly probable that the Committee received some medical opinions in favour of their scheme, but in their endeavour to make out a perfect defence for their own obstinacy in persisting in it after it had been generally condemned, they have strained those opinions in what is justly called a "disingenuous" manner, and have thereby thrown discredit on that part of their Report.

The other point on which Mr. Tite defended the Grand Committee was on the charge of litigiousness in their dealings with the Railway Company. Very possibly there may have been some exaggeration on this head. The Committee may have been represented as having wasted on litigation a few thousands more than they actually spent in that way. But the part of the Report which related this portion of their proceedings was also very much discredited by what took place at the meeting. It turns out that one offer of the Railway Company made to the Treasurer was omitted altogether from the Report, and was unknown even to Mr. Tite or to Mr. Wainewright, the solicitor of the Company. It is true that the offer was made at a late hour, when there was no time for deliberation. But it is very strange that an offer of so much importance should have remained locked in the breast of the Treasurer, and never have been communicated to any of his colleagues.

THE POPE AT MALTA.

The French newspapers have discovered a deep design on the part of this country to obtain possession of the person of the Pope. Lord John Russell, for the first time, probably, in his life, is being compared to Machiavelli, to Richelieu, and to Pitt; and we learn, from one excitable foreign journal, that the crafty object of Great Britain is, and always has been, to make the Papacy her vassal. M. Drouyn de Lhuys appears to have been caught with the general infection, and to have had a serious panic at the idea of losing his Holiness after all. The disappearance of the Grand Llama could not create much more alarm among his subjects than the bare notion of the Pope on English soil has done in Paris. The head of the Catholic religion has long been the object of every possible care at the hands of the French Emperor. An ambassador, a French general, and a considerable French army, have been told off to surround him. At first these fussy attentions were thrown away upon the Pope. He could not bring himself to do anything but pray for the Emperor, as if he was an ordinary sinner like the King of Italy, or any other heretic; gradually he has begun to thaw; and he at last blesses the Emperor, the Empress, and the little Prince Imperial with creditable ease and fervour. Cardinal Antonelli has done the same; and the French garrison at Rome can hardly stir out of doors without being thanked by the Cardinals in the name of the entire religious world. It is a proud position in the eyes of a vain nation to be the protectors of the sacred person of the head of the Church. The French rather like taking care of his Holiness, and attending to his comforts. It gives them prestige, and an air of political sanctimoniousness. Though by no means religious in their turn of mind, the French are fond of a little ostentatious diplomatic piety. It suits them to patronise the Pope. They take missionaries on board their men-of-war to Cochin China. The Emperor himself is understood to take a personal interest in the new Bulgarian convents; and to have a plan for reforming Mexico by means of the Mexican clergy. It is by no means necessary that these Evangelical tastes should be accompanied with strong religious convictions. Napoleon III. chooses to take a prominent place in the ceremonies of the Catholic Church; nor does it interfere with this laudable ambition that he cares very little about the points of Catholic doctrine. The Gold Stick in Waiting of the Papacy performs his duties punctually. Nobody has anything to do with his private sentiments upon matters of faith. An emperor is a political, not a religious being; and has a right to his own mixture of genuflexions and scepticism. The Pope's opinions are nonsense, but the Pope's person is a valuable possession for a great nation.

The horrible suspicion that England was desirous of supplanting the French Emperor and of playing Gold Stick to the Pope herself, was sufficient accordingly to drive all loyal French Anglophobists to the very verge of madness and distraction. Everything possible had been essayed to keep his Holiness under the thumb of the French Empire. The subtle intrigues of England have set all at nought. Lord Russell himself got up—according to the *Nation*—an *émeute* in London for the sole purpose of frightening the Pope from Rome, and inducing him to fling himself on the protection of the English. At the same juncture, the English envoy at Rome was discovered tampering with the Father of the Faithful under the very roof of the Vatican. The Pope—the French newspapers seem to think—is a troublesome and slippery kind of old creature. It is impossible to take one's eye off him for a single moment. Somebody is sure to get hold of him and undo the labour of years. The origin of the awful rumour about English influence is given in a despatch from the French Ambassador at Rome. Mr. Odo Russell last summer solicited and obtained an interview with Pio Nono, and pleaded "as usual, though in decorous terms," the cause of Italian unity. The conversation closed without result, and Mr. Odo Russell bade his venerable host good-bye. "Adieu, dear Mr. Russell," said his Holiness; "who knows if one day I shall not be forced to go to you for hospitality?" The expression sank deep into the mind of the too imaginative Mr. Russell. To diplomatists, trifles light as air are what they are said in Shakespeare to be to the jealous. Mr. Odo Russell, whose business it was, according to the traditions of diplomacy, not to lose a single wink of the great spiritual potentate to whom he was accredited, came in hot haste to London; believing, no doubt, that he was the repository of an important political secret. The Foreign Secretary was informed of the Pope's very remarkable expression. Lord Russell at this great juncture appears to have been more overcome than he should have been at the discovery of a political marc's-nest. He took the Pope's badinage *au pied de la lettre*, gravely sat down, and selected from his Complete Letterwriter a suitable despatch, in which the Pope was offered the Mediterranean fleet to convey him to Malta. This characteristic document in due time was transmitted to Cardinal Antonelli, who, having as much idea of going to Malta as he had of going to Jerusalem, was probably proportionately surprised. He explained to the enthusiastic English envoy that the Vatican was not going to break up. "Dear Mr. Russell," however, was not inclined to let go his hold. Important political intrigues are too great a novelty at the English Foreign Office not to be kept up as long as possible. The Pope and Cardinal Antonelli said there was nothing in it. Mr. Odo Russell was all the more convinced that he had come across something which would make the name of Russell famous, and was not to be put off the scent. His frank and confiding nature led him to communicate the whole story to an officer of the Pope's household. The officer revealed everything to the French embassy. The French Embassy have given it to Europe. A serious expostulation has been addressed in consequence to the Pope by the French Foreign Minister. The Parisian Press is up in arms at the thought of the Machiavellian ingenuity of Lord Russell. To Englishmen, the entire

Digitized by Google

occurrence is a piece of news. Meanwhile, the sagacious Lord Russell sits and contemplates the mare's-nest he has found, and probably by this time has made up his mind that the united wisdom of Lord Russell and Mr. Odo Russell have been in fault, and that it does not do to concoct great political enterprises on the strength of the blarney of a good-natured and fussy ecclesiastic.

The Continent and the Paris journals on this occasion may be reassured. There is not the least wish in this country to have the Pope either at Malta or in Leicester-square. The Pope is of some use to France, but he is of no use at all to England. We gladly make a present of him and of Cardinal Antonelli to the Catholic Powers. He would be a greater nuisance to this country than the Ionian Islands, and the certain source of continual grievances. Either we should treat him too well, and Europe would be jealous; or we should neglect him, and Europe would be indignant. In no way could we escape odium. Lord Russell himself would live the life of the wretched, and be in perpetual hot water with Austria, with France, and with Spain. Not even at Malta would the Pope be a tolerable guest. Maltese fanaticism is not, as it is, the most enlightened form under which Catholicism presents itself; and Malta—which is now a Catholic hothouse—would become a Catholic furnace of intolerance, of superstition, and of intrigue. Nothing but the pomps and vanities of office can have brought the author of the Ecclesiastical Titles Bill to look with moderate complacency on the project. It is the old story of Lord John's fatal and besetting habit of attempting to write State papers. Supposing his Holiness had taken our impulsive and ambitious Foreign Secretary at his word, and accepted his humorous offer of hospitality. Lord Russell would have landed us in a scrape which would have been awkward and ludicrous enough. The Continent would have stormed at the sight of the venerable Pontiff landing from an English steamer, with the Mediterranean fleet behind him, and Lord Russell waiting to welcome him on the Dover pier. No finer historical tableau could have been drawn than Lord Russell receiving the Papal benediction on his knees, with an amused and astonished nation in the background, watching the performance of their Protestant Foreign Secretary.

The ridiculous indignation of the Parisian press at the suggestion of a British asylum for the Pope proves at least that the possession of the Pope's person would be esteemed an honour and an advantage, even by the anti-clerical party, in a country so secular as France. It will be difficult to select a residence for the Court of Rome which will not arouse the jealousy of Catholic Europe. It cannot be said that the political influence of the Papacy, even in these days, is slight. It is a real object with the Continent to see that the Pope should be independent. For his own sake, we can well imagine that he would nowhere be so independent as in England. The Catholic Church, except when in the dominions of the Church, will never really be free, except in a free State. The very political influence which the Papacy must possess in Catholic countries would be for ever bringing it into contact or conflict with the Executive. Under the Roman empire the Roman senate and the Roman people were never free, because it was conceivable that a political use might be made of their name. It might be said in like manner of the Catholic Church and the Pope, that they must ever be *nequaquam obscura nomina, etiamsi aliquando adumbrarentur*. The most congenial retreat that Pio Nono could find would probably be Spain, where the Court and a large section of the population are Ultramontanist to the backbone. The Pope might go there if he chose, but in half a dozen years Spain would be too hot to hold him. His residence there would be the signal for court intrigue and ecclesiastical encroachment, which would, before long, be followed by widely-felt popular dissatisfaction, a liberal reaction, and civil commotion. Spain before long will have to pass through the same ordeal of religious politics as Belgium. The same effect would follow in all places in which the Pope was not supreme. He is too great to be the guest of any Catholic nation. France herself could not safely hold him. Whether or no it would be possible to devise some expedient by which he might remain at Rome, even if Rome became the capital of Italy, it is hard to say. Any such compromise must be hazardous in the extreme, and is not likely to be tried in a lifetime of a Pope who is too old and feeble to cope with the difficulties of a very critical position.

BARRISTERS' FEES.

No one who has any adequate notion of the ways of courts of justice will have been surprised at the decision of the Court of Common Pleas, in the case of Mr. Kennedy and the lady who was so well known to the legal world as Mrs. Swinfen, and who will now enjoy the satisfaction of having contributed, under the name of Broun, one-half to the title of a leading case on a very interesting subject. Passing over mere technicalities, the result of the decision in Kennedy *v.* Broun is, that there not only is no contract between counsel and their clients in ordinary cases—a proposition which even Mr. Kennedy never contested—but that the nature of the relation is such that no contract can be made in respect of a barrister's services, even if both he and his client wish to make it. The Court of Common Pleas decided this to be the law in an elaborate judgment, which may be divided into two parts. The first ascertains, by the usual array of authorities, what the law upon the subject actually is. The second is directed to the less usual and less necessary task of defending the expediency of the law upon principle. In a passage of great vigour, and distinguished by masculine eloquence, the Court describes the duties of barristers, dilates upon their importance to the public, and argues that they could not be performed in a satisfactory manner if they were to be made the subject of specific contract.

"The incapacity of the advocate in litigation to make a contract of hiring affects the integrity and dignity of advocates, and so is in close relation with the highest of human interests—namely, the administration of justice. We are aware that in the class of advocates, as in every other numerous class, there will be bad men taking the wages of evil, and therewith also, for the most part, the early blight that awaits upon the servants of evil. We are aware also that there will be many men of ordinary powers performing ordinary duties without praise or blame; but the advocate entitled to permanent success must unite high powers of intellect with high principles of duty; his faculties and acquirements are tested by a ceaseless competition proportioned to the prizes to be gained—that is, wealth and power and honour without, and active exercise for the best gifts of mind within. He is trusted with interests, and privileges, and powers almost to an unlimited degree. His client must trust to him at times for fortune, and character, and life. The law trusts him with a privilege in respect of liberty of speech which is in practice bounded only by his own sense of duty; and he may have to speak upon subjects concerning the deepest interests of social life, and the innermost feelings of the human soul. The law also trusts him with a power of insisting on answers to the most painful questioning, and this power again is in practice only controlled by his own view of the interests of truth. It is of the last importance that the sense of duty should be in active energy proportioned to the magnitude of these interests. If the law is that the advocate is incapable of contracting for hire to serve, when he has undertaken an advocacy, his words and acts ought to be guided by a sense of duty—that is to say, duty to his client, binding him to exert every faculty and privilege and power in order that he may maintain that client's right, together with duty to the Court and himself, binding him to guard against abuse of the powers and privileges intrusted to him, by a constant recourse to his own sense of right. If an advocate with these qualities stands by the client in time of his utmost need, regardless alike of popular clamour and powerful interest, speaking with the boldness which a sense of duty can alone recommend, we say the service of such an advocate is beyond all price to the client, and such men are the guarantees to communities for the maintenance of their dearest rights, and the words of such men carry a wholesome spirit to all who are influenced by them. Such is the system of advocacy intended by the law, requiring the remuneration to be by gratuity; but if the law allowed the advocate to make a contract of hiring and service, it may be that his mind would be lowered, and that his performance would be guided by the words of his contract rather than by principles of duty; that words sold and delivered according to contract for the purpose of earning hire would fail of creating sympathy and persuasion, in proportion as they were suggestive of effrontery and selfishness, and that the standard of duty throughout the whole class of advocates might be degraded."

This vigorous and interesting passage offers a singular contrast to the judgments usually delivered in courts of justice, and deserves attention as an instance of a sort of excursion into that domain of speculation and general principles which the severe genius of English jurisprudence hardly ever allows to its exponents. No one can deny, or would wish to underrate, the vigour of the language employed, or the healthiness of the sentiments expressed. The force of the argument is perhaps less apparent. Shortly, it comes to this. The rules of the whole profession must be framed so as to provide for those exceptional cases in which the public are deeply interested. On common occasions it matters very little what the rule is, but in important cases the proper exercise of the advocate's discretion becomes a matter of the greatest public importance, and it can be secured only by a system of gratuitous compensation as distinguished from compensation by contract. The first proposition is indisputably true. The public importance of the existence and of the proper exercise of the discretion of advocates cannot be exaggerated, and the rules laid down for the regulation of the profession must no doubt be framed with an eye to the cases in which this fact is brought conspicuously forward, and not with an eye to other laws of greater frequency but less importance. No one who considers the matter with anything like competent knowledge can fail to perceive that it would be most unwise to lay down any rule as to the relations between counsel and their clients, which, in cases of great public

Digitized by Google

interest,—political prosecutions, for instance,—could in any degree fetter the discretion which the Bar are at present bound to exercise in the interest of the public, or lessen the influence which attaches, and ought to attach, to what is said by counsel of high character. If the public, out of jealousy of assumptions which are sometimes insolent and often hypocritical, were to do anything to lower the dignity of the Bar in the sense of those words so ably and vigorously explained by the Court of Common Pleas, they would strike a fatal blow at most important interests. A class of advocates habitually regarding themselves as the mere mouth-pieces of their clients, and as men invested with no public duties and responsibilities, would be a nuisance of the most intolerable kind. There can be no doubt that much of the language respecting the Bar which passes current at the present day shows either ignorance of this privilege or indifference to it. Many persons both speak and write as if barristers had no other or higher duties to perform than those of honestly doing their work, and often very dirty work, too, for their money. The shallow treatment of the subject by Mr. Trollope, in one of his late novels, is a fair specimen of the way of thinking which prevails at present on this topic. To those who entertain it, the language quoted above is a proper and timely rebuke.

All this, however, being fully granted, the consequence pointed out by the Court of Common Pleas does not appear to follow. A barrister's duties are of great importance; they require a high sense of duty and public spirit, *therefore* no contract should be made, either prospectively for their performance or retrospectively for payment because they have been performed. If a recognition of the right of the parties to contract involved the consequence that the advocate was at liberty to refuse business upon the offer of a brief and a reasonable fee; or if it involved the consequence that a barrister might not exercise to the full that discretion with which he is at present invested for the public interest, the argument would be perfectly valid. This, however, is not the case, and no one can suppose it to be so. It would no doubt be wrong to allow barristers to sell their services without any restriction whatever; but why should they not be allowed to sell them for a reasonable price, to be settled according to some rule well understood by both sides? It is so with attorneys. The contract between attorney and client is a contract in the fullest sense of the word. Yet there is, in principle at least, no difficulty as to payment, because taxing-masters are provided for the express purpose of saying what is to be paid; nor would a contract to pay more be valid. So a cabman has a right to be paid sixpence a mile, but every one who takes a cab enters into a contract to pay that amount as much as if each passenger made his own bargain. These instances show that the power of arbitration on the one side to do the work, and on the other to pay the fee, would not of necessity enable barristers to be extortionate or involve them in any unseemly haggling. Means of settling the amount of the fee might easily be provided, and the result would be that barristers would hold themselves out to the world as persons ready to enter into contracts according to certain fixed rules. In such a position there would be nothing degrading. It would, indeed, be more dignified than the practice which some leading members of the bar adopt of driving bargains through their clerks, which are not the less bargains, because they cannot be legally enforced.

The matter of fees, therefore, affords no reason in favour of the present incapacity to contract. The question of discretion is more important. The Court seems to have assumed that if there were a contract between counsel and client, the counsel must say whatever the client pleased. "Words sold and delivered according to contract would fail of creating sympathy." No doubt, if this were the case, it would indeed be fatal. A viler trade than that of letting out one's tongue, of engaging for money to say whatever a client wished, it would be impossible to imagine. Where, however, is the connection between the mere fact of contract and this vile practice? Why may not a client and his counsel lawfully contract, that, in consideration of a certain fee, the counsel will conduct the client's cause according to the rules of his profession, and subject to the discretion which those rules confer. If such contracts were made, the counsel would have the very same powers in every respect as at present, and would be bound to exercise them in the public interest by precisely the same set of obligations; but contracts are by no means uncommon, and are entered into by men of perfect honour in every rank of life. A pilot contracts to take a ship into harbour; but it is of the very essence of the contract that he shall have full authority to give orders. An attorney contracts to manage his client's lawsuit. The discretion reposed in him is as delicate and in some respects even more important than that which is reposed in counsel; but his contract is founded on that discretion, and recognizes it in the fullest way. Suppose a client were to say to his attorney, "You have accepted my retainer, you have engaged to conduct my cause, I therefore demand that you should go and tamper with the witnesses on the other side." The answer to such a speech would be conveyed by kicking the speaker out of the house; and why should not the same course be taken by counsel? The Court of Common Pleas seems to think that if actions could be brought for fees or for negligence, a client might say, "I hired you to browbeat, to bully, to mis-state evidence, and to mis-quote cases, and I expect you to do so." Surely the answer would be, "You hired me to discharge a public duty on certain well-known terms; so long as I discharge that duty on those terms, I fulfil my obligation." The judges themselves are in a certain sense contractors. In consideration of £5,000 a year they undertake to do certain work. Does this deprive them of all discretion in the way in which the work is to be done? In the case of an arbitrator there may be not only a substantial but an express legal contract, yet the duties of an arbitrator, and his powers, are judicial in the strictest sense of the word. If a man may contract to adjudicate it seems a strange anomaly that he may not contract to plead.

Whatever may be the legal merits of these questions, there can be no doubt that in practice the sentiment by which the Bar is animated is of far more importance than the express laws by which it is, or, in the last resort, might be governed. It would be well for the profession and the public if the sentiments quoted above could be accepted as an index to the general state of feeling amongst barristers as to their profession. If the fact were so, many theoretical anomalies might readily be forgiven. Unfortunately, the Bar do not act up to the high standard which the Court of Common Pleas sets up for them. Too many of them put it in the power of shallow and vulgar critics, who are incapable of understanding the high view of the profession, to taunt them with practices utterly inconsistent with their professed principles, and to argue with considerable plausibility that they refuse to allow of contracts between counsel and clients, not because they fear to lower their dignity, but because they want to shirk their engagements with impunity. Where, it is asked, is the dignity of a man who screws the last guinea out of a reluctant client by the agency of his clerk, and after taking the fee refuses to do the work? Where is the dignity of a man who undertakes to be in three or four places at once; and when all his cases but one have been disposed of in his absence, refuses to return his fees on the ground that the Bar is too proud to make contracts, and that the fee is only an *honorarium*, and not prospective payment for work to be done? These questions are simply unanswerable. The real friends of the profession, those who honour it as one of the noblest of English institutions, and as a calling in which the highest talents and the greatest virtues may find a worthy arena, hear them with shame and in silence. Such practices are simple cheating, and cheating of a peculiarly dirty and hypocritical kind. They ought to be put down in the most decisive way, and if proper measures were taken, they might be put down. The proper corollary to the judgment in Kennedy *v.* Broun would be the adoption of measures to maintain that dignity which the judgment describes so well. Let there be a proper court of discipline; let us hear no more of such scandals as those which throw an uninviting halo round the names of Mr. Edwin James and Mr. Digby Seymour; let eminent counsel at the Common Law Bar follow the good example set them in the Courts of Equity, and confine their practice to particular courts; let the amount of fees be settled in such a way as to give a substantial meaning to the boast that the public are entitled to the services of the Bar in a different sense from that in which every man is entitled to have any luxury he can pay for; and when this is done, it will be matter of little importance whether the relations between clients and counsel are regulated by practice or by contract. Of Mr. Kennedy, and the *teterrima causa* in which he has figured, it will be enough to quote one clause of the judgment:—"In this case, the advocate, by disclosing words of intimate confidence which passed in moments of helpless anxiety, has raised the phantom of a contract for a sum of monstrous amount; and of this we hope we may say there is no one in the profession who would be willing to accept from her this verdict of £20,000 as a gift."

ELOQUENCE IN PARLIAMENT.

To inveigh against the degeneracy of the age in general is a habit which may be safely recommended to all writers who are particularly anxious that their sentiments shall not be refuted. There are no statistics whatever to prove that we are not more

Digitized by Google

selfish, ill-mannered, and idle than our grandfathers, and ill-natured people may consequently, without fear of definite contradiction, assert that we are. No registrar-general can ever make a report on the highmindedness of the metropolis for the week ending such and such a Saturday, 1863; hypocrisy and sincerity may do battle for centuries without ever going to scale. But in such attacks on modern times it is well to be discreetly indistinct. Fewer murders are committed by this generation than by that of a century ago; more individuals can read and write than could read and write then; and a smaller allowance of port is considered sufficient for the daily exhilaration of gentlemen. One of the most common comparisons between old times and new is that of their respective eloquence. Our age has lost, it is said, the art of public speaking: men grow impatient now of the rhetoric which used once to charm, entrance, persuade them; puny logicians rule the senate now; there were giants in the days of old. So runs the querulous contrast; and, with every allowance made for the natural tendency to exaggerate the virtues of the past, it must be allowed that the complaint is made more frequently and forcibly than can be accounted for by mere caprice.

There are two standards by which the oratory of different ages may be compared. One of these is the impression which the speeches make upon the audience. In this respect the palm must certainly be yielded to the elder generation, if we are to trust the existing evidence. There is no mistaking the tone in which the efforts of the great Parliamentary orators of the close of the last century and the beginning of the present are described by their contemporaries. The speeches of the day were then the topics of common conversation; they influenced the votes of the House, they calmed or roused the passions of the country, they startled their hearers into admiration. No parallel can be quoted in modern times to the effect produced upon the House of Commons by Sheridan's famous speech upon the "Fourth Charge" against Warren Hastings, to which, however, his summing-up in Westminster Hall, before the Lords, was considered nearly equal. But in the first place, it must be remembered that the audience to which an orator then addressed himself was more susceptible of influence than any which could be found now. Members were less in fear of their constituents, and could more easily follow their own taste in the votes they gave; while speakers had the satisfaction of knowing that their arguments might possibly be new, and that their illustrations had not already been supplied by the press. It was not so difficult to convince men who were open to conviction, and who had not studied the whole question that morning in print. Again, this applause was often as capricious as it was vehement. Sheridan, at the close of whose speech the House adjourned in order to have time to recover their dispassionate powers of judgment, was counted out on the question of the Abolition of Slavery. Burke, with his fancy and enthusiasm, was more than once coughed down. Fox, who delighted his hearers with his argument, is said on many occasions to have wearied them by his iteration. Pitt, Fox, and Burke agreed to give the palm of ancient and modern eloquence to the speech of Sheridan just mentioned; and yet some doubts as to the justice of the verdict cannot but suggest themselves, when we hear a speech of Lord Radnor, a few years later, spoken of by both Windham and Canning as the best they had ever heard. Either the degeneracy of orators had taken place very rapidly, or such judgments must be taken with a little reservation.

The other standard of comparison between speeches is supplied by the printed copies which we possess. For the reasons given above, it must be concluded that these afford the best means of judging the question. It is often said that the speeches of some of the great leaders seventy and eighty years ago are so badly reported that we can form but little idea of the words actually spoken. It is difficult to know how far this is true; but we are inclined to believe that the statement is exaggerated. It was as easy to take short-hand notes in the time of Pitt as it is now. The language of the orators of that day, as we have it reported, bears much the same relation, and exhibits the same degree of unlikeness to that of modern debaters that the style of writing in their times bears to that of their descendants. Nor are they given with a uniformity which would be fatal to a belief in the accuracy of the reports; even the speeches of Irishmen may be recognized to this day by the peculiarity of their language. Probably Burke has suffered more from the short-hand writers than any other speaker of his time; but, after all, there are many who suffer still. Neither Sir James Graham nor Macaulay, both whose periods were most elaborate, were ever reported accurately, and it is only necessary at the present day to compare the Parliamentary proceedings as given by two different daily journals, to estimate the looseness of rendering to which rapid speakers are liable. Even in the great financial duel of December, 1852, the *Times* and *Morning Chronicle* differed in some places to the extent of two or three lines together in their report of the chief speakers of the evening; and that of the *Morning Chronicle* was, on the whole, the more accurate of the two.

To set the oratory of former and of modern times in rivalry with one another is at best an unprofitable task. But it may not be useless to notice the most marked points of difference between them. One feature, which has, in a great measure, disappeared from our public speaking, is the tone of self-confidence, not to use a harsher expression, which used to pervade it. The personality of the speaker used to enter into his rhetoric to an extent which would hardly be tolerated now. It was the intellectual element which corresponded to the now nearly abandoned "action." One great orator produced a magic effect by shaking his head, during a telling sentence, at a lord at the end of the House; another fell back in his seat, from real or simulated faintness, when his work was done; Lord Brougham, only thirty years ago, besought the peers, "on bended knees," not to reject the Reform Bill. Traces of the prominent personal element are to be found in every great speech of the time. It takes sometimes the form of attacks against opponents to which Parliament is now a stranger; sometimes that of such painful scenes as the quarrel between Fox and Burke; but it is most common in the form of what may almost be called egotism. Pitt once told the House of Commons of the reminiscences of his childhood. Fox declared, at the beginning of one of his best speeches,—that on the Westminster election, that he did not expect to meet with bare justice in the House. The words created some disturbance; Fox dwelt on them, repeated them, and overawed his enemies, as the story goes, when he had pronounced them four times over. How irresistibly the *ego* breaks out in Grattan's celebrated invective in the Irish Parliament against Flood, by no means a contemptible foe! The speaker begins by supposing an imaginary character, whom he invests with all the faults of his opponent, and in whom he traces his history. His evident intention is to keep up the transparent mask to the end of the speech, and then annihilate his rival by a word; much in the same way as Brougham, forty years later, directed a memorable attack on Canning. But in the middle of the speech the orator can restrain himself no longer; the direct hostility which inspires the assault is too powerful to allow the flimsy pretext of an imaginary character, and Grattan bursts into one of those fiery onsets which no man ever led with such effect. "The merchant may say to you—the constitutionalist may say to you—the American may say to you—and I, I now say, and say to your beard, sir,—you are not an honest man!"

The artificial character of most of the great speeches on record is another feature which cannot but be remarked. Nearly all exhibit a designed, often a complicated, arrangement of the matter. There is no reason to think that speeches were prepared with more labour than at present: some doubtless were committed to memory then as now, some depended on the inspiration of the moment. Cicero himself cannot have elaborated his speeches with more care than Lord Macaulay. The impression which the speeches of the latter on the Reform Bill left on the minds of the audience was, that the speaker was an extraordinarily clever man, who did not seem to care much about the debate, provided that his sentences turned out right. He quotes in his speeches from his history, and in his history from his speeches. But in arrangement of the matter, Macaulay no more resembles Pitt than a simple equation resembles a problem in the Lunar Theorem. The only modern debater who seems to take pains in this respect, is Mr. Gladstone: and it is for this reason, probably, that so curious a resemblance will be found between all his budget speeches, considered simply as rhetorical exercises. This is not the only respect in which Mr. Gladstone bears some likeness to the "heaven-born minister." Unlike him in manner, he is like him in clear roundness of enunciation, and like him in persuasiveness of tone. Such parallels are often interesting to trace, even when perfect exactness is unattainable. Thus, in his modes of thought and choice of words, Mr. Disraeli approaches more nearly than any modern speaker to Canning, though he, again, is very different from him in manner: and as far as regards vigour, readiness, and beautiful clearness of style, Lord Derby is the nearest copy of Fox which we can produce. Burke has no close parallel among us now, nor has Grattan; unless we may conceive Mr. Roebuck in his best moments, to bring back, in some faint degree, the "drawling but fiery" sentences of the great Irishman. It need hardly be added that he in no degree resembles him in exquisite music of cadence, in which Grattan stands among all orators supreme.

Digitized by Google

Perhaps the infrequency of extraneous ornament would be the most striking evidence to any of the older generation who should attend a modern debate, that the times have changed. Where are now the quotations, for which Virgil and Horace used to be ransacked? A great speech unadorned by a few Latin verses was a rarity in the days of Pitt; and English poets—now, it would seem, the exclusive study of Mr. Bright—were never long neglected. Burke quoted Horace, Lucan, Juvenal, Virgil very often, Shakespeare repeatedly, Milton in almost every speech, and sometimes more than once. Fox, though an excellent classic, and a man of great literary taste, quoted but seldom, and then mostly from Virgil; but some of Pitt's happiest effects were produced by apposite quotation. His allusions to the departure of fortune—Laudo manentem, &c.—his reply to Conway on the East-India Bill, in which he appropriated Scipio's answer, "Si nullâ aliâ re, modestiâ certè et temperando linguam adolescens senem vicero"—his application of the early morning light breaking in through the windows of the house while he was prophesying a better day to come for Africa—

> Nos ubi primus equis Oriens afflavit anhelis,
> Illic sera rubens accendit lumina vesper—

these were some of the things that made his fame. Gradually the taste for the classics seems to have died away. Canning hardly ever quoted, Brougham but seldom—chiefly from Milton and Virgil; but once from Ovid. Now, with the exception of Mr. Bright, who has been making the acquaintance of the English classics, Mr. Gladstone, who introduces a new piece of Virgil into each fresh budget-speech, and Lord Palmerston, who astonished the world not long ago by an extract from Seneca, the habit has almost passed away. With it may be considered to have departed in great measure the conception of a speech in Parliament as a rhetorical display. What has diminished in our eloquence is not so much the power of speaking well, as the wish to speak persuasively, and the immediate advantage of speaking at all.

DOCTORS.

There is among mankind so general and resistless a sentiment that doctors may be fairly made game of, that it is impossible to help believing that there must be some ground for the conviction. For the most part, a comic atmosphere settles round things by the merest chance, and the finer shades of humour exclude all philosophical treatment. It is obviously so with the more comic among the brute creation. That monkeys should be laughed at is intelligible enough, and a pelican actually invites the jokes of the unfeeling public by the arrangement which it spontaneously makes for its offspring. But most other animals are comic by force of circumstances only, and through the associations of the Zoological Gardens. When the giraffe first began to pack up his bedclothes for himself, and the Polar bear adopted the habit of climbing in search of buns, they at once laid themselves open to public remark and the broader forms of pleasantry. The hyæna is humorous because he laughs, and the crocodile because he weeps: the supposed animosities of the Cassowary towards the inoffensive missionaries of Timbuctoo will ever render that unfortunate bird, which, in reality, is by no means carnivorous, a by-word and a mockery among men. What, then, is it which leads us to make fun of doctors? We consider bishops moderately well adapted for playful satire because they wear lawn sleeves, and because, in his well-known encounter with Dick Turpin, the bishop of lyric story behaved with a quaintness unsuitable to his character. Aldermen, again, may be laughed at, because they seem to exist for no other very important purpose. But doctors are very useful men: they dress as the rest of the world dresses, and their drugs have been found of service to sick people in many well-authenticated instances. Why is a doctor to be refused the serious mention which we accord to the soldier or the stockbroker?

We have no hesitation in replying that doctors are ludicrous, because they are the depositaries of a tradition which does not deserve respect, and the professors of a science which has as yet no claim to the title. These may seem hard words, but on examination they will perhaps be found to be not so hard as they look. That the traditions of the faculty are by no means precious heirlooms, few modern physicians would deny. The medical profession in the time of our great-grandfathers was as far behind its generation in energy and in disposition to learn, as if it had by some accident omitted a century of existence, and had given up all hope of recovering its ground. The practice of medicine was as much guesswork as it was in the days of Hippocrates; the theory was dogged conservatism; and so low was the estimation in which the professors of the art were publicly held, that there were times at which pure quackery absolutely carried away the whole nation for months together, till the imposture could be sustained no longer. There is no instance on record of resistance to improvement so absolutely persevered in, as that which the history of the medical profession supplies. It is but fair to say that the spirit has changed; and public opinion is changing with it. A visitor to Paris a few months ago might have seen a play of Molière acted at one theatre, in which doctors are represented as sycophants and impostors; while at another one of the best of modern French pieces was performed, in which a doctor is the good angel of the drama, and the embodiment of practical good sense. But can any one at this moment seriously declare that there is such a thing as a science of medicine? What there is, is this. There are a few facts—a very few—distinctly known, and beyond the reach of controversy; and the number of them increases but slowly, if it increases sensibly at all. There is a pharmacopœa of drugs, about the use of which no three men agree completely, and about which, whatever agreement there is, is derived from simple empiricism. There is a vast amount of chemical research, which appears to bring more physiological difficulties to light than it serves to explain, and passes by a number of organic laws to which it is powerless to afford the slightest clue. It may be urged, that all true science is founded on empiricism. So it is; but does any true science end with it? Can the doctors point to any one new law of their profession which they have laid down from the consideration of general principles, whether those general principles have been derived from practice or not? No one has a right to complain, if they do their best to collect facts on which the physic of the future may build some stable theories; and, as a matter of fact, nobody does complain. When medicine was conservative and stupid, it was despised by a practical world; now that it is willing to learn, its priests are respected for their labours, even if they are gently twitted with their ill success. It is the same with all other pursuits; progress, and a tendency to progress, is an unfailing guarantee of enlightenment. It may be safely asserted that the profession which has made the most progress during the last twenty years is that of farming; and the word farmer, which used to be nearly synonymous with simpleton, is now mentioned as if there was something intelligent and decidedly sensible in the sound. The practice of surgery has made great steps in a still shorter period, and has discovered in chloroform a source of blessing to the human race which will compare with any since the invention of steam. The legitimate gratitude of mankind is attested by the fact that there is not a single novel or drama of modern times in which a practising surgeon plays the part of a fool.

The relation of physic to facts, and of the general public to physic, is well illustrated by a book which has lately been published, under the title of "The Common Sense of the Water Cure." No one would think of publishing to the world his untutored reflections on the law of settlements, or apply his native genius without extraneous help to the discussion of a plan of fortification. It is felt that therapeutics are, as it were, common property, and may be settled, like politics and theology, over the dessert. A gentleman finds that a certain mode of treatment agrees with him, and does not see why it should not agree with everybody; and he feels that he is doing the world a service by mentioning the facts of the case. The substance of the work is exactly what might have been expected, always presuming the amateur physician to be a man of ordinary ability, and capable of observing and stating what passes before his eyes and mind. He depicts vividly the miseries of ill-health, the pleasure of being cured without the aid of medicines, and the delight of restoration to soundness and strength. With perfect good temper, and a fair amount of literary ability, he implores the world to follow his example and embrace the theory and practice of his peculiar heresy. But at this point his power ceases. Immediately that he attempts to give a reason for the faith that is in him, his philosophy falls hopelessly to the ground, and he wanders confusedly in a region where "inflammation" is the only sign-post, and the "blood-vessels" are the sole substitutes for guide-books. The author, however valuable his testimony as to the excellence of cold water, is purely and simply a quack. It does not make his position more exalted to confess to him with the utmost candour that all doctors are more or less quacks also.

As a matter of fact, however, hydropathy is just the subject on which the faculty has a right to pronounce an opinion, and upon which the verdict of a doctor is rather more likely to be true than that of an ordinary person. Less is known about the reasons and causes of those operations which take place in the human body than upon any subject upon which labour has been largely spent. But to determine the effect of any given treatment, and especially

Digitized by Google

so simple a treatment as that of Malvern and Ilkley, no recondite physiological knowledge is requisite. When doctors tell us that hydropathy is invaluable in a large number of chronic complaints, but that in acute diseases it is generally about as useful as a dose of prussic acid, we have every right to think that they are as right as men can be whose only business in life it is to record such simple experiences. That a light feverish attack may be cured by a wet pack, while a severe one will probably be rendered fatal by the same application, is a phenomenon, the rationale of which we are as thoroughly unable to explain, as we are competent to enunciate the fact itself with certainty. Take the action of calomel, again. Its effect is perfectly well known to doctors: calomel and quinine are the sheet-anchors of modern medical practice; the latter is a specific for ague and similar complaints; the action of the former in some cases of acute inflammation is almost magical. The author of the little book, which we mentioned above, enters into a long argument to prove that calomel is wholly noxious. Here is an instance in which the very weakness of the faculty is their strength. "We know," they may reply to the amateur, "about the philosophy of the action of calomel just as much and just as little as you do. We, and you, and the best chemist at the College, may spend a week in analysing its properties, and examining its affinities, and leave off at the end as wise in a therapeutic point of view as when we began. The only difference between us is, that we find that a number of grains of a certain white powder will save a person's life when no other known substance in the universe will." Impartial judges will not hesitate to declare that the doctors have the best of the argument.

It would neither be true to say that there has been no change in the practice of medicine in the last twenty years, nor that this change is independent of the influence of the various dissenting schools. The progress has been entirely in one direction—that of abandoning physic, and placing more confidence in nature; and the Homœopaths and the rest have had a great deal to say to it. Professional men have at last begun to be less afraid of their patients. Strange as it may appear, the main cause which once rendered the healing art so conservative, was the irremediable conservatism of the sick men. It is well known that the sufferers at the hospitals believe that the doctors are tampering with their case, if their drugs are not sufficiently nauseous. The blacker and nastier the draught is, the greater will be the relish with which the poor man will drink it. The same has been in a great degree the case with their richer neighbours; and more hypocrisy has probably been practised by physicians in making up useless and harmless medicines, than by an equal number of any other profession. We could give the name of an elderly gentleman, lately deceased, who for the last forty years of his life took a pill every day before dinner. The pill was sent him by a clever and respected physician; and it consisted of pure unadulterated bread. He would insist on having medicine, and he firmly believed that the medicine the wise doctor sent him did him good. From such thraldom as this, physic is being gradually delivered. At present it hopes great things, though it has as yet accomplished none. In one particular department, which is specially open to chemical inquiry, it does seem at last as if something might be done. The present race of workers are patient and laborious; more so, perhaps, than the writers of hydropathic treatises are willing to allow. Still, that art must have a great deal before it, which can even now use the manuals of a century or two centuries ago with profit to itself, can treat a difficult problem by the light of an experience of the reigns of the Stuarts, can refer back for instruction or morbid diagnosis to an age when dissection was an infant art, and morbid anatomy a study hardly dreamt of.

PRIVILEGED COMMUNICATIONS.

A CASE of great interest has just been decided in the High Court of Justiciary in Scotland, and the question of privileged communication is to some extent involved in the decision. A person of the name of Ferguson entrusted a letter, in which two half-sovereigns were enclosed, to an Irishman called Terence M'Ghee, to be taken to the post-office. M'Ghee posted the letter, but abstracted the money before doing so, and on proceedings being adopted for the detection of the theft, he went to the Rev. Patrick M'Laughlin, a Roman Catholic priest, told him of the theft, and gave him the money. Mr. M'Laughlin wrote an anonymous letter to Ferguson, in which he enclosed the money, and gave this letter to M'Ghee to post. Mr. M'Laughlin's handwriting was recognized, M'Ghee was brought before a justice of the peace and accused of the theft, and Mr. M'Laughlin was cited as a witness. At the outset of the proceedings Mr. M'Laughlin intimated his refusal to take the usual oath, not on conscientious grounds, but because he might be called on to reveal certain circumstances which would involve a violation of his duties as a priest, who had received confidential communications from a penitent, although those communications were not given in the confessional. The magistrate, after some hesitation, permitted him to take a qualified oath, to the effect that he should "tell the truth, and nothing but the truth." In his examination he admitted having written the anonymous letter; but on the question being asked, "To whom did you deliver it?" he refused to give any reply. The question was reiterated in various forms, but the witness steadily refused to answer it, as his answer would, either directly or indirectly, involve a violation of his duties as a spiritual adviser, and lead to the conviction, on his evidence, of the prisoner. On persisting in his refusal, he was committed for contempt of court, and sent to prison for thirty days. These proceedings took place in an inferior court. After suffering imprisonment for thirteen days, what is called in the Scotch courts "a bill of suspension and liberation" was brought, praying for a suspension of the sentence pronounced upon him. The case was argued at some length, and the Court, after a week's consultation, has sustained the judgment of the inferior court, but mitigated the punishment, on the grounds, first, that the presiding judge had departed from the ordinary and regular course of procedure in the administration of the oath, and so, perhaps, misled the witness; next, that the character of the witness was unimpeachable; thirdly, that he had caused restitution to be made to the injured party; and in the fourth place, that, in his refusal to answer the question put to him, he was not actuated by any desire to screen guilt or obstruct the due course of justice. This decision,—though, so far as the mitigation of the punishment goes, it may not be thoroughly logical,—is in many respects the most satisfactory that could have been given; but it was reached by means which only partially involve the question of privileged communication. The full bench of the seven Scotch justiciary judges rested their judgment upon the nature of the question which the witness refused to answer. It was a question relating to a matter of fact, and not to a matter of confidence; and the fact to which the question referred was altogether *ultra* of the penitential confession and of spiritual advice and consolation, which cannot go beyond what the penitent *said* to the priest or what the priest *said* to the penitent. "Assuming, though not asserting," said, somewhat verbosely, the Lord President M'Neil, "that the law may regard as confidential, and therefore not to be divulged, a confession made by a criminal to his spiritual pastor, to ease his conscience and obtain consolation and advice, and even that it protects from disclosure the whole of what I may call the spiritual intercommuning between them, no one has ever said that it goes further, and extends—not to anything said by the penitent to the priest or by the priest to the penitent in the course of their spiritual intercommuning—but to every act afterwards done by either of them, if it can be regarded as a consequence of the confession made. In such acts the priest is not engaged in the exercise of his spiritual functions, and the penitent is not engaged in confessing to his spiritual adviser."

This judgment is sound, and it is perhaps the only just one that could have been given under the circumstances; but it is to be regretted that the nature of the case did not require it to go further. It is very important for society that a question of such general interest should be authoritatively decided. Legal writers both in England and Scotland have nibbled at the question, but they have not established any absolute principle as to what extent communications confidentially made are to be respected, and how far they may be extracted from a witness in the course of judicial examination. There are some few cases in which the point is raised, but in none are these decisions sufficiently definite to form a guiding principle. The general bearing of the law seems to be that communications made to legal advisers are privileged, whereas those made to non-professional men or clergymen, except perhaps to jail chaplains (and to them, if at all, on account of their *quasi*-official position), are not privileged. This, we say, is the general bearing of the law, but even this is not so distinctly laid down as it ought to be. With regard to communications made to law agents, it seems doubtful whether the privilege rests in the client or in the agent, and whether refusal to give evidence is founded on a legal, a moral, or a professional duty. The practice is thus not clearly defined, but the reason of it is clear enough. Communications between client and agent ought to be held sacred, and no power on earth ought to suffer them to be divulged. In criminal prosecutions his legal adviser is, in reality, but the mouthpiece of the accused; and just as the accused is not made to give evidence against himself, so his counsel should not be called on to give

Digitized by Google

evidence against him. In civil cases this principle is not, at first sight, so apparent; but it is undoubtedly more expedient for the interests of society, that all communications of any nature given to legal advisers, in their professional capacity of course, should be given under the seal of secrecy.

The whole matter resolves itself into a question of expediency; but those considerations of expediency which apply to the communications made to law agents on professional matters do not apply to the communications made to clergymen on spiritual matters. Expediency cannot look beyond the present world, or beyond our temporal relations one with another and with the community of which we are members. Whether, therefore, religious communications be made in the confessional or in private life, whether the absolution of the Roman Catholic Church be sought, or the spiritual advice and consolation of the established religion of the country, if, as a general principle, it be more expedient that all available means for the detection of crime should be put in force, than that a certain proportion of the community—*i.e.*, the criminal population—should have the opportunity of confessing their crimes under secresy, it must follow that neither the confessional nor the established clergy should be privileged. And there is no intolerance in this. Let us take the confessional as an instance. Roman Catholicism is tolerated in this country, but it is tolerated so far as it does not infringe upon the laws of the land. The moment it steps beyond the boundary it can no longer be tolerated. Toleration consists in allowing every one to think and to act exactly as he pleases, so long as he hurts no member of the community. There is a law of the land according to which all the lieges must give evidence in a court of justice when called upon to do so. An infringement of this law is hurtful to the community, and the man who refuses to act in accordance with its terms, infringes on it, and so hurts the community; and, therefore, is no fit object for toleration.

We do not deny that much may be said on the other side of this question. It may be for the spiritual well-being of an individual to confess his sins. A man who has unburdened his conscience may feel himself a happier man, and more readily accept the instructions of his spiritual advisers. He individually is a gainer by that act of his, but the civil community is no gainer. If a criminal, therefore, is to enjoy what may be called the luxuries of religion, let them be presented to him *after*, and not *before* his committal. Let the communications made to the gaol chaplain by criminals undergoing sentence for their crimes be privileged, by all means. The divulgence of them will not tend to the detection of crime, nor will it be expedient for the interests of society that they should be divulged. But if clergymen and others are to be looked on as favoured individuals, who may receive all sorts of penitential communications from all sorts of criminals, in all the stages of their guilt, and withhold them when called upon to give evidence—we do not say betray them without being called upon—they become privileged to connive at crime, and to prefer a merely sentimental consideration to that stern, effective, and inflexible justice, the adequate maintenance of which is almost the first essential of civilized society.

THE PAST WEEK.

The five days' battle, mentioned in our last number as having been fought between the Federals and Confederates, at Murfreesborough, in Tennessee, is explained in a special article. Not less obstinate has been the struggle at Vicksburg, on the Mississippi, of which we also spoke. This town is held by the Confederates, under General Johnston, and besieged by the Federals, under General Sherman, who was sent up there from New Orleans by General Banks. The Confederate entrenchments and fortifications extend back from Vicksburg six miles. General Sherman's troops advanced to within two miles of Vicksburg, when he was attacked by a superior Confederate force. The fighting was very severe. Batteries were taken and retaken; and the 4th Iowa regiment lost 600 men in killed, wounded, and missing. The Federal General Storey, with 1,500 men, was sent out to execute a special order, and has not since been heard of. Confederate steamers were conveying reinforcements from the Louisiana shore to Vicksburg. The Confederates had concentrated all their forces from Jackson to Grenada, and along the line of the roads, amounting to 65,000 men, at Vicksburg. This force attacked General Sherman, and caused him to fall back on his first line of defence. Next day the Federals again attempted to storm the Confederate lines, but were repulsed. The Southern reports affirm that the Federals have since re-embarked in their river squadron, and have retired. There is little other military news. The defeat of the Confederate guerilla chief Morgan, in Kentucky, is confirmed; and in Arkansas, the town of Van Buren has fallen into Federal hands. The latest accounts from New Orleans say that preparations for a movement up the river were making with the greatest energy, and it was expected that the advance would commence about January 5th. Baton Rouge, the new base of operations, was swarming with troops, and was fully protected from any possible attack from the Confederates. At Lexington, in Tennessee, the Confederates, under General Forrest, have been defeated, with a loss of 1,400 men, by General Sullivan. In Virginia, the Federal army has not moved; but a large portion of the Confederate army has left Fredericksburg. Another fleet of iron-clad gunboats and transports, for an unknown destination, has sailed from Fortress Monroe. The famous *Monitor* has followed her rival the *Merrimac* to the bottom of the sea. She sank in very deep water, off Cape Hatteras, while going in tow of a steamer towards Wilmington, on the Carolina coast; a gale of wind having proved too much for her, with all the weight of her cumbrous armour, forbidding her to float.

The political news from America is yet more important. Governor Horatio Seymour, the newly elected Democratic ruler of the "Empire State" of New York, has declared his purpose to check the illegal usurpations of President Lincoln's government, in that part, at least, of the Union. He denies the assertion of the Republican party, the authors of this war, that it was caused by an unavoidable contest about slavery. He says, that slavery has been the subject, not the cause, of this conflict. "We are to look," he says, "for the causes of the war in the pervading disregard of obligations of laws and constitutions, in the disrespect for constituted authority; above all, in the local prejudices which have grown up in the two portions of the Atlantic States, at the two extremes of our country. There is no honest statement of our difficulties which does not teach that our people must reform themselves as well as the conduct of the Government and the policy of our rulers." In the same tone, Governor Seymour condemns the exercise of arbitrary power under martial law as destructive of the rights of States and of the judicial and legislative powers of the general government. He declares the President's emancipation proclamation impolitic, unjust, and unconstitutional; calculated to raise many barriers to the restoration of the Union; likely to be misconstrued by the world as an abandonment of the hope of restoring it—a result to which New York is nobly opposed, and which will be effectually resisted. The Union will be restored by the Central and Western States, both free and slave, which are exempt from the violent passions which exist at the extremes. Those central slave States which rejected the ordinance of secession—which sought to remain in the Union, and which were driven away by a contemptuous and uncompromising policy—must be brought back. The restoration of the whole Union will then be only a work of time, with such exertion of power as can be put forth, without needlessly sacrificing the life and treasure of the North in a bloody contest. The national Constitution must be held inviolate, and the rights of States must be respected as not less sacred. A consolidated government would destroy the home rights and liberties of the people. The suppression of journals and the imprisonment of persons have been glaringly partisan. By the party now in office, conscious of these gross abuses, an attempt has been made to shield the violations of law, and to suppress inquiry into their motives and conduct. This attempt will fail. Unconstitutional acts cannot be shielded by unconstitutional laws. "I shall not inquire," says Governor Seymour, "what rights the States in rebellion have forfeited, but I deny that this rebellion can suspend a single right of the people in the loyal States. I denounce the doctrine that the civil war in the South takes away from the loyal North the benefits of one principle of civil liberty. It is a high crime to abduct a citizen of this State. It is made my duty by the Constitution to see that the laws are enforced. I shall investigate every alleged violation of the laws, and bring the offenders to justice." He has therefore begun by placing the New York police administrators on their trial for illegally arresting and imprisoning, under orders from the Federal Government, many citizens of the State of New York. In this conflict of authorities, he seems to have the ordinary law of the land upon his side.

The French conquest of Mexico seems at length to be making some way. Reports had reached Texas that a French force of 5,000 men met and engaged a Mexican division of 25,000, commanded by General Ortega, and after a sharp fight the Mexicans gave way and fled in all directions. The victors took possession of Puebla, where they would await reinforcements, and then advance on the city of Mexico, a distance of 90 miles. A semi-official Paris journal announces that private information which it has received confirms the news of the capture of Puebla by the French. According to this information, General Forey, after turning the position of Guadaloupe, attacked and captured Puebla.

The French Senate and Corps Legislatif are preparing in committee their addresses of assent, in reply to the Emperor's speech. The ministerial reports and despatches published at the opening of the session add little that is fresh to our acquaintance with the Emperor's abortive negotiations, both on the American and the Roman questions. *La France* sullenly remarks that Italy will have to bear the blame of refusing a compromise with the Papal Court. The French Foreign Minister, M. Drouyn de Lhuys, has instructed M. de Sartiges to inform the Italian Government that Italy keeps up a much larger army than the Emperor considers necessary for so small a country. He recommends a considerable diminution of the Italian forces, suggests that the Italian Government should put its finances in order, and offers the loan of some French functionaries well versed in finance to assist them in their operations. But the Italian statesmen have a mind to manage their own affairs. In the meantime, a new treaty of commerce, navigation, and postal arrangements, has been ratified between France and Italy.

There is a change of ministry in Spain, but Marshal O'Donnell

Digitized by Google

is still at the head of the Government, professing to unite "all the fractions of the Liberal and Constitutional party," and promising to maintain friendship with all the foreign powers. There is likewise a change of ministry in Turkey, where Fuad Pasha, the most enlightened and reforming of Turkish statesmen, has been ousted from the Grand Viziership, which, after going a-begging among three or four persons, is now accepted by Kiamil Pasha, who was for a long time President of the Grand Council. He is a man of amiable disposition and moderate views, and an adherent to Fuad's policy, but without experience, and unable to cope with the present difficulties. It is said that one chief point in the programme of the new ministry is the development in considerable proportions of the Turkish army and fleet. *La France* even asserts that "in view of the decided attitude of the Sultan, Russia is about to increase the army of the Caucasus, where important military events are expected to take place."

The most serious incident, however, of political affairs in the Levant is the unexpected death of Mohammed Said Pasha, the Viceroy or hereditary vassal Prince of Egypt, whose praises we quoted but last week from Sir H. Bulwer's speech at Alexandria; and a biography of whom, with some account of his useful reign, appeared last summer in the *London Review*, on the occasion of his visit to London. His nephew, Ismail Pasha, a clever and energetic man of business, has succeeded to the viceregal throne. What effect this will have on the progress of the Suez canal scheme, or the covert objects of French policy in Egypt, a very short time may show. Meanwhile, the French papers have published a strange statement, that the late Viceroy of Egypt had agreed to supply the French Government with a regiment of 1,000 negroes to serve with the French army in Mexico; their complexion being, like that of our Indian sepoys, fitter than that of any European troops to endure a tropical climate.

The official Dresden journal states, on the authority of a private correspondent, that the Duke of Coburg has not yet refused the throne of Greece; and that, should he accept it, Prince Alfred would not immediately succeed him on the throne of Coburg, but a Council of Regency would provisionally administer the government in his name.

The Prussian Prime Minister has renounced all prospect of an understanding between Prussia and Austria on the question of the Customs' Union; and he declares that Prussia will rather quit the Zollverein, in order to get rid of its share in that vague engagement with regard to Austria, into which the Zollverein entered some ten years ago.

The Danish Government has replied to Lord Russell's advice on the Schleswig-Holstein question. It refuses to make any further concessions as to Schleswig, but consents to do for Holstein what the German Confederation requires, taking care, however, not to subject the Danish Monarchy to the control of the German Confederation. The King of Denmark has got a New Year's gift from the President of the United States in the shape of a pair of Colt's revolvers, which were presented to him by Mr. Wood, the American Minister at Copenhagen, with a speech vehemently urging the claims of the North to the sympathy of Europe. The King replied discreetly, hoping that the civil war in America may soon come to an end.

The Indian mail brings news that the unsettled aspect of things in Rajpootana has induced our Government to place a field force at the disposal of the political agent there. Dost Mahomed has made up his mind to invest Herat throughout the winter, and Sultan Jan has been deserted by some of his troops. The Ameer has rejected the overtures of peace made to him by Sultan Jan. Herat is provisioned for a year. In the opposite or eastern quarter of Southern Asia, our relations with the neighbouring States appear to be good. A commercial treaty has been concluded with the King of Ava, by the Government of India, for the passage through his territory, duty free, of all merchandise to and from British Burmah and China.

At home, as usual in this season, the week has been marked by no events of any political importance. Party leaders are mustering their numerical strength for the parliamentary session. The President of the Board of Trade has made a speech to his constituents at Ashton-under-Lyne, in which he contended that, as the secession of the Southern States of America was for the purpose of perpetuating and extending slavery, we ought not to desire their successful establishment; but he was bound to suppress any feeling of sympathy he might have for the one side or the other, since it was for the interest of England that our Government should preserve a strict neutrality. Mr. Milner Gibson further observed that the North had actually gained some territory by the war, as compared with the extent of its dominions twelve months ago; and he was glad to say that, in spite of the Morrill tariff, our exports to the United States in 1862 were larger than in 1861. The Duke of Argyle, at a meeting of the Bible Society at Edinburgh, complained of the mischief and scandal to Christianity, resulting from such conduct as that of the bishops in the Southern States, who have just declared that the principle of abolishing slavery is an infidel opinion.

The Totnes election has ended in the return of Mr. Alfred Seymour, brother to Mr. Danby Seymour, whose family lineage is collateral with the ducal house of Somerset. He is a Palmerstonian Liberal, and he polled 165 votes, against 157 polled by Mr. John Dent, the China merchant, who, having purchased an estate at Totnes, combatted the Seymour territorial influence, by coming forward on the Tory side.

Several cases worth notice have occurred in the Law Courts this week. A judgment of the Court of Common Pleas has set aside, on grounds explained in our article thereupon, the verdict for £20,000 which Mr. C. R. Kennedy obtained some months back against his former client, Mrs. Swinfen, now Mrs. Broun. In the Court of Vice-Chancellor Wood, a suit is being tried to decide on the validity of the will made by the late Earl of Egmont, twenty years ago, by which nearly all the Egmont property in Ireland was left to Mr. Tierney, his lordship's agent and solicitor. These estates, worth about £150,000, have since passed from Mr., afterwards Sir Edward, Tierney, to his heir, the Rev. Sir William Darrell, who is the defendant in the suit now brought by the present Earl of Egmont, to recover the property. It is alleged by the plaintiff, that the late Earl, who was a man of reckless and intemperate habits, lived for many years in obscurity, under the assumed name of Lovell, without holding any communication with his family. His secret was known to Mr. Tierney, who exercised great influence over him. Mr. Tierney, it is said, had given Earl Henry to understand that the estates were encumbered very nearly to their actual value, so as to leave him little, if any available income, and to render him dependent for his maintenance upon advances made to him by Mr. Tierney out of his own pocket. While these representations were being made, a very large expenditure was annually devoted to improving the estate. The plaintiff now contends that Earl Henry was at the time of his death (which was caused by consumption and *delirium tremens*) in the belief that there would be but a very trifling surplus from the property, and that he made the will in Mr. Tierney's favour, in ignorance of its real value. On the defendant's side, these allegations are denied. In another Vice-Chancellor's Court, a curious question was tried, as to the validity of a transfer of shares in the British Provident Assurance Society, which failed, and was wound up a year or two since. A Mr. D. Orpen, a grocer's assistant at Thame, in Oxfordshire, had been tempted by a puffing advertisement, with the promise of £500 a year in salary and commissions, to undertake the local agency, as a condition of which he was required to invest £200 in shares. The company was then in difficulties, and Mr. Orpen soon became anxious to get rid of his agency and his shares. He sold them in 1857, for £50, to Mr. John Sheridan, the manager, who is a brother of Mr. R. B. Sheridan, M.P. In the deed of transfer then executed, an interlineation has since been made, to appear as if the shares were purchased on behalf of the company. Such a purchase would, however, have been legally void; and the matter now in dispute was, whether Mr. Orpen had really got rid of his liability as a shareholder for the debts of the company. The verdict of the jury is, that the transfer deed was altered after he signed it; and the result of the verdict is to fix Mr. John Sheridan himself with the liability, as the real purchaser of the shares. The Court of Queen's Bench has been moved to amend a conviction by two magistrates in Buckinghamshire, who sentenced a man to aggregate penalties of 40s., for swearing a profane oath twenty times repeated, the statutable fine being 2s. for each oath. The question, whether a volley of oaths should count as one, stands over for grave consideration.

The Central Executive Committee of the Lancashire Relief Fund has had a full meeting at Manchester, where Lord Derby was present. It was reported, that since the 6th of December there had been a gradual weekly decrease of dependence on parochial aid in the distressed districts. Mr. Farnall states that in the last reported week, ending January 10, there is a decrease of 8,000 in the number of persons relieved out of the poor-rates, and of £2,000 in the expenditure for out-door relief. There are, however, 236,000 persons who are relieved solely by the charitable fund committees.

The balance-sheet of the Executive Relief Committee at Manchester shows a total of subscriptions exceeding £600,000, of which about £500,000 had been actually paid in at the end of the year; besides which, the Mansion House Fund amounts to £400,000, and the Local Committee have raised about £200,000 by themselves. Half of all this money remains as yet unexpended. The minutes of the Executive Committee set forth, in a valuable memorandum from Lord Derby's pen, the conditions upon which relief should be granted, and the dangers to be guarded against in its distribution; but to analyze these recommendations would take up too much of our space.

The British Consul at Savannah calculates that the quantity of cotton now remaining in the Southern States of America is 3,500,000 bales, which could be exported if the ports were opened to trade.

Prices rose in the Liverpool cotton market, when Mr. Lincoln's final decree of emancipation was known, as it seemed to remove all prospect of a speedy end to the American civil war. From China, as well as from India, we hear that large quantities of cotton are on the way to us.

The Manchester Chamber of Commerce has had a visit from Mr. R. G. Herbert, secretary to the Colonial Government of Queensland, and Sir Charles Nicholson, of New South Wales, who gave rather a promising account of the capabilities of that part of Australia for growing, with the aid of Coolie labour from China, the best sea-island cotton at a tolerable price.

The announcement of new baronets has been followed by a rumour of the creation of some new peers, Mr. Monckton Milnes, Mr. Ellice the elder, and Sir Charles Wood, being named as the likely selections for that honour. But the *Globe*, with semi-ministerial authority, contradicts the rumour altogether.

An influential meeting at Dublin, presided over by the Lord Mayor, has been held to urge the restoration of the Post-office subsidy of £78,000 for the carriage of the American mails by the

Digitized by Google

Galway route. Lord Clanricarde, Lord Clancarty, and Lord Gough, took part in this demonstration. "Justice to Ireland" was insisted upon in this as in other matters. Mr. Whiteside, by the way, in a lecture on the history of the Irish Parliament, Sir Robert Peel being one of his audience, is reported to have charmed the Repealers and "Nationalists," by enunciating the maxim, "Ireland first, and everything else afterwards." The Roman Catholic Bishop of Galway has threatened to excommunicate parents whose children go to the unsectarian schools established by the National Board. The murderers of Braddell, the land-agent in Tipperary, have not yet been caught; but Colonel Hare, the landlord, has the courage to go about there, well armed, and collect his rents for himself.

Mr. Beresford Hope has again been lecturing on America; Mr. Leatham, at Wakefield, on the Reduction of Expenditure; and Mr. Forster, at Bradford, on Commercial Treaties.

Among the deaths this week we may notice Horace Vernet, the French historical painter, and Mr. Richard Green, one of the greatest shipowners and shipbuilders in the port of London.

A police constable, in charge of an empty house at Acton, was treacherously murdered on Monday evening, by some one who knocked at the door and shot him dead when he came out. A few hours before, he had caught two men stealing planks from the premises, when he attempted to take them in custody, but they escaped. It is believed that, as he knew these men, they feared he would capture them again, and so they resolved to kill him. They are now both in custody on the charge of murder. They are brothers, twenty-two and twenty-three years of age. A gun, which had lately been fired, was found concealed in their bed.

The gale on Monday and Tuesday, though predicted in good time by Admiral Fitzroy's storm signals, caused much damage all round our coasts. Many vessels were driven ashore.

A frightful disaster has taken place at the town of Locarno, in the Italian part of Switzerland, at the head of the Lake Maggiore. The dome of a church gave way, beneath the weight of snow which had fallen upon it, and fell upon the congregation, who were then kneeling in prayer. As usual in the churches of Italy, most of the worshippers were women; fifty-three of whom, and one old man, were taken lifeless out of the ruins.

The new Viceroy of Egypt has begun well. In his reply to an address from the foreign consuls, he promises to devote all his energies to improving the prosperity of the country. He knows that good financial economy is the basis of public order, and he will therefore fix a civil list, which is never to be exceeded, for the expenses of his person and court. The revenues of Egypt are to be applied to the improvement of agriculture, abolishing the fatal system of forced labour in public works. Free trade, popular instruction, and the fair administration of justice, will at once promote the comfort of his people, and secure the beneficial intercourse of Egypt with the European world. The consuls, while bearing testimony to the private and public merits of Ismail Pasha, as proved already by his skilful management of his vast estates, no less than by his firm and dignified government in the Regency, expressed their hope that Egypt, under his rule, will become a rich and important State. But the French consul put in a word, sideways, for the Suez Canal, remarking that the French Government never wished the system of forced labour to be employed for that scheme. His Highness replied with discretion, that he did not mean to say anything about the Suez Canal just now. The *Times* greets his accession to the throne with a liberal meed of encouragement.

The Turkish troops in Montenegro are recalled, and, for this winter, the military works on that frontier are stopped. English, French, and Austrian ships of war are cruising to catch the pirates who infest the Ægean sea, while the Provisional Government of Greece takes measures to put down the brigands on land.

The Italian Government has detected an authentic Muratist conspiracy at Naples. The peasants of Russian Poland are gathering in the forests, and threaten an insurrection. A Warsaw correspondent of the *Daily Telegraph* describes that city as a prey to military terrorism of the sternest kind.

The Prussian Chamber of Deputies, in their address to the King, protest most solemnly against the late violation of Parliamentary rights, declaring that the country is justly alarmed by these abuses of royal power, and that peace can only be restored by a return to constitutional government. Meanwhile, the delegate of Prussia in the German Federal Diet has been advocating the creation of a popular elective Chamber, to sit with the council of German princes, as the legitimate organ of the whole nation; but this proposal was resisted by Austria, and is now rejected by the Diet.

The King of Sweden and Norway has proposed a reform of the existing Swedish constitution, which is still framed on the ancient feudal plan of a legislature consisting of the four estates of the realm,—nobility, clergy, burghers, and peasants, meeting but once in five years. He offers, instead of this cumbrous representative body, to create an Upper and a Lower Elective Chamber, with an annual parliamentary session.

The arguments of counsel in the case of the Earl of Egmont's will, briefly described above, are concluded, after nine days' discussion, in the Court of Sir William Page Wood. The Vice-Chancellor intends, as at present advised, to have the facts tried by a jury in his own Court.

The Directors of the Brighton Railway Company report an increase of traffic in the past half-year, and pay a dividend of 3½ per cent., making 6 per cent. for the whole year.

Reviews of Books.

KINGLAKE'S CRIMEAN WAR.*

The Crimean war forms a strange episode in modern European history. There is a certain grandeur and unity of action about it which would have fitted it to be the subject of an epic poem, in days when epics were reckoned amongst things endurable. The whole interest is centred upon one point; the three most warlike nations of the world struggled there for the prize with superhuman energy; and the prize was one which, for the moment, seemed worth the struggle. And yet it is impossible to look back upon the war which interrupted a thirty-eight years' peace without a sense of bewilderment. When the little Crimean boy picks up something white and round on the slopes above the Alma, the questions what they fought each other for, and what good came of it at last, are likely to puzzle not only his venerable Tartar grandfather, but intelligent European statesmen. Why did England, France, and Russia, and their allies, throw away a full million of lives, and hundreds of millions of pounds, about a remote fortress in the Crimea? How did it come to pass that the respectable English people, whom the Emperor Nicholas imagined to be all faithful disciples of the great prophet John Bright, suddenly flared up into unappeasable fury, rushed into the arms of a gentleman across the Channel whom they had just been abusing with all the energy of the English tongue, and set to work mauling their ancient and faithful Russian allies, as if their lives depended upon it?

A full reply to these questions will be found in Mr. Kinglake's long expected history of the Crimean invasion, an instalment of which, down to the battle of the Alma, has just appeared. Mr. Kinglake has an admirable and well-defined subject to write about; he writes with the clear and nervous style which might be expected from the author of "Eothen;" and more than this, he speaks with an amount of authority of itself enough to entitle him to respect. In the first place, all Lord Raglan's papers were entrusted to him by Lady Raglan; these papers were methodically and carefully arranged; they include all the military reports addressed to the commander of the English army; Lord Raglan's official and private correspondence with sovereigns, ambassadors, ministers, generals, admirals, French, Turks, Sardinians, and every kind of public functionary, scheming adventurers, and private friends. In addition to this Mr. Kinglake received, as soon as his task was known, the fullest information from private sources—so much that, he says, he never could find any limit to his power of getting at what was known in this country—and from our statesmen, admirals, and generals. Mr. Kinglake emphatically says that he does not remember that any one of these public men has ever suggested to him that there was anything which should be concealed for the honour of the nation. From French sources Mr. Kinglake also received much assistance; an accomplished and experienced officer was sent over expressly to explain to him some of the operations of the French army; the authorities, however, of the French war department "did not avail themselves of his offer" to inspect papers in their war-office. His knowledge of the battle of the Alma is drawn to a considerable extent from the narratives of the three Russian generals of division under Prince Mentschikoff. Last, but not least, Mr. Kinglake can rely for many facts on his own personal observation.

From this it will be seen that Mr. Kinglake has had rare advantages. We may add that he has used them with an ability equally rare; he has, with great skill, reconciled two offices, generally kept distinct; he has been in direct contact with the masses of undigested information upon which memoirs and biographies are generally founded in the first place; and, without inflicting upon us these raw materials of history, has at once given us history itself. Accounts of exciting periods generally have to appear first in the form of rough lumps of journals, letters, and memoranda imbedded in a thin layer of narrative, in which afterwards the historian has painfully to dig. The Crimean War has escaped this dismal fate, and the result of a great mass of inquiry and observation directed upon it is melted down and run into a permanent shape in Mr. Kinglake's clear and vigorous story. In one special case the advantage is conspicuous. Mr. Kinglake is particularly happy in describing the characters of the chief actors in the war; and he frequently combines the results of personal knowledge of his heroes or villains with the freedom which might be used if they had been dead for a hundred years. This habit of being personal, while it gives great liveliness and a sense of reality to all the author writes, is not without its dangers, and degenerates very easily into mere rudeness, or idle gossip: Mr. Kinglake's portrait of the French Emperor, for instance, is simply a caricature, which hardly deserves a place in a grave historical memoir.

Mr. Kinglake's first volume describes the causes which led to the Crimean war. In his second, he carries the history of its progress down to the battle of the Alma. The causes of the war are to be sought for to a great extent by following out the action of three remarkable men, who, more than any others, contributed to shape the course of events. At a later period, the voice of no one man, however exalted in position or attainments, could effectually rule the storm or command the excited passions of the nations. But during the greatest part of 1853 the quarrel aroused comparatively little interest, and was being only gradually developed under a few skilful hands. The chief actor was the Emperor Nicholas.

* The Invasion of the Crimea. By Alexander William Kinglake. Blackwood & Sons, Edinburgh & London. 1863.

Digitized by Google

His picture is carefully drawn by Mr. Kinglake. He was a man of imposing exterior, of great and restless activity, and of a strong or rather violent will. Moreover, he had a high character as a gentleman and a lover of truth. "His ideal of human character was the Duke of Wellington." On the other hand, this external brilliancy concealed real poverty of intellect. Moreover, he was headstrong and ambitious: he had a decided capacity, as was shown in the course of the war, for "saying one thing and doing another;" in other words, he occasionally lied. Finally, he was in the unfortunate position of being able to order war, as a man may order dinner, by ringing a bell without getting out of his arm-chair. We must add, that if he had a special weakness, it was an intense hatred of Sir Stratford Canning. The struggle first commenced on the important question of whether the Latin monks were to have one of the keys of each of the two doors of the sacred manger at Bethlehem, and whether they might put in the sanctuary of the nativity a silver star adorned with the arms of France. These and two or three similar questions naturally placed the ruler of fifty million simple and pious subjects, who believed in sacred shrines with all their hearts, in direct opposition to the equally strong religious prejudices of Louis Napoleon. After diplomatic contests, in which the unlucky Turks came in for blows from both parties, Prince Mentschikoff was, in the beginning of April, 1853, engaged at Constantinople in trying to force upon the Porte a settlement of these difficulties, and under cover of this grievance, to extort from it for Russia the protectorate of the Greek churches. At this point of the contest appears the second of the actors in the quarrel, Lord Stratford de Redcliffe. Lord Stratford's resolute will, and fierce and imperious temper, had made him at once supreme amongst the Turks and the personal enemy of the Emperor Nicholas. The Emperor had in fact once refused to receive him as ambassador at St. Petersburg, and had thus himself marked him out as his personal opponent. The Emperor had the advantage that his words might at any moment be backed up by armies; but even that advantage was no more than a fair equivalent for Lord Stratford's personal ascendancy. The Turks bent and fell down before him as though yielding to fate itself. "If what he directed was inconsistent with the nature of things, then possibly the nature of things would be changed by the decree of heaven, for there was no hope that the great Elchi would change his will."

At the moment when he arrived at Constantinople, backed by no material force, the Turks were trembling before the demands of Prince Mentschikoff, who was supported by a fleet and an army of 140,000 men. Although, like schoolboys, the Turks were at first afraid to tell Lord Stratford what a terrible mess they had been getting into during his absence, his arrival at once restored calmness to them. The diplomatic duel which ensued was short and decisive. By Lord Stratford's mingled skill and determination the Russians were placed in a completely false position. He managed so that the important questions of the silver star and the door-key should be taken by themselves and finally settled. But the Emperor continued to insist, though deprived of all ground for complaint, upon the protectorate of the Greek churches, with a violence increased by his hatred of his opponent. To him, personally, he attributed everything. He spoke even in formal despatches as though there were no government in Constantinople but the absolute will of Lord Stratford. Under the influence of this passion he gave orders to occupy the Principalities. By so doing he was placed clearly in the wrong. Moreover, not only England and France, but Austria and Prussia were dead against him. It was a case in which it seemed impossible that even the arbitrary will of the Russian Emperor should not yield to the public opinion of Europe. The Turks had satisfied all his just complaints; they had promised to redress every grievance of the Greek churches. The Emperor had clearly not a shadow of a right to extort a new treaty from them in time of peace; it might be reasonably hoped that, however irritated he might be by his diplomatic defeat at the hands of Lord Stratford, he would be compelled to see the error of his ways. How was it, then, that these expectations were frustrated, and that the most unreasonable and unintelligible of modern wars was allowed to break out?

To answer this question Mr. Kinglake makes a digression. How far the chapter we refer to is actually a digression may indeed be questioned. Its object is to show the motive of a third actor for now appearing upon the scene. That actor is Louis Napoleon; and the motive attributed to him is, that he had so covered himself with infamy a short time before, that it was a matter of life and death to him to get the French people to attend to something else than his own proceedings. We speak strongly, it will be seen, of a gentleman whom it is now rather the fashion, after several changes of popular opinion, to compliment as the saviour of society and the restorer of French prosperity. Passing over for a moment the question of whether the description of the *coup d'état* ought or ought not to form part of a history of the Crimean war, we think it a good thing that the deeds which Mr. Kinglake here recalls to our memory should not be suffered to be forgotten. It might save us the loss of some dignity if we sometimes remembered the crimes with which Louis Napoleon is charged, and of which he has never been cleared. We recommend the study of Mr. Kinglake's fourteenth chapter to the Emperor's panegyrists. He describes with extreme minuteness the proceedings of the little knot of disreputable conspirators, who on the night of the 1st of December seized the government of France, arrested generals and statesmen, stopped all the newspapers in Paris, and forcibly turned the Assembly out of doors. He describes the ghastly scenes of wholesale massacre on the Boulevards, which seem to have been the results of the cruelty, sometimes produced by cowardly panic in masses of armed Frenchmen, the yet more atrocious murders in cold blood which took place afterwards under the cover of night, and the deliberate transportation of twenty-six thousand five hundred men. It is a story which no Englishman can read without indignation, and no Frenchman, we should think, without shame; for it is a shame that the absolute command of a country like France should be capable of being snatched like a purse by a pickpocket. The moral, however, as far as Mr. Kinglake's immediate purpose is concerned, is this; that Louis Napoleon, being utterly cut off from the sympathy of his countrymen by his complicity in these infernal crimes, tried to draw off their attention by plunging Europe into war. We stated that the "four Powers" were, as a result of Lord Stratford's brilliant feat of diplomacy, arranged on a common ground of opposition to Russia. There was every hope that Russia would, under these circumstances, be compelled to yield without an appeal to arms. But this would not have suited Louis Napoleon. Accordingly he contrived, in the first place, to strike up a close alliance with England, which of itself threw a halo of respectability round him; and, in the next place, to detach England from France and Prussia, and to push her on into war. By a judicious series of eggings on at the right moment, the Czar was always infuriated by a fresh movement of our fleets, just when he was beginning a little to cool down from his last fit of passion. At last, before any one knew it, we felt ourselves committed to action, and, in fact, had unintentionally "drifted into war." The objection to this theory arises from Louis Napoleon's characteristic trick of blowing hot and cold at the same time. Whether his occasional suggestions on the peace side of the question, such as his autograph letter to Nicholas, in January, 1854, were intended merely as blinds, or whether he would have been willing to make peace if by that means he could have got the credit of commanding European diplomacy, may be doubtful. At any rate, according to Mr. Kinglake, the naval power, which might have been used so as to guarantee peace, was, in fact, so manœuvred under his instigation as to provoke war. What is the truth, we do not venture to decide. No one, however, but a partizan could fail to observe that the whole of Mr. Kinglake's theory depends on his assumption that the Emperor provoked the war, and it is just at this point that his proof is least conclusive.

At any rate, it cannot be doubted that if Napoleon really wished for war, he had plenty of assistance on this side of the Channel. The English people had talked so much of nonsense about the Exhibition of 1851, that foreigners actually supposed we were going to give up war for the future, and to turn our whole attention to our shops. They were, it seems, utterly taken back when it turned out that this was nothing but talk; that we were as fond of fighting as ever, and actually looking forward to a war with the same satisfaction as an undergraduate to a town and gown row. We were, to speak the truth, fairly delighted with the prospect of a war; we talked about it with a kind of boyish gaiety of heart, and should have been very little obliged to any one who had appeared as a peacemaker to spoil our sport. It is true that this was not very consistent with spoutings on the blessings of peace; but it seems that Englishmen have such vigorous lungs, that when even a small party sets up a shout, foreigners imagine it must be a spontaneous cry from the whole nation. We must confess, in passing, that Mr. Bright seems to get rather hard measure from those who now say the Crimean war was unnecessary. If you had not made such a noise, they say, the Russians would never have believed in our peacefulness, and would not have forced us to go to war. But, after all, that only leaves the fault with those who first let Mr. Bright talk without an answer, and who afterwards would go to war against his advice.

Finally, the Emperor had one strong ally in our Cabinet. Whilst Lord Aberdeen was drifting, and Mr. Gladstone—"that good man in the worst sense of the term," as Mr. Kinglake calls him—was refining, there was one man who knew his own mind and went straight on his own way. There was one man who had determined that France should for once adopt the traditional English policy in the East, though we might have to pay a price for it; and he was the man who, as we now know, has beyond all others the power of putting himself in thorough accordance with English sentiment. If all the members of Lord Aberdeen's government could have the chance of retracing their steps, every one of them, with a single exception, would look back to see where he could have altered his course. "Lord Palmerston would do nothing of the kind. What he had done before, he would do again."

(To be continued.)

ARTHUR HENRY HALLAM.*

So singular a story belongs to this book, that the task of judging it is unusually difficult. Arthur Hallam had, in his father's prefatory words, "the happiness to possess the friendship of one, then as young as himself, whose name has risen to the highest place among our living poets. What the distinguished person felt for one so early torn from him has been displayed in those beautiful poems entitled 'In Memoriam.'" The most remarkable monument which Genius ever raised to Friendship has for many years rendered all who love English poetry familiar with the lofty expectations raised amongst those who knew him best by a young

Cambridge man who died at two-and-twenty. In a hundred stanzas his friend has expressed the conviction that our loss in Arthur Hallam was one which a country, rich as England in great and fertile minds, might reasonably reckon a national misfortune. This is, indeed, to rate a man highly; and when we turn from the testimony of love given by Tennyson, supported though it be by much other concurrent assurance, to the slender "Remains" of the youthful student, it is impossible to free the mind from a perplexity of opposing feelings. Might not this be an instance of the well-known idealization of genius and affection? Did the promise, if found to exist, honestly carry with it the pledge of so great a fulfilment? May we, indeed, ever safely commit ourselves to such prophecy? We think that a careful reader of the book will find no difficulty in deciding that the verdict of Hallam's friends is strictly proven.

We will presently endeavour to confirm this by examples, premising that in framing our estimate our aim has been to judge the writer solely by the contents of the volume now published. It is by this that the world is now affected, and by this only will the world be able to test the validity of "In Memoriam." Yet it must not be concealed that several pieces in verse and prose have been omitted, which would have added further force to the conviction of the writer's sure destiny to greatness. These pieces were kept back in former years by a natural reserve. All reasons for this having now passed, it must be regretted that the collection should not have been now made complete: we shall hope that a new edition will afford opportunity for supplying omissions, and for the rectification of some careless misprints which the issue of 1863 presents when compared with that of 1834.

Arthur Hallam is one of the very rare examples of the direct hereditary transmission of high mental power. It is impossible not to judge him more or less by reference to that honoured father who, by a fate happier, perhaps, for us than for himself, was spared for more than thirty years after Arthur's death to enrich our literature by that admirable "History of Intellect," which might alone have occupied the lifetime of an industrious student. To the elder Hallam's vast range and clear command of reading the son added a depth of poetical insight, a certain kindred sensitiveness for the high things of art, which, in the author of the "Constitutional and Literary Histories," were compensated by that calm yet fervent justice of judgment—that "one weight and one measure" which, as Macaulay observed, we can hardly look for elsewhere with success. Years might—in all probability would—have brought this quality of the philosophic mind to Arthur Hallam. As we perceive him in the writings of his marvellous boyhood—amorous of the beautiful, passionate for the ideally high and truthful—we are rather reminded of the opinion expressed by one of his most intimate friends, that what we lost "in Vienna's fatal walls" might have been a second—perhaps a greater—Edmund Burke.

That this partial judgment of friendship bore no remote relation to the promise of the man, these pages seem amply to testify. The poetry alone would have placed him securely among the "inheritors of unfulfilled renown," from its varied felicity in subject and treatment, from its powerful yet subtle strain of reflection, above all, from the sweetness and intense truth with which it expresses the natural affections. Yet it does not seem to do such full justice to the author's capacity as the Essays: it does not perhaps carry with it the conviction that the final triumph of his career would have been in verse. The intensely receptive character of the boy's mind is shown in the reflected lights which, without imitation or plagiarism, colour his stanzas: Wordsworth, Dante, the Elizabethan poets, latterly his college friend Tennyson,—we trace these favourites successively in many pleasing lines. The following stanzas, written on the banks of the Tay (probably before the end of Hallam's twentieth year), are a characteristic specimen:—

"I saw a child upon a Highland moor,
Playing with heath-flowers in her gamesome mood,
And singing snatches wild of Gaelic lore,
That thrilled like witch-notes my susceptive blood.
I spake a Southern word, but not the more
Did she regard or move from where she stood.
It seemed the business of her life to play
With euphrasies and blue-bells day by day."

The poet's first wish is "to grow with her and like her," to be her comrade and her brother, "dreaming how to play a child once more with her:"—

"Then a stern knowledge woke along my soul,
And sudden I was sadly made aware,
That childish joy is now a folded scroll,
And new ordainments have their several fair;
When evening lights press the ripe greening knoll,
True heart will never wish the morning there;
Where arched boughs enlace the golden light,
Did ever poet pray for franchised sight?

"When we were children, we did sigh to reach
The eminence of a man; yet in our thought,
And in the prattled fancies of our speech,
It was a baby man we fashioned out;
And now that childhood seems the only leech
For all the heartaches of a rough world caught;
Sooth is, we wish to be a twofold thing,
And keep our present self to watch within."

With the exquisitely delicate fancy of the last stanza compare the lines in which, after describing a summer's day in Italy with some fair companion, and how he talked of Wordsworth, and she chilled him by the show of less than his own enthusiasm, he felt the truth—

"That different halts, in Life's sad pilgrimage,
With different minstrels charm the journeying soul;"

that only after trial of the world, when the heart grows dry, and the brain—

"Fevers with cogitations void of love,
It is a blessed God-given aid to list
Some master's voice, speaking from out those depths
Of reason that do border on the source
Of pure emotion and of generous act.
It may be that this motive swayed in me;
And thinking so that day I prayed that she
Whose face, like an unruffled mountain tarn,
Smiled on me till its innocent joy grew mine,
Might ne'er experience any change of mood
So dearly bought by griefs habitual."

We think that the great Singer of Rydal would have welcomed in the author of these lines, so evenly balanced between pensiveness and tenderness, a nature already largely endowed with his own most valued attributes.

It is, however, rather in the extraordinary scope at once of thought and of reading—in the equable justice and modesty of judgment—in the lucid expression and pregnant originality of phrase which the Essays present, that we may more adequately trace the great gifts of the lost friend, "the sound of the voice that is still." These little papers were written at an age which, to most of us, rarely yields anything that we can look at—if we can look at it at all—in after life without a smile of astonishment. Yet in fulness and sweetness, in their penetration and their poetry of feeling, we may fairly set them in excellence beside those by which Shelley has almost doubled the impression of his genius. The essay on sympathy displays the strong impulse, noticed by Hallam's friends, to subtle searching-out of the hidden springs of the human heart. It is in itself clearly due to that peculiar direction in psychology, of which Mackintosh was in 1830 the most distinguished English representative. One cannot but feel that a larger induction from facts—that a closer reference to the physiological side of the subject is wanting to this delicate metaphysic of morality; yet the fine inquisition into the recesses of our nature here presented has a value which in our hazy sensationalist age we are far too disposed to overlook. In the "Oration on the Influence of Italian Works of Imagination," the eloquent style adopted obscures, at a first glance, by its inevitable generality, the marvellous grasp of accurate detail which underlies and verifies the large lines and bold masses of the sketch. A somewhat similar subject is dealt with more minutely in the masterly review of Professor Rossetti's now forgotten Carbonari paradoxes on Dante. It is not too much to say that this paper is one of the very best reviews in the language; so luminous in its criticism, so refined in its humour, so penetrating in its poetical insight. Everywhere also in this, and in the similarly able essay on Cicero, we see the copiousness of the young writer's information, and the energy of his intellect diverging into the wider questions suggested by his immediate theme, and marking out the avenues of thought, as it were, which he was destined never to investigate. The following specimens taken from his writings will, perhaps, best illustrate his vein of thought. Speaking of the influence of the Italian romantic love poetry, he says:—

"I cannot help considering the sonnets of Shakspeare as a sort of homage to the genius of Christian Europe, necessarily exacted, although voluntarily paid, before he was allowed to take in hand the sceptre of his endless dominion.

* * * * *

"The number of pure artists is small: few souls are so finely tempered as to preserve the delicacy of meditative feeling untainted by the allurements of accidental suggestion. The voice of the critical conscience is still and small, like that of the moral: it cannot entirely be stifled where it has been heard, but it may be disobeyed. Temptations are never wanting; some immediate and temporary effect can be produced at less expense of inward exertion than the high and more ideal effect which art demands; it is much easier to pander to the ordinary and often recurring wish for excitement than to promote the rare and difficult intuition of beauty.

* * * * *

"The world is full of coincidences that mean nothing. To find design in everything is as great madness as to find it not at all. . . .

* * * * *

"It would be a prize of inestimable value to a philosopher if we possessed any monument of the religion of the ancients. Their mythology we know. Their philosophy we know. But of their *religion* we are entirely ignorant. The class of believers at Rome or Athens was not the class of authors. The reverential Theism of Plato and Cicero was a sentiment much fainter than that which must have agitated a true believer in the golden-haired Apollo, or the trident-shaking ruler of stormy seas. The recluses of Isis and Cybele must have felt many of the same passions which ruffle the indifferent calm of a modern convent. What a pity that we cannot compare the forms assumed by the feelings of those idolatrous Polytheists, with those presented in the present day by Roman Catholic populations! We might find, perhaps, the same prayer breathed before a crucifix which had been uttered ages before beside the solitary fire of Vesta; the same doubts started, the same struggles made, the same noble extravagance of human self-devotion, the same sad declension of human frailty! . . . .

Passages such as these seem to rival in power the youthful precocity of Keats or Shelley: they tell us that the loss which his friend has immortalized was a grave one indeed. It has been

Digitized by Google

poetical justice in the strict sense that one so gifted should be mourned so deeply. "In Memoriam" is justified before the tribunal of Pure Reason, even by the slender "Remains of Arthur Hallam."

MR. RUSSELL'S DIARY.*

We should be sorry to think that there was no other side to the picture which Mr. Russell here draws of the Americans; but, as he says himself, it was his fate to see the nation under its most unfavourable aspect. From March, 1861, to the spring of 1862,—when, through the discourtesy of Mr. Stanton, he was refused the means of accompanying General M'Clellan to his head-quarters at Manassas,—Mr. Russell has pourtrayed, with his characteristic liveliness and plain-speaking, his experiences of North and South in the earlier stages of the civil war. Until his candour had drawn upon him, first the indignation of the populace, and finally the opposition of the Government, he appears to have enjoyed every opportunity of ascertaining the real state of things among the Confederates as well as the Federals. Received and fêted by both Presidents, admitted to the confidences of Cabinet Ministers and Commanders-in-chief, he has freely communicated the mysteries of the office and the camp; while his habit of picking up information from chance companions, to which the modes of travel and accommodation in America gave fuller scope than in India or the Crimea, has enabled him to represent the sentiments and passions of the general body of the people. We may safely leave the somewhat needless accounts of American hotels, scenery, railways, and the rest, and confine ourselves to the more interesting notices of the war, and the persons and things connected with it.

Nothing is illustrated in the "Diary" more forcibly than the remarkable change of attitude toward the Secession, which the North underwent after the fall of Fort Sumter in the spring of 1861. When Mr. Russell left New York for the South, before hostilities had commenced at Charleston, every one in New York who did not regard the Southern rebellion, with the eyes of Mr. Seward, as a short madness which would pass away, was inclined to view its possible success with indifference, if not with positive sympathy. Mr. Bancroft considered "that the Government had no power to coerce the people of the South." Mr. Chase expressed himself "not averse to let the South try and have their own way, for that they would soon find out their mistake." "The majority of the people of New York, and all the respectable people, in the opinion of another gentleman, were disgusted at the election of such a fellow as Lincoln to be President, and would back the Southern States if it came to a split." With the fall of Fort Sumter all this calmer feeling disappeared; and when Mr. Russell returned to New York, he found in every mouth the cry of "Death to the traitors," "War to the knife." The mob had gone in for war, and a weak President, guided by a fanatical Cabinet, had followed the popular rush.

Everything that Mr. Russell saw of the condition and resources of North and South enabled him to predict confidently what experience has since confirmed. Nothing could exceed, according to his account, the detestation and contempt entertained everywhere and by everybody in the South towards the "cursed Yankees," and especially the people of the New England States; the hatred of Poles towards Russians, of Italians to the "brutti Tedeschi," seems mild compared with this. Before General Butler had excited the fury of the Southern ladies, "one of the most charming young persons possible" expressed to Mr. Russell "her delight that the Yankees in Fortress Monroe had got typhus fever, and hoped it would kill them all." There were no doctors to heal, for they had all gone off to fight. High and low, white and black, free and slave, all were ready to die rather than yield to the North. We should have been glad if Mr. Russell could have thrown some more light on the *causes* of this state of feeling. Those ordinarily given—the different origin, interests, habits, and employments of North and South, do not seem to us adequately to account for it. But the *fact* of its existence, whatever be its explanation, is proved in almost every page of the "Diary." Added to this feeling and the resolution awakened by it, the confidence reposed throughout the South in President Davis,—the military *habits* rather than *resources* of the people—almost the only race in which the art of war is studied by those who never intend to make it their profession—their superiority in the arm of cavalry, their knowledge of the country they fight in, and above all the ability of the generals,—appeared to Mr. Russell to make the failure of the North inevitable. With so small a proportion of their forces consisting of Americans—in one New York regiment amounting only to two-twelfths—with no cavalry; with deficient artillery, "equipped worse than the Turkish field-guns;" with no maps or means of making *reconnaissances*, which would seem to explain the helpless ignorance of the enemy's whereabouts so common in the Northern commanders—with disadvantages like these, it does not require, in addition, that of an ignorant and mob-ridden government, to ensure the defeat of such enterprises as the Federal generals are compelled to hazard.

We wish that we had room for extracts from Mr. Russell's descriptions of the great personages who figure in the war. The pictures of Presidents Lincoln and Davis, of Seward, M'Clellan, and many others are sufficiently detailed to serve for the "Hue and Cry;" but we must content ourselves with a mere reference to his portraits of the two Presidents and their wives. We learn that Jefferson Davis "looked a gentleman," and that Lincoln did not; while the same superiority is accorded to Mrs. Davis, or "Queen Varina," as she is called—a great favourite in the social circles both of North and South—as contrasted with the ordinary appearance, plain features, and homely manners of Mrs. Lincoln. It certainly is to be hoped that the Northern President does not make the same impression in general as he appears to have left on Mr. Russell's friend:—

"My friend asked me when I got into the street why I stood up when that tall fellow came into the room? 'Because it was the President.' 'The President of what?' 'Of the United States.' 'Oh! come now, you're humbugging me! let me have another look at him.' He came back more incredulous than ever; but when I assured him I was quite serious, he exclaimed, 'I give up the United States after this.'"

Of course Mr. Russell speaks of slavery, but he does not add anything new to that perplexing subject. He saw a great many slaves on the estates of several proprietors in the South whom he visited, and his testimony is uniform as to the excellence of their physical condition and treatment. Indeed, he seems to think it almost a pity that they are so well fed and cared for, as they are thus led to forget that humanity has any claim on them higher than an animal contentment with a full stomach. We were surprised to find, among other things, that none of the owners of slaves with whom Mr. Russell conversed appear to have calculated the bad *economy* involved in slave labour. It is certain, however, many of the more intelligent Southern gentlemen are fully alive to this feature of the "peculiar institution," and are accustomed to speak of slavery simply as a very expensive necessity.

If doubt could survive in any Englishman's mind as to the wisdom of our national policy towards America in the present war, these volumes of Mr. Russell's must certainly dispel it. Both our behaviour in the matter of the *Trent*, and our sustained refusal to recognize the independence of the South, have drawn upon us a torrent of abuse from either quarter; but the forbearance and firmness shown by us can hardly fail to efface the idea prevalent throughout America that English policy is moved merely by the strings of self-interest and fear. Not only was it the universal belief in the South that the need of cotton would compel England to break the blockade and recognize their independence; but every part of the States seemed, according to Mr. Russell, to consider itself and its produce necessary to the very existence of this country. They tell us "that the English people are fed by the beneficence of the United States, and that all the trade and commerce of England are simply directed to the one end of obtaining gold enough to pay the Western States for the bread-stuffs exported for our population." "The people of the East, again, think they are striking a great blow at their enemy by the Morrill tariff, and I was told by a patriot in South Carolina 'Why, creation! if you let the Yankees shut up our ports, the whole of your darned ships will go to rot. Where will you get your naval stores from?'" Now, our recent policy towards the United States will have done much towards scattering illusions like these; and when they find that, in spite of the blockade, we have got our turpentine and naval stores,—that there is every chance of our getting an average supply of cotton from other quarters,—and that, in spite of the difficulty of reaping the harvest in the Western States, bread was never so cheap in England as now, the lesson will be forced on their minds that New York, Chicago, and New Orleans are not so necessary as they imagine to the existence and the well-being of Europe in general and of England in particular.

In the same way our firmness in the matter of the *Trent* must have helped them to unlearn the notion, which Mr. Russell says pervades all Americans, "that Great Britain is in a state of corruption and decay." We do not pretend to reconcile this with the statement which he makes elsewhere, that the policy and good opinion of our country is thought much more of by our cousins across the Atlantic than that of any other nation; but if the notion of our decrepitude be so prevalent, a considerable shock must have been given to it by Lord Russell's despatch, in December, 1861, demanding the surrender of the Southern Commissioners. In connection with this subject, the "Diary" contains some interesting notices of the different views entertained by the Cabinet at Washington on the first receipt of the despatch. Mr. Seward, in case of Great Britain forcing a war on the United States, contemplated "wrapping the whole world in flame." Happily, lest such an intention should overpower our author's nerves, one of the guests assured Mr. Russell that "when Seward talks that way he means to break down." The President insisted with equal vehemence on "no surrender." "I would sooner die than give them up," was his vigorous resolution. We do not know how far it was modified by the sagacious reply of an old Treasury official: "Mr. President, your death would be a great loss, but the destruction of the United States would be a still more deplorable event." Mr. Sumner, who is Chairman of the Committee on Foreign Relations of the Senate, though he considered there were precedents for Captain Wilkes's act, yet appears almost the only one who behaved in the affair with statesmanlike dignity and calmness. "I hope you will keep the peace; help us to do so," were his words to Mr. Russell. Finally, it appears that the situation was controlled by Mr. Seward, who had relinquished his intention of firing the universe, in deference to the Minister of a nation which he for one, we imagine, did not hold to be "in a state of corruption and decay."

We are so much accustomed to strains of self-glorification, and

* My Diary North and South. By William Howard Russell. In 2 vols. London: Bradbury & Evans. 1863.

Digitized by Google

dazzling pictures of future greatness, from the lips of Americans, that we cannot refrain from quoting Mr. Russell's words respecting the views entertained by some of the older and wiser heads on the present crisis of their history. "In the minds of all the very old men in the States there is a feeling of great sadness and despondency respecting the present troubles; and though they cling to the idea of a restoration of the glorious Union of their youth, it is hoping against hope. 'Our game is played out. It was the most wonderful and magnificent career of success the world ever saw; but rogues and gamblers took up the cards at last, they quarrelled, and are found out.'" With so much to recommend his volumes, we trust that Mr. Russell will pardon us for giving him one caution as to style. There is no one who can write more clear, vigorous, idiomatic English than himself; why should he then mar so good a style by interlarding his sentences with words of monstrous birth and classical allusions of a very feeble type? What are we to say to such formations as "crinology" (which its author would wish to mean the "science of *hair*," but which, if it meant anything at all, should be the "science of *lilies*")? The same applies to "*anthropo-proprietor*," "*thesicles*," "*novo-classic*," and such-like. What would most readers make of "*Edonian* youths" (ladies, we imagine, would consider it a misprint for *Etonian*), or of a dinner devoid of "Persic apparatus"? None but scholars can even understand them, and every scholar would be offended at them. It were a pity if Mr. Russell's partiality for Latin should corrupt the purity of his English.

ST. WINIFRED'S.*

We have seen a great deal in late years of religious and moral novels, and upon their merits and demerits the world has by this time pretty well made up its mind. Such books are useful to many of their readers, and it would be strange if they did not lead into the paths of virtue some docile and plastic dispositions. On the other hand, their value as literary works is seriously affected by the colouring. Like the early confessors of the Faith, they do good and suffer for it. The book now before us is different from its predecessors in the same walk of art in that it carries the principle to the furthest possible length. Other stories of the kind may be said to be pervaded by a moral purpose: this would be more appropriately described as a moral purpose largely pervaded by a story. It seems to bristle with moral; to overflow with moral; to heave, labour, swell with moral. Virtue, integrity, and gentlemanly bearing claim it for their own. Whatever things are just, righteous, and of good report, on these things it thinks so much that it has hardly space to think upon anything else. Moreover, in enforcing the maxim that we ought always to do what is right, it does so without misrepresentation, narrowness, or dulness. This is clearly a good specimen of books of its class. How far must we consider that it succeeds?

It is by no means a failure. The fact is, that it is necessary to set up some standard of criticism for works of fiction, and that upon which judgments are commonly formed is not necessarily infallible. We call a novel good, if it is amusing, suggestive, well written, clever in plot, and acute in delineation of character. So we decide: but to those who urge that the lessons to be learnt from the story, and the upshot, as it were, of the whole, ought to be taken into account, we hardly know what reply to make. It can only be said that the greatest works of art are not those which are consciously didactic, and that since fictitious writings ought to make it their great object to represent and "imitate" real events, any secondary purpose must in a great measure interfere with the primary aim. The problem is the same which occurs in so many other relations of life: it seems as if the lawyer would do more good to society on some one individual occasion by leaving his guilty client to his fate, and as if the clergyman would serve the cause of truth by refusing to read that special collect which he dislikes. But the public advantage is secured by collective and unselfish effort, and art as a whole has certainly for its mission to represent what it finds and fancies. The author of "St. Winifred's" has more imagination than dramatic power; and this distinction fairly expresses, and may be almost said to account for, the peculiar character of his story. When he is given his scene, he can describe it well; when a bold idea seizes him, he gives it force and life. There is a rhetorical tinge even over his commonest details, and he has fluency and even grace of language to help him to carry it through. But in that wonderful gift by which some writers can portray events to the life, not only by themselves, but in their relation to one another; can force their readers to look upon a story as something which must have happened exactly as they tell it; can group their scenes in relief, and present them as the whole of an intimately connected plan, he is to a considerable extent deficient. It is no wonder that he falls back upon that which gives the work a unity of its own, a prominent and definite moral. The plan succeeds, though it does not succeed in the best way.

But it is time to examine a little more closely the subject of the work itself. "St. Winifred's" is a story for boys, and treats of the things that are supposed to please them. Perhaps, indeed, this is too much to say, since it has yet to be shown that any class of readers would prefer to listen to school adventures to those of the great real world. At all events it is intended to represent a boy's ordinary school life to himself, with as much truth as the moral colouring will allow. Now if this is to be done with success, the indispensable condition must be that the balance of interests shall be preserved; that those things shall have most prominence which are really most cared for by the class from whom the picture is taken; and that the same degree of importance shall be attached to the several pursuits and scenes of which school life is composed, as they attach. One very remarkable book has appeared on the same subject in the course of the last few years, and taken all the hearts of the rising generation by storm. But who is there who can fail to notice that even in "Tom Brown" the picture is but partially drawn? Many boys, strange to say, do not care to be athletes, and still more are unable to be so; and the element of school work, for which a great number do really care, and which nearly all would rank as next in importance to games, hardly enters into the popular story at all. Let us conceive an average boy at a large school, neither very good nor very bad, not at the top of it and not very near the bottom; and let us endeavour to draw up a list of the questions which chiefly interest him, in the order in which they present themselves most frequently and urgently to his mind. They will perhaps be as follows:—Firstly, who will be the last choice for the "eleven?" Secondly, what are the chances for the great match of the year? Thirdly, shall I get my prize, or my promotion, this half? Fourthly, will Brown thrash Jones? Fifthly, how many days are there to the holidays? Sixthly, is it very wrong to smoke a cigar? Such may fairly represent the relatively engrossing character of the cares of school. How does the author of "St. Winifred's" put them? There can be no objection to his introducing a few scenic effects, such as a perilous adventure on a mountain, because all his readers will readily understand that they are brought in as exceptional, and that they are possible enough. But when, after reading his book, we find that the impression it leaves on the mind is that questions of moral conduct are first in order of prominence in school life, and questions of social relations next, the only thing to be said is that the picture is not an accurate one. A more detailed criticism might find something to blame in the romantic nature of some of the social scenes, the alarming number of quarrels in the history, and the taste which the boys at St. Winifred's seem to show for public speaking; but the chief objection to the tale, regarded simply in the light of a representation of school life, is the inverted order of the interests which are supposed to occupy the heroes.

In many respects "St. Winifred's" has a strong resemblance to another tale entitled "Eric," which appeared about the same time as "Tom Brown," and passed through several editions. But in many respects it is superior to it. It is more cheerful in tone, its characters are more boyish, and it is not spoilt by an ending which bordered on the melo-dramatic. There is a vein of humour in "St. Winifred's" which is sometimes very happily touched, and truthfully. In a certain kind of humour, that which is grotesque, intelligible, and, if possible, personal, boys are almost equal to men. The genius of nicknames seems to depart from the human race when it has turned its eighteenth year. Even in the moral attitude which it is the object of such books as these to represent and encourage, there is sure to be something quaint, if not incongruous. Puzzle-headed youth can admire, for it is impulsive, and it can imitate, for it is easily persuaded; but set it to work out an ethical problem, or to frame a philosophy of life, and it accepts the task with an activity which gives a different solution every morning, or declines it with a delightful incapacity to see its use. There is nothing in later life so domineering, nothing so amazingly intolerant, as the intellect of a boy. No subsequent union of interests or sworn alliance can ever establish among men that grand freemasonry which has no outward symbols, but of which we must go back some years of our life to understand in any degree the spirit. It regards the world of men simply and wholly as aliens. Grown-up people may be pleasant enough in their way, but at bottom they are natural enemies. There are many who are tolerated, some few who are thoroughly liked, but they are deserters from their flag, and for that reason are, however admirable, still more or less unintelligible. We make fun of boys sometimes, and those who care to examine the habits of the animal, find plenty to amuse and instruct them; but it is, after all, nothing to the fun they make of us. Henderson is often sportively inclined, in "St. Winifred's;" but he always seems to get on best when he is laughing at his elders and betters. The instinct is too natural to allow any misgivings. "Childhood and youth," says Solomon, "are vanity;" but they form the only species of vanity which never suspects that it is so.

There is one class of writers on such subjects as these who err on the opposite side quite as much as the author of "St. Winifred's" errs on that to which we have called attention. If boys do not think all day long of moral questions, at least they think of them sometimes. If moral development is not of more importance in youth than in manhood, at least it is of as much. When Mr. Thackeray tells his readers that their sons in the dormitory say the thing that is not, but that, as wise parents, we shall not think of making a fuss about such peccadilloes, he implies that the sons themselves think them of as little consequence as he does. The fact is that, allowing for the difference of standard, boys have the passions of their kind, and their moral sensibility too. The same things are not equally right and wrong for boys as for men; but things are right and wrong nevertheless. In a boy, it would be a much greater moral offence to divulge to the authorities some ordinary crime of his comrades than it would be to break bounds or smuggle forbidden food, though not as great as it would be to steal a sovereign from a purse. In this, as in so many points, Mr. Thackeray seems ignorant of the nature of boys; and the error which denies them feelings of duty is even more un-

* St. Winifred's; or, the World of School. Edinburgh: A. & C. Black. 1862.

Digitized by Google

like the reality than that which pushes them to exaggeration. The chief vices of boys are cruelty and meanness, and their chief virtues justice, public spirit, and versatility. A book like "St. Winifred's," which sacrifices its literary claims to a determination to emphasize the virtue and the vice of schools, has, at all events, its merits as a corrective of the other theory, which imagines them as without virtue or vice at all.

KATHARINE PARR.*

A FEELING seems to exist at the present day on historical questions akin to that indiscriminate humanity which lets the ticket-of-leave men loose on the streets, and winces at every lash laid on the back of a drunken soldier. Characters hitherto branded by the universal execrations of mankind now find apologists, and we are almost driven to doubt whether any historical facts can safely be taken as proved. Richard III. has numerous partisans, and Mr. Merivale regards Domitian as a very ill-used person. Even Judas Iscariot is considered by an eminent German divine as a sincere though misguided patriot. Among the rest, Henry VIII. has found two distinguished advocates in such eloquent writers as Froude and Kingsley. We confess that the old-fashioned judgment was most commonly, in our opinion, well-founded. The general current of opinion among well-informed contemporaries conveys, for the most part, a pretty fair estimate of a public man placed, during many years, in an exalted station. We find it difficult to believe that the prince, who, as was said in his own time, never spared man in his anger or woman in his desire,—and whom Sir Walter Raleigh, expressing the voice of a subsequent generation, pronounced the most perfect type and pattern of tyranny ever known,—can have really been the magnanimous and enlightened sovereign which modern criticism would fain represent him.

The book before us throws scant light on this question. Henry VIII. may or may not have been a cruel, unscrupulous tyrant, but the feeble, vacillating, and most ridiculous personage depicted in these volumes by Herr Muhlbach he assuredly was not. The romance commences with the marriage of the heroine to Henry VIII. By way of a suitable recreation for his bride, the King, who, as we are told *en passant*, was the earliest patron of the legitimate drama in England, causes the "Curculio" of Plautus to be acted in the royal presence by the gentlemen of the court; and "whenever Katharine blushed at the obscene and scurrilous jests of the Roman poet the King felt highly amused, and accompanied the most indecent allusions and the most licentious passages with boisterous laughter and loud applause." In the next chapter the King appears "in a large armchair mounted upon wheels, which, instead of horses, was drawn by men, and to which, from a kind of delicate flattery, was given the form and shape of a triumphal chariot, so that he wholly forgot that it was not his achievements, but his corpulency, which had raised him to the victor's car." This sketch reminds us of Marlow's hero, Tamburlaine, with his captive monarchs, those

> "Pampered jades of Asia,
> Who could not draw but thirty miles a day."

The King next regales his spouse with the pleasing spectacle of an *auto da fé*, after which he addresses her in the following tender strain:—"Yes, Kate, I love my own virgin bride truly and tenderly, and as a test thereof, you may ask me for any favour you wish. Do you wish for jewels, or a mansion by the sea-side? Would you like fine horses, or has any one perchance offended you, whose head you would have?" Kate, however, declines the part of Herodias's daughter, and the story proceeds. The reader will remember, by the by, that when the King addressed his bride in this impassioned manner, she had been already twice a widow. A conspiracy is speedily formed against the Queen by Lord Douglas and his daughter, Lady Jane, two fictitious characters, acting in concert with Bishop Gardiner and Wriothesley, the chancellor. Lord Douglas and his daughter, we must observe, are Jesuit spies, emissaries of Loyola; although the Order of Jesus had not then been more than about six years in existence. They discourse much Popish treason against the king, and favour us with a long history of his crimes. Their plots, however, are constantly frustrated by John Heywood, the king's jester or court fool, who is endowed with the useful faculty of overhearing the most private consultations. During these intrigues, Thomas Seymour, afterwards Lord High Admiral and fourth husband of Katharine Parr, is busily engaged in making love alternately to the Princess Elizabeth and the Queen—a situation in which he strongly resembles Captain Macheath between Polly and Lucy. The King, meanwhile, remains in his normal state of ferocious cruelty. After being first likened to a tiger, then to a hyena, and subsequently to a vulture, he is finally spoken of as a hungry alligator. He tells us himself that he is king by the wrath of God, and high-priest of the vengeance of the Most High. His courtiers endeavour to soothe him by the most outrageous and clumsy flattery. "Old!" exclaims Lord Douglas, "with these fire-flashing eyes, this unfurrowed brow, this noble and serene countenance! No, your majesty, kings, in common with the gods, enjoy the privilege of never growing old." Henry, however, derives more substantial consolation from a banquet of "the most *recherché* edibles, birds' nests from the Indies, capons from Calcutta [chickens must have been marvellous scarce in England under the Tudors], and the hard Rhenish wines, with which the North German princes hoped to intoxicate the King, whom they wished to place at the head of their league."

When we arrive at the second volume, we find the King, "a huge, unshapen mass," seated, as before, like Tamburlaine, in his "triumphal chair," and bewailing himself, like Rolf the Gauger, that he is too heavy for any horse to carry. He still, however, indulges in "sensual witticisms and equivocal puns." The thread of the story is now further complicated by an absurd intrigue between the Earl of Surrey and Lady Jane Douglas. The unfortunate earl is deceived into supposing her to be the Queen, and celebrates her as the fair Geraldine of his deathless lay; an invention in which our author sins equally against history and good taste. We have then a scene between Lord Douglas and his daughter, in which the father, with "his solemn metallic voice," comforts his child, "whose heart is lacerated by the wild boar of despair." The King's health is now fast declining. The royal tiger constantly utters fearful bellowings of pain and rage. Blood, however, is still "his only balsam," and he feels that a "due sense of the kingly power must be burnt into the bodies of his refractory subjects." "Nemesis and the Eumonides (*sic*) are to be his torch-bearers." Gardiner assures him that he is "a sublime idea, a mighty world-embracing thought"—language more intelligible, surely, to a modern German metaphysician than to Henry VIII. The romance ends with the death of the King, and the fourth marriage, soon followed by her death, of Katherine Parr.

Our author's historical errors are, upon the whole, less numerous than might be expected. We will notice a few of the more conspicuous. He tells us that Miles Coverdale, the venerable translator of the Bible, was burnt by the Papists, confusing him, apparently, with Tyndale. Miles Coverdale died quietly in his bed, at a good old age, in 1568. He terms Thomas Seymour Lord Sudley, when, in truth, Seymour was not invested with that title until the subsequent reign. He says that Katharine married Seymour only thirty days after the king's death. In reality, full three months had elapsed. He says that Katharine died six months after her last marriage. In reality, she lived over fifteen months afterwards. He says that Seymour was beheaded within three months after her death. In reality, he survived her more than six months. He turns Anne Askew, the martyr, into Maria Askew; and confounds a titular lord with a peer of the realm. But these are minor blemishes; his faults of style are much more trying to the reader. The work is overlaid with modern French phrases, and such strangely inappropriate terms as *boudoir*, *piquant*, *recherché*, and *delassement*, continually offend our eyes. The classical allusions, too, are more numerous than correct. Thus we read of the dragon's teeth of Theseus, not of Cadmus. Upon the whole, we should advise Herr Muhlbach to choose some less ambitious subject for his next attempt at historical portraiture. He is not, critical veracity obliges us to inform him, the literary Holbein, destined to delineate in lasting colours the illustrious personages of the court of Henry VIII.

* Katharine Parr; or, the Court of Henry VIII. An historical romance. Translated from the German of L. Muhlbach, by John Ringwood Atkins. London: T. C. Newby. 1862.

THE FIJIAN ISLANDS.*

ON a meridian precisely opposite to that of England and St. Helena, and in the parallel of the latter, are situated the islands of the Viti group. They are an insignificant portion of Polynesia, which overspreads an area of the Pacific equal and nearly antipodal to the entire continent of Africa; but they have especial claim to our interest on many distinct grounds. In the first place, they chance to be the nearest land which vessels bound from Australia to Panama are likely to fall in with, and as they lie at a distance of 2,000 miles from Sydney, may form an important station of re-fit in future trans-oceanic routes. They are peculiarly interesting to the ethnologist, as the locality where the black Papuan race that inhabits Australia, New Guinea, New Caledonia, and the neighbouring islands, is divided from the copper-coloured Polynesians of the rest of the Pacific. The two races are brought face to face in Viti and in Tonga, and it is hard to say which proves the superior. In sterling qualities the Viti people seem to excel; but in intrigue, the Tonguese are the more dexterous of the two. The Viti are pre-eminently the Cannibal Islands, for every inhabitant of fifty years and upwards has unquestionably assisted, in his youth, in numerous cannibal feasts. Now they are a scene of triumph to the Wesleyan missionaries, who have converted 70,000 natives, and brought all the accessible territory under the spell of their moral rule; nay, they have at length subdued a man, Thakombau by name, who was the hero of all Vitian books of travel in times not long gone by, as the foremost warrior and the greatest man-eater in the place. They have actually succeeded in converting even him into a douce, church-going respectability, who contents himself with a single wife in crinoline, and who responds to the name of Ebenezer.

The Viti are in the uncomfortable state of incipient civilization, in the common British interpretation of the word. That is to say, white renegades, 'cute traders, and devout missionaries have pounced upon the natives; the almighty dollar is becoming recognized as the rightful superior to personal qualification or hereditary influence. Old customs are becoming ridiculous; the Sabbath is

Digitized by Google

rigidly enforced. Rum shops are established, and the natives are learning to wear clothes supplied as per advertisement by the slop-shops, and suffer more in health from their use than from any of the recognized vices of European importation. Of course the poetry of savage life is disappearing, and the unhappy islanders domineered over, intrigued with, and tempted into quarrels by immigrating strangers, who have never been asked to come, but are too strong to be ousted, have appealed to Britain; whom they flatteringly consider the least objectionable of all the foreign powers, to take them under her *ægis*, and allow them to live with as few distractions as possible. Hence followed a political mission from England to Viti, to learn if the offer was genuine, and also to act contrary to the proverb, and narrowly scrutinize the mouth of the gift horse. Colonel Smythe was the principal person of the mission, and our author was his coadjutor and his botanical associate. The volume before us contains the information that these gentlemen collected.

There were solid advantages to be gained by accepting the proffered cession, but a strong objection to the extension of British settlements has led, for the present, at least, to its refusal. So long as the Viti do not fall into the hands of a powerful enemy, we may gain the same advantage from them whether they be British or not. Existing facts show them to be pre-eminently suited for the growth of cotton. Dr. Seeman, who is an accomplished naturalist, speaks with the utmost emphasis on this point. On the other hand, we do not yet know the extent of area suited to its cultivation. The size of all the islands put together equals that of Wales, but their surface is hilly, and is heavily timbered on the sides exposed to the trade winds. The produce of cotton can never be great when compared to the enormous wants of Lancashire, but its quality is sure to be of the very best; and a territory is not to be despised that has the capacity of keeping British mills going for a single week in the year, or even for the half of that time. The harbours of the Viti are undoubtedly well situated as ports of call on more than one great oceanic route. Ships returning from Australia round Cape Horn are usually in want of a cargo; they could easily touch there and carry cotton homewards. Here, too, is the first place to the eastward of Sydney, where spars can be met with of a sufficient size to repair accidents. Lastly, the French occupation of New Caledonia and Tahiti would call for some counterpoise in the event of war with that power.

The Viti were first seen by Tasman, and were first communicated with in 1808. The first Christian mission was established there in 1822, when cannibalism was an everyday custom, the ovens in which human bodies were baked being rarely allowed to get cold. This state of things was much the same at the time of Commodore Wilkes' visit in 1840, and continued in a modified degree when Captain Erskine saw them in 1852. At present cannibalism hardly exists, and the people in the parts of the island visited by foreigners are ashamed to talk of it. A story is told, we think by Erskine, to show how cannibalism was a regular, everyday fact, of a native preacher who illustrated Paley's doctrine of a designer from the evidence of design. He took the mechanism of the hand for his subject, and, in describing its subtle anatomy, began, "When you *eat* a hand," &c., &c.

Judging from the numerous descriptions we have read of Viti, we should think there was good reason to class its inhabitants as the very highest specimens of a purely black race. They appear to hold a still more prominent rank among the black Papuans, than is occupied by the Mandingoes among the races of Western Africa. They are eminently handsome in feature and form; decorous in their habits; energetic and social. It is remarkable how genuine is the aristocracy of their chiefs; they are physically a superior class, being taller and stronger, and far more accomplished than their subjects. Of course the chiefs are the better warriors, orators, and statesmen; but what peculiarly pleases us is to learn that they justly pride themselves on their superiority in every kind of industry and handicraft. They are the best canoe builders, the best agriculturists, and they excel in every art where competition is possible. Dr. Seeman compares the political discussions of these people with those of New Zealand, and declares that they excel them in logical acuteness, as far as the reasoning of men exceeds that of boys. The high qualities of the Viti chiefs are remarkably attested by the fact that when Erskine visited the islands, he found a white man who contentedly served a black chief in almost a menial capacity. It is almost incredible to us that such an inversion of the usual condition of the two races should occur anywhere in the African negro-land.

There are many points of social relationship in the people of Viti that are exceedingly interesting to those who eagerly seek for evidence of a possible form of civilization really suitable to negroes. We wish we could learn more about the inner life of these people. Many of them work hard of their own free will, and they thoroughly enjoy life. They are energetic agriculturists, have clean comfortable homes, and are eminently gregarious. One of their social institutions calls for a few words of description, for it goes far beyond our own club system. There are large buildings in every village called *bures*, where all the male population collect to spend the evening and to sleep at night. The boys have bures to themselves, separate from those of the adults. It is wholly contrary to Viti etiquette that any man, married or unmarried, should pass the night in their own homes. The bures must be very picturesque. The clean floors are sanded and well matted. Round their sides are ranged sleeping compartments, and between each compartment is a fire-place; above-head is stored a sufficiency of firewood. As evening approaches the people flock in from all sides; the hall is lighted up, a great brew is made of their national beverage "*kava*," a delicacy manufactured by the process of mastication, and presenting the faintest possible attractions to an European appetite. The people group themselves round the *kava* bowl, and there are jokes, and gossiping, and story-telling. Thus the people of Viti sit by the hour together, till the *kava* makes them sleepy—it does not intoxicate—and the men steal away one by one to their respective berths. At length everything is hushed, and all the world is asleep. It would be very amusing to learn the bye-laws, both tacit or expressed, of such an institution as this; how harmony was insured, who regulated the programme of each evening, how bores and snorers were kept in order. British forms of civilization encourage separate houses and isolation of families, especially among the poor; this is far more suitable to the stolid Anglo-Saxons than to the gregarious and vivacious natives of the South. The pleasures of life are to be reckoned by the aggregate balances of the small pleasures and pains of each minute that composes it. The exceptional pains and terrors of war and massacre have little counteracting weight against huge accumulations of trivial items. We are not clear that the inhabitant of Viti, as a savage liable to be clubbed and eaten, is necessarily a less happy man than when he has been manipulated by Europeans, who protect him from violence but mulct him of his freedom and his national pride. The finch may be a happier bird in the bush than in the cage, though the latter shields him from the sparrow-hawk. It is, however, quite possible that the strong natural character of the Viti people may so bend the civilization that is forced upon them, as to direct it into a congenial growth. Indeed, Viti seems one of the most hopeful localities in the entire world, for a purely black race to develope a dignified and intelligent civilization of their own.

SHORT NOTICES.*

THE two first publications that we shall take for a passing notice this week are pretty volumes of standard lyrical poetry, newly illustrated by the wood-engraver's art. Those snatches of song which are scattered through the plays of Shakespeare, though seldom consisting of "his native wood notes wild," but oftener borrowed from the repertory of popular ditties in his time, are yet most congenial, in their humour and pathos, to the dramatic life of his scenes; but we are nevertheless glad to have them in a separate collection, along with a few of the choicest of his sonnets, accompanied by Mr. Gilbert's very graceful designs. Another pleasing gift-book of the present season is Wordsworth's "Poems for the Young," in which the meditative hermit of Rydal Mount, with the characteristic purity and tenderness of his muse, speaks to the hearts of children. The artists have done their part with a true feeling of the poet's intention; and that pensive little maid, who, counting her brothers and sisters, between the churchyard and her cottage home, persists in declaring that "We are seven," looks, in the wisdom of her simplicity, quite secure of a hope which the human heart will on no account deny.

New novels crowd upon us so fast, that we must dispose of a batch of them with a mere glance at the ground-plot of each story, and the merits or faults of its style; for we have not leisure to criticise in detail the manner in which incidents and characters are worked out. The first we notice shall be "Sephas," which is the story of a youth much troubled and torn asunder by torturing conflicts of religious opinion, till, after running the gauntlet of controversy between the Methodists, the Freethinkers, and the Romanists, he dies serenely, with a gleam of Christian consolation through the "cloudy skies" of his life. There is a boldness of handling and a certain rough vigour about this work of fiction which are not always found in novels written for a religious purpose; we cannot, however, relish the forced jocularity of its lighter scenes.

"The Family at the Lea" is, on the contrary, a quiet and wholesome book, evidently the production of a lady, who has a correct and unaffected style. The story is told by Miss Alice Neville, the only child of a country gentleman in Yorkshire. Her aunt Margaret, a rather imperious though kindly and right-minded matron, comes, herself a widow, to take care of the widower's household, bringing a cousin Laura, whose fragile loveliness bespeaks our compassion for her premature fate. Gentlemen visitors, among them a baronet and a clergyman, whom no young ladies' novel can do without, bring to the Family at the Lea a fair occasion for the due accomplishment of female destinies by sober courtship and matrimony, though broken by serious troubles. The tone of feminine propriety and gentleness which pervades this novel deserves to be commended.

We cannot give the same praise to Miss Julia Tilt's "Countess Dowager;" a series of unconnected tales, characterized by a boisterous by artificial vivacity, and a reckless spirit of banter, which are not

Digitized by Google

exactly to our taste in a book designed by its authoress for the entertainment of "her young people." The style is too much defaced by colloquial slang, while the incidents here and there approach too abruptly near to the illicit courses of disreputable folk. It is questionable if any moral benefit can be got out of Miss Tilt's narrative of such an adventure as that of the young guardsman, who, having been entrapped into marrying the pretended daughter of a foreign baron, afterwards finds her to be an impostor, the profligate wife of a French waiter. The tone of hard, knowing worldliness in which the follies and vices of society are here dealt with, is the more displeasing, as it is not redeemed by an absence of the most besetting faults of feminine authorship.

Very different in spirit is "Katie, or the Simple Heart," a story of child-like duty and affection, with a decided religious tone. Katie is made a very loveable, good girl, and we are sorry when she is sorely tried with a false imputation of naughtiness, from which she is ultimately cleared. She has also a narrow escape of drowning, and suffers long from a spinal injury, the result of a fall, which endears her all the more to the family circle, as it calls forth, more than ever, the sweetness and truthfulness of her disposition.

"Clarissa," too, is professedly a book for young ladies, and by no means unfit for their perusal. The heroine, who relates her own story, ascribes a thousand misfortunes of her life to one fatal error—the firm belief that her own judgment must be right. We fancy that it would be just as easy to illustrate the reverse maxim, by describing the inconstant and unhappy course of a person haunted by the suspicion that his or her own judgment would probably be wrong. But as we cannot here pause to discuss the moral of this fictitious autobiography, it is only to be said that the interest of it mainly depends on the doubtfulness of Clarissa's parentage, and on the vicissitudes of her social position, from the union workhouse in which she received her early training, through her various experiences in a boarding-school and in her employment as a governess, till, by an intricate series of events, she becomes the heiress of Mervyn Hall, and bride of the virtuous man of her choice. It is rather an old-fashioned sort of novel, such as our grandmothers liked.

"Pattie Durant" is one of that class of domestic romances based upon a precise imitation of the old English style, and upon a minute study of the habits and manners of our ancestors, which were first attempted with marked success by the authoress of "The Maiden and Married Life of Mary Powell" nearly twenty years ago. This little book is a tale of personal hardships and of patient well-doing in the case of the family of one of the ejected Nonconformist ministers of 1662. The conception is not unskilfully worked out, and in good keeping with the modes of thought and sentiments prevailing in that age. Pattie is the niece of the worthy ejected minister; her letters and her diary tell most of the story.

A "King Play" was the title vulgarly bestowed, in the middle ages, upon those mystery-dramas enacted in the churches at Christmas, which often represented the homage of the "Kings," or Wise Men of the East, at the cradle of Bethlehem. But the story which Mrs. Freeman here relates is that of Lambert Simnel, the Oxford baker's boy; who, being used as a tool of conspiracy by the enemies of Henry VII.'s reign, did, for a brief space, play at being a king, and having then been saved from the axe and the gallows, thanks to the royal clemency, became his Majesty's falconer. The story of Gerald Fitzgerald, a little son of the Earl of Kildare, one of the victims of Henry VIII., is equally authentic; the orphan child's escape, after the death of his father, from his destined bondage at the English court, and his residence in France and Italy till the attainder of his family was reversed, are incidents very suitable for an historical romance, but are feebly and scantily treated here.

Last, and by his own account of himself, the least of all, comes "Minimus," with a little volume of "Parvula," in the shape of verse, mostly about the little flowers, the little birds, and the innocent little girls. The author has learned all the Wordsworthian tones and tricks, as a bullfinch may be taught to sing like a thrush, until we hear nothing of its natural note. In his concluding stanzas, he wonders what he shall do when he goes to Heaven:—

> "I wonder whether I shall still
> Love rhyming as I love it now,
> Or if her wise Creator will
> With other tastes my soul endow."

We seriously advise him to wait and see; let him desist from rhyming until then!

MUSIC.

THAT leviathan of musical institutions, the Sacred Harmonic Society, with its "band and chorus of nearly seven hundred performers," resumed its concerts on Friday, the 16th inst., with Mendelssohn's "Athalie" and Mozart's "Requiem." Mendelssohn's "Athalie" is one of that glorious series of musical works, including also his illustrations to "Œdipus," "Antigone," and the "Midsummer Night's Dream," which the late King of Prussia commissioned the composer to produce for performance at Berlin. In these works, so different in style and treatment, Mendelsohn has given abundant proof of that dramatic and versatile power which, had he lived a few years longer, would doubtless have culminated in a grand stage work. The fragments which he has left of his projected opera "Lorely," warrant the opinion that its completion would have given Mendelssohn as high a place in the romantic musical drama as he has achieved in every other walk of the art. His minor and earlier stage works, charming as they are, can scarcely be taken into any account in estimating his mature genius; but of his strong dramatic faculty there are many proofs in his works, and none more striking than the contrast between the graceful elegance and sportive fancy by which he has given an additional charm to Shakespeare's imaginative poetry, and the broad, bold vigour, classical simplicity, and deep gravity with which he has clothed the serious dramas of the Greek and French tragic poets. "Athalie" had previously been performed here, but was first heard in its full sublimity and grandeur at the concerts of the Sacred Harmonic Society, whose massive chorus and excellent orchestra are heard to the highest advantage in the mixed effects which this work presents of grand vocal simplicity and elaborate instrumental colouring. The performance in this instance was marked by the same general excellence as those of former seasons.

The overture, with its simple commencing phrase of churchlike melody—gradually developing into dramatic warmth and passion, but still chastened by the serious earnestness of the work to which it is the prelude—was given with a superb effect, the merit of which must be equally shared by the energetic conductor, Mr. Costa, and the band of artists over whom he presides. The chorus, also, was admirable throughout; among many passages that might be cited, that for the male voices in unison, beginning "O Sinai," was remarkable for steadiness of intonation and earnest expression. Here we may point out two instances of the difference between a great and an ordinary mind, as evidenced in this very work; the occasional use of the chorus in unison, and the employment of harps among the instruments of the orchestra. These features, which are so often suggestive of weakness and puerility, are, in "Athalie," productive of the most powerful effects. The "March of Levites," with the sublime episode which occupies the place of the trio ordinarily appended to a march, was given with grand effect. The solo singers were Miss Parepa, Mrs. Netherclift (late Miss Fanny Rowland), and Madame Sainton Dolby. The duet, "Ever Blessed Child," and the trio, "Hearts Feel that Love Thee," were charmingly sung by the soloists, who were well supported and not overpowered by the accompanying chorus.

Mr. Bartholomew's text, by which the musical pieces are linked together, was admirably declaimed by Mr. Phelps, whose clear and deliberate enunciation was perfectly intelligible even in that most trying place for elocutionists, Exeter Hall. Mozart's "Requiem," which followed "Athalie," is likewise no novelty at these concerts, where both those great works seem destined long to hold their attractive power. The "Requiem," into which Mozart infused the serious pathos of his dying thoughts, is full of the composer's earnest aspirations after another and a higher life, mixed with the pathetic grief inseparable from a parting with this world. It is impossible to deny that, together with much that is in the highest style of religious sublimity, there is also a strong infusion of merely human sentiment in this great work. For the former qualities we would point, among other instances, to the choruses, "Requiem æternam," "Kyrie," "Rex tremendæ," and the "Domine Jesu," than which there is nothing more sublime in the whole range of the art; while in the "Lacrymosa," and even in the delicious "Benedictus," it is impossible to deny that the beautiful and the human predominate over the awful and the reverent. If, however, mundane beauty and sentiment be recognised as compatible with religious awe and grandeur, then Mozart's "Requiem" stands alone in the art. There is very little doubt that had Mozart's life been prolonged, he would have made a wider distinction between the sacred and secular styles, owing to the influence which he derived, only in his later years, from the choral works of Bach and Handel. Mozart's "Requiem" is, however, an unexampled combination of the severe grandeur of Michael Angelo with the exquisite loveliness of Raffaelle; and doubtless it is to this latter feature that the "Requiem" owes much of its power to please so vast an audience as that of Exeter Hall. The work was given with great completeness and effect; the solo singers being Miss Parepa, Madame Sainton-Dolby, Mr. G. Perren, and Mr. Weiss, Mr. Perren having replaced Mr. Montem Smith at very short notice. The hall was crowded even to inconvenience by an assemblage whose enthusiastic reception of music of such high order afforded another proof, if any were wanting, of the growth of sound musical taste among us. "Elijah" is announced for February 6th.

At the last Monday Popular Concert, a quintet for stringed instruments, by Franz Schubert (a posthumous work), was played for the first time, and, judging by its reception, certainly not for the last time. The work belongs to that abstract order in which form and proportion are comparatively disregarded, and a dreamy idealism pursues its wayward course unfettered by any laws of symmetrical construction. Such works, therefore, cannot be judged by any comparison with the school of Haydn and Mozart, with whom perfection of design and balance of detail were all-important requisites. Beethoven, that great innovator on the previous forms and canons of the

Digitized by Google

art, was undoubtedly the model whom Schubert had in view in his instrumental works, which, long and diffuse as they mostly are, must be looked on as musical reveries and dream-like fancies; and the hearer who would enjoy them must surrender himself entirely to the capricious guidance of imaginative but uncontrolled genius. Listened to in this spirit, the quintet in C can scarcely fail to exercise a charm, and hence the delight which it inspired in the audience of St. James's Hall on Monday night. It was admirably played by Messrs. Sainton, Ries, Webb, Paque, and Piatti, by whom its very great difficulties and varied shades of expression were rendered with a perfection that evidenced high individual skill and much general rehearsal. The other instrumental pieces were Schumann's quintet for pianoforte and stringed instruments, Beethoven's sonata for piano and violin in C minor, Haydn's solo sonata in E flat, and a quaint romance of Viotti's for violoncello; Herr Pauer being the pianist, and Signor Piatti the violoncellist, which is as much as to say that these pieces were played to perfection.

Herr Pauer deserves high praise for his occasional introduction of Schumann's music, in spite of the adverse opinion of most of the London critics. With many points fairly open to criticism, Schumann yet offers much that is worthy of more genial recognition than has hitherto been shown here, as we may on some future occasion still further enforce. The vocal music included a song by the Russian composer, Glinka, which presented little to distinguish it from the average ballad of home manufacture, though expressively sung by Miss Banks, who likewise gave "Where the bee sucks," from Mr. Arthur Sullivan's music to the "Tempest," being encored in the latter. This song, requiring orchestral accompaniments, should scarcely have found a place in a selection of chamber music; and the same remark applies to the song from "Elijah" ("If with all your hearts"), although Mr. Reeves' expressive and powerful singing was sufficient to overbalance any such small objection. No similar exception, however, could be taken to Beethoven's "Adelaide," in his choice and execution of which Mr. Sims Reeves evinced both his taste as a musician and his accomplishments as a vocal artist. Spohr's "Nonetto" will be the novelty at the next concert.

CONTEMPORARY SCIENCE.

THE central sun of our own planetary system being the only self-luminous body, at least to any extent, in it, it was natural to suppose that a like arrangement would be the case with those other solar systems the existence of which is revealed to us by those bodies belonging to them which are self-luminous, and which to us are their only visible parts. It was equally natural to infer that in such of those systems there was, as in our own, a relatively quiescent body in the centre, giving light and heat to a greater or smaller number of opaque planets revolving round it at different distances and with different velocities.

That this, however, was not the universal rule, was first shown by the discovery of binary stars, which are examples of one luminous body revolving round another; but not until recently has it been found that there are cases even of the absolute reversal of this arrangement.

Two such instances are now tolerably clearly established; one of which, remarkably enough, is the brightest of all the fixed stars — Sirius. It had been previously known that the proper motion of the great "Dog-star" was variable, when Dr. Peters, of Altona, in 1851, showed that the variations in right ascension admitted of explanation by the hypothesis that it was revolving round some invisible body,—the period of its revolution being about fifty years. If this hypothesis were true, it was evident that it must be capable of explaining the variations of the proper motion in declination as well as in right ascension; and this test has been successfully applied by Mr. Safford, of Harvard College, U.S., an account of which has been given in the last number of the Astronomical Society's "Monthly Notices" by the Astronomer Royal; and in the preceding number is a notice, by Mr. Lynn, of the Greenwich Observatory, of a paper by Herr Auwers, discussing similar variations in the proper motion of Procyon, the principal star of Canis Minor; the conclusion arrived at being that that star also revolves round an invisible or opaque companion in a period of about forty years. Auwers has even computed approximately the mass of the dark body around which he supposes Procyon to move, and finds that it must be at least nearly half that of our sun. This calculation depends upon a value of the annual parallax of Procyon, which the astronomer has found, by means of the Königsberg heliometer, to amount to 0″·12. He has also determined in the same manner the annual parallax of 61 Cygni, the first that was measured by Bessel. His value, 0″·57, is considerably greater than Bessel's, which was only 0″·37, and this difference throws some doubt upon both; but as the former agrees pretty closely with another observation obtained by Struve with the great Pulkowa refractor, and is determined in a manner somewhat more direct than Bessel's, it is probably not far from the truth. If so, the distance of the star 61 Cygni is about thirty-four billions of miles, while Auwers' value of the parallax of Procyon gives to it a distance of 170 billions.

That old geological enigma—the "Parallel Roads to Glen Roy"—has again elicited a spirited discussion at the Geological Society. Not content with the unsatisfactory state of the various explanatory theories, which have been generated to account for those singular, narrow, perfectly level ridges around the hill-slopes of that famous glen, Mr. Jamieson in the summers of the last and the preceding years visited that region, and whilst examining all its physical and geological details, tested in every way he could conceive each of the theories of former observers.

The first of these theories, that the glen had been barred up by rocky materials, so that a lake of great depth had been retained behind the barrier, he considered to be untenable, because no relics of such an earth-barrier could now be found. The diluvial theory of Mackenzie, the inundation-wave theory of Professor Rogers, who presumed the successive rolls of gigantic waves, produced by some enormous disturbances in the Atlantic, were also tested by facts and rejected; it being evident that water had occupied the glen for a long time, and in so quiescent a state that not the slightest deviation from horizontality in any of these "parallel roads" had been detected by practised engineers who had made an instrumental survey of them. Darwin's old theory of an emergence of the land from the sea was next examined and found unsupported. And finally the suggestion of Agassiz, that their origin was to be attributed to ice-action, was taken up. The author accepted this theory as a basis, and in his paper developed at length the evidences of its correctness; the conclusions to which he arrived being, that lake-waters of great depth—the lowest of these parallel roads being 870 feet high—had been pent upby an enormous glacier, filling certain of the contiguous glens, and that, as this barrier successively shrank, the water-level of the lake stood at different heights, the "parallel-roads" being its beach-lines marking the successive horizons at which it became periodically stationary. With respect to the age of these roads, the author compared them with the well-known "old coast-beach" of the Scottish land, now some 40 feet above sea-level, and considered them to be of posterior date to it. As the "40-feet beach," according to the evidence of the mollusca preserved in it, which are mainly of the Boreal fauna, is newer than the Clyde beds, the fossils of which belong to the Arctic fauna, the "parallel roads" must be, geologically speaking, of comparatively recent origin.

The new commercial treaty just signed at Calcutta gives an interest to one of the subjects brought under the notice of the Ethnological Society, "On the Nations and Tribes of British Burmah," by Lieut.-Colonel Phayre, her Majesty's Commissioner for that province.

Burmah consists of what was once Arracan, Pegu and Tennaserim, extending from the tenth to the twentieth degree of north latitude, and having an inter-tropical area of three times the extent of Ireland. It is the alluvial tracts of this province, and not Bengal, that furnishes Europe with the yearly amount of 12,500 tons of rice. The native inhabitants throughout the province are of the same race, and which extends from the eastern boundary of Bengal to the west of China. In stature they are stout, squab, and heavy; with complexions more or less brown; the features flat; hair copious, lank, coarse and black—but beard and whiskers almost nominal. This race differs essentially from every other; and in civilization, and probably in intellectual power, is much below the Hindu and greatly below the Chinese. European writers have lately denominated it the Hindo-Chinese; but it is only in a geographical sense that it has any claim to this designation, for unquestionably it does not consist of any admixture of those two races. The native population of British Burmah exists in two very different social conditions; and many distinct languages are spoken. The nations of the plains—always determined by the course and character of the great rivers—beyond the British territory are the Siamese, Cambojans, and the Annamese, or people of Coclin-China.

The principal nations have for centuries adopted the Buddhist religion, with the exception of the Annamese, who have only partially done so. The rude tribes are in a very different condition. They have very small knowledge of the useful arts, although not ignorant of them. Their agriculture consists in the cultivation of roots, and in snatching from the virgin forest a corn crop off land not reclaimed, but used for the moment, and abandoned for a similar crop from fresh lands—a practice prevalent among many rude peoples of the tropical East. They are not, however, Buddhists; they have no priesthood, no temples, no systematic religion, but abundance of superstitions; of letters they are wholly ignorant. A few of the tribes are predatory, but the majority inoffensive. They dwell in the mountains and narrow valleys, but never in the plains; their social condition being, seemingly, entirely determined by physical geography. A census is taken every year. In 1861 the native civilized inhabitants amounted to 1,400,000, and the rude people to about 350,000. The Sans, or, as they are better known to us, the Laos, all recent emigrants, to 46,000; the mixed race, descended from Arabs, Persians, and the Mahommedans of Hindustanee, above 20,000; natives of Hindustan, who had resorted to the country, chiefly since its British occupation, for good trade and high wages, 73,000; Chinese, nearly all recent immigrants, 10,000. To these Asiatic people is to be added a miscellaneous group of Malays, Javanese, &c., numbering 25,000.

Finally come the rulers and masters of the land, so widely differing in race and civilization; and these—men, women, and children—were but 2,562! The total of the census was 1,897,897, exclusive of the military. In 1859 the numbers were 948,731. Thus in two years the population had been doubled. This could only have resulted from a great immigration; which has taken place chiefly from the neighbouring Burmese territory. This immigration has now been in progress for five years, and is still going on, so that, no doubt, at this moment the actual numbers exceed two millions. If the whole of this number were packed into the ten thousand square miles of the alluvial tracts of the Irawadi, the density would be only two hundred per square mile, or not one-half that of an ordinary populous province of the Gangetic plain. The work of education and conversion to Christianity was commenced about forty years ago by the late Dr. Judson, an American missionary, but it made little progress until the sovereignty of the country was assumed by ourselves. It is believed that not fewer than fifty thousand of the inhabitants of British Burmah have now been converted. The majority of those amenable to conversion have belonged to the rude tribes; the more advanced, with a teaching and religion of their own, having resisted both conversion and European education. In reply to Mr. Oliphant, who took part in the discussion, the President, Mr. Crawfurd, said as to an extensive trade between Burmah and China, that he did not think it possible, the intermediate country being mountainous, and the valleys often inhabited by

Digitized by Google

predatory tribes; and when the traders got into China, it was into the wildest and most thinly populated district of the whole empire; and there was still another unpropitious region, although not so bad, to be passed over before the populous heart of China was gained.

LEARNED SOCIETIES.

LIST OF MEETINGS FOR NEXT WEEK.

MONDAY.

ARCHITECTS—Conduit-street, Hanover-square, at 8 P.M.

GEOGRAPHICAL—Burlington House, at 8½ P.M. 1. "Proposed Route to Siam across the Isthmus of Kran." By Capts. Fraser and Forling. 2. "Visit to the Island of Tsusima." By Laurence Oliphant, Esq.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Sculpture." By Professor Westmacott, R.A.

MEDICAL—32A, Great George-street, Hanover-square, at 8½ P.M. "Spontaneous Closure of the Axillary Artery after Division by Gun-shot Wound." By Mr. C. W. Coolthrop.

ACTUARIES—12, St. James's-square, at 7 P.M. "On the Calculation of Survivorship Annuities by the Columnar Method." By Mr. Jas. Meikle.

ENTOMOLOGICAL—12, Bedford-row, at 7 P.M. (Anniversary.)

TUESDAY.

MEDICAL AND CHIRURGICAL—53, Berners-street, Oxford-street, at 8½ P.M.

CIVIL ENGINEERS—25, Great George-street, Westminster, at 8 P.M. Continued Discussion on "Railway Telegraphs."

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Professor Marshall "On Animal Mechanics."

ZOOLOGICAL—11, Hanover-square, at 9 P.M. "On a New Australian Mammal." By Mr. G. Krafft.

WEDNESDAY.

ARCHÆOLOGICAL ASSOCIATION—32, Sackville-street, at 8½ P.M. 1. "On Ancient Literary Frauds and Forgeries." By Mr. Madden. 2. "On Sepulchral Discoveries at Stapleford Tawney Church, Essex." By Mr. Turner. 3. "On the Discovery of Roman Remains at Combe Wood, Bath, and Exhibition of the Antiquities found by Mr. Cruickshank." By Mr. Syer Cuming.

LONDON INSTITUTION—Finsbury Circus, at 7 P.M. "Commercial Law." By G. W. Hastings, LL.B.

SOCIETY OF ARTS—John-street, Adelphi, a 8 P.M.

THURSDAY.

ROYAL SOCIETY—Burlington House, at 8½ P.M. "On the Absorption of Gases by Charcoal." By Dr. Angus Smith, F.R.S.

ANTIQUARIES—Somerset House, at 8½ P.M.

ARTISTS AND AMATEURS—Willis's Rooms, St. James's, at 8 P.M.

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Professor Frankland "On Chemical Affinity."

FRIDAY.

ROYAL INSTITUTION—Albemarle-street, at 8 P.M. "On the Points of Contact between Science and Art." By Cardinal Wiseman.

LONDON INSTITUTION—Finsbury-circus, at 7 P.M. "Non-Metallic Elements." By Professor Field.

SATURDAY.

ROYAL INSTITUTION—Albemarle-street, at 3 P.M. Mr. W. S. Savory "On Life and Death."

LIST OF NEW PUBLICATIONS FOR THE WEEK.

Ace's (Rev. D.) Treatise on Auricular Confession. Fcap., cloth, 3s. 6d.

Amy Lawrence, the Freemason's Daughter. By J. F. Smith. Royal 8vo., boards, 2s.

Annette; or, Ears to Hear. New Edition, fcap., cloth, 2s.

Barlee's (Ellen) A Visit to Lancashire in December, 1862. Fcap., cloth, limp, 1s. 6d.

Bible (the) in the Workshop. A Refutation of Bishop Colenso. By two Working Men. Crown 8vo., sewed, 1s. 6d.

Booty's (F.) Aids to Stamp Collectors. Third edition, fcap., sewed, 1s.

Cairns' (Dr. John) Romanism and Rationalism as opposed to pure Christianity. Fcap., sewed, 1s.

Campin's (F.) Practical Treatise on Mechanical Engineering. 8vo., cloth, 27s.

Cavalier Songs and Ballads of England, 1642 to 1684. Edited by Charles Mackay. Fcap., cloth, 5s.

Christina, Queen of Sweden, Memoirs of. By Henry Woodhead. Two vols. Crown 8vo., cloth, 21s.

Cobbin's (Rev. Ingram) Bible Reader's Handbook. New edition, 32mo., cloth gilt, 2s. 6d.

Colenso.—Bishop Colenso and the Pentateuch; or, the Bible in the Gospel. By "Alpha." 8vo., cloth, 2s.

Cups and their Customs. Post 8vo., boards, 2s. 6d.

De Porquet's (L. P. R. F.) Histoire de France. Eighth edition, 12mo., cloth, 3s. 6d.

Disraeli's (B.) Novels. Cheap edition. Vivian Grey. Fcap., sewed, 1s.

Drexelius (Jeremy). The Heliotropium; or, Conformity of the Human Will to the Divine. Translated by Rev. R. N. Shutte. 8vo., cloth, 21s.

Edgar's (J. G.) Danes, Saxons, and Normans; or, Stories of our Ancestors. Illustrated. 8vo., cloth gilt, 7s. 6d.

Edgeworth's (Maria) Moral Tales. New Edition. Fcap. cloth, 3s. 6d.

Edwards' (T.) Shall we register Title? the Objections to Land and Title Registry stated and answered. Crown 8vo., cloth, 4s. 6d.

Emma Leighton; or, Lessons of Self-Control. New Edition. Fcap. cloth, 2s. 6d.

Floral World and Garden Guide. Vol. V. 8vo., cloth, 6s.

Fox's (General C. R.) Engravings of Rare and Unpublished Greek Coins. Part II.—Asia and Africa. 4to., sewed, 7s. 6d.

Freeman's (Mrs. T. G.) Stories from English History. 16mo., cloth, 2s. 6d.

Friendless and Helpless. By Helen Barber. Fcap., cloth, 3s. 6d.

Gordon's Educational Series, Advanced Reading-book. Part I.—Scientific. Crown 8vo., cloth, 2s. 6d.

——— Part II.—Literary. Crown 8vo., cloth, 1s. 6d.

Gordon's School and Home Series, Gulliver's Travels. Two Parts, 4d. each, sewed; or in One vol., 8vo., cloth limp.

Gordon's (Margaret) Leaves of Healing, for the Sick and Sorrowful. New Edition. Royal 16mo., cloth, 2s.

Grant's (C.) Hints on the Destruction of the Red Spider, Green Fly, &c. Fcap. sewed, 1s.

Green's (Rev. J.) The Insect Hunter's Companion, with an Essay on Pupa Digging. Fcap. cloth, 1s. 6d.

Grote's (George) History of Greece. New Edition. In Eight Vols. 8vo., cloth, £5. 12s.

Guy's (Joseph) School Question-book. Twelfth edition, revised. 12mo., bound, 4s. 6d.

Historical Lessons in English and French. By the Author of "Lessons on Objects." Fcap. cloth, 3s. 6d.

Houdin's (Robert) The Sharper Detected and Exposed. Crown 8vo., cloth, 6s.

Howitt's (Wm.) Letters on Transportation. Crown 8vo., sewed, 1s.

Hughes' (Wm.) Geography of British History. Fcap., cloth, 8s. 6d.

Hutton's (Barbara) Monday Morning: How to get Through it. 32mo., cloth, 1s.

Imogene; or, the Flowers and Fruits of Rome. By M. H. Crown 8vo., cloth, 8s. 6d.

Is Geology Antagonistic to Scripture? By an M.A. of Cambridge. Crown 8vo., cloth, 3s. 6d.

Israel (The) of the Alps: a History of the Waldenses. New edition. Crown 8vo., cloth, 5s.

TO CORRESPONDENTS.

Mrs. Grote has requested us to correct an impression to which some remarks in the LONDON REVIEW *may, she thinks, have given rise,—that in her writings she in any degree impugns the permanent character of matrimonial obligations. We are happy to have her authority for giving such an impression the most complete denial, and for explaining that Mrs. Grote's doctrines on the subject do not go further than the justice of bringing the opportunity of separation, where rightly demanded, within the reach of all classes alike.*

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

PRIZE MEDALS.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

HEDGES & BUTLER,

London, 155, Regent-street, W.; Brighton, 30, King's-road,

(Originally established A.D. 1667.)

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

DR. DE JONGH'S

(*Knight of the Order of Leopold of Belgium*)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

TREATISE ON THE MATHEMATICAL THEORY OF THE STATIONARY, MARINE, AND LOCOMOTIVE ENGINES. By T. BAKER, C.E. In 1 vol. 12mo. limp cloth, Illustrated with Diagrams.

TABLES OF SIMPLE INTEREST FOR EVERY DAY IN THE YEAR. At 5, 4½, 4, 3½, 3, and 2½ per cent. per annum, from £1 to £100, &c. By JAMES LAURIE. Nineteenth edition, 800 pp., 8vo. cloth, strongly bound, 21s.; or in calf, 26s.

HIGH RATE TABLES. At 5, 6, 7, 8, 9, and 9½ per cent. per annum, from 1 day to 100 days. By JAMES LAURIE. Third edition, 8vo. cloth, 7s.

MANUAL OF HERALDRY; being a Concise Description of the several Terms used, and containing a Dictionary of every Designation in the Science. Illustrated by 400 Engravings on Wood. New edition, Fcap. cloth, 3s.; gilt edges, 3s. 6d.

NAOMI; or, the Last Days of Jerusalem. By Mrs. J. B. WEBB. New edition, with Designs by GILBERT. Fcap. 8vo. 7s. 6d. cloth lettered.

FRANK FAIRLEGH; or, Scenes from the Life of a Private Pupil. By F. E. SMEDLEY. Price 2s. 6d. boards; 3s. 6d. cloth.

LEWIS ARUNDEL; or, the Railroad of Life. By F. E. SMEDLEY. Price 3s. boards; 4s. cloth.

THE FORTUNES OF THE COLVILLE FAMILY; or, A Cloud and its Silver Lining. Price 1s. 6d. boards; 2s. 6d. cloth.

HARRY COVERDALE'S COURTSHIP, and All that Came of It. By F. E. SMEDLEY, author of "Frank Fairleigh," &c. New Edition, Post 8vo. cloth gilt, price 3s. 6d., boards 2s. 6d.

SEVEN TALES BY SEVEN AUTHORS. Edited by F. E. SMEDLEY, Esq., Author of "Frank Fairleigh," &c. Fcap. price 2s. boards; 2s. 6d. cloth. [*This Day.*

WORKS BY THE AUTHOR OF "MARY POWELL:"—
YE MAIDEN AND MARRIED LIFE OF MARY POWELL, AFTERWARDS MISTRESS MILTON. Third Edition, Post 8vo. price 7s. 6d. antique.
OLDEN TALES.—DEBORAH'S DIARY. With Illustrations. Cheap Edition, price 2s.
" " HOUSEHOLD OF SIR THOMAS MORE. Price 2s. 6d.
" " THE COLLOQUIES OF EDWARD OSBORNE. Price 2s. 6d.
" " THE OLD CHELSEA BUN HOUSE. Uniform.
" " THE CHRONICLE OF ETHELFLED. Price 6s. in antique.
A NOBLE PURPOSE NOBLY WON. An Old, Old Story. New and Cheaper Edition, Post 8vo. cloth, price 7s. 6d.

THE CELT, ROMAN, AND SAXON. A History of the Early Inhabitants of Britain down to the Conversion of the Anglo-Saxons to Christianity. Illustrated by the Ancient Remains brought to light by recent research. By THOMAS WRIGHT, Esq., M.A., F.S.A. With numerous Engravings. Post 8vo. price 12s.

WINTER EVENINGS; or, Tales of Travellers. By MARIA HACK. New and Cheaper Edition, with Illustrations by GILBERT. Fcap. cloth, price 3s. 6d.

NURSERY RHYMES. New and Improved Edition, with Frontispiece. 18mo. cloth gilt, price 1s. 6d. Also,
AN ILLUSTRATED EDITION, in Large Type, with 16 Cuts by GILBERT. 16mo. cloth, gilt edges, price 2s. 6d.

ORIGINAL POEMS FOR INFANT MINDS. New and Improved Edition, with Frontispiece. 2 vols. 18mo. cloth gilt, price 1s. 6d. each.

ROBINSON CRUSOE. With Illustrations. 18mo. cloth, price 2s.

SANDFORD AND MERTON. With Cuts. 18mo. cloth, price 2s.

WATT'S (Dr.) DIVINE AND MORAL SONGS FOR CHILDREN. With Anecdotes and Reflections, by the Rev. INGRAM COBBIN, M.A. With Frontispiece and 37 Woodcuts. New Edition, cloth, price 1s.; gilt edges, 1s. 6d.

WORKS BY THE REV. JOHN CUMMING, D.D., F.R.S.E.:—
DAILY FAMILY DEVOTIONS; or, Guide to Family Worship. With 24 Engravings. 4to. cloth, gilt edges, price 21s.
THE DAILY LIFE; or, Precepts and Prescriptions for Christian Living. Fourth and Cheaper Edition, revised. Fcap. 8vo. cloth, price 3s. 6d.

WORKS BY MARTIN F. TUPPER, Esq., D.C.L., F.R.S.:—
THREE HUNDRED SONNETS. In a handsome volume, cloth, gilt edges, price 7s. 6d.
THE CROCK OF GOLD, and other Tales. With Illustrations by JOHN LEECH. Cheap Edition, in 1 vol., price 2s. 6d. boards; 3s. 6d. cloth.
BALLADS FOR THE TIMES, and other Poems. Third Edition, with Vignette. Fcap. cloth, price 7s. 6d.
LYRICS. Second Edition, Fcap. cloth, price 3s. 6d.

BIBLE CHANTS ADAPTED FOR PUBLIC WORSHIP:—
THE CHANT BOOK; a Selection of the Psalms and other portions of Holy Scripture, arranged and marked for Chanting. By WILLIAM SHELMERDINE. With a Preface by the Rev. J. A. BAYNES. New Edition. Fcap. 8vo. cloth gilt, price 1s.
ONE HUNDRED AND EIGHTY CHANTS, ANCIENT AND MODERN. Arranged for Four Voices, with an Accompaniment for the Organ or Pianoforte; to accompany the above. Crown 8vo. price 2s. 6d.

THE PRINCE OF THE HOUSE OF DAVID; or, Three Years in the Holy City. By the Rev. Professor J. H. INGRAHAM. Fcap. 8vo. cloth gilt, price 3s. 6d.

EDUCATIONAL WORKS.

ACKWORTH VOCABULARY; or, English Spelling-Book. Compiled for the use of Ackworth School. Improved edition, 18mo. cloth lettered, price 1s. 6d.

BARBAULD'S LEÇONS POUR DES ENFANS. Depuis l'âge de Deux jusqu'à Cinq. Avec une Interprétation Anglaise. New edition, 18mo. cloth, price 2s.

BARBAULD'S HYMNS EN PROSE. Traduit de l'Anglais. Par M. CLEMENCE. 18mo. sewed, price 1s.

CHRISTIE'S CONSTRUCTIVE ETYMOLOGICAL SPELLING-BOOK. Exhibiting the Etymology and Meanings of 8,000 words; with Lessons on Etymology, and Notes. Seventh edition, 12mo. cloth, price 1s. 6d.

THE EARTH AND ITS INHABITANTS. By MARGARET E. DARTON. Crown 8vo. cloth, with Frontispiece, price 5s.

GILES' ENGLISH PARSING; comprising the Rules of Syntax, exemplified by appropriate Lessons. Improved edition, 12mo. cloth, price 2s.

HOPKINS' EXERCISES ON ORTHOGRAPHY. On an Improved Plan. New edition, 18mo. cloth, price 1s. 6d.

PICTORIAL SPELLING-BOOK; or, Lessons on Facts and Objects. With 130 graphic Illustrations. New edition, cloth, price 1s. 6d.

CHILD'S FIRST STEP TO ENGLISH HISTORY. By ANN RODWELL. With many Cuts. New edition, revised by JULIA CORNER. 16mo. cloth, price 2s. 6d.

DERIVATIVE SPELLING-BOOK; in which the Origin of each word is given from the Greek, Latin, Saxon, German, Teutonic, Dutch, French, Spanish, and other Languages. With the Parts of Speech and the Pronunciation accented. By J. ROWBOTHAM, F.R.S.A. New edition, 12mo. cloth, price 1s. 6d.

SELECT POETRY FOR CHILDREN, with brief Explanatory Notes, arranged for the use of Schools and Families. By JOSEPH PAYNE. Tenth edition, corrected and enlarged, 18mo. 2s. 6d. cloth; or 3s. scarlet, gilt edges.

STUDIES IN ENGLISH POETRY, with short Biographical Sketches, and Notes Explanatory and Critical. By JOSEPH PAYNE. New and enlarged Edition. Fcap. 8vo. cloth, red edges, price 5s.

A CATECHISM OF FAMILIAR THINGS; their History, and the Events which led to their discovery. With a Short Explanation of some of the principal Natural Phenomena. By E. A. WILLEMENT. New Edition, 12mo. cloth, price 2s. 6d.

OXFORD AND CAMBRIDGE ANALYSES AND SUMMARIES OF THE OLD AND NEW TESTAMENT HISTORY AND GEOGRAPHY:—
ANALYSIS AND SUMMARY OF OLD TESTAMENT HISTORY AND THE LAWS OF MOSES. By J. T. WHEELER, F.R.G.S., &c. Sixth Edition, revised and improved, Post 8vo. cloth, red edges, price 5s. 6d.
ANALYSIS AND SUMMARY OF NEW TESTAMENT HISTORY. By J. T. WHEELER, F.R.G.S., &c. Fourth Edition, revised, Post 8vo. cloth, red edges, price 5s. 6d.
AN ANALYSIS AND SUMMARY OF THE HISTORICAL GEOGRAPHY OF THE OLD AND NEW TESTAMENTS. By J. T. WHEELER, F.R.G.S., &c. Small folio, Illustrated by large Coloured Maps, and Plan of Jerusalem. Cloth, price 7s. 6d.
A POPULAR ABRIDGEMENT OF OLD AND NEW TESTAMENT HISTORY. For Schools, Families, and General Reading. Explained by Historical and Geographical Illustrations, and numerous Map Diagrams. In 2 vols. 18mo. cloth, price 2s. each.

SCHOOL PERSPECTIVE; being a Progressive Course of Instruction in Linear Perspective, specially designed for the use of Schools. By J. R. DICKSEE, Principal Drawing Master to the City of London Schools. Second Edition, in 1 vol. 8vo. cloth gilt, price 5s., with many Woodcuts, and Forty Engraved Plates.

TATE'S ELEMENTS OF COMMERCIAL ARITHMETIC; Containing a Minute Investigation of the Principles of the Science, and their general application to Commercial Calculations. By WILLIAM TATE. Fifth Edition, improved and corrected, in 1 vol. 12mo. neatly bound, price 2s. 6d.
KEY TO THE ABOVE, 12mo. bound, 3s. 6d.

THE EMPEROR'S OLIVE-BRANCH.

THE French Emperor has let loose a second dove upon the troubled waters of America. This time, possibly, news may come back to him that the Deluge is subsiding. With the commencement of another year the American question has, beyond all doubt, entered on a fresh phase. Among the immediate combatants the blaze of passion seems as fierce as ever; for the barbarous name of reprisals, together with the hateful rumour of military executions, begins to be heard. But there are symptoms that large classes of both communities are becoming weary of the fratricidal contest which threatens to exhaust, if not to desolate, half a continent. Is the North capable of and prepared for still more gigantic efforts than any it has yet made, on the vague chance of conquering the conquerors of Fredericksburg? If not, the contest had better end without further loss of life. Are the South, on their side, anxious to protract their terrible attitude of defence, which, even if successful in the end, must also be ruinous and bloody? These thoughts have, it appears, at last presented themselves on both sides of the Potomac. The *New York Tribune* raises its voice, and indirectly asks for peace. Deep answers unto deep. A similar cry is heard from the press of Richmond, though with it comes a protest that the separation of North and South must be eternal. Journalists are by nature warlike, and a national press seldom advocates the cessation of hostilities, until the horrors of war have begun to be universally and profoundly felt. The intelligence, accordingly, which the last steam-packets have brought, is hopeful. The war is not over,—revengeful passion still runs high,—military murders have begun in Arkansas,—and gold at New York is at a premium of 48 per cent. Yet, if we mistake not, the white clouds of peace are beginning to show themselves on the horizon.

At such a crisis the Emperor's intercessory despatch will be read perhaps by many a patriot, both in the United and Confederate States, with sensations of relief and gratitude. Courageous men, whose hardihood has been thoroughly attested, can afford to welcome the prospect of an amicable interruption. From Virginia to the mouth of the Mississippi the windy phantoms of war will pause and rest upon their swords at the appearance of the great European wizard upon the stage. A wave of his wand may not dispel them all, but it opens at least an honourable door for their retreat. The arrival of the French note is a great event indeed. Worded with a *savoir faire* and a delicacy, which the Foreign Office may admire and envy, the document commends itself to the natural vanity of all Americans. North or South may take or leave the olive-branch held out to them; but, at least, it is impossible for them to be offended. The initiative of acceptance or rejection rests with the North. President Lincoln's Government will be bold men if they wave away the proffered courtesy, in the face of their growing unpopularity with their own party and the evident hostility of the Democrats. Pride may prevent a loud expression, on either side, of a wish to bring the present state of affairs to a close; and there can be no doubt that the mutual hatred of the Yankee and the Southerner is inexhaustible. But the political and military situation of Lincoln's Cabinet is now almost untenable, and a refusal to discuss terms of accommodation will be counted by their watchful enemies as the last signal link in the chain of evidence of their incapacity. There may not henceforward be Peace; but henceforward there will certainly be a strong Peace Party within the limits of the Union. The thoughtful of the Republican party, who view with regret the blow to abolition principles, and to the prospects of a military propaganda, which European intervention implies, may well reflect that the course which they have forced on the Washington executive must sooner or later have led to this. They and their champions have been guilty of the political crime of caring less for the Union than for revenge upon the South. Even the Emancipation of the slaves has been used by them merely as a dagger by which the South might be stabbed to the very heart. With the exception of an honest section of philanthropists, who are well represented by the literary coteries of Boston and elsewhere, the Republicans have upheld the cause of abolition, not because they loved the negro, but because they hated the negro's master. President Lincoln's proclamation was a signal gun proclaiming that the Union had been wrecked. From that moment the war became a war, not of principle but of passion. It was an acknowledgment that, in the eyes of the Lincoln Government, a great empire was gone, that the advisers of the President now at last despaired of the republic, and that henceforth their only object was to fire the cotton fields of the South.

A war purposeless henceforward—except so far as Providence, out of the ruin of the cotton-owner and the wild fury of the North, might bring about the deliverance from bondage of the negro—could not long last without an effort being made to end it. The golden and gracious opportunity has fallen to the Emperor of the French, who alone was in a position to seize it. People in England will, perhaps, ask themselves how it is that these windfalls happen chiefly to the Emperor of the French? In the first place, he was committed, in consequence of his recent ineffectual overtures, to a policy of the kind. Instead of retracing his steps, he has gone on and done gracefully what he was compelled to do. With respect, however, to the American war, there never was any doubt but that circumstances had made

Digitized by Google

France a natural and easy mediator. America's distrust of England—caused, perhaps, by something of mutual bitterness of spirit and mutual misunderstanding on both sides of the Atlantic—made it impossible for us to move in the matter. A feeling had seemed to be growing upon us that, perhaps, it would be better if the Union, which English statesmen had found so insolent in policy and democracy, never again were re-established. For once, English generosity appeared to be dead, and the cold neutrality which the English Government have honestly pursued seemed to cover, without concealing, a hidden prejudice. America believed that we were watching with an evil eye the death-throes of our great Transatlantic rival. The French Emperor is removed from the influence of these depressing suspicions and jealousies. He can with decency arrive upon the stage, simulating a warm glow of friendship for both parties. France comes upon the battle-field breathing the purest philanthropy, and her face radiant with affection for anything American. She appreciates the difficulties of their position. She admires their national pride and susceptibility. Under the same circumstances, the French cock would feel very much what the American eagles both feel. Interference and advice would be an impertinence. Cannot the contending parties talk over their differences quietly among themselves; if possible, uniting to restore the Union; if not, at all events agreeing to separate in peace?

The sentimental halo which the Emperor's letter sheds around, would not be of much service in thawing the frost of Federal and Confederate antipathy; but it may gild with decent colour any arrangement between the belligerents to which they are impelled by the exhaustion of the war. It is not merely now a question whether the move should be made. The Emperor has made his move, and has despatched his proposition. This country will rejoice if it should lead to anything; and our sympathies must be on the side of every effort of the kind. It is not a case in which French diplomacy will be strengthened by having English diplomacy to back it. Mr. Seward will no doubt be told that the French suggestion, though it does not emanate from us, has our approval and our warmest wishes. English counsels are not likely to be acceptable at Washington, and Lord Russell will confine himself wisely to following with the rest of Europe in the train of France. An olive-branch from the hand of France will come with a better grace than any olive-branch we can bring. It is said that the French Emperor has already suggested informally a scheme of reconciliation. He will find it hard to blow up the dying embers of Union recollections again into a flame. He will find it difficult to reconcile conflicting interests, to decide what is to be done about tariffs, and to settle into whose hands the Mississippi is ultimately to fall. But the task is an honourable and a grateful one; and America will forget her suspicions about Mexico, and the Emperor's crotchets about the Latin race, at the receipt of a kindness so opportune and so sincere.

MR. BRIGHT ON INDIAN COTTON.

WE are content to receive the present cotton famine as a dispensation of Providence for which we must be very sorry, but as to which there is no call for being very angry. It is a great calamity, no doubt; but it by no means follows that it is anybody's fault, except that of the Americans themselves. The attempts that have been made to attribute it to this party or to that,—the mutual recriminations which have been bandied about,—the charges brought by Mr. Bright against Sir Charles Wood and his colleagues,—and those brought by Mr. Kingsley against Mr. Bright and his fellow manufacturers,—appear to us to spring rather from irritation than from reflection, and to be for the most part flagrantly unjust. There may have been want of forecast on the one side, and there may have been want of energy on the other; but most assuredly no amount of the prophetic faculty on the part of manufacturers could have foreseen the American civil war or the American blockade, or could have provided against it if it had been foreseen. Nor is it at all proved, to say the least, that any amount of wisdom or vigour on the part of the Indian Government could have rendered Indian cotton as cheap or as abundant as we now need it to be—without, at all events, overstepping all the sound and salutary limits of governmental action and governmental impartiality to a degree against which Free-traders and Political Economists, like Mr. Bright, ought to have been the first to cry out.

The dissolution of the Union, and the war which has ensued, were events which few could have anticipated, and which, as a fact, scarcely any statesman or any merchant did anticipate. The interruption of the ordinary course of trade and production in America at some indefinitely distant date, as a result of negro emancipation or negro revolt, was, indeed, regarded vaguely as one of the possible contingencies which the future might have in store for us. But up to three years ago, the cessation of the cotton supply, as a consequence of a desperate and obstinate war between the North and South, was, to all appearance, as little probable, was certainly as little expected, and was a casualty on which it would have been as rash to calculate, as the interruption of the indigo crop in India on account of the mutiny, or the abandonment of the cultivation of tea in China on account of the Taeping rebellion. And it is just as absurd to blame the British merchant or the British Government for not having, in the view of an invisible calamity, taken measures for forcing the growth of cotton in India, as for not having taken measures for forcing the growth of indigo in Australia or of tea in Assam. Experiments, indeed, might have been made, and were made, with a view of ascertaining whether and how such growth could be fostered and improved; but no elaborate or official steps could with safety or propriety have been taken to stimulate or artificially encourage such growth in these secondary countries, till the crops in the primary countries had actually failed or been abandoned, or till such failure or abandonment was proximately probable and imminent; for the very simple reason that it would *not have paid* to do so, and that the introduction of new and extraneous crops must have so much increased the quantity and deteriorated the value of the article thus fostered, as to have rendered the speculation a ruinous one to all parties concerned. So long as the United States were able to pour into England, and did pour in, ample quantities of excellent cotton at moderate prices, it would clearly have been a work of supererogation on the part of the British importer or manufacturer to be at the trouble of forcing the growth of cotton in India or elsewhere (where it cost more and was worth less), merely because it was *possible* that some day or other the American crop might fail or be withheld. Nor would it have been in his power to do so had he been foolish or Quixotic enough to desire it, since the fortune of no millionnaire could have been equal to the strain of introducing poor Surat at sixpence a pound to compete with good Orleans at fourpence.

So much for the charge of neglect and imprudence as against manufacturers. Much of the same defence is applicable to the same accusation when brought against the Indian Government; and thus far Sir Charles Wood might obtain an easy victory over Mr. Bright. It is perfectly true, moreover, that—though, perhaps, they might have worked harder and faster in opening rivers, digging canals, promoting railways, and the like, and thus have facilitated the access to new markets for *all* the products of the Indian soil—the Indian authorities could not, without a dereliction of duty have applied the revenue at their command to favour the growth of one commodity rather than another; and that Mr. Bright's suggestion of offering a bounty on the production of cotton by exempting cotton lands from tax or rent, is one which is simply disgraceful in a man who spent his best years and achieved his chief repute in denouncing a similar bounty in the case of British wheat. Sir Charles Wood is quite right, moreover, in declaring that the whole affair is a mere question of price; that the reason why cotton, fit for the English market, has not been more regularly and more constantly produced in India, is that a remunerating price has never been regularly offered for it; that it has been in demand only or chiefly to *supplement* the American supply, and has only yielded a profit to the ryot or the native merchant in those years when the American crop was defective, and when, in consequence, prices had advanced considerably. Cotton has not been largely grown for export in India, because, owing to the cause just referred to, other articles paid better. The pro-

Digitized by Google

duction of other articles, and the total value of Indian exports have increased; and that is the defence of the Indian authorities to the indictment. The first of the following tables shows the aggregate value of our imports from India for the last eight years; and the second, the quantity of the principal staples for ten years; and the general result is not unsatisfactory.

TABLE I.—*Total Real Value of Imports from British East Indies, 1854 to 1861.*

But when Sir Charles Wood goes on to say that, if the British manufacturer will only give, as an average, a shilling a pound for Surat cotton, India will send him every year as much as he requires, and as much as America ever furnished, he shows a strange unacquaintance with the conditions of the problem. England never can give any such price; and for two plain reasons. The first is, that other countries will supply her wants at a much cheaper rate; that Africa certainly, and Australia probably, and the West Indies, we believe, could produce largely at a considerably lower cost; and, more especially, that we can scarcely anticipate any such prolongation of the American war, nor any such derangement of American industry as will disable the Gulf States from supplying cotton very largely at sixpence per pound, or to speak cautiously, assuredly at eightpence. The second reason is, that if the price of raw cotton is to range as high as a shilling a pound (and Sir Charles Wood does not seem disposed to contract at much less), then the consumption of cotton fabrics throughout the world will be so materially and inevitably curtailed, that whether India can supply us or not will become a matter of very much smaller importance than it is at present. Surat cotton permanently at one shilling would, probably, imply the permanent closing of half the factories in Great Britain.

POLITICAL AFFAIRS IN TURKEY.

WHEN, at some period in the remote future, the historian of this country pronounces a calm and a philosophical opinion upon the Crimean War, he will tread with an unembarrassed step amid entanglements, confusions, conflicting interests, and unexpected results, which we are too near at present to contemplate without bewilderment. He will follow with interest and amazement those diplomatic conflicts which had for their origin the possession of a key and a star, and for their termination a European war; and, as the dispassionate narrator of the events of a byegone age, he will deduce from them, more readily than we can now, the great moral which they convey. He will be better able to analyze the motives by which each of the Powers was actuated; to separate the religious enthusiasm from the political ambition of Russia, and to give each its proper weight; to contrast that cold and calculating policy of expediency which governed the action of the French Emperor, with those blundering but amiable impulses which led the British nation to join him: and he will probably conclude that the Power which lost least of its dignity, and made the best show of firmness and consistency, was the one which had advanced least in the arts of peace and civilization, and which, while it exercised more religious toleration than either its enemy or its allies, professed a creed in deadly hostility to that which caused the struggle. He will perceive that if the Western Powers, who undertook the defence of Turkey, had from the first understood the real character of the Osmanli, and the genius of their institutions, the war might possibly have been altogether avoided; and he will be forced to admit that the English nation cannot be held altogether irresponsible for the expenditure of blood and treasure which the war involved. Popular sentiment, easily aroused, and always inadequately informed, too often encourages our rulers in a policy that is either vacillating or precipitate; and political misunderstandings, capable in the first instance of easy adjustment, soon reach the point at which they admit of no honourable arbitrament but that of the sword. Had we fully understood and firmly resisted the pretensions of the Czar at first, we might, there is every reason to believe, have been spared the rest. A few months of hesitation cost us an European war.

The same policy which involved us in war with Russia is being again pursued by her with unabated vigour. However proverbially fickle may be the mind of the public, we can scarcely give it credit for such inconsistency as would be implied by indifference to a cause now for which we fought and bled some seven years ago. If it was worth spending millions to achieve an object then, it is worth expending a little diplomatic energy to preserve what we have gained. We ought to feel a greater interest in Turkey than in any other power in Europe, considering what we have done for her; and yet events are happening in that empire, of which people will remain profoundly ignorant until they are called upon to decide the line of policy which the Government is to adopt. It is not likely that the Sultan would dismiss the whole of his cabinet unless the point at issue was serious. It is the fashion to look upon this sweeping measure as the rash act of an eccentric despot. Those who know Abdul Aziz attach to it a higher significance, when taken in conjunction with events which are passing in some of the provinces of his empire. It is, in fact, the inauguration of a new policy, whether sound or not, those only who are familiar with all the conditions involved, can tell. We may gather that Fuad Pasha takes a strong view of the matter by his conduct on the occasion; but on the other hand, his resumption of his financial duties leads us to hope that some means have been found to reconcile his views of national economy with the foreign policy of the Sultan. That policy is simple and straightforward. He knows that, by the ninth article of the Treaty of Paris, he has, spontaneously and as an independent sovereign, granted certain concessions to his Christian subjects; but that a clause in that article prohibits the interference, in his mode of dealing with these subjects, of any Christian power. He is unfortunately in possession of the clearest evidence that this clause has not been respected, either in the case of Montenegro or of Servia; and, to make matters worse, he finds that the leading agitators are not confined

Digitized by Google

to emissaries of his old enemy, the Czar, but are generally the agents of his late friend, the Emperor of France. He has succeeded, in spite of the machinations of his two great antagonists, in suppressing the rebellion in the Herzegovine and Montenegro; but he has to contend with diplomatic protests on the part of these Powers, in carrying out the terms of peace, for which no grounds of justification can be found. By one of the terms of the convention entered into with Montenegro, the Sultan is entitled to construct a line of block-houses, without which he can have no guarantee for the maintenance of the peace he has imposed. In consideration for this, he has relieved the Montenegrins from the taxes which were formerly levied upon provisions and the necessaries of life imported through Turkey into the country. The Montenegrins now protest against the construction of block-houses, and they are supported in this protest by Russia and France. In connection with this dispute, another cause of complaint has arisen against Russia out of the supply of arms, which that Power has furnished to Servia. In the first instance, these arms were destined for Bulgaria; but the Turkish Government, having been informed of their transport through Wallachia, remonstrated on the subject with Prince Couza, who communicated with the Government of St. Petersburg, and received instructions to say that they were for Prince Michael, of Servia. Prince Michael, however, has come under an obligation to the Porte to reduce his army, and can have no excuse for claiming about 200,000 stand of arms, which are now in Belgrade, and which he possesses facilities for disseminating through Turkey at any moment. Already the authority of the Sultan is weakened in Bulgaria by the humiliation forced upon him by the Powers, in the ejection of the Mahometan population from the suburb of Belgrade, and by the abandonment of his fortresses in Servia; and he foresees, that in the event of a Christian rising, the British public, with their ready and ever-varying sympathies, may transfer their affections from the Turk to the Christian. Now he knows that in European Turkey there are four millions of Turks to seven millions of Christians; that the proprietors of the soil are all Turks; that their familiarity with arms, their warlike nature, their common creed, their common tongue, and the prestige which invests a dominant race, would enable them to crush and utterly exterminate, if exasperated, the Christian peasantry, who consist of different races, speak different languages, who profess two forms of the Greek religion, many of whom are Latins, and who, so far from having any cohesion among themselves, are constantly engaged in the fiercest disputes. To prevent a massacre which would shock Europe, to deprive the Western Powers of an excuse for that armed occupation which two of them delight in, and to warn them from pushing their present agitation to too great a length, the Sultan has determined to maintain an army and a fleet which may cause his enemies to respect him, and relieve his friends from the duties of protection. With a fleet at Constantinople, the Black Sea, denuded of any Russian squadron, is at his mercy; and we have already seen how a Turkish army, well led, could drive the whole Russian army out of the Principalities. All that the Sultan asks is to be left alone, and he is entitled to point as a proof of the vitality of his empire to those intrigues and that perpetual agitation on the part of foreign powers which distract, but which fail to destroy it. Is there another Power in Europe, except England, which could undergo as much, and live?

THE POLISH INSURRECTION.

LIBERAL Europe is once again summoned to that most melancholy of spectacles—a Polish outbreak. Once again we are told that order reigns in Warsaw, and the experience of former catastrophes has rendered us only too well able to interpret this ominous announcement. As of old, it means the ineffectual effort of a brave people to recover the independence of which they were robbed. It means an outbreak of despair, resistance more or less prolonged, military executions, Siberian exile, and the desolation of many a home. This time, it seems, the brimming cup of a nation's woe and indignation has been made to overflow by a levy of conscript recruits. "On the 15th instant," said the official journal at Warsaw, "in the early hours from one to eight in the morning, the levy of military took place in the most complete peace and order. No single instance of opposition had to be contended against; and for the last thirty years there has not been such an example of willingness and pleasure on the part of the conscripts. In the council-hall and in the citadel, where they were placed in the meantime, and where they were tended with every care, they showed the best and, indeed, a joyful feeling. . . . Many of the conscripts expressed the joy they felt at entering the school of order, which military service would be to them." Now we can sit and read these precious lines by the clear, pitiless light of subsequent events; and yet of themselves, and without the commentary of facts, they excite, rather than allay, suspicion and disquietude. Accustomed as we are to recruiting a truly national army by voluntary enlistment, this joy of conscripts at entering an alien and hostile army as "a school of order," is, even to us, past all understanding; and we find it difficult to associate the regular and peaceful operations of the law with one o'clock on a winter's morning. We have, to be sure, another and a very different account of the levy, which was so satisfactory to the official journal. At midnight on the 15th, so runs the non-official story, the gates of Warsaw were closed and guarded, the public squares were filled with troops, and cavalry patrolled the streets. Peace and order, as they are understood at Warsaw, being thus secured, the police forced their way into private houses, and took from their beds 2,000 youths, who, piously conscious of their own frailties, were awaiting with impatience the salutary discipline of the Russian army. But, alas, for poor human nature! the next thing we hear of these 2,000 conscripts is their desertion *en masse*. Whether they were acting under the orders of a revolutionary committee or not, they betook themselves to the neighbouring woods, killed whatever soldiers they could lay hands on in scattered billets, and, in short, became the authors of an insurrectionary movement. The large landed proprietors and the peasants, say the telegrams (which, however, come from Russian sources), refused to join the insurgent conscripts; but the smaller proprietors, members of the lower middle class, and working men, threw themselves into the struggle. Then came the monotonous and inevitable sequel—telegraphs destroyed, railroads torn up, burning villages, and frequent carnage.

Sitting here at ease and enjoying a plenitude of liberty, it becomes not us harshly to condemn the acts of patriots—youths torn from their homes to swell the ranks of an army, under the iron heel of which their country lies crushed and bleeding; but there cannot be two opinions with respect to the hopelessness of this insurrection in Poland. Fertile, no doubt, is the soil watered with the blood of martyrs; and "we will die that we may live," is a sublime saying when it comes from a nation's heart and lips. Freedom's long and often seeming desperate battle is bequeathed from sire to son; generation succeeds generation, passing through a vale of anguish and affliction, and reaping no reward but the hope that their children's children may live to see the dawning of a happier time. Such a hope may be theirs so long as they keep their cause pure and undefiled; and more than ever is this necessary in the present time. Day by day the moral sense of the civilized world grows more sensitive, and the eternal justice of a cause is sometimes hidden from men's eyes by the wild deeds which are the last resource of erring patriots. Aimless, useless slaughter, men do not readily forgive. The recent rising in Poland seems not to have been justified by any concerted plan of action within, or by any hope of assistance from without,—while the national cause will have been stained by the murder of Russian soldiers strangled in their beds. Most impolitic has it been to inflame the animosity of the Russian army, in which there was, no doubt, a growing sympathy for the Poles. The Emperor avowed as much in his speech at St. Petersburgh. "The revolutionary party," he said, "reckons upon finding traitors in our ranks." Wherever the germs of sympathy showed themselves among the Russians, it was the plain interest of the Poles to cherish these by every means in their power: but now between them and the Russian soldiery runs the blood of murdered comrades.

According to the latest accounts an appeal was made by the revolutionary committee to the students of Warsaw, calling upon them to unite, heart and hand, with the insurgents; but the students had the wisdom and the self-restraint to resist an appeal, for which the secret voices of nature must have pleaded with passionate energy. The calm view of reason, schooled in adversity, saw no light of hope at the end of the tempting path that lay before it. It saw the gloom deepening in the distance. It was the duty,

Digitized by Google

said the students, of every man who should be selected as a conscript to bear his sad lot with resignation, so as not to expose his country to enormous and hopeless calamities. Coming from the flower of Polish youth, to whom it will belong for many a year to make or mar the name and fame of their nation,—such language is of happy augury. In it will be seen a determination to abstain from every desperate enterprise of arms, until, perhaps, what M. Lamartine called "the supreme hour of nationalities" has struck, and foreign aid may come from some quarter of a troubled Continent. And it will be taken to mean that the educated classes in Poland, with one accord, prefer peaceful and legal opposition to assassination and abortive insurrection, in the long struggle to recover their lost rights; that they have taken the path indicated to them by the best and wisest of their patriot leaders, Count André Zamoyski. Never in its chequered course has the cause of Poland stood fairer and stronger before the world than in the early months of 1861; when under grievous provocation they hurled not a stone,—when men, women, and children knelt down, in the face of an enraged soldiery, to chant "Restore us, Lord, our country; restore us Liberty,"—their piteous helplessness was then a tower of strength to them. And never was the Russian Government weaker with respect to Poland than in that, the hour of its seeming power and might. There is a time to wait as well as a time to dare; and if the Poles will look around Europe now, they must see that it is not the time to dare.

We can well believe that the Emperor Alexander betrayed emotion when he addressed his troops on parade at St. Petersburgh. To a well-meaning and humane-tempered man like him, a state of siege, and martial law, and their attendant horrors, are probably most alien and repulsive. But it is his fate to reap a crop which his hand did not sow. He came to the throne, cursed with the heritage of his father's policy. "I intend," said the present Emperor to the Polish nobles soon after his accession, "to maintain the order established by my father. So, gentlemen, above all, no dreams, no dreams! The happiness of Poland depends upon its entire fusion with the peoples of my empire. What my father did was well done. I will maintain it. My reign will be the continuation of his." Events, however, have proved, that what the Emperor Nicholas did was very ill done. He was a gigantic bubble, which burst after all, but not till much mischief had been caused by its outward splendour. He passed his life, amid great pomp and noise, in weaving ropes of sand. To him belongs the bad pre-eminence of having been the first to raise an enormous standing army after the peace of 1815; and that army he dressed, pipe-clayed, and drilled, till he finally launched it forth, and broke the spell of the long peace. And then from his deathbed he saw the collapse of the colossal machine which had been the darling of his life. Equally vain was the war which he pertinaciously waged against the march of ideas. With a frenzied horror of everything savouring of Democracy, he watched, suspicious and uneasy, each indication of mental activity. The discoveries of science found no favour with him. He discouraged association, hampered the action of universities by elaborate restrictions, and strove to crush out all freedom of thought under the most searching censorship of the press; and in all this he was no wiser than the courtiers of Canute by the sea-side. What has been the success of his system in Poland, Europe now sees. One day he quietly signed an order for the "transplantation" of 45,000 Polish families to the Caucasus, and the residue furnished materials for the conscription, shooting, and expatriation to Siberia. He made a land the silent house of bondage and affliction, and this he called "order." He proscribed the Polish language, dress, and customs; and now, after thirty years, the fire of Polish nationality burns with a purer and steadier light than before. It is difficult, therefore, to believe that the Emperor Alexander adheres to his programme of following close in his father's footsteps. It may not be too late, even at this eleventh hour, to enter on a new path of conciliation; but, if once entered, it must be pursued steadily, and without looking back. A vacillating policy, giving with one hand and taking away with the other, granting concessions on one day and withdrawing them on the morrow, can only increase distrust and hate, and aggravate the long disease. The preservation of the Polish nationality was expressly stipulated for by the Treaties of Vienna, to which Russia was a party. Will the Czar, then, persevere in setting at nought the faith of treaties, no less than the dictates of humane and enlightened policy, out of deference to his misguided father's memory? We hope for better things.

INDIAN LEGISLATORS.

THE Imperial Legislative Council at Calcutta have done the bidding of Sir Charles Wood and withdrawn the Bill relating to fraudulent breaches of contract. But they have done so with much grumbling and discontent, and with a strong protest against what they consider the vexatious interference of the present Secretary of State with legislation in India. Such is in fact a summary of the news brought by the last Indian mail. It will probably be to many a matter of surprise that any very strong feeling should gather round a mere project for amending the law of contracts, and that the rejection of the scheme by Sir Charles Wood should cause very considerable excitement at Calcutta, and still more at Manchester. The wonder will cease when it is observed that the interests of a large and influential class are involved in the question. The object of the Bill was a very good one. It sought to enforce the performance of contracts with greater stringency. But the manner in which the Bill proposed to attain it was open to very grave objections. It was well described by Mr. Maine as "prescribing a proceeding of a civil nature in point of form, but of a criminal nature in respect of the penal consequences incurred by an unsuccessful defendant." It was in fact a criminal investigation added on to a civil suit. In this and every other civilized country, the only question in a suit for a breach of contract is, whether the contract has been performed. If not, the proper consequences must follow, whatever may have been the excuses for its non-performance. Contracts are enforced, either by giving damages for their breach, or in some few cases by decreeing their specific performance. But in no country has there ever been any attempt to enforce contracts generally by punishing the breaches of them as criminal offences. Yet this is what the Bill before us proposed to do. In any suit for the breach of a contract, for the performance of which the defendant had received a consideration, the Court was to inquire if he had committed the breach in bad faith, or without reasonable excuse. If the Court found in the affirmative, the defendant, on failure to pay the damages, was to be punished as a criminal, with imprisonment and hard labour, and, like criminals, maintained in gaol at the public expense. By this scheme of general criminal legislation with respect to contracts, the advocates of the measure concealed their true design. It will be observed that the proposed Bill applied to contracts, for the performance of which the defendant had received some consideration. The most important class of such contracts in India is that which embraces the advances made to ryots for the cultivation of indigo. It was to meet these cases that the scheme was devised. It is a question between the capitalist, or the planter, and the ryot. This Bill was an instance of special legislation in favour of one of the parties to a contract. It would have armed one class, which already possesses the power and influence that belongs to wealth and intelligence, with extraordinary remedies capable of being readily turned into instruments of oppression against a far more numerous and important class, which stands in peculiar need of protection.

This scheme of punishing breaches of contract criminally has been for the last two years a favourite idea with some of the Bengal civilians and with the indigo planters. And it is not surprising that they should be indignant with Sir Charles Wood for rejecting the measure. Besides, there is something in the manner of its rejection which adds to the bitterness with which they regard his interference. With the constitutional power, reserved to the Crown, of disallowing an Act after it has passed the Indian Legislature, the members of the Council do not appear to quarrel. Their complaint is that this Bill was stopped at an earlier stage. As soon as the draft of the Bill was received in this country, Sir Charles Wood found such serious objections to the principle on which it was based, that he intimated to the Indian Government that it would be impossible for him to give it his approval, and requested that it might be at once withdrawn. It would, of course, have been idle to have proceeded with a Bill which was certain to be annulled a few months after it became law. The Council at Calcutta have accordingly complied with the request, but in doing

Digitized by Google

so they take care to let it be known that their opinions have not been altered by the despatch of the Secretary of State. They proclaim somewhat loudly that they have yielded to Sir Charles Wood's authority and not to his arguments. Such, at least, are the sentiments expressed by the majority of the Council. But there is a small minority, including Mr. Maine, the new legislative member, who are opposed to the Bill on its merits, and agree with the Indian Secretary. The papers brought by the last mail contain full reports of the important debate which took place on the withdrawal of the measure. This is the first serious discussion in which Mr. Maine has taken part since he went to India; and though his speech is perhaps something wanting in that popular power which can only be acquired by the habit of addressing a deliberative assembly, it is all that might have been expected from his high reputation as an able and philosophic lawyer. He points out, with far greater clearness and accuracy than Sir Charles Wood in his despatch, not only the defects of the particular Bill before them, but also the dangers attending any general legislation on the principle of that measure. We have little doubt, judging from the report of the debate, that any assembly of unbiassed Englishmen, who formed their opinion from the speeches made in the Council, would have concurred in the withdrawal of the Bill.

The advocates of the measure maintain that it is essential for the protection of European capital in India, and, therefore, for the encouragement of European settlers in the interior of the country. India, they say, cannot be developed without the aid of English capital, and capital cannot be safely expended without a good contract law. A good contract law, as interpreted by capitalists, is a measure which gives them extraordinary and, it may be, oppressive powers which are not granted in any civilized country for enforcing ordinary commercial transactions. Such a measure is, in reality, a bill of indictment against the whole people of India. It is based on the supposition that the natives are generally dishonest, and require to be coerced by extraordinary laws. This has not been established. The indigo planters in the North-West Provinces make advances to their ryots, and yet the most peaceful relations exist between them. "In the South of India," according to Mr. Ellis, the member for Madras, "in the face of rapidly rising cotton prices, contracts for the supply of cotton during the past year had been honestly fulfilled in the midst of great temptation." Both Mr. Ellis and Mr. Harrington, who have served respectively in the South and in the North-West, are distinct in asserting that there had been no call for special legislation in either of those divisions of India in consequence of any general bad faith of the native producers. The cry for this stringent legislation comes mainly from Lower Bengal, and arises from the disputes of the indigo planters of that quarter with their ryots. It is true that the ryots there did refuse to perform their contracts, but it is no less true that the contracts which extend over long periods had become extremely inequitable. It was natural enough that the ryots should become restive when they became fully aware of the inequitable nature of the contract between themselves and the planters, which barely enabled them to support life. Under similar circumstances the Government ryots employed in the opium cultivation became discontented when they found that, under their contracts, opium had become the most unprofitable crop they could cultivate. The cultivation became of course unpopular, because it was unprofitable. Under these circumstances, the Government took the just and reasonable course of advancing the price paid to the ryots to such an extent as to make the employment a profitable one. It is absurd to suppose that a whole people can be coerced by penal enactments into continuing a certain course of cultivation after they have discovered that it is the most unprofitable they can follow. And if the planters of Lower Bengal had acted with as much equity as the Government, the present cry for special legislation would never have been heard.

THE FEW AND THE MANY.

Of the many singular phenomena presented by the existing state of feeling and thought upon philosophical, and especially upon religious subjects, none is more strange than the tortuous devices by which able men contrive to hint almost any amount of heterodoxy without expressly committing themselves to any theological opinions at all. The *Saturday Review*, amongst its other remarkable gifts—some of which really are very remarkable—possesses this curious talent to a marvellous degree. You read two columns headed "modesty," or "humility," or "the uncertainty of human affairs," or "the vanity of human wishes," written in oxydised English—the style which conceals polish and labour under an appearance of roughness—you are told that "that this is not a theological journal," and are lectured on topics ostensibly as commonplace and trivial as those which are exhibited in copy slips; but somehow or other, by artful touches, carefully chosen illustrations, and judicious moral remarks which affect to be as commonplace as those of a schoolboy's theme, and to be based on the most childlike acquiescence in all established opinions, you are insensibly led to think that if "we" were a theological journal we should be a very queer one, and should propagate opinions greatly at variance with those professed by the bulk of mankind. It is not fair to treat this way of writing, as it often is treated, as a crime and an act of hypocrisy. It is neither one nor the other. It is the natural, and, indeed, unavoidable result of setting men of fastidious taste and of great ability, as some of the writers in the *Saturday Review* unquestionably are, to provide intellectual dainties for a large circle of readers once a week. Take a man with a full and powerful mind, great originality, and a large stock of delicate humour, half pathetic, half ironical, and set him to play the fiddle for the public amusement every week, and he inevitably plays tunes of this sort. It is like a man performing feats of strength on a small scale. He does not lift anything very heavy; but it would be hard to find any other man who could throw about a weight of five pounds so nimbly with the middle finger of his left hand.

An excellent illustration of this style of composition is afforded by an article lately published in the *Saturday Review* on an essay by Mr. Matthew Arnold in the last number of *Macmillan's Magazine*, called "The Bishop and the Philosopher." Mr. Arnold maintained that all books whatever ought to undergo literary criticism, for the purpose of seeing how they affect the general culture of mankind; that theological books affect the culture of mankind either by instructing the few or edifying the many; and that literary criticism ought to praise books which effect either of these objects, and to denounce those which effect neither, as books which ought never to have been written. He then proceeded to show that Bishop Colenso's book could not instruct the few, who had learnt from Spinosa all that was to be learnt on the defects of the Bible, two hundred years ago; and that it could not edify the many because it consisted of a *reductio ad absurdum* of the Pentateuch by the help of three or four sums in the rule of three. The inference was that Bishop Colenso ought for ever to have held his peace; for as to the notion of instructing the many, the great majority,—Mr. Arnold dismisses it with that lofty contempt which becomes a believer in "the grand manner." He says, in so many words, that the notion of instructing the many is simply absurd:—

"It is a doctrine, which no criticism that has not a direct interest in promulgating it, can ever seriously entertain. The highly instructed few, and not the scantily instructed many" (Why, indeed, should the poor wretches be even scantily instructed? No bread, in this case, would be better than half a loaf.), "will ever be the organ to the human race of knowledge and truth. *Knowledge and truth, in the full sense of the words, are not attainable by the great mass of the human race at all.*" What a beautiful subject for a theme to be written by the pupil-teachers, whom Mr. Arnold will have to inspect in his next tour through the dissenting schools. Her Majesty's Inspector having delivered this anathema on popular instruction, goes on to compare Spinosa with Bishop Colenso. Spinosa wrote in Latin; he wished to avoid notoriety; his books were addressed to the instructed few, and they were written in "the grand manner." This "grand manner" is a private order of merit, of which Mr. Arnold is the exclusive proprietor, and to which he admits a few elect persons, who are supposed by the scantily instructed many to be qualified for it, by impressing Mr. Arnold's imagination in some ineffable manner, too sublime to be divulged.

The view taken by the *Saturday Review* of this singular performance was amusing in the extreme. The distinguished artist already alluded to appears to have felt, upon reading it, that he was a sort of literary Frankenstein, altogether overcrowed by his own monster. For several years he and his journal had been the unquestioned representatives of the contemptuous classes, and had been supposed to carry the distinction between the instructed few and the scantily-instructed many to as high a point as the weakness inseparable from human nature could permit. Suddenly he

Digitized by Google

must have found himself trumped. Even the *Saturday Review* never went Mr. Arnold's lengths. It must have been a bitter moment indeed when its writers discovered that a power existed capable of stigmatizing, as that which ought not to exist, every article in the *Saturday Review* and *Macmillan's Magazine* which, glancing at theology, did not either edify the many or instruct the few. It is just possible that the very highest class of minds in Europe may not have derived the whole of their thoughts from either of these journals, or even from both of them put together; for, strange as it may appear, men, still young, can remember the time when neither existed. It is also possible that the many may not have been much edified by a considerable proportion of the articles which have appeared in them. Mr. Arnold's principles, rigidly carried out, would produce a strange change, both in the newspaper and the magazine. The *Saturday Review* would publish three or four articles and one or two reviews, written in crabbed Latin, promulgating frightful heresies for the instructed few. In the rest of its columns Mr. Spurgeon and Dr. Cumming would edify the uninstructed many. In *Macmillan's Magazine* Mr. Arnold would expound the grand manner in Greek Iambics worthy of the theme, and Mr. Kingsley's fairy tales about Water Babies would supply the edification.

The experienced Saturday Reviewer appears to have reflected on such a consummation with not altogether complacent feelings towards the pupil who made such a vigorous use of his own lessons. If a steady-going old nobleman, who had always considered his own class the very cream of creation, and had by dint of the grand manner given a certain meaning to his claim, were to find his son engaged on a pamphlet recommending that every one who was not of Norman blood should be sold as a slave, he might experience the same sort of feelings. This peremptory division of mankind into intellectual sheep and goats naturally inspired the *Saturday Review* with a legitimate anxiety as to the fate of the alpacas. Writing with the oddest sense of the fact that Mr. Arnold had caricatured his own views, the artist of the *Saturday Review* contrived, with really admirable skill, to combine the expression of his own contempt for the mass of mankind with a gentle admonition to Mr. Arnold as to the effect of his extravaganza. There was a great deal of truth in Mr. Arnold's view. No doubt the educated few (especially that pure and reformed part of them which is established in those columns) were infinitely superior to the rest of the world—it was quite natural that they should "wish the babes to stick to their milk,"—but where would Mr. Arnold draw the line? What would he say of the clever women who read the "Essays and Reviews" either with praise or blame?—what of "the usual college don"? What would become of the gentlemen who beat solid plate into gold-leaf or filagree work, in *Macmillan* and the *Saturday Review*? "Demetrius, a silversmith, which made silver shrines for Diana, brought no small gain unto the craftsmen whom he called together and said, Sirs, ye know that by this craft we have our wealth." Pity the sorrows of a gentleman who has every week to inform the educated few in the grand manner, or to submit to edifying the many in the manner of a popular preacher!

As between Mr. Arnold and his critic, there can be little doubt on which side the victory lay, but the grotesqueness of the contrast between them ought not to be allowed to conceal the serious side of the controversy. Mr. Arnold says, in so many words, what a great many people in these days really think. He openly avows his opinion that in the matter of religious belief the great mass of mankind ought to be guided entirely by their feelings, and by the authority of the few who happen to be highly instructed, and that they have nothing to do with any direct evidence of the truth or falsehood of their opinions. If this is so, the world has made some great mistakes. Christianity was a great mistake. The Reformation was a piece of impertinence. Mr. Arnold attempts to parry this obvious criticism by saying that, "Christ said to a few disciples, 'unto you it is given to know the mysteries of the kingdom of Heaven, but to them'" (the multitude) "'it is not given.'" Were the fishermen to whom this was addressed a highly instructed few? or were they forbidden to preach the mysteries of the kingdom of Heaven to the uninstructed multitude? Was it not also said, "In secret have I taught nothing"?

As to the Reformation, Mr. Arnold says, "It was not by the intellectual truth of its propositions concerning purgatory, or prayer for the dead, or the human nature of the Virgin Mary, that the Reformation touched and advanced the multitude; it was by the moral truth of its protest against the sale of indulgences and the scandalous lives of many of the clergy." A more audacious assertion has seldom been made. It is notorious that the scandals and immoralities which certainly contributed powerfully to bringing about the Reformation had existed in various forms for ages without producing that effect. The intellectual and argumentative tide of the Reformation was at least equally powerful, and its area hardly, if at all, less wide. The standing complaint of the Roman Catholic clergy was, that every mechanic or tradesman who got a Bible in his hands in the vulgar tongue set to work to dispute out of it. The scantily-instructed taste intellectual pleasures with an even keener zest than the well-instructed. Boys at school and lads at college will chop logic and metaphysics all night long, when their superiors—the instructed few—would be talking over personal politics, or literary anecdotes. There are probably no people in the world who relish theological argument so much as the peasantry of Wales and Scotland, and every sect that can be named is founded, in point of fact, on arguments which convince those to whom they are addressed.

M. Arnold may say that "knowledge and truth *in the full sense of the words* are not attainable by the great mass of the human race;" but this is not the fact. Surely the multiplication table is knowledge and truth in the full sense of the words. So are the news in the *Times*, and the dates of the Kings of England. What Mr. Arnold really means is, that knowledge and truth *in their full extent*, are not attainable by the great mass of the human race. He might have said they are not attainable at all. The wisest must be content to know in part, and the least wise has knowledge of precisely the same kind which he believes on precisely similar grounds. There is in all knowledge an element of conjecture, and in all conjecture an element of knowledge. The uninstructed many may not be fit judges of Spinoza's doctrine about the nature and attributes of the Deity; but whether or not they have grounds to believe particular statements in the Bible to be literally true, is a question on which they can judge as well as any one else, and on which they ought to judge. To try to believe without reasoning is like trying to breathe without air. If a man determines to believe whatever his clergyman tells him, he reasons as much as Spinosa himself. He says, I think it best to believe my clergyman. He says so and so. Therefore I believe it. As the *Saturday Review* truly said, you cannot draw the line. There is no resting-place between a labourer's child at a charity school and a highly instructed Inspector of Schools. From top to bottom, the only limit to the food consumed is the power of digestion; the food itself is unlimited and universally accessible. This being so, can it be said that Dr. Colenso's book, right or wrong, is of no importance? It is, on the contrary, of the greatest importance. If the substance of it is false, its publication is a great calamity. If it is true, it is a great public benefit; but whether true or false, no one ought to deny that it is a relevant argument addressed to a competent tribunal, unless he is prepared to contend that it is to be regretted that English mechanics and labourers look upon winking Virgins and miraculous cures, as childish lies and nonsense. No vigorous minded man will really think thus. We are all alike *terræ filii*. If the rank and file ceased to argue, the officers would pass their time in idle trifling. The thoughtfulness and intellectual courage of the many is the only true guarantee for the greatness of the few.

IS THE FRENCH EMPEROR A COWARD?

THERE are certain points connected with Mr. Kinglake's entertaining "History of the Crimean War," on which we are anxious not to be misunderstood. It would be very painful to us to have it supposed that we approve of the rancorous attacks on the French Emperor and his adherents which Mr. Kinglake has thought fit unnecessarily to interweave with his history, or of the foul and un-English weapons which he has condescended to use in the contest. All that he says concerning the events of December, 1851, may be true. A good deal of what he says probably is true. He himself, no doubt, believes every word of what he has written. But in making these admissions, we must add, that it is impossible not to perceive that Mr. Kinglake is easily misled by his very strong prejudices in favour of those whom he likes and against those whom he dislikes, and that he is, moreover, abundantly endowed with a faculty most dangerous to a historian, of believing on very slight evidence whatever he wishes to be true.

We will adduce but two instances of the defects to which we have here alluded, which will, we think, suffice to guard the public against being led away by the *verve* with which the book is written, and from allowing their judgments to be biassed by the imposing materials which, we are told, have been placed at Mr. Kinglake's command. The first relates but to a small matter, worthier, in our opinion, to be handled by a Lord Llanover in hot persecution of a Mr. Buggy of Bedford, than by the brilliant historian of the Crimean war. Mr. Kinglake has discovered, or fancies that

Digitized by Google

he has discovered, that Marshal St. Arnaud, at some early period of his life, went by the name of Le Roy; that M. de Persigny, whose father's name was Fialin, bears his mother's name; and that M. de Maupas has no right to prefix to his name the aristocratic particle by which it is preceded. Not content with stating these utterly irrelevant facts—if facts they be—in the most offensive manner, Mr. Kinglake has pursued his enemies with them through his whole narrative. Again, and again, and again—twice, thrice, in the same page—do we see those unhappy "brethren of the Elysée" pelted with the fact that they have assumed other names than those to which they were born. It is right to add, however, that Mr. Kinglake does not pretend that they have thus changed their names from any disgraceful motives; indeed, on one occasion, he admits that they probably did so for the sake of mere euphony; exactly as very respectable British peers have been known to transmute Smith into Vernon and Carington. Mr. Kinglake ought to have reflected that if the French were minded to pay us back in the base coin which he has used in his dealings with them, they might easily do so, and that it would not need a very microscopic investigation to show that in the English army also there are a few distinguished men who, from no disreputable reasons, have preferred their mother's to their father's names,—that there are illegitimate children, bearing fancy names, who are nevertheless men of conduct, courage, and sensitive feelings, who would all be sorely pained at having these facts, unimportant to everybody but themselves, maliciously paraded by a French Mr. Kinglake in the face of the world.

The other matter to which we have to allude is more important. We lament to say that Mr. Kinglake appears to take a strange delight in affixing on those whom he seeks to disparage, the withering imputation of cowardice. This he does more often inferentially—but in one very signal instance, by direct assertion. If a French aide-de-camp brings Lord Raglan a message, he describes the lad as confused and breathless, observing, significantly, that his agitation may or may not have been caused by the rapidity of his movements and the steepness of the hill which he had just surmounted on foot; if a French general is not exactly where Mr. Kinglake thinks he ought to have been, it is insinuated that, his heart not being in the right place, it is not surprising that his corps should have been in the wrong one. But in speaking of Louis Napoleon Mr. Kinglake uses no circumlocution. He distinctly says that, in circumstances of personal danger, the French Emperor invariably becomes a helpless coward. At Strasburg, he sneers at him for not having used the sword he had by his side when he, a single man, found himself surrounded by a regiment of hostile French soldiers, whom he had been deluded into supposing eager to espouse his cause; at Boulogne, he sneers at him because he did unhappily use the pistol he carried in his hand with fatal effect. On these occasions Mr. Kinglake compares the Emperor's outward appearance to that of "a weaver." Now we have no doubt that, both at Strasburg and at Boulogne, Louis Napoleon cut as pitiful a figure as baffled conspirators generally do cut in presence of their victorious opponents, but we deny that Mr. Kinglake has produced the slightest proof of his want of personal courage beyond his own unsupported assertion. And we protest most earnestly against the feminine malignity of his remarks on the Emperor's personal appearance. What would Mr. Kinglake himself think; what would any gentleman of sense think of a French writer, who, even in reply to the work of which we are now speaking, should condescend to remind its author of the ludicrous circumstances under which "the Staff Officer" represents the future historian of the war as having introduced himself to the notice of Lord Raglan on the field of the Alma; who should comment disrespectfully on Mr. Kinglake's insecure seat on horseback, and who should argue that "a tailor," unable to control a bumptious pony, might possibly not be altogether competent to sit in solemn judgment on the complexion and courage of the statesmen and warriors of France?

On the 2nd of December Mr. Kinglake presents us with a fancy picture of Louis Napoleon cowering for hours before the fire of an inner room at the Elysée, "still decked in red trowsers, but with his back to the fire-place, resting his elbows on his knees," accessible only to Persigny and Fleury, from one of whom Mr. Kinglake must necessarily have derived his authority for the story—if indeed he has any authority for it. When Louis Napoleon sends out what ready money he could command at the time to procure refreshments for the wearied troops, Mr. Kinglake constructs the following defective syllogism, for which we opine he would have been soundly flogged at school:—

"When a peaceful citizen is very much terrified by soldiers he praises them, and gives them all the money he has got in his pocket.

"In December, 1851, Louis Napoleon praised the French soldiers, and gave them all the money he had in his pocket.

"*Ergo*, in December, 1851, Louis Napoleon was very much terrified."

At Magenta the condition of the Emperor was, as Mr. Kinglake says, publicly seen, and he does not therefore encumber his pages with what he conceives to be an acknowledged historical fact. But on the day of the great battle, which was afterwards fought on the Mincio, he affirms that Louis Napoleon avoided the criticism of numerous witnesses, and that "great pains were taken to make France and Europe believe that the Emperor, at Solferino, was not only in a state to be able to give useful orders, but was actually in a part of the field where there was real danger."

Mr. Kinglake proves this to be false, by adducing the fact that on the Mincio the Emperor was followed by a brilliant staff and by a numerous escort, and that neither he nor any of his followers were killed, and but one wounded. *Ergo*, argues Mr. Kinglake again, on the day of Solferino it is impossible that he should have been exposed to any danger at all; and having established this fact to his satisfaction, he repeats a generous admission which he had already made, that he does not believe Louis Napoleon to be more destitute of courage than "the common run of peaceful citizens;" he merely means to say that under fire he becomes a helpless craven and "turns green."

We are sorry to have seen that several of our contemporaries, and amongst them the *Saturday Review*, have accepted this latter proof of Louis Napoleon's indisposition to face danger on the battle-field as conclusive. The *Saturday Review* compliments the historian of the war on "the cruel accuracy of criticism with which he has demolished the statements of the *Moniteur* as to the Emperor's self-exposure at Solferino." Very good. We will now introduce a brief quotation from Mr. Kinglake's account of Lord Raglan's and his own self-exposure at the Alma, explaining previously that no general exposing himself or his staff for purposes of observation or example, would think it either necessary or prudent to expose his escort also, if he could avoid doing so. A picture of the battle of Solferino, at Versailles, represents the Emperor, surrounded by about twenty officers, reconnoitring from an open height, his Cent Gardes being safely drawn up at some distance in his rear, completely sheltered from the enemy's notice and fire by the rising ground; and such, probably, would have been their position.

The sketch which Mr. Kinglake draws is so horribly graphic that we almost shudder as we read it. We wonder what manner of man Lord Raglan could be, what manner of men his staff were composed of, of what materials Mr. Kinglake himself, a mere *litterateur*, could be made, that they should have endured such a *feu d'enfer*, and that any one of them should have survived to tell the tale:—

"The level posture of our infantry threw into strong prominence the figure of every mounted man who rode along their lines, but the group of horsemen composing or following the head-quarter staff was so marked by the white flowing plumes of the officers, that at the distance of a mile and a half it was a conspicuous object to the naked eye, and a Russian artilleryman at the Causeway batteries could make out with a common field-glass that, of the two or three officers generally riding abreast, there was one in a dark-blue frock whose right arm hung ending in an empty sleeve. In truth, Lord Raglan at this time was so often standing still, or else was riding along the line at so leisurely a pace, that he and the group about him could not fail to become a mark for the Russian artillery. . . . They opened fire upon the group from a great number of guns. . . . . Failing with round shot, the enemy tried shells—shells with the fuses so cut as to burst them in the air a little above the white plumes. This method was tried so industriously and with so much skill, that a few feet over the heads of Lord Raglan and those around him, there was kept up for a long time an almost constant bursting of shells. Sometimes the missiles came singly, and sometimes in so thick a flight that several would be exploding nearly at the same moment, or briskly, one after the other, right and left, and all around. The fragments of the shells when they burst tore their shrill way down from above, harshly sawing the air; and when the novice heard the rush of the shattered missile along his right ear and then along his left, and imagined that he felt the wind of another fragment of shell come rushing along the cloth on his shoulders, almost at the same moment, it seemed to him hardly possible that the iron shower would leave one man of the group untouched" (p. 264, vol. ii.).

After writing the above passage—far surpassing in horror anything penned by the historian of the Peninsular war, in his well-known description of the assaults of Badajoz and St. Sebastian,—it must have been very embarrassing for Mr. Kinglake to have had to record that not one man of Lord Raglan's staff was damaged on the occasion in question; indeed, we fear that if the above-quoted passage were submitted to the critical ordeal to which the *Saturday Review* insists on submitting the *Moniteur's* account of the dangers to which the Emperor was exposed at Solferino, the result of the process might not be very creditable to Mr. Kinglake's character for either accuracy or cool observation; unless, indeed, like the

Digitized by Google

writer in the *Moniteur*, he were to call in the aid of "divine protection," a step which we fear might be distasteful to him, after all the fun he has poked at the pious French journalists on that account.

We cannot forbear, in conclusion, directing the notice of the public to an anecdote related by Mr. Kinglake of St. Arnaud's felicitous device for arresting the mad flight of the French at the assault of Constantine, by imitating, with marvellous skill, a British hurrah, "a sound very strange in the ears of Frenchmen, which he had formerly heard in northern climes." Certain bold, reckless outcasts serving in the *Legion Etrangère* caught up and repeated their native war-cry; "with it came the thronging of men who must and would go forward;" and thus, by Kentish fire, was Constantine, in reality, won. So, at least, says Mr. Kinglake. He does not, of course, give his authority for this nursery tale, so flattering to our national vanity, so justly irritating to the French, so ludicrously improbable, and so irrelevantly interpolated into a History of the Crimean War. We are not without serious misgivings that it may turn out to be but an old friend in a new garb. Somewhere about the year 1760, in a book of travels by a French lady, an incident is related which very much resembles Mr. Kinglake's "British hurrah" story: it is there cited to illustrate the extraordinary energy and effect of our national imprecations.

Whilst crossing from Calais to Dover in a sloop, a squall carried away the topmast, and the confusion resulting from the accident grievously terrified the lady and her husband. In writing an account of the danger she fancied she had run, the following sentence occurs:—

"Dans ce moment solennel nous entendîmes, pour la première fois, le fameux 'Goddam,' mot tout national et energique, qui rétablit de suite l'ordre, et parut par son influence presque apaiser la fureur des flots."

THE GERMAN NATIONAL MOVEMENT.

In two long and extremely interesting articles in recent numbers of the *Revue des Deux Mondes*, M. Klackzko, whose name, no less than his sentiments, betrays a Slavonic origin, has given a clear and correct narrative of the German national movement, and of its relations to the Liberal struggle in Prussia. At the outset of his remarks he is led, very naturally, to lay more stress than we should be inclined to do upon the connection between the ideas of liberty and nationality. What is more legitimate, he asks, than that those who *resemble* each other should wish to *assemble?* We should be content to recognize the nationality cry as a sign of the times, to which the statesman would do well to bow, but against which the philosopher may have much to advance.

The influence of the first French Revolution was introduced into Germany in such a questionable shape, that the people may well be excused if even what was good in it produced but little effect. The German middle classes, indeed, had not yet arrived at such a point of political development as to be fitted for any great change. Accordingly till the enemy was actually within their borders, they went on in the old way, leading for the most part still and uneventful lives, leaving politics to their superiors in birth, and literature to a learned caste, which was relatively of but small extent. So little were they accustomed to think for themselves that, after the great disaster of Jena, the chief magistrate of Berlin could find nothing better to announce to his fellow-citizens than the unnecessarily sedative observation:—"The first duty of the subject is to remain tranquil." During the next seven years the iron had entered sufficiently deep into their souls to make them comprehend that there might be even higher duties than letting well alone; and the war of Liberation, of which they boast as much as if it had been a successful war in defence of their independence—instead of a rising against intolerable oppression too long endured,—enabled them to march to Paris in the suite of England and Russia as they had marched to Moscow in the suite of France. No doubt the war of 1813, if the princes had been moderately honest, might have been the beginning of a real national life, but the princes were anything but honest; and Germany was reconstituted in a very different way from what the nation had a right to expect. Far too many petty sovereignties were retained; the central government was constituted absolutely without popular elements, and was made a very master-piece of complication. Each individual ruler was encouraged to oppress his own subjects as much as seemed to him good; while the slightest advance in a liberal direction brought on him the ill-will and suspicion of his fellow Sovereigns.

Congress after congress was held, and, as the diplomatists wrote and talked, matters grew ever worse. Soon the best minds in the country turned once more from politics, while the lower classes emigrated by tens of thousands. Then rose the star of Hegel. The great philosopher preached a doctrine which could readily be turned to the purposes of power; and no doubt the Conservative side of his teaching was skilfully taken advantage of by men like Altenstein, who saw that it was impossible to do anything effectual in the direction of real political progress in the face of the still unbroken strength of the Holy Alliance. All this non-political period may, with great propriety, be called the period of Hegel. In other countries, says M. Klackzko, they talk of the age of Louis Quatorze, or the age of Elizabeth. In Germany it has always, till now, been the age of some great poet or philosopher, who lived far away from the political arena.

The vapouring of France in 1840 may be considered as the first cause of the national movement which now agitates Germany, as the accession of Frederick William in the same year began the closely-related constitutional struggle which still rages in Prussia. Every one knows the spirited little song by Becker:—

"Sie sollen ihn nicht haben,
Den freien Deutschen Rhein."

It was soon followed by the establishment of the *Deutsche Zeitung* of Heidelberg, which set itself to din into the ears of the nation the same idea which animates the great work of Gervinus, "What is active life in Germany? Nothing! What should it be? Everything." It was this journal which first raised the standard under which most German Liberals are now fighting, and took for its programme the establishment of a thoroughly constitutional system in Prussia, the exclusion of Austria from the Germanic Confederation, and the grouping of the smaller States round Prussia. The conductors of the *Deutsche Zeitung* were clear-sighted enough to see, when the French Revolution of 1848 broke out, that that movement would result in anarchy, would lead to a military despotism, and bring on very probably a general war. They saw this, and they not only saw but proclaimed it. The meeting of the fifty-one publicists and deputies at Heidelberg immediately followed, and the German Revolution began. The isolated outbreaks in the different States of the Federation lent it new strength, and the various governments, yielding to the pressure of the times, gave their countenance to the elections for the great Assembly which was called together in Frankfort for the month of May. The "*question brûllante*" of the extent of the future Fatherland soon divided the legislators who gathered in the Church of St. Paul, into the partisans of a Germany *with*, and a Germany *without*, Austria; into the *Gross* and *Klein-Deutsch* factions. At length, however, the scale of the House of Hapsburg was weighed up by the fortune of the Hohenzollern, and the crown was offered to the King of Prussia. Puzzled, and hesitating as usual, Frederick William refused the great position to which he was called, and attempted a series of half measures which all failed hopelessly. By the end of 1850, the daring of Schwartzenberg, and the re-establishment of the Austrian supremacy in Hungary and Italy, enabled Vienna to dictate terms of peace to Berlin, and all but enabled her to enter the Germanic body with all her multi-lingual States.

From the catastrophe of the Prussian diplomacy at Olmutz down to the present hour, all the real interest of German politics centres in Prussia and in the States which, like Saxe-Coburg-Gotha, follow closely in her wake. The internal history of Prussia during the last twelve years is ably sketched in M. Klackzko's second article. Arrived at the end of his survey, the writer pauses and asks, What, then, was effected for Germany, by the great convulsion of 1848? Did the revolutions of that year utterly fail of effect, or did they turn the course of national life in a new direction? And first as to Austria. In the case of that empire we must unfortunately reply that it is still upon the wrong path. True, the system of stupid and time-serving Conservatism, which was the delight of Metternich, and which consisted in playing off one nationality against another, gave way under the influence of the reaction to the far more consequent and intelligible system of Schwartzenberg, which consisted in crushing the provinces together by the weight of the army, and substituting the motto, "Viribus unitis" for the old "Divide et impera." That system, which was afterwards carried out by Bach with all the appliances of bureaucratic tradition, broke down hopelessly after the Italian war, and was succeeded by the parliamentarism of Schmerling. At Vienna, however, even the Liberal party clings to the delusion that the mission of Austria is to be a great German Power, and the "middle empire" of Europe. As long as they go on playing at constitutional institutions, in the absence of the most important provinces—as long as they fail to comprehend that the influence of Austria should be extended, not by intrigues at Frankfort and the minor courts, but by steadily pushing civilization along the Lower

Digitized by Google

Danube—till, in short, the wise men who surround the Emperor comprehend that "Oesterreich" should be "Ostreich" (the Empire of the East), we must continue to look with the utmost distrust upon all their measures, and be as the deaf adder to Mr. Roebuck and to the enthusiastic writer in a recent number of the *North British Review*.

Turning to North Germany and not allowing ourselves to be too much distressed by the absurdity of the spectacle which Prussia presents, and for which her people are really not responsible, we observe with satisfaction the disappearance of the crazy Radicalism which preceded 1848, and which was caused, to a great extent, by the severity of the censorship, inasmuch as it crushed native German thought, and left the masses to French teachers. Go from Hamburg to the Bohemian frontier, and where will you meet with any one who could have sat for the portrait of the Gallomanic Detlev in Radowitz's "Gespräche aus der Gegenwart?" Arnold Ruge is peaceably writing novels at Brighton or some such pleasant retreat. Herwegh is, we rather think, at Naples; and Fröbel has come back wiser, if not sadder, from the other side of the Atlantic. Go to Berlin and talk with the leaders of the party of progress, and you will find a group of independent liberals, very thorough-going and very determined, but with no wish whatever to meddle with the monarchy, and utterly destitute of the fire and fury which we associate with the idea of extreme politicians in the year of revolution. Another highly satisfactory change is the discredit into which mere philosophizing has fallen in its most favoured home. Neither in Jena, Halle, or Leipsic does any one at present evolve camels from the depths of his inner consciousness. The destructive process in theology, which was carried on by Strauss, by Feuerbach, and afterwards still more rapidly and fiercely in the *Hallischen Jahrbücher* has come to an end, and has been superseded by the historical school, and by the constructive efforts of F. C. Baur and his disciples. It is this constructive movement, taken in connection with the fanaticism which was favoured so much by the late King of Prussia, that encourages half-informed or dishonest controversialists in this country to maintain that the German schools have devoured each other, as Saturn devoured his children.

Another change to which M. Klackzko does not allude, but which is not without its significance, is that which has come over the German students, who have almost entirely ceased to be the turbulent "Burschen" of former days, always the first to take part in every disturbance. A still more important sign of the times is the growth of a large, sound, and constantly increasing economical and political literature. Dr. Gneist's work upon the English constitutional and administrative system, which supplies to a certain extent a great blank in the labours of our own political writers, may be taken as a fair sample of the kind of book to which we allude.

On the other side of the account must be set down the steady growth of the foolish and aggressive Pan-Germanic spirit which broke out for the first time in the Frankfort parliament. It is a strange circumstance that so clever a man as Varnhagen von Ense should have recorded in his diary his hopes that the flag of the Schwartz-roth-gold, that, namely, of German unity, might at some future day wave over the cities of Alsace and Lorraine; but even the sober Gervinus predicted that the future of Europe was in the hands of the Germanic races, and Metternich, so late as 1859, was dreaming of a partition of France, England taking the north, two small Bourbon kingdoms occupying the south, and the whole of the east falling to the Teutonic fatherland.

POACHERS AND MAGISTRATES.

After the "battue" of a parliamentary session, there is generally a few days' sport left for the Bar, and a Bill which has passed through a line of good shots in the House is often brought down in the courts of law. Better luck has attended the Poaching Act of last session, which will long be recollected for the vigorous opposition which it met with from Sir George Grey and others in the House of Commons, against the united support of the country gentlemen. It was generally thought that successive amendments had taken from it all its sting, and magistrates have everywhere been chary of convicting under it. The decision, however, of Chief Justice Erle, last week, has quite rehabilitated the Act, and has made it all that the most ardent of sportsmen can desire. The short facts of the case were these. On a Sunday morning in October last, at 6 a.m., a police constable met four men in company on the high road leading from Coggeshall to Braintree, close to the town of Braintree, where they resided; noticing that Brown's pockets contained something bulky, they searched him, and found on him five dead rabbits recently killed. The other three men walked away during this search; Melbourne was later in the day found in his bed, his clothes and shoes wet and dirty. On Chapman, who was also arrested, was found a net, and in one of his pockets rabbits' fur, and the cuff of his coat was smeared with fresh blood. Peters, the fourth man, was proved to have sold a dead rabbit at a beer-house for sixpence. There was no evidence that any of the four men had been seen off the highway during the previous night; and no evidence was given to show how the rabbits had been obtained, whether lawfully or unlawfully; nor was there evidence that any rabbits had been taken from any land, or that persons had been trespassing upon any land during the night. The magistrates of Essex upon this evidence convicted the four men, and fined them a shilling each, with costs, or to be imprisoned for fourteen days with hard labour; and a case was stated upon these facts for the opinion of the Court of Common Pleas.

The Act provides that where a constable on any highway has good cause to suspect any person of coming from any land where he shall have been unlawfully in search or pursuit of game, and having in his possession any game unlawfully obtained, or any gun, part of gun, or nets or engines used for the killing or taking game, he may search him, and afterwards may apply for a summons against him; "and if such person shall have obtained such game by unlawfully going on any land in search or pursuit of game, or shall have used any such article or thing as aforesaid for unlawfully killing or taking game, or shall have been accessary thereto, such person shall forfeit and pay any sum not exceeding £5." It will be seen, therefore, that to warrant a committal under this clause two things must be proved—that the person has either game or the implements for taking it on his person, and that he has obtained such game by unlawfully going on any land in pursuit of it, or have used the implements for unlawfully taking game. In the present case there was undoubtedly evidence of the first; and the only question was, whether there was evidence of the men having unlawfully gone on any land in pursuit of game, or having used the implements for unlawfully killing game. The evidence certainly connects the use of the nets with the killing of game, but the lawfulness of the act must depend upon the place where the game had been killed. Now, what evidence is there of this? Whose land had been trespassed on? Whose game killed? Surely the word "suspect," in the first part of the clause, is only for the protection of the police constable in his search, and is not to justify the magistrate in convicting on mere suspicion!

In the opinion of the Court, however, "the justices were right in applying the ordinary rules of evidence to the circumstances proved, and were right in inferring from those circumstances that the men, with the exception of Melbourne, had become unlawfully possessed of the rabbits, and had been unlawfully in pursuit of game, and that it was not necessary to prove whose land they had been on; with respect to Melbourne, the Court was of opinion that there was no evidence to support the conviction."

The effect of the decision will be that, in cases where persons are arrested on the highway in possession of game or nets, the *onus* of proof as to where the game had been procured, or on what land the implements had been used, will be thrown upon the accused; for this we can see no warranty in the Act, nor precedent in other cases, where the law has always been held that innocence is to be presumed till guilt is proved. Indeed, the law rests upon this only safe ground; for, suppose that, in a case like the present, a poor man is found with rabbits which he bought from a poacher or from a gamekeeper, who is perhaps committing a breach of trust in selling game; or suppose that he has been asked by a poacher to help him in carrying the game along the road, what possibility is there of his calling evidence to prove his innocence? In the present case,—one undoubtedly of great suspicion,—it may well be that one of the men was not guilty, and that the man who was let off by the Court because he had neither rabbits nor nets on his person, was the guilty one,—yet what possibility was there of the innocent man getting the others to prove his innocence?—it would be a confession of their own guilt. Suppose a dozen men going along the road with a cartful of pheasants and nets and guns, according to this case, is the man in charge of the cart alone to be convicted and the others let off?

Again, under this decision persons may be convicted where they have taken rabbits from the land of owners who have no wish to enforce the game laws, or who allow rabbits to be snared or netted. The mere suspicion, without proof of some offence, is very dangerous ground to rest on. Suppose a noted pickpocket to be found on a racecourse, having on his person a gold watch which has evidently been just broken off from a chain; there would, of course, be the strongest suspicion that he has become unlawfully

Digitized by Google

possessed of the watch; but unless an owner can be found for the watch, nothing can be done to the pickpocket; and it would be the same with pheasants or rabbits, if by law they were property. The Act was intended by its originators to be a step towards investing game with the qualities of property: but it goes much further, and makes the mere possession of game, under suspicious circumstances, evidence on which county magistrates will be justified in convicting: a power which we are very loath to see placed in the hands of most magistrates in game-preserving counties. It is a misfortune that there is no possibility of the present case being carried to a higher tribunal; and as all similar appeals must come before the Court of Common Pleas, we must look upon the law as settled till Parliament shall, as we hope, amend the Act.

We fully admit that some provision of Parliament was necessary to check a system of poaching by gangs of men who would clear a whole estate of its game, and were then able to cart away the proceeds of their raid without fear of interference from the police. An amusing case of this kind lately occurred, in which, a party having been invited to a battue, in vain were the covers beat—not a pheasant was to be seen. At the end of the day, the host, who was excessively annoyed, apologised to his guests for the want of sport, saying he was much surprised at it, for he had himself turned out 200 live pheasants in the woods only two days before. It afterwards appeared that a gang of poachers, in the interest very likely of the poulterers who supplied the pheasants, had cleared the woods only the night after the pheasants had been turned out. Now, with every sympathy for the gentlemen who were robbed of their sport, we have not overmuch for the host or for sportsmen of that sort, of whom it is from time to time recorded in the sporting papers that so many hundred or even thousand head of game have fallen in a week's sport in their covers; and we have no wish for the patrons of "sport" of this nature to strain the Game Laws to a point which may fill our gaols with suspected poachers, and bring the law into hatred and contempt among the labouring classes.

PERORATIONS.

It is related of the Japanese envoys who lately visited our shores, that after a sojourn at a friendly court, they used at parting to pay a visit of ceremony to the palace, and express their regret at the prospect of departure in a set speech. The First Ambassador would commence a graceful acknowledgment of all the attentions shown to himself and his suite; but, after some two or three sentences, he would become so overwhelmed by his feelings, that his voice shrank up to a piping treble, and the rest of the speech was delivered in a stifled whisper. Without pronouncing an opinion on the propriety of this special form of leave-taking, civilized nations must, nevertheless, confess that the Japanese have paid a great deal of attention to style. In one respect our views on speeches are the same as theirs. We openly profess to consider the end of the oration to be its most telling part, and the most worthy of special elaboration. All orators wish to be thought to care for the honour of the country, the welfare of society, and the eternal destinies of man; but they invariably reserve these euphonious topics till the last. The immediate prospect of leaving off has an effect upon the mind so extremely exhilarating, that the speaker is carried away by a flood of mighty thoughts, and rises beyond himself. Swans sing before they die, and members of Parliament prophesy before they sit down. Listeners applaud, in some cases because they admire what is said, and in others because they are jubilant at the near prospect of release.

Perorations are worth some study, not only from the insight which they afford into the welfare and destinies of man, as looked at from various points of view, but also as conveying the speaker's ideas of the best possible style. Even the dullest of mortals can throw whatever is in him into the facile topics of a peroration. However small may be his intellectual resources, he has in such general remarks an open field to display them. It follows, that if there is, in any respect, a large agreement among perorations, it will afford the nearest approach that can be made to a common-verdict of orators. Such an agreement certainly does not exist as regards the natural subject-matter. There is a clear understanding that it shall be something grand and comprehensive; but so many things are both grand and comprehensive, that the choice is, after all, a wide one. For the very last words of all, nothing can be so well recommended as "public safety." There is a dignified, and yet modest emphasis, about the term which is found to be highly calculated to elicit cheers. "The happiness of mankind" has been found good for the provinces, and Mr. Gladstone is much attached to it; but for parliamentary eloquence, a young orator will do well to confine himself either to "public safety" or to "the affections of the people." Mr. Bright has once or twice adopted "the renown of Parliament," and seems continually to hover round it towards the end of his speeches; but in mere humble people it might be thought a shade too presumptuous. Mr. Disraeli has of late cultivated variety in the perorations of his great speeches. In 1861 he delivered two which claimed a high place in the annals of eloquence: one of them closed with "the people of England," the other with "the conduct of their representatives." In 1862 his four chief speeches had for their conclusions "the fortunes of the realm," "the taxpayers of the country," "public money," and "the public service." In the same period his rival managed to steal a march upon him by appropriating "the happiness of the people" twice in a single session: once he found "the spirit of the constitution" answer admirably, and once he sat down with an allusion to "the nations of the world." Wonderful indeed must be the gift of eloquence, which can enable great speakers so often to produce the same kind of sentiment in so many different ways; and marvellous the art, by which so many different subjects can be made to issue in the same kind of sentiment!

In the subject-matter of perorations there is to be seen, amid a general agreement, a considerable variety of detail; but in respect of cadence, the measured beat of the sentences, there appears to be, in all seriousness, a very distinct uniformity. For the sake of distinctness in terms, it may be as well to premise that cadence implies nothing more than the allotment of the words on which stress falls in each clause of a sentence. Writers have sometimes spoken of a harmonious style; Lord Macaulay and Lord Brougham have done so, among others, though it is known that the former expressed contrition before his death for the venial offence, and the latter would probably, upon reflection, do the same. The term is simply inaccurate: rhythm or cadence is simply the beat of the heavier syllables, broken up as they are by lighter ones, and by the intervening stops. We think we shall be able to show that the English language requires, for rhetorical perfection, a certain particular cadence; and since, above all things, it is necessary not to be monotonous, this cadence is reserved for the more emphatic passages, to which class a studied peroration will, of course, belong. That to which we refer is the trimeter, or triple beat; and laying this down as the first law of cadence, the second would seem to lie in the still more certain fact that a double beat at the end of a sentence must be invariably preceded by another. For example, let us begin with the following sentence, which closes Lord Macaulay's first speech on the Reform Bill, one of the most highly wrought of all his speeches:—

"The danger is terrible. The time is short. If this Bill should be rejected, I pray to God that none of those who concur in rejecting it may ever remember their votes with unavailing remorse, amidst the wreck of laws, the confusion of ranks, the spoliation of property, and the dissolution of social order."

Why did the orator insert here the word "social?" It is not necessary to the sense. The reason clearly is, that he instinctively felt that the triple cadence was the fitting close for the appeal. And the effect will generally be increased if another similar clause precedes. Fox closed his speech on the state of Ireland thus:—

"I shall now relinquish this subject, perhaps for ever, by repeating a sentiment that I have before thrown out during the discussion. I will not barter English commerce for Irish slavery. That is not the price I would pay, nor is this the thing I would purchase."

The two triple measures are increased in this passage by a clause of an entirely different character which precedes them both; and the rhythm is none the worse if this is left slightly monotonous. The peroration of Lord Brougham's celebrated defence of Queen Caroline is the perfection of cadence, though the speaker was more remarkable for fluency and vigour than for the nice adjustment of his words. No one, again, can have read the denunciation of Jeremiah against the feeble king of Judah, without wondering at the majestic march of the sentence,—an effect chiefly due to the trimeter beat of the English version:—

"O earth, earth, earth, hear the word of the Lord. Write ye this man childless, a man that shall not prosper in his days: for no man of his seed shall prosper, sitting upon the throne of David, and ruling any more in Judah."

Those who have but rarely studied the speeches of ancient and modern times, would be surprised if they could see how general this rule is. Of late times it has become even more general than formerly. The chief use of a dimeter ending—a double cadence—is in plaintive or despondent utterances; and in this case it is virtually quadruple. We hardly remember, in all the speeches of the best English orators, a single instance of a trimeter followed by a dimeter at the end of an effective speech. The speeches of Pitt

Digitized by Google

and Fox are both very frequently marred at the conclusion by the formality of pronouncing the words of a resolution, or reading a petition or amendment; but the best that we have are generally in the form we have mentioned. Of all the speakers of that time, Burke is the most dissyllabically inclined, as was Canning in later times; the latter, however, never greatly elaborated his perorations, and of all that he made, the most famous is the peroration of his speech on affording aid to Portugal, which ends in a series of triple cadences.

One great speaker alone, and one unmatched in rhythmical beauty, was in the habit of concluding his speeches by a single forcible beat following a pause; and it must be confessed that in his hands it was extraordinarily powerful. It is hard to help quoting, though it is so well known, that magnificent ending of the "Declaration of Irish Right," than which nothing finer was ever spoken even by Grattan himself; but the whole passage would ill bear mutilation. It may not be out of place, however, to caution some readers that in more than one selection of rhetorical pieces the passage in question is mutilated, and not improved. "The breath of liberty,"—such were its closing words,—"like the word of the holy man, will not die with the prophet, but survive him." The solemn measure of this ending was, as we said, a favourite with Grattan; but sometimes he is as grand in his trimeter or even hexameter conclusions. "The labour of years she now gathers, in a harvest which she shares with her princes." Still better is the speech on the Revenue Commissioners in 1790,—"Let us bring forth the institution of Parliament itself to expostulate with the Irish Minister! or, if there is yet her spirit resident in this dome, let that spirit rebuke him! I cannot hear its voice, but I think I feel its dictates." A similar ending in respect of cadence, is that of Curran's defence of Rowan, as also in Lord Brougham's attack on the Durham clergy, and both his inaugural discourses, that at Glasgow University, and that of last year at the Social Science Congress.

Let us now turn to more modern times. Sheil, one of the most vivid of modern orators, ended his speech on the Repeal of the Union with a dimeter; but his splendid peroration to his defence of O'Connell, and that of his speech on the Irish Corporation Act, which hardly fell short of it, were both concluded with a trimeter. In Macaulay's own edition of his speeches we have the best means of seeing what that perfect master of cadence conceived to be good. It is easy to examine them. Setting aside those which may be considered doubtful, and those of which the conclusion does not fall into a regular measured pulsation, we find a triple beat in ten, a double in five, and a single beat, of the Grattan type, in one. Mr. Gladstone almost invariably concludes in the way which we have ventured to describe as the best. He is ending, for example, a great speech on finance: free trade is "one of the greatest boons which have ever in the history of man been conferred by a wise and prudent legislature upon a great and intelligent people." Or he is concluding a panegyric on Lord Palmerston: he is a Minister "of whom it will be recorded that not now alone, but for many years past, through evil report and good report, he sustained and supported the cause of Italy." It will be evident to any one who reads this sentence aloud, remembering its place in the speech, that a slight pause is naturally to be made after the word "sustained," so that the last bar, so to speak, is threefold, not fourfold; and the same is the case with the last words of Sheridan's great speech, which might seem at first sight to be dimetric. Mr. Disraeli's best and most highly-wrought efforts have the same musical ring. The end of his set speech on the state of the finances is a finished example. But no illustration can be better than the rival addresses delivered on the last night of the Budget debate in December, 1852—the debate which cost Lord Derby's Government their office. The first passage quoted is the conclusion of Mr. Disraeli's peroration; the second, that of Mr. Gladstone:—

"This I know, that England does not love coalitions. I appeal from the coalition to the public opinion, which governs the country—to that public opinion whose wise and irresistible influence can control even the decrees of Parliament, and without whose support the most august and ancient institutions are but the baseless fabric of a vision."

"You may refuse my appeal now—you may accompany the Chancellor of the Exchequer into the lobby—but the time will surely come when you will look back upon this vote, as its consequences shall sooner or later unfold themselves, with bitter, but with late and ineffectual repentance."

We have not space to extend the examination to the more rhetorical portions of great literary works. But we may merely mention, by way of illustration, the concluding passages of "Bulwer's "Last Days of Pompeii," and of the "Mill on the Floss," along with Mrs. Oliphant's description of Irving's death, as worthy of study for their extreme rhythmical beauty. Each of them will be found, as will most of the rhetorical passages which are most popular in the Bible, to bear out what we have said above. We have no right to pretend that the view that we have urged is of necessity the true one; at the same time, there must be some laws of cadence, and the striking uniformity which the instinct of great speakers, as exemplified in their perorations, seems to display, does appear to point in a very marked manner to the conclusion which we have ventured to draw from it.

SERVANT-GAL-ISM AND THE "CODE GAMP."

The spirit of the immortal Mrs. Gamp—if it ever walks the earth, or, rather, if it ever brings itself to cross the British Channel in one of those "packidges," of which, perhaps, it may be said that their awful and disturbing motion is not suited to the Gampian "constitugion,"—will be gratified to find that thoroughly Gampian notions of female dignity prevail in France as well as in England. How they may have come there it is difficult to say, unless, at a period anterior to human memory, a member of the illustrious Gamp family was blown across by accident from England, in an open boat, in the way in which all scholars of eminence believe that America was originally peopled by the Pelasgi. At a period when servant-gal-ism was as yet unknown except on British soil, it may be that some missionary Gamp, overcoming her dislike to the sea, possibly went over, like St. Augustine, to disseminate her principles among the benighted natives on the Normandy coast. From the Normandy coast the Gampian propaganda would naturally extend inland, and, by slow degrees, arrive at Paris, where distinct traces of it have recently been found. With their usual love of abstract principles, the French, however, have erected into a creed and an idea what in England was merely a habit and a custom. In England the female Gamp had her tastes and her pursuits, but was a law only to herself. Across the Channel a *Code Gamp* has been discovered, just as there is a Code Napoléon. The British Gamp had clear notions of what was due to her own dignity (which she had imbibed from the lessons of one who shall be nameless), and, knowing what she liked for supper, she usually had it; but she did not go so far as to lay down laws and to force others in domestic life to follow her example. Servant-gal-ism, accordingly, in England is not based so much on philosophical theories which have been promulgated by authority, as on individual fancy or caprice. It is a wild flower, not a garden-flower, and would scorn to cultivate itself by any given rules. In Paris, it seems to be different. An ancient philosopher complains that in his days the very dogs in the street had become imbued with revolutionary principles, and ran about with the most democratical air in the world. The French "servant-gal," in like manner, is not so much a woman as a system. She is not merely a domestic—she is a citizen, who knows how to apply the principles of the "fundamental pact" of 1789 to domestic life. Liberty, equality, and fraternity are not much good, unless they are brought to bear on the social relations of the parlour with the kitchen. It is the boast of the French Empire that it revives those principles of 1789 everywhere when it comes across "suffering civilization." The French Empire seems to have found civilization suffering downstairs, and to have entered on its mission with alacrity. A fair but frail socialist, of the name of Marie Gagneur, appears to have been the authoress of the *Code Gamp*. She probably began by asking herself some such question as that which agitated the Abbé Sièyes; and she certainly came to a similar conclusion. "Qu'est qu'est la servant-gal?—Rien. Qu'est qu'elle doit être?—Tout."

The world knows little of its greatest men; and Paris for a long time knew but little of its greatest woman. The thought never dawned upon anybody—not, perhaps, even on the Imperial Government—that they had got amongst them a revolutionary prophetess, who, in her humble sphere, had set about reforming the world. An English servant-gal would have gone off selfishly by herself, and enjoyed her own disregard of rules, quite careless as to whether her fellow-servants were emancipated from the tyranny of their masters and mistresses. The French servant-gal could not act so mean a part. She could take no pleasure in independence, unless she saw something like a nobler spirit spreading in the kitchen than a mere regard for material interests. The highest form of policy of which an English girl would have been capable would be, perhaps, some miserable combination below stairs, leading to a strike for wages. The Parisian servant-gal is a daughter of the Empire, and goes to war for an idea. She saw before her the possible regeneration of the "slavey" race; just as Napoleon III. wishes to regenerate the Latin race. Fixing her eye on this, she laboured on for years, sometimes successfully, sometimes fruitlessly, but always usefully. The only pain she felt, beyond the gnawing and agonizing pain of bondage, was,

Digitized by Google

perhaps, seeing her fellow-servants occasionally so lost to a sense of duty. Some of them received well enough her lessons or advice. Of some she could not but feel, as she lay down to sleep after her thoughtful day, that they were not what she could have wished to see them. It is so pleasant to be a backslider in the cause of servantgalism, and so hard to remember to persevere. The servant-gal who hesitates is lost, and in the hour of temptation, when a mistress is kind and indulgent, it is easy to take a step for which the servant-gal may bitterly reproach herself afterwards. Then, again, many of her companions would go a certain way, without carrying out their principles to a logical conclusion. Marie Gagneur found, no doubt, that there were temporizers downstairs as well as everywhere else; but still, upon the whole, she was successful; and when the time came for her to be taken up by the police—for a matter about the propriety of which the Code Gamp and the Code Napoléon happen accidentally to differ, and in which the police insisted on being guided by the Code Napoléon—she had it in her power to look back on a well-spent service. The lady whose money she had taken being an inveterate enemy of the Code Gamp, acting in a servile spirit, prosecuted her with animosity, and the magistrates sent her to prison. But they could not take from her the consciousness that she had provided a code which will be the benefit of her order for many generations, even after she has passed away.

The way in which the Code Gamp was brought to light is curious enough. The lady who had the honour of the society of its authoress as a "help" was somewhat astonished to find that four servants whom she had taken from the country, with excellent characters, in six months had to be dismissed again. Then it all came out. After some inquiry, she discovered that their characters had been undermined in consequence of an intimacy with the Gampian theory of life, as propounded to them by its admirable inventor. Living in the house, and always walking by her own standard, this exemplary young woman had taken upon herself to instruct all novices in service, and had actually drawn up a set of rules for their guidance, a copy of which was afterwards found in her possession. The rules began, in the spirit of the French Imperial code, with laying down the fundamental principle that servants are quite as good as their employers. The general proposition came next, that every servant is entitled to be absent from the house two hours a-day, between breakfast and dinner, and to have one day to herself every fortnight. A table of regulations followed, to be carefully observed by "every servant who has any self-respect."

1. To insist on going to market unaccompanied by her mistress.
2. To refuse to debase herself by washing or dry scrubbing.
3. To allow of no meddling with her private affairs or dress.
4. To receive whomsoever she pleases in the kitchen.
5. Not to allow her letters to be read.
6. To wear crinoline, a long shawl, and bonnet.
7. To demand an increase of wages every three months.
8. To take a fortnight's holiday twice a year to visit her relations.
9. To leave any family, if she does not receive a present after two months' service.

From the evidence given before the tribunal of correctional police, it appeared that the prisoner, Marie Gagneur, had followed this programme to the letter. Hers will be the proud and simple epitaph—She never debased herself by washing or dry scrubbing. It is more than most English servant-gals can say, when they reflect upon their past lives. With all this pride, she does not seem to have been wanting in those little touches of domestic affection, without which no Frenchwoman or Frenchman would be French. Article the eighth is dedicated—if we may so say—to a provision for the cultivation of family affections. Twice a year she required a fortnight to visit her relations. This proves she was not unmindful how high a place the "culte de famille" must occupy in every social system. It is a picture of honourable simplicity united with pardonable pride. The proud servant-gal, who would allow none to dictate to her, becomes twice a year a child again, and visits her relatives as affably and humbly as if she had never been brought up to wear "crinoline, a long shawl, and a bonnet." The Gampian Code is remarkable in another way, as showing a little sense of what may be done with masters and mistresses by an earnest, self-respecting servant-girl. Marie Gagneur does not seem to have thought it possible to live in a house for two months without receiving a present from the family. If she lived up to her views, as we are assured she did, the family must have been a strange one, which felt inclined to make her extraordinary and supernumerary presents. The high spirit, however, of Marie Gagneur could not brook neglect. She brought to the service of her "employers" a soul that had never debased itself by dry scrubbing. But she expected, on their part, confidence and esteem. In this respect her theory was the converse of the Imperial theory, which requires that the power should come from the Sovereign, and the confidence from below. Marie Gagneur maintained that the power should come from below, and the confidence from above. "L'état c'est moi," said the French monarch. "La famille c'est moi," said Marie Gagneur. She has gone to prison for a time, in consequence of the mingled meanness and obstinacy of her mistress. It is to be hoped that when her term of confinement is over, she will reappear to carry out her mission, and to place for ever on a firm and constitutional basis the rights of the female servant. Ultimately, no doubt, each house will be conducted on the principles of universal suffrage. Meantime, Marie Gagneur is suffering the penalty of those great minds who allow themselves to be in advance of their age.

THE PAST WEEK.

The insurrection in Poland, alarming symptoms of which were mentioned by us last week, has actually broken out. Its immediate provocation was the harshness with which the recruiting for the Russian army has lately been carried on. The city of Warsaw was occupied by 50,000 troops, many of them billetted in private houses. At midnight, the soldiery were ranged, in order of battle, through the streets, while sergeants entered every dwelling where a member of the family had been drawn for the conscription; so that the victims of forced military service were literally taken out of their beds and carried off, with their hands bound, to the citadel, about 2,000 in number, without exempting those who had aged parents or wives and children to support. The governors of all the provinces of Russian Poland had orders to proceed in the same manner. While the bereaved families of Warsaw were mourning, a central committee of Polish patriots raised the standard of resistance; proclaiming the whole country to be, not in a revolutionary, but an "exceptional" state, they denounced the Marquis Wielopolski and other principal agents of the Russian despotism; and they advised the youth of Warsaw to go forth and shelter themselves in the neighbouring forests. A supply of arms was expected from France, but stopped by the French Government. The effect of this invitation was, that some hundreds of workmen and young people, with a few of the peasantry, collected in different places, especially towards Modlin and Plock, which are situated lower down the Vistula, the one town being distant about twenty miles, and the other about seventy miles, to the north-west of Warsaw. Other bands of insurgents appeared at Minsk, at Sierock, and Pultusk, in an opposite direction. The railways and telegraph lines were at once broken up. A great number of persons enrolled for the army service fled southwards, and took refuge beyond the Austrian frontier. The Russian Government has shown, however, its determination promptly to put down this revolt. Large forces were instantly sent from Warsaw, from Bialystok, and from Grodno, to disperse the insurgents. We already hear of their being driven from the neighbourhood of Modlin, which is an important garrison town; and they were defeated in a skirmish at Plock, where 150 of them were taken prisoners. In another instance, it was the Czar's troops who were forced to retreat. In most places, as the official reports take care to inform us, the peasantry have held back; and they have even aided, here and there, in capturing the insurgents. At Lublin, they took twenty prisoners, one of them a Roman Catholic priest; these are all to be tried by court-martial. The districts of Kovno, Grodno, and Volhynia, in Russia itself, but on the Polish border, have been placed, as well as Poland, in a state of siege. The railway communication between St. Petersburg and Warsaw is stopped by the destruction of a bridge over the river Bug. There are later accounts of bloody collisions between the troops and the insurgents. A thousand rebels were posted at Ostroyka, and others at Brzesclitewski, and Bialapodolska. A troop of insurgents attacked Tomaszow, driving out 500 Cossacks, and disarmed several frontier Cossack posts. Warsaw students accompanied the rebels. On the whole, there seems to be no chance of the success of the insurrection, the landlords and middle-class townspeople holding aloof. Martial law has been proclaimed throughout the kingdom of Poland. In the city of Warsaw itself, several of the soldiers are said to have been killed in the houses where they separately lodged; and this was magnified, by rumour, into a desperate conflict, but the facts are not yet exactly known. The Czar Alexander, in a speech to his officers on parade, at St. Petersburg last Sunday, referred with some emotion to these sad events in Poland. His Imperial Majesty said:—"Even in presence of these atrocities I will not accuse the whole Polish nation. I see in these events only the work of the revolutionary party, desirous of overturning legal order everywhere. I know that this party reckons upon finding traitors in our ranks. It will, however, not shake my belief in the faith and devotedness of the army, which will now more than ever fulfil its duties. Should circumstances require, you will prove that I can depend upon you."

The Emperor Napoleon has received an address from the French Senate, which echoes, of course, with docile approval, his own account of his policy, lately expounded in his speech. The Senate feels assured that "the period of conflicts is receding, and that of arrangements is drawing near;" that the attitude of Italy at Turin, and that of the Papacy at Rome, "are such as to allay any

Digitized by Google

apprehensions of a conflict;" and that the Emperor contrives very wisely to decline any compact with "the revolution," taking care "not to separate the legitimate aspirations of the peoples from the law of treaties." As for the Mexican expedition, "nothing remains but for our heroic army to advance." We learn, accordingly, by the despatches from General Forey and Admiral Jurien de la Gravière, that the army was, about the middle of December, advancing close to La Puebla, where the French suffered a severe check under General Lorençez last summer, on their road to the city of Mexico. General Forey reports that his troops are now in a good sanitary condition, though he requires one baggage mule for every three men, and has set up an hospital for the convalescent at Jalapa. It is thought not impossible that the French may be in the Mexican capital by this time.

The distribution of prizes to the French Exhibitors in the Great International Exhibition at South Kensington last year has already taken place at the Louvre, by the Emperor in person, with a speech, in which he complimented them upon their success, their energy, and their perseverance in upholding the honour of France. His Majesty said that "the redoubtable invasion of British soil," which used to be so much talked of, "has now been realised;" and he continued, "I am happy to have to bestow the reward of the brave. In fact, we have crossed the Channel and invaded English soil, not with arms which carry ruin, but those which confer prosperity and comfort." The Emperor then spoke of the benefit of treaties of commerce, which draw nations nearer to one another and improve their manufactures. He said,—"If foreigners have to envy us many useful things, France must have seen that she can borrow many moral conquests from England. We have, in fact, borrowed from England that spirit of liberty which, being extended to all opinions, insures the development of all interests." His Majesty further said that liberty, as understood in England, does not destroy, but reforms. He particularly remarked that, in England, "private industry acts for itself; the Government leaves to every one the responsibility of his acts; this system has not been followed without contributing to the industrial and maritime prosperity of our neighbours." The Emperor stated his conviction that France would attain the same object, when she had "completed the bases indispensable to the establishment of public liberties." He concluded by appealing to all good Frenchmen to unite and rally round the Empire, in order to arrive at this result.

The *Moniteur* says that Lord Cowley has been instructed by Earl Russell to express to M. Drouyn de Lhuys the satisfaction felt by the British Government on account of the late speech of the Emperor to the French exhibitors, and its strong desire to see the sentiments of mutual esteem daily strengthen the ties of friendship which unite the two nations as well as their governments.

The failure of the Emperor's proposal to mediate between North and South in America is referred to, with some expression of regret, in the address of the Senate. A fresh attempt has now been made, by a note which M. Drouyn de Lhuys has addressed to M. Mercier, the French Minister at Washington, dated 9th January, in reference to proposals for peace to be submitted to the Federal Cabinet. M. Drouyn de Lhuys says:—"In adopting this course, France is, above all, guided by her friendship for the Government of Washington. The Government of the Emperor has, therefore, thoroughly examined the objections which might be raised against friendly intervention. Among these objections were the reluctance of the Republic to admit any foreign influence, and the hope entertained by the Americans of a solution being arrived at by the force of arms. The assistance of the good offices of foreign Powers has nothing incompatible with the pride of a great people. Besides, in offering our services to facilitate negotiations between the belligerents, we have abstained from prejudicing their bases. France in no way disputes the right of America to decline the assistance of the great maritime Powers; but this assistance is the only means of hastening the end of the war. Should the American Government, nevertheless, reject foreign mediation, might it not at least enter into direct negotiations with the authorities of the South? The opening of negotiations between the belligerents would not necessarily involve the cessation of hostilities. Nothing would hinder the Federal Government from retaining the advantages which the continuation of the war might offer, and it might nevertheless enter into negotiations with the South. If the South consented, representatives of the two parties might meet in a city which could be declared neutral. The grievances which have led to the separation might be examined. The representatives might also consider whether secession is the unavoidable extremity, and whether the recollection of former times and common interests is not more powerful than the causes which have brought the two peoples under arms. Negotiations of this character would not be open to the objections which have been raised to European intervention; and, without giving rise even to any hope of immediate reconciliation, the armistice would nevertheless exercise an ameliorating influence upon present events."

The *New York Times*, which is supposed to have semi-official communications from Mr. Seward, narrates, with suspicious minuteness, a conversation alleged to have passed between the Emperor Napoleon and Mr. Slidell, the unrecognized envoy or agent of the South. The Emperor is reported to have asked Mr. Slidell whether a reconciliation and reunion of the North and South might not still be possible, if the North would consent to let the South reserve all its rights, to indemnify the South for all its losses, and to pay for the emancipation of all its slaves. He intimated that there would be difficulties in the way of a recognition of the South by the European Powers, if the South was obstinately resolved on making slavery the basis of its social and political fabric; and he remarked that it was the duty of France, which lent a hand to the foundation of the American Republic, to assist in an amicable settlement of this conflict, and if possible, to save the Union. Mr. Slidell replied that North and South could scarcely agree ever to live together again; but as for slavery, he believed that its gradual abolition, by the spontaneous action of the State Governments, was a mere question of time, when once the political independence of the South should have been secured.

The latest news from America, to the 16th, shows on both sides a disposition to pause. The *Richmond Enquirer* urges an armistice, but says that the separation of the South from the North is eternal. The *New York Tribune* says, that if foreign mediation were first offered to and accepted by the South, the North would give it a favourable consideration. In the State Legislature of New Jersey, a resolution has been proposed, recommending an armistice and the discussion of some terms of compromise. Meanwhile the Southern President, Mr. Jefferson Davis, in his message to the Confederate Congress, declares the anxiety of the South for peace, but says that its determination not to submit is unalterable. He denounces the conduct of the Federal armies as atrocious and cruel. Of Mr. Lincoln's emancipation proclamation, he says he may well leave it to the instincts of the common humanity of men of all countries to pass judgment upon a measure by which millions of human beings of inferior race, peaceful and contented labourers in their sphere, are doomed to extermination, while they are encouraged to assassinate their masters. Commissioned Federal officers attempting to execute the proclamation will, if captured, be delivered to the State authorities, to be dealt with according to the State laws for the punishment of criminals. Mr. Davis further complains, that the European Powers declared their neutrality without acknowledging the sovereignty of the seceded States, thus injuring the South and prolonging the war by admitting the doctrine that the Federal Government had a right to coerce the seceded States. If these States were independent, the refusal to entertain the same international intercourse with them as with the North was unjust. There is not much actual war news. The Federals have given up their attack on Vicksburg, and retired, but on the Arkansas river, a Confederate post, with seven thousand men, stores, and ammunition, has been taken. At Springfield, too, the Southerners are forced to retreat, pursued by a Federal army. They have put to death ten Federal officers in Arkansas, by way of retaliation for the act of General M'Neil at Palmyra. The State Capitol of Bâton Rouge, which place is in the hands of the Federals, has been burnt down by incendiaries. The *Alabama* has captured two more vessels, and a Federal squadron is sent into the Gulf of Mexico, to recapture, if possible, the transports which lately fell a prey to the Confederate cruisers there. Galveston, on the coast of Texas, is taken by the Confederates. The financial situation of the Federal Government has been explained by Mr. Spaulding to the Congress. He stated that the Government must borrow, in some form or other, nearly two million dollars a day, and must continue doing so, till next July, when the amount of the public debt will be two thousand million dollars. There being an immediate need of a hundred million dollars, the House of Representatives has passed an act for the issue of legal tender notes to that amount. Bills for granting money to assist Maryland and Western Virginia in emancipating their slaves, as well as a bill for the enlistment of 150,000 negro troops, have been laid before Congress.

At home, the week has been quiet,—all parties awaiting the opening of Parliament on Thursday next. The vacant seat for the borough of Cambridge, left by the retirement of Mr. Steuart, on the ground that, as a good Protestant Church Conservative, he will not support Mr. Disraeli's championship of the Pope, is likely to occasion a contest. Mr. Francis Powell, of Wigan, in Lancashire, is the Conservative candidate. On the Liberal side, Mr. Shafto Adair, who formerly represented the borough, declines this time to come forward; but another candidate has been found in Mr. Henry Fawcett, a Fellow of Trinity Hall, and the author of some well-approved essays on political economy and social science, who once stood for Southwark, a few years ago. He will support the foreign policy of Lord Palmerston's Government, but advocates a stricter economy in the national expenditure. He is thought to have a fair chance of uniting all sections of the Liberal party in his favour. Several members of Parliament, but not of the greatest note, have been making speeches to their constituents this week; at Greenwich, Mr. Angerstein said, that he had observed with much pain Mr. Cobden's inclination to act with the Conservative party against the present Administration; at Leicester, Mr. Peter Alfred Taylor remarked that both the great parties are just now wonderfully unanimous in their desire to have no reform at all. Non-intervention in America, but with a sentiment in favour of the North or the South, as the bias of individual opinion may be, is the chief topic of every discourse on the political prospects of the day.

A deputation of some importance has waited on the Archbishop of Canterbury, the Archbishop of York, and the Bishop of London, to urge the necessity for a combined organization of clergymen and laymen to extend the spiritual working of the Church of England. Most of the laymen in the deputation stated that they belonged to societies for the defence of the Church of England from external enemies, but they felt that it was useless to guard it from without unless its action was improved within. Their present object was to increase the number of clergymen in the Church till their numbers were adequate to take the pastoral oversight of the whole

Digitized by Google

population; and this they thought would best be accomplished by beginning with some manageable district—say a rural deanery—where all the local resources would be applied to the purpose and supplemented by the liberality of the district. The three prelates agreed in heartily approving the scheme. The co-operation of clergy and laity, organized through the rural deaneries, to bring the spiritual agencies of the Church within reach of the great mass of the people, was, in their view, the true course of Church defence; and the Bishop of London added some remarks on the duties of churchwardens, and on the importance of their making full and true presentments, to supply the local information which is required.

An address, signed by many of the clergy and laity, is being prepared, to desire the Archbishop of Canterbury, or Convocation, to take some steps to purge the Church of that blot upon her orthodoxy which, in their view, has been caused by the late publication of the Bishop of Natal. The Bishop of Ripon, also, in presiding at a meeting of the Scripture Readers' Society, has noticed the "painful spectacle" of a man in Dr. Colenso's high office, "miserably perverting his talents" to disparage the historical accuracy of the Pentateuch. The Bishop of Durham has withdrawn his countenance from the Society for the Propagation of the Gospel, because its conductors refuse to censure the Bishop of Borneo for his share in the fight with the pirates, which he narrated with so much gusto in the *Times* a few months ago.

On the special topics of social reform, which most occupy public attention just now, several speeches of interest have been delivered within the last few days. The Bishop of London, at Islington, has pleaded on behalf of ragged-schools; Mr. Adderley, in Warwickshire, has summed up the results of late experience in juvenile reformatories; the Earl of Carnarvon has presided at a meeting of the Hartley Institution, at Southampton, where he praised the establishment of reading-rooms and educational classes for workingmen.

A meeting has been held in Dublin by the Marquis of Waterford and other gentlemen interested in the tidal salmon fisheries of Ireland, to oppose the bill which is about to be introduced into parliament for prohibiting the use of fixed engines in the taking of salmon, and for regulating, in other ways, the conduct of the fisheries.

The Bank rate of discount has again been raised to 5 per cent., but the funds remain steady at 92¼ to ½, and foreign bonds as well. The money market is calm; on some of the railway and other joint-stock companies the measure has had rather a depressing effect.

The gale which blew for several days last week, besides causing the wreck of sundry vessels, but without much loss of life, destroyed the foundation of Lytham lighthouse, built upon piles, near the mouth of the Ribble, on the Lancashire coast; and, in spite of all the efforts made to repair the damage, the edifice has fallen.

There has been a meeting in Exeter Hall, convened by the new Negro Emancipation Society, to express sympathy with President Lincoln and the Northern States of America, and to denounce the "treason and tyranny" of the slave-holding States. The chief speakers were the Hon. and Rev. Baptist Noel, Mr. Thomas Hughes, and Mr. J. M. Ludlow, the Rev. Newman Hall, and Mr. P. A. Taylor, M.P. There was some opposition, an amendment being moved in favour of recognizing the Southern Confederacy, but the original resolutions were easily carried.

The Court of Queen's Bench has had to refuse several applications for leave to prosecute or sue the high officers of State, for alleged neglect of duty, to the injury of private persons. Last week, the Court decided against Mr. O'Malley Irwin, an Irish barrister, who, after having failed in an action against the Home Secretary, for not appearing in the witness-box when Mr. Irwin was tried for the misdemeanour of obtaining a revising barristership by false representations, again sought redress, because Sir George Grey had since advised Her Majesty to disregard his "Petition of Right." In the next case, Miss Rosina Fray, the plaintiff non-suited in an action against the Earl of Zetland, in whose family she had been governess, wanted to make Mr. Justice Blackburn personally responsible for his judicial opinion against her claim. The last instance is that of Mr. Maillard, an Irish landowner, who asked for a mandamus to compel either Sir Robert Peel or Sir George Grey to grant him a special police escort, for the protection of his life and property, threatened by assassins and mobs. The Court referred him, of course, to the ordinary police magistrates of his district.

The Prussian Chamber of Deputies has adopted, by a majority of 255 to 68, the constitutional address to the Crown, protesting against its recent violations of Parliamentary government.

Sir Robert Peel, while lecturing at a provincial mechanics' institute, on the various specimens of wood shown in the Great Exhibition, made a digression on the subject of the American civil war; he denounced, as odious and foolish, the vindictive conduct of the North, and hoped the South would gain its independence, believing that this would best further the abolition of slavery.

The British Chamber of Commerce at Shanghai has memorialized our Foreign Office to enforce the Treaty of Tien-tsin, with regard to the privileges of trading up the Yang-tze-kiang river, and of residing in the interior of China.

The Lord Mayor and the Bishop of London have spoken at a meeting on behalf of the Whitechapel Ragged Schools.

Local disturbances, with an extensive conspiracy, have broken out in Greece.

Reviews of Books.

KINGLAKE'S CRIMEAN WAR.*

Mr. Kinglake, as we have seen, ascribes to Louis Napoleon's atrocities, and his struggles to avoid their consequences, a prominent part amongst the causes of the Crimean war. We have already ventured to doubt whether, in his eager anxiety to do signal justice upon a great criminal, he has not come to exaggerate the importance of his crimes in this particular direction. The case becomes more doubtful as we proceed. The executioner feels rather too much pleasure in his task. He takes a cool and deliberate aim, and then brings down his scourge with a hearty indignation right on the tenderest places. Every sentence leaves its mark, and we seem to hear a subdued but virtuous chuckle from the spectators, as each stinging blow gets well home on a criminal inaccessible to ordinary punishment. But we feel, as we have elsewhere intimated, that the desire for justice is quickened by personal hatred; and the historian accepts a lower standard of evidence when it bears against the man he detests. For example, the picturesque physiological statement that Louis Napoleon's skin, in moments of alarm, is liable to be suffused with a greenish hue, has rather the flavour of spiteful drawing-room gossip than of history. When a man can be proved an accomplice in, if not a perpetrator of, wholesale massacres, we do not want an extra statement to be thrown in, on insufficient evidence, that he is apt to turn green. He is quite bad enough without it. In more important matters than this we should be all the readier to accept Mr. Kinglake's statements if we could feel certain that the previous bad character of the accused had not been allowed to weigh too much in the judge's mind. We cannot resist a suspicion that Louis Napoleon is charged with being the author of the war, much more because Mr. Kinglake thinks that such a thorough-paced scoundrel naturally would provoke a war, than because he has proved any overt acts against him. As this is the very cardinal point of the whole theory expounded in the book, it is worth while to point out the slightness of the evidence in favour of it.

Louis Napoleon, says Mr. Kinglake, provoked the Crimean war principally by prompting certain movements of the allied fleets. Four times the fleets were moved gradually forwards, till they had passed Constantinople and reached the Black Sea, and four times the Emperor Nicholas was thrown into paroxysms of fury which upset all previous negotiations. The last and most decisive of these movements, by the way, was one which proceeded at least as much from Lord Palmerston as from the French Emperor, and was one, which the English people would have infallibly demanded. But, says Mr. Kinglake again, two most important overtures for peace were also favoured if not originated by Louis Napoleon. One of these, the Vienna note, was within an ace of being successful. The five great Powers had every one agreed to it, and it was not till it came into the hands of Lord Stratford and the Turks, that it was exploded, and war finally declared. How, if Mr. Kinglake attacks Louis Napoleon for his manipulations of the allied fleet, can he escape giving him credit for these attempts at peace—attempts, moreover, which were nearly successful? He suggests two theories; either, as "some men will believe," the negotiations were mere masks to the real intent, or as is "perhaps more likely to be true, the French Emperor was all this time hesitating and keeping his judgment in suspense." It seems to us that the last conclusion is the only one which the facts support. Mr. Kinglake's mind is bent to consider the other as tenable only by his thorough-going hatred of the French Emperor. If so, the whole sting is taken out of the accusation. Perhaps it is true that Louis Napoleon was anxious to put himself forward in the eyes of Europe; it is in all probability true that he was anxious to turn away the eyes of Frenchmen and the world from the atrocious crimes he had committed, and we estimate their atrocity not one whit lower than Mr. Kinglake. But a very different responsibility is attached to the man who deliberately gets up a war, and the man who is merely seeking for notoriety, and who is as willing to gain it by making peace as by making war. The honour or the disgrace must remain, not so much with the restless intruder who had seized the position of second to one of the antagonists, but with the duellists who would not be pacified without drawing blood.

This view of the case, which is suggested by the earlier negotiations, becomes much stronger in the later part of the history. Not only does Louis Napoleon cease to take the most prominent part in inciting to war: it becomes wholly and solely the work of English people, newspapers, and ministers, and we mention them in the order of their relative importance. The story, as Mr. Kinglake tells it, is as follows, and is one of singular interest. When the Russians had abandoned the Principalities, and the allied armies were still at Varna, it seemed that all the objects of the war had been obtained. There was every probability that Nicholas, with his forces driven back into the interior,—with the allied fleets in possession of the Black Sea and the Baltic,—with all the expectations which had led him into war disappointed,—would be ready to make peace on honourable terms. How was it that this expectation was again falsified? It was not this time owing to the diabolical machinations of the French Emperor. He, as Mr. Kinglake good-naturedly suggests, was quite safe in leaving it to us.

* The Invasion of the Crimea. By Alexander William Kinglake. Blackwood & Sons, Edinburgh & London. 1863.

Digitized by Google

But the fact was that the English people were, as our cousins express it, "spiling for a fight." We had, after forty years' peace, collected an army, and sent it all the way to Turkey; and we felt the disappointment at the prospect of peace, which the appearance of the policeman causes in the mind of the prizefighter stripped in the ring. Moreover, there was something tempting about Sebastopol. It was held out to us like an enticing bait at the end of a peninsula, with the warlike stores and fleets that had been collected in twenty-five years. It seemed incredibly hard to give it all up, and come back without so much as one dash at the prize. We signified our intention to her Majesty's servants by the national organ—the *Times*. Mr. Kinglake, we may remark, in passing, treats the *Times* to a sample of his acid criticism, dissolving that mysterious abstraction into its component atoms with great point and vigour. The *Times*, however, delivered its oracle on the 15th of June, 1854, to the effect that Sebastopol was to be destroyed. In obedience to this mighty intimation of the popular will, the Duke of Newcastle set about composing a despatch to Lord Raglan, and by that despatch there hangs a tale. "The despatch," says Mr. Kinglake, "bristled with sentences tending to provoke objection." The despatch, moreover, was read to the acute and critical ministers who composed Lord Aberdeen's cabinet. Not one of the cabinet raised an objection, and why? because the cabinet went fast asleep. Three times the attempt was made to attract their attention. Twice they fell asleep; a third time "a blissful rest (not actual sleep)," reduced them to "a quiet and unassuming frame of mind." And thus the despatch went forth, unaltered by a single word. The absence of any modification was the cause of our going to Sebastopol. The despatch reached the allied commanders at Varna. They were in almost complete ignorance of everything they would most wish to know about the country they were to invade; they knew next to nothing of its geography, or of its inhabitants, or whether the forces opposed to them were 40,000 or 100,000. Naturally enough, both French and English generals thought the attempt too rash to be undertaken. Now, as a collateral consequence of Louis Napoleon's misdeeds, the French commander, St. Arnaud, had received his command, not because he was fit for it, but because he had fought in the streets of Paris in the days of December. That service, by an infamous decree of Napoleon's, was counted equally with service against an enemy. St. Arnaud had in his time been a man of vigour and resource. He had in particular smoked to death 500 Arabs in a cave, without letting anyone know of it but his brother and Marshal Bugeaud. But his health had now broken down. He was only fitfully able to take any share in the real command of the army; and Lord Raglan generally went quietly on his own way, leaving the French to follow him. This was especially true of the expedition to Sebastopol, and it is, therefore, interesting to see what were the motives of Lord Raglan's decision. We cannot think that, accepting Mr. Kinglake's account, they were really creditable to his judgment. He consulted Sir George Brown, and the two veterans began by laying down a canon, with which it would be cruel to find fault. They were to do what the great Duke would have done. Now, said Sir George Brown, the great Duke would certainly not have gone to Sebastopol; still I advise you to go, because from the tenor of the Duke of Newcastle's despatch, if you don't go they will get some one else to go for you. This suggestion, we are told, did not at all govern Lord Raglan's decision. His view of the case was founded upon the assumed maxim of the Duke of Wellington, that a commander of an army owed the same duty to the Secretary of State as a subaltern to his military chief. He neglected the fact, that, when the great Duke chose he would disregard the Secretary of State and his own maxims when they came in his way, as resolutely as if maxims and secretaries of state had been French armies. Lord Raglan thought, therefore, that the Duke of Newcastle's letter left him no choice, and before long 60,000 men were on their way to the Crimea; and thus we plunged headlong into the serious part of the war, owing to a chain of causes, in which, on Mr. Kinglake's own showing, Louis Napoleon had no part whatever, or none but a strictly passive part. The will of the English people, the power of the *Times*, the Duke of Newcastle's letter, the sleep of the cabinet, St. Arnaud's incapacity, and Lord Raglan's reverence for the great Duke, may all come in for a share of the blame. But, for aught that we can see, Louis Napoleon might have been willing to make peace if we had not resolved upon war. Surely that 14th chapter was rather a digression after all. Louis Napoleon richly deserves to be denounced for his December massacres and transportations; but the edge of the attack is rather blunted than sharpened, when we try to fasten upon him a war which was much more owing to our own passions than to his misdeeds.

We have discussed at some length Mr. Kinglake's account of the causes which led to the war. We have not stopped to do justice to the clearness and beauty of the narrative in which they are described. It becomes still more vigorous in describing the scenes of the invasion and the fight at the Alma, in which, as Mr. Kinglake indirectly informs us, he had the advantages of personal observation. If we were to raise any objection to the account of the Alma, it would be that the story is rather too minute and detailed, and that we are called upon to follow the fortunes of each of the commanders as if they were heroes in a Homeric battle; the general effect, however, remains distinct and brilliant. It will probably be little more gratifying on the other side of the Channel than the former part of the book. The characteristic of Mr. Kinglake's account is, indeed, his very low estimate of the amount of work actually done by the French. The Russians had neglected to occupy the western part of the ridge in sufficient force, trusting, apparently, that the natural difficulties would be a sufficient protection. The appearance of the French troops on the top of the plateau threw Prince Mentschikoff into a state of hopeless bewilderment, and he contented himself with moving seven battalions from his right flank to his left, and then moving them back again,—a manœuvre which naturally produced few results. Meanwhile, however, the French hung back. Their infantry had reached the top of the cliffs, but without artillery; and it is an unalterable French maxim never to engage without the help of artillery. Consequently, the troops remained simply standing their ground or fell back (in one part of the field, according to the Russian account, were driven back) till they found a shelter under the crest of the hill. Whilst the French army was thus hanging upon the slopes, without advancing, and exposed to a direct fire upon the centre of the battalions, they gradually became uneasy, and called upon Lord Raglan to advance. It was not till a much later hour that the French artillery began playing upon the massive columns of Russian troops and compelling them to fall back. Finally, it was not till the ultimate success of the English attack that the Russians retired from this wing and left the French to occupy the key of the position—the Telegraph height. But what becomes of M. de Bazancourt's account of the desperate struggle round the telegraph,—"one of those desperate bloody struggles in which man fights body to body with his enemy, in which looks devour each other, in which the hands grapple each other, in which arms dashed against arms are made to yield sparks of fire?" M. de Bazancourt's account must be reckoned with the desperate fight of the *Vengeur*, the destruction of English squares at the battle of Waterloo, and other bits of French historical romance; in other words, there was not any fighting at all, and the Russians simply retreated under a heavy fire of artillery.

The chief interest of the battle consists in the desperate fight between English and Russians, in line and column. It does not appear that there was much science expended in this part of the field. It was that kind of downright, pig-headed pounding which Englishmen admire. For an hour and a half the men had been lying down under a heavy fire of artillery, not liking it so much as a bayonet charge, but decidedly preferring it, says Mr. Kinglake, to a church parade. As they got the word to advance, the whole line sprang up, with a front of two miles and a depth of only two men, and went straight at the enemy. The light and second divisions had, unfortunately, overlapped and got into partial confusion. In passing through vineyards and inclosures, the light division had gradually been reduced into a crowd, with just a trace of its original file-formation. Before they had waded and swum the river, even this trace was gone, and by the time they had climbed the opposite bank, they were nothing but a disorderly crowd of Englishmen in red coats, with rifles in their hands and a gray Russian column in front. They blazed away at this column, however, till it fell back, and then instinctively rushed forwards with a common impulse converging upon the great redoubt. The Russians gave them a final volley, and then through the smoke our men saw the guns rapidly withdrawn. There was a general race for the redoubt. Young Anstruther, "fresh from the games of English school life," won it, raised the colours of the 23rd on the parapet, and fell shot through the heart the next instant. William Evans, of the Royal Welsh, was a good second, and directly afterwards General Codrington leapt his horse into the breastwork. By this time of course the English lines had been reduced to a shapeless mass; no supports were near them; a Russian column moved down upon them; for a time the men still waited steadily; at last a bugle sounded "the retire" (no one knows by whose orders), and the men fell back, still slowly and still firing at the enemy, except in one place, where a mass still more confused than usual retreated in a panic, and broke a gap through the advancing line of Guards. The Guards had been following slowly, and at too great an interval. At one time, indeed, when they came under fire, some officer "of obscure rank" had said, "The brigade of Guards will be destroyed; ought it not to fall back?" "It is better, sir," replied Sir Colin Campbell, who was near, "that every man of her Majesty's Guards should lie dead on the field, than that they should now turn their backs on the enemy." So the Guards moved on. The Scots Fusilier Guards were broken down by the confused masses of the light division in retreat. General Codrington, having rallied about 300 men of different regiments, proposed to fill up this gap partially; but with a rather uncalled-for delicacy, asked the Guards whether they would like his assistance? The Guards, with a kind of magnificent insolence, answered No? The Russians meanwhile, according to a certain Chodasiewicz, were "astonished at the extraordinary firmness with which the red jackets opened a fire in line. This was the most extraordinary thing to us, as we had never before seen troops fight in lines of two deep, nor did we think it possible for men to be found with sufficient firmness of *morale* to be able to attack in this apparently weak formation our massive columns." Whilst the Guards were busily at work file-firing into the flank of the close Russian columns, till they began to bend and waver, the Highland brigade was advancing on their left. The great front presented by the thin English line persuaded the Russians that they were being attacked by overwhelming numbers—the reverse of the truth. The strange garb of the tall plumed Highlanders, masked by a curtain of smoke, as they advanced firing, and the ominous silence of their ranks, produced a vague terror as of unearthly beings; some of the Russians fancied they were being

Digitized by Google

charged by horsemen, strange, monstrous, bestriding giant chargers. The Russian cavalry remained unaccountably quiescent. Their artillery had been withdrawn; and in a few minutes the masses of Russian troops, unable to bear the galling fire opposed to them, "concluded to skedaddle." The English had fairly won the very heart of the position.

One thing remains to be explained. Why had the Russian redoubts been disarmed, and why did not their reserves come into play? The reason was this. After ordering the English advance, Lord Raglan had ridden forwards almost alone. He rode through the gap between the English and French lines, passed both French and Russian skirmishers, and went straight on till he gained a knoll in the very centre of the Russian position, commanding the rear of their redoubts and batteries, which they had fortunately left unoccupied. He immediately ordered up two guns; they were brought up just after the defeat of the light division. A few well-directed shots from them caused the withdrawal of the batteries which, till then, had held Sir de Lacy Evans in check; a few more caused the heavy columns of Russian reserves to fall back, and stopped the advance of another column upon the shattered remains of our light division. More than this, the very sight of the group of horsemen upon the knoll, misinterpreted by the Russian commanders, caused the great redoubt to be disarmed. Thus Lord Raglan's audacious solitary raid half-disarmed the Russians at the critical moment of the attack by Guards and Highlanders; and if it did not change the result of the battle, at any rate it decided it.

We have noticed only a few of the incidents which Mr. Kinglake describes with wonderful graphic power and with the vivacity of an eye-witness. It is a narrative which Englishmen should not willingly let die. Frenchmen perhaps would not grieve at its loss. They may think that honour and glory is very grudgingly doled out to them. Certainly, although we had the lion's share of the fighting, their movement, it seems to us, had by itself decided the battle. The delay in getting their artillery up the hill made the English advance a necessity, but when once they were fairly established there, the Russian position was in fact untenable. The accuracy of the facts, as reported by Mr. Kinglake, seems, however, to us unimpeachable. And this applies to the whole of the work up to its present stage. He has a clear and distinct bias, which makes many of his conclusions doubtful, but the carefulness and accuracy of his statements of fact (except when they refer to his special object of spite, the French Emperor) are as undeniable as the vigour of his narrative and the beauty of his style. Whilst regretting that the history should be pervaded by a vein of unfairness, we can sincerely congratulate Mr. Kinglake on having so far completed a genuine history, and one of a very high order.

THE WORKS OF THOMAS HOOD.*

THE question, *Comœdia necne poëma?* is as old at least as the time of Horace, and few in the present day would share his hesitation in giving an affirmative answer. But the critic of Hood is met, at the outset, by the further inquiry whether real excellence of both kinds, serious and comic, is likely to be found in the same writer. That such a combination is possible is settled conclusively by the example of Shakespeare; but one swallow does not make the spring. The fact we take to be this, that the highest poetical genius is inseparable from some sense of humour, just as the deepest moral earnestness is never disjoined from irony; witness, to go no further, Plato's Dialogues and St. Paul's Epistles. Milton's genius was essentially tragic, but he condescended to a punning elegy on the "University Carrier." Burns is as felicitous when he is funny as when he is pathetic; the power of the author of "In Memoriam" is not least conspicuous in the grim humour of the "Vision of Sin." On the other hand, comic genius of the highest order could hardly exist without almost equal powers of an opposite kind, though many accidents of temperament or circumstance might prevent their being equally displayed; but the converse does not hold true to the same extent. It is impossible to doubt that Aristophanes could have written tragedies, had he been so minded; but we cannot conceive Æschylus composing the "Frogs." These remarks seem the natural preface to a notice of Hood, who is about equally admired as a comic and a serious author, and has in both capacities attained considerable eminence. His prose works, though the most bulky, are the least important portion of his remains. The contributions to the "Comic Annual" are the most characteristic and the best, and, as ephemeral productions, deserving of high praise; but even these occasionally give us the impression of a writer who had to say something rather than of one who had something to say. His "National Tales," a series of short love stories, are readable, but commonplace; in fact, nature clearly did not intend him for a novelist; his only elaborate attempt of the kind, "Tylney Hall," cannot be considered a success. There are several amusing people among the minor characters, and some very amusing scenes, as especially Mr. Twigg's "feat shampeter;" but the principal characters of the tale, or those who ought to be such, are inadequately drawn, and the plot is unnatural and melodramatic to the last degree, with a superabundant allowance of villanies and murders. It is, in fact, merely an average sensation novel, with humorous incidents interspersed, and if it repays perusal it is for the sake of the fun, not of the story. Hood's humour is genial rather than caustic, and reminds us more of Dickens than of Thackeray; but he does not share the peculiar facility of the former in delineating the grotesque aspects of life below stairs, or rival the power of either in sustained elaboration of character. Justice Rivers, Mr. Twigg, Uriah Bundy, and Unlucky Joe are admirable sketches in their way; but there are no Pecksniffs or Becky Sharps. A charitably-disposed lady once said, when asked her opinion of a very dull sermon, that "it was entirely on the side of religion and virtue." This praise may safely be accorded to all that Hood has written; the moral is excellent, but it is not always impressive. In a "Voyage up the Rhine," consisting of imaginary letters from different members of the travelling party to their friends at home, he is far more successful. There is little pretence of a regular story, and plenty of room for play of wit. The hypochondriac uncle, who "went off at once quite insensible," and was at the point of death every time he fell into an after-dinner nap; the conventional English tourist railing at foreign customs and raving incoherently in foreign churches; and the estimable Mrs. Twisleton, "who never closed her eyes for a week after Catholic emancipation, for fear of being converted in her sleep," are but specimens of the general style of these highly entertaining epistles, which might be indefinitely multiplied. Indeed, the essentially comic nature of "Our Family," the author's last novel, left unfinished at the time of his death, shows that he had then learnt where his true strength as a prose writer lay. We rise from the perusal of this portion of his works with the impression strong on our minds which was lately expressed by a successor and admirer of Hood's, in one of the "Roundabout Papers," that he would have been a very charming person to know and be able to talk to. Nor will that impression be at all diminished when we turn, as we must now do, from his prose to his poetry.

The shorter poems, like the shorter stories, are better than the long ones, and chiefly for the same reason. It is in brief brilliant flashes, whether of wit or of sentiment, that Hood's peculiar genius is most conspicuous. The "Plea of the Midsummer Fairies" is decidedly wearisome; "Hero and Leander," though generally musical, and in parts very touching, disappoints us as a whole; and if, to take a very different example, "Miss Kilmansegg and her precious Leg" be quoted against us, we must reply that there, too, particular passages, witty or pathetic, form the main attraction. It is rather in pathos than in power that the speciality of Hood's serious powers must be sought. Of the latter, the most striking instance is to be found in the terrible "Dream of Eugene Aram;" of the former kind is the famous "Song of the Shirt." The "Lady's Dream" is less known but almost equally touching:—

"And oh! those maidens young,
Who wrought in that dreary room,
With figures drooping and spectres thin,
And cheeks without a bloom;—
And the voice that cried, 'For the pomp of pride
We haste to an early tomb!

"'For the pomp and pleasure of Pride
We toil like Afric slaves,
And only to earn a home at last,
Where yonder cypress waves;'—
And then they pointed—*I never saw*
A ground so full of graves!"

In the simplicity of the closing lines lies the secret of their exquisite pathos. Hood is eminently the reverse of Shelley; he does not idealize abstractions, or dwell, a hermit spirit, in a land of hopes and joys and dim surmises impervious to vulgar ken. His instinct is for the actual circumstances and sorrows of human life, and it is mainly by particular recollections or the sufferings of particular classes, (as in the poems just referred to), that his imaginative sympathies are evoked. He throws himself outward on the world as it is, not inward on his own conception of what it ought to be; burning with indignation, indeed, against tyranny and wrong, but not turning in disgust from a universe he would fain remodel, almost in defiance from its Maker. Hood would scarcely have comprehended "Alastor" or the "Revolt of Islam;" still less would he have shared the strange idiosyncracy which found expression in the "Cenci." Shelley, sensitive enough to be "tender over drowning flies," would have thoroughly entered into the sentiment which dictated the "Song of the Shirt," but he would never have written it. Not, indeed, that the genius of Hood can for a moment be put into competition with Shelley's; we have contrasted them for the sake not of marking the difference of power but the difference of idea. Both are in temper eminently unselfish, both earnest lovers of their kind, but the same feeling expresses itself in widely different forms. And while to the few who can appreciate him Shelley, with all his faults, cannot fail to be priceless, Hood will be popular for precisely the reasons which must prevent Shelley from ever becoming so. He utters feelings which all who have hearts can realize, and in language which all can understand. The poem to which these remarks least apply, and alone, of all which we have noticed, does somewhat remind us of Shelley, is his fragment on the "Sea of Death:"—

"Sad were my thoughts that anchor'd silently
On the dead waters of that passionless sea,
Unstirr'd by any touch of living breath;
Silence hung over it, and drowsy Death,
Like a gorged seabird, slept with folded wings
On crowded carcases—sad passive things
That wore the thin grey surface like a veil
Over the calmness of their features pale.

* The Works of Thomas Hood, Comic and Serious, in Prose and Verse. Edited, with Notes, by his Son. Seven vols. London: Edward Moxon & Co., Dover-street. 1862.

Digitized by Google

And there were spring-faced cherubs that did sleep
Like water-lilies on that motionless deep,
How beautiful! with bright unruffled hair
On sleek unfretted brows, and eyes that were
Buried in marble tombs, a pale eclipse!
And smile-bedimpled cheeks, and pleasant lips,
Meekly apart, as if the soul intense
Spake out in dreams of its own innocence."

Far more in harmony with the author's normal tone of mind is the song, "I remember, I remember," familiar to every child; the closing stanza of which re-echoes, in simpler language, the sentiment of Wordsworth's glorious Ode to Immortality:—

"I remember, I remember,
The fir trees dark and high;
I used to think their slender tops
Were close against the sky;
It was a childish ignorance,
But now 'tis little joy
To know I'm further off from heav'n
Than when I was a boy."

The same purity and naturalness of feeling is observable in many of the sonnets; for instance, that addressed "To an Enthusiast," and to "A Sleeping Child."

Hood, like all true poets, is fond of children. His comic poems are perhaps as compositions, more original, though it would not be fair to say that they are more characteristic of the man. That he could feel truly and deeply would be evidenced, if only by his touching lines, "To a false Friend," never published during the author's lifetime, with their bitter thrice-repeated refrain,—

"Our hands have met but not our hearts,
Our hands will never meet again!"

Indeed, his poems bear witness in every line to a genial nature and warm heart. Such feelings, however, are scarcely distinctive characteristics. But Hood's wit and play upon words is peculiarly his own. So far he was probably right in thinking his speciality lay in punning. This forms the charm of several of his prose writings, but it comes out even more conspicuously in many of his shorter poems. The well-known conclusion of "Faithless Sally Brown" may be taken as a typical specimen of his felicitous punning:—

"His death which happened in his berth,
At forty-odd befell;
They went and told the sexton, and
The sexton tolled the bell."

With which may be compared a verse of another similar ditty on Hero and Leander:—

"Why, lady, why,
So in love with dipping?
Must a lad of *Greece*
Come all over *dripping?*"

The same sort of ready wit in ringing the changes on words is sustained throughout "Faithless Nelly Gray," "A Soldier's Apology for Bow Legs," and several kindred lucubrations. In the "Elegy on David Laing," of Gretna Green celebrity, we touch on a richer vein of humour, though the poem is also plentifully garnished with puns:—

"From Prospect House there comes a sound of woe,
A shrill and persevering loud lament,
Echoed by Mrs. J.'s establishment
'For six young ladies,
In a retired and healthy part of Kent.'
All weeping Mr. L—— gone down to Hades!
Thoughtful of grates, and convents, and the veil!
Surrey takes up the tale,
And all the nineteen scholars of Miss Jones,
With the two parlour boarders and th' apprentice—
So universal this mistimed event is—
Are joining sobs and groans!
The shock confounds all hymeneal planners,
And drives the sweetest from their sweet behaviours;
The girls at Manor House forget their manners,
And utter sighs like prisoners."

A great authority has lately expressed regret that Hood, from a false estimate of his own nobler capabilities, should have devoted so much time to merely making jokes, instead of taking his station as "a true genius and poet." We have no wish certainly to depreciate his power of drawing our tears as well as exciting our laughter; and are free to confess that we attach a much higher value to the former than to the latter gift. We regret, too, that the constant pressure of literary engagements—for Hood did not write for his own pleasure merely—and a career cut short by premature death, did not leave him time and opportunity to cultivate more fully his graver vein of thought. Some things he has written so exquisite in their mournful melody, that we cannot help wishing we had more. Still we can hardly agree with Mr. Thackeray in thinking he mistook his vocation, when he devoted so much time to comic writing. A man who instinctively jokes on his death-bed, though he need not be so inveterate a wit as Sydney Smith—and Hood is very unlike him in many ways—must have the jocular element very thoroughly imbedded in his nature. And it was no doubt this light-heartedness of disposition which helped him to battle so cheerfully against the trials of an obscure and by no means affluent lot. That even in his gayest sallies, he was not forgetful of graver interests, and sought, as the late Sir Robert Peel expressed it, "to inspire fun and merriment into writings correcting folly and exposing absurdity," proves alike the soundness of his judgment and the goodness of his heart. But it would be an error to suppose that his jokes were simply "written to order," or that he was less himself as an amusing punster than as a lyrical poet. The same characteristics came to his aid for either purpose. He felt deeply, had a keen eye for discerning the weak or the strong point of his case, and a readiness for hitting it off in a few telling lines. In the happy use of words rather than in originality of thought, in quickness rather than in depth, his true strength lay. And he was so familiar with his instrument that he could use it for the most various ends. That these ends were never base ones is not a little to his credit as an author and as a man. Few poets have so thoroughly won for themselves our personal sympathy and respect; few have taught us so simply and yet so persuasively to laugh with them that laugh, and weep with them that weep. There are few, we fear it must be added, whose private history so entirely justifies the regard for them suggested by their works.

Thomas Hood will not take rank among poets of the highest order of genius. He is not the representative of any special idea. He is not, like Wordsworth, the calm votary of nature; or, like Byron, the terribly truthful photographer of every varying phase of selfish passion; or, like Shelley, the ideal prophet of unsatisfied desire; still less does he possess that rare combination of qualities which have made Tennyson the recognized exponent of all the deeper thinkings of his age. Rather he would seem, especially in his more serious moods, to have sat alternately at the feet of all. His meditative sonnets remind us strongly of Wordsworth; many passages, serious as well as comic, seem modelled upon Byron; the "Song of the Shirt" reads almost like an echo of Mrs. Browning's "Lament of the Children;" and the "Dream of Eugene Aram" recalls, in its very form, the "Rhyme of the Ancient Mariner." But if Hood is not, in the highest sense, an original poet, his sentiment is always noble, his language often strikingly felicitous; seldom, if ever, common-place. It is, indeed, as we have already hinted, in their nobility of sentiment, rather than in their intellectual conception, that the unity of his poems is to be sought. We do not mean that he always writes with a directly moral aim, but he is never oblivious of moral principle or religious reverence. His serious pieces are not mere lackadaisical rhapsodies; his funny ones are often something more than fun. The humour may be broad, occasionally flippant, never purposely ill-natured or profane. A genuine love of humanity, with a stern hatred of oppression and an instinctive sympathy for the weaker side, is the constant burden of his song. The religious aspect of this feeling, in its withering contempt of intolerance, cant and the self-complacent unreality of pious optimism, is strongly, some perhaps would say bitterly, expressed in the admirable "Ode to Rae Wilson." The whole poem is an indignant protest against—

"Those pseudo Privy Councillors of God,
Who write down judgments with a pen hard nibbed;
Ushers of Beelzebub's Black Rod,
Commending sinners, not to ice thick-ribbed,
But endless flames, to scorch them up like flax,—
Yet sure of Heaven themselves, as if they'd cribb'd
Th' impression of St. Peter's keys in wax!

* * * *

"That frown upon St. Giles' sins, but blink
The peccadilloes of all Piccadilly—
My soul revolts at such bare hypocrisy,
And will not, dare not, fancy in accord
The Lord of Hosts with an exclusive Lord
Of this world's aristocracy."

The theology which reserves heaven as a kind of *peculium* for a select coterie of comfortable dowagers and reformed rakes, while it quietly hands over the mass of sinful suffering humanity, with a pious chuckle or a well-bred sigh, to the "uncovenanted mercies" of the lake of fire, did not commend itself to him. That a man who rose from the ranks should be the champion of the poor, may seem natural, though it does not always follow. But Hood is no vulgar declaimer against "bloated aristocrats." It is not from want of sympathy with refinement that he pleads for the ignorant and the degraded. The "Song of the Shirt," by which he is probably most widely known even to those who know nothing else about him, is the lament, not less musical than intense, of a class whose sorrows have little to attract the attention of the mob orator; while, in the "Bridge of Sighs,"—equally touching and truthful,—he has dared to plead the cause of a yet lower class of outcasts, for whose unpardonable sin society has no absolution, and whom it was not so much the fashion to compassionate and care for, when Hood wrote, as it has happily since become. A genuine principle underlies alike his graver and his gayer utterances, and exalts him to a higher eminence than that of the mere sayer of witty things, or the mere copyist of melodious verse. We have done, we hope, no injury to his intellectual gifts, which were considerable, when we claim for him a place in the second class of poets, not the first; we certainly do no more than justice to his use of them, when we say that they were consistently devoted to the cause of righteousness and mercy.

POSSIBILITIES OF CREATION.*

In these days it is a novelty to find the fancy enlisted in the service of science or theology. The graver muses have settled down into steady matrimonial relations with their worshippers. There are no more serenadings and moonlight meetings, where such a handmaid was a useful auxiliary. Not so long ago it was otherwise. The bent of the Teutonic mind, shaping the scanty materials of knowledge, had given the fabulous and the grotesque an almost recognized place in the train of philosophy. And though in a still more ancient literature the imagination of the Greeks scarcely troubled the channels of scientific investigation; yet, among the countrymen of the giants and fairies, when chemistry was undistinguishable from alchemy, and astronomy was in less high repute than astrology,—when miracle plays were valued agencies of the Church, and witchcraft and demoniacal possession were received with undoubting faith,—the fancy as naturally came to the aid of the philosophical writer, as it was sure to colour the ideas of his audience. Now Science no longer steps in a twilight region between the known and the unknown. The haze of morning has cleared away; and philosophy and the fancy have parted. The genius of a master may narrowly save a poem like "Endymion" from shipwreck on its basis of mythology. But our scientific age has become intolerant of the slightest deviation from fact or natural law in a serious composition. The "Republic" of Plato, or Sir Thomas More's "Utopia," could hardly be written to-day, if it were only because their roots strike a little way into a substructure of the fabulous. The change is neither an arbitrary caprice of fashion nor a phase of literary taste. It is the inevitable consequence of increased knowledge. If verisimilitude is violated beyond a certain point, sense and humour are alike sacrificed. And now that the conquests of science extend over so large a portion of the physical world, a hypothesis or illustration, which a century ago would have appeared possible, or not too impossible, may seem to us a *bizarre* and pointless absurdity. This is the atmosphere of the age, and it is breathed as much by writers as by readers. Fiction has a wide domain in the eccentricities of the moral, and the possible combinations of the physical world; but a *bouleversement* of the laws of nature no longer suggests itself to any one as an adequate vehicle at least of philosophical thought.

The "Possibilities of Creation" is a popular work on a philosophical subject, but it is an exception to the general rule, and the author's best defence is that the exception is evidently genuine. The view which he asks his readers to take has presented itself vividly to his own mind. The preface promises a treatise of the Bridgewater class, and the title-page promises a book of fancies. Accordingly, it is in the treatment, and not in the subject-matter, that the novel and characteristic part of the volume is to be looked for. The premisses and conclusions of the argument are old enough. The author's design is to show that we live in the best of all possible worlds which Divine wisdom could contrive; and this thesis is supported by exhibiting what vastly inferior results would have emerged, had creation and providence been entrusted to a malignant or even a finite intelligence. To work out the theory, his Satanic majesty is seated on the top of the Himalayas, "kicking the mountain flanks," according to the elegant fancy of the apologist, "with his heels, in ecstasy at the sport which he has devised." From this elevation he conducts a series of transformations upon the earth; and we cannot help feeling that what is detailed as the probable conduct of "the puir deil" under the circumstances, is unworthy of his intellect and experience, if not of his moral character. It ought not to be said of any one behind his back. With diabolical ingenuity he hits first upon the device of making the food of all animals disagreeable to the palate. He then proceeds to tamper with the atmosphere. He increases its density, he decreases its density; he makes it chlorine, he makes it oxygen, he makes it sulphuretted hydrogen, he makes it carburetted hydrogen. He displays, in short, an acquaintance with Joyce's "Dialogues" calculated to stir the emulation of the most diligent youthful reader. The consequences, it is needless to say, are appalling. At each successive change the world is metamorphosed into a vast laboratory where a bottle has burst; and a most edifying picture is drawn of the agonies of the inhabitants. The experiment on the appetites of animals elicits a series of remonstrances on the part of the various sufferers, which perhaps tends to excite a more conservative feeling as to the world's constitution than all the argument in the book. If the lower animals would make such a use of reason and speech as is here represented, we cannot be too thankful that these faculties have been denied to them. From the lion to the *pediculus* (for we must warn the reader of this book that he will make acquaintance with strange bedfellows), they indulge in long philosophical soliloquies in a strain of dreary humour. Water, light, and heat are next operated upon with precisely similar results. Then we are called upon to admire how easily anarchy could be introduced into the animal and vegetable kingdoms. Finally, an attempt is made in the last two chapters to array under the banner of the same argument the existing state of society and religion.

And now to look for the result of all these frightful hypotheses. The air the reader breathes, the bread he eats, the water he drinks, have all been carefully poisoned for his imagination. His body has been hypothetically paralysed, and his mind, for the sake of argument, unhinged. After wading through this sea of horrors he naturally asks, *Cui bono?* and we are not at all sure that the question can be satisfactorily answered. This method, by *reductio ad absurdum*, does seem a very roundabout way of seeking for the stamp of divinity either in nature or in man. But still, if its logic were conclusive, it might happen to carry to some minds the strongest kind of conviction. Its conclusiveness, however, will appear to many more than doubtful. It needs no elaborate illustration to convince that there is an equilibrium among the forces, and a just proportion among the elements of nature; or that, according to superficial conceptions, the nicety of the balance might be easily disturbed. It is easy to say, with this writer, "If the sea were turned into mercury, commerce would be impeded." It is easy to indulge in fancies like the following:—"The humerus might have been immovably attached to the scapula, and the ulna and radius (the bones of the fore-arm) rivetted firmly to the elbow." But it is difficult not to suspect that such arguments appeal to us as much through our ignorance as through our knowledge. No one would found anything on the hypothesis that two and two make five. The mind refuses to build on such a foundation; nor does it seem so entirely certain that the chains of causation in the physical world may be broken with impunity at any point; that the harmonies of nature are mere arbitrary contrivances of ingenuity, the successful solution of a Chinese puzzle, where, if one piece is misplaced, the whole is spoilt, and it is as likely as not that a piece should be misplaced? It is true that the animals on the earth's surface find a congenial element in the air they now breathe, and it is easy to imagine an alteration in the composition of the atmosphere which would destroy their health and enjoyment. But we venture to suggest to the author two supplementary hypotheses. What if the inhabitants of our globe under the new economy refused to live or to propagate their species? And again, what if it is as unphilosophical to assume that the air is made to suit man, as the author would himself apparently allow in the case of the lower animals? What if it is more true to speak of man as made to suit the air, inasmuch as his physical structure is conditioned by it? We conceive this difficulty must occur to many plain people who would hesitate to nail their colours to Mr. Darwin's mast. We believe the idea of one-sided changes in the constitution of relative parts of the universe will appear absolutely pointless to most who are acquainted with the subject. We have heard of the Red Indian who binds his captive to a tree, and tries how near he can throw his tomahawk without hitting him. Is this a true picture of the economy of the world? Is nature a conjuror? Does she conduct us through life over a Mussulman's bridge between two yawning abysses, to extort from us an acknowledgment of divinity? The argument from final causes is a time-honoured and a favourite weapon in the polemical armoury. It is urged, too, by the author, with considerable force and imagination. It has not lost its freshness for him if it has for the public, and that is something. But the "Possibilities of Creation" comes a century or so too late. Had Leibnitz lived now, the "Théodicée" would have been adequate to the advanced stage of science. The living power of a metaphysical notion or argument rarely lasts beyond a few generations. "The hoary hills and veteran sun," as our author pleads, are still unchanged, but the theories which have been spun respecting their origin and purpose do not possess the same faculty of endurance and self-renewal.

In the last two chapters on Social Provisions and Religion, the author exposes his views to the severest test. It is a bold inference to deduce optimism from the actual state of society, and to find a proof of preconceived harmony in the religious history of the world. Least of all do we expect such an argument from one whose opinions of history are expressed in the following passage:—

> "What is history, in a great measure, but a reservoir filled to overflowing with the sewerage of the soul? What is it but the tale of ambition, avarice, plunder, love of blood, and other unholy passions, related not as exceptional occurrences, but as the favourite employments of the race?"

We do not pause to say that this is a false and shallow view of history, but we ask how even the leaden canon of the argument from final causes can be made to fit these phenomena? There is still less consistency in the chapters on Religion. In an estimate of the religion of the human race, it is not enough that we are satisfied with that of our own age and country, and admitting that there is room for optimism or at least for congratulation here and at home, is there any in history or abroad? It is but little to say that matters might conceivably have been worse, and yet in this book that is the conclusion of the whole matter. Instead of identifying ourselves with the whole human race, we are actually invited to ridicule complacently the absurdities of the Jewish ritual:—

> "Or shall we suppose that the Jewish dispensation had been established in perpetuity upon the globe? What a gloomy contrast it would have exhibited to the light and graceful requirements of Christianity! How easily does the latter sit upon mankind, compared with the burdensome load of ceremonies under which the soul of the Hebrew bent and often rebelled. To an Englishman of the nineteenth century it would be specially irksome to present burnt-offerings, sin-offerings, peace-offerings, and other oblations continually. . . . . Similarly, what would a British matron think if she were pronounced unclean for two weeks after a confinement (in case the child were a female), and prohibited from entering the sanctuary, or touching any hallowed thing, until her sixty-six days of purification were accomplished? Would it always suit her, when churched, to bring a lamb of the first year for a burnt-offering, or a young pigeon or turtle-dove

* Possibilities of Creation; or, What the World might have been. A Book of Fancies. London: Simpkin, Marshall, & Co. 1863.

for a sin-offering? And could she lead a comfortable life if her husband might at any time, whenever she ceased to find favour in his eyes, give her a bill of divorcement, and turn her into the streets without the slightest power of appeal to a court for the adjudication of matrimonial causes?"

We may extol the superior lightness and grace of our own religion, as we compare a brougham with a hackney coach; but these remarks could not advance the author's views unless we lived in a different world from the Jews. So, in another place, it is quaintly remarked, that "fortunately all faith in the gods of Greece and Rome has long ago disappeared." But the Greek and Roman mythologies are not the less part of the history of our race. The work would have gained in completeness had something else been sacrificed to make room for the chapter on the mystery of evil which a postscript announces has been omitted, along with others, for want of space.

The style of these essays, as may already have appeared, is a very peculiar one. In the preface the reader is warned that the tone is for the most part light and playful, and the propriety of such a tone is maintained. In the sequel the question is at least fairly raised. Page after page of joke and slang is strung together in a strain which is far from being always up to the colloquial standard of well-bred people, dignity is thrown to the winds, and even delicacy is now and then disregarded. The style is honest, rapid, vivacious, and energetic. It indicates qualities which secure other than literary success. So far it prepossesses the reader favourably. There is no ground for suspecting that one of the possibilities in the author's mind was a bishopric or an archbishopric to be won by writing a treatise on the right side; but anything like literary taste is searched for in vain, alike when the tone is grave and when it is gay. It is grave sometimes. The "words for the most part" above quoted arouse a dark prognostication which is only too completely verified. The Spurgeonic fun which constitutes the main texture of the book, is relieved by ornamental patches of the finest English prose. The author seems resolved to show that he can write in an elevated style, and when he does, we have it with a witness. A sublime peroration to the chapter on Possible Atmospheres concludes as follows—with it we conclude our criticism of the work.

"It has throbbed with mothers' prayers—purest of earthly utterances; with maidens' sighs—softest of mortal breathings; with lovers' vows—frailest, oft, of spoken things. It has received with equal readiness the most jocund strains of festivity, and the tumultuous shoutings of the battle-field, or the piteous shriekings which go up to heaven from the ravaged city. If it trembled with delight when stirred by the voices of the morning stars, as they sang together for joy, or when celestial harps and cherubic tongues poured forth the famous midnight melody which announced peace on earth and goodwill to men, so has it also heaved under the solemn thunders which burst from the peak of Sinai, when God came down to legislate for his people, and spoke to them from his pavilion of thick darkness. And as from the atmosphere came the first breath which each man drew, so thither shall return the latest sounds his lips shall utter, whether these are shaped into the sceptic's wail of despair, or the Christian's cry of victory, cleft in twain, perhaps, by the stroke of death, and half of it syllabled in time, whilst the rest is drowned in the merry peal of the golden bells which ring out his welcome to the skies."

BURKE'S VICISSITUDES OF FAMILIES.*

No conscientious critic can peruse this book without experiencing a feeling of self-reproach. The favour with which Sir Bernard Burke's former volumes were received has induced him, he tells us, to produce this third volume; and it is impossible not to see in this result a direct consequence of the pernicious leniency which has been shown by the critics. Had they done their duty, it is probable that the book before us would never have been published; and we may at all events be certain that, if it had been, it would have been free from some of the errors which now disfigure it. It is now, we fear, too late to hope for much amendment on the part of the Ulster King, nor do we derive consolation from the announcement that this is the concluding series. We have too little faith in the farewells of actors and authors not to be apprehensive of more behind. The lines of Prior, which Sir Walter Scott once applied to himself, are peculiarly appropriate to Sir Bernard Burke:—

> "Still fitted the halter, still traversed the cart,
> And often took leave, but seem'd loth to depart;"

and, indeed, the culprit becomes more audacious at each re-appearance. He seems more and more careless and untrustworthy; his ignorance becomes confirmed, and the indiscriminating character of his mind more glaringly apparent. Each reviewer should say to himself, *mea culpa*, and lament that Ulster's first book was not judged with due fidelity.

The untrustworthiness of this volume is very remarkable. We do not now complain of the want of critical power in the author, of his inability to estimate the value of evidence, or of the false notions which he has of our early history: in all these particulars he is simply content to remain in the position of the heralds and antiquaries of the sixteenth and seventeenth centuries. But he lacks the accuracy for which they were proverbial. The industrious Garters and Norroys of our forefathers had little thought of testing the probability of the statements with which they met, but we may always depend upon the fidelity with which they repeated them; when they make a quotation or cite an authority, we need rarely verify the reference. The present Ulster is deficient in this simple virtue, without which the most lively feeling of sympathy with the past is of little value, whilst the possession of it redeems the humblest annalist from contempt. Luckily Sir Bernard Burke's inaccuracy is apparent to everyone possessing an ordinary acquaintance with English history; we may mention a few errors apparent on the most cursory inspection of this volume, but we know not how many might be revealed on a careful verification of the more obscure details he has narrated. He seems, for example, to be ignorant of the elementary distinction between Arundel and Arundell, as he almost uniformly misapplies each name. Early in the book he writes as if the St. Johns were first ennobled by Queen Anne; the present dukedom of Northumberland is enumerated amongst the creations of George the Second; after a sketch of the circumstances of the succession of the present Earl of Shrewsbury to the premier earldom, we are told that the earldom of Derby "has been transmitted down in an unchequered course since the Stanleys acquired it," the fact being notorious that upon the decease of the tenth earl, in the middle of the last century, it was necessary to revert to the stock of the first earl to find his successor. A little further on we read of "Henry Edward, Earl of Devon and Marquis of Exeter, who died at Padua in 1566"—a most striking exhibition of the Ulster King's power, inasmuch as he has given the person spoken of an additional name, Henry, advanced him a step in the Peerage by creating him Marquis of Exeter, and added ten years to his unhappy life. This last, however, is a trifle compared with the case of Sir Richard Carew, who was born somewhere in the middle of the sixteenth century, and is stated by Sir Bernard Burke to have died in 1726. All these are patent errors, and the catalogue might be largely increased. It is difficult, for instance, to accept at the same time the two statements, that the Earldom of Kildare is the oldest "in the United Kingdom," (the author means the three kingdoms,) and that the Earldom of Mar is so old that its origin is lost in antiquity. But Sir Bernard Burke is not free from other faults. "Gibballines" is unusual, and the commonplace Latin quotations, found in the book, have a trick of appearing in odd forms; nor do we quite accept as English such phrases as "no one can ignore that the Douglas race is among the noblest in Europe"—"it is now scarce to be recognized from the pristine fashion"—"a man of an imposable nature,"—which ugly word Sir Bernard has created and endowed with a meaning which it could in no case rightly possess.

It would be, perhaps, too much to expect a King-at-arms to exhibit a spirit of historical criticism; were the sceptical spirit of Sir George Lewis introduced at the Heralds' College, how many pedigrees would stand their ground? Fancy the dismay of the De Moleyns and the De Montmorencys! The gentlemen of Ireland need not fear their Ulster King. Once, indeed, he hints a doubt, and it is in a case where it could not possibly be sustained,—the case of the Duchy of Cornwall; but, in general, he exhibits the most indiscriminate and unflinching faith; he evidently looks upon the earls created by the Conqueror and his successors as persons of the same status as the members of the present peerage, believes implicitly in the Roll of Battle Abbey, and would be little, if at all, staggered by the Welsh pedigree, which mentioned in a side-note the birth of Adam as an event happening in the life of the eighth in descent. Sir Bernard mentions, as a matter of fact, a grant of a certain farm by Alfred the Great to one Reginald Wapshot, repeats the story of the descent of the Percies from the Dukes (?) of Louvain, and tells at length a history of the Oglanders of Nunwell, which is alone sufficient to stamp his character as a historian. The Oglanders are a family of very high antiquity in the Isle of Wight, where they have been settled for some six hundred years; Mr. Shirley places them amongst the knightly families of the shire of Southampton, and, adds the cautious note, "the family is supposed to have been of Norman origin." This is insufficient for the Ulster King's noble enthusiasm; he identifies the English Oglander, formerly Okelander, with an existing family in Normandy, D'Orglandes, and, neglecting their more obvious separate derivations, derives both from Og, a Norwegian proper name, and "lander," which "infers the possession of a fief or domain." One Richard de Okelander is the connecting link between the two families: "he left his native Caen to act in England as a marshal of the Conqueror: intent on rendering essential services in promoting the conquest, he went, with William's leave, on an expedition against the Isle of Wight. Having effected the reduction of that island, he settled there at Nunwell. . . . This Richard had a son, Robert Oglander, who died in the thirtieth year of Henry III." We are almost ashamed to borrow a line of argument of a bishop of the Church; but we must confess to feeling a little difficulty with the arithmetical problem here involved. The conquest took place in 1066, and we may suppose that a marshal would not be less than thirty years old at that time. Henry III. succeeded his father in 1216; the interval, therefore, between the birth of Richard Oglander and the death of his son Robert would be 1216+30—(1066-30), or 210 years. Perhaps Sir Bernard Burke will tell us in his next edition whether Richard begot his son Robert when in an old age, or whether Robert was an earlier Old Parr. Sir Bernard might, at the same time, give us the authorities for the other facts of Sir Richard's life.

We cannot be surprised at finding Sir Bernard a faithful believer in Sir Henry Spelman's theory of the rapid decay and extinction of the families which were enriched with the lands of Holy Church; we remember, indeed, to have heard, not many years ago, an ex-

* Vicissitudes of Families. Third Series. By Sir Bernard Burke, LL.D., Ulster King of Arms. London: Longman & Co. 1863.

Digitized by Google

position of the same theory in the charge of a still living archdeacon, but we had thought that no believer in it could be found outside the ranks of the clergy. "The rapid downfall and total extinction of the Earls Marischal of Scotland," writes Sir Bernard, "may be added to the long list of startling instances of the temporal punishment with which the sin of sacrilege has been visited." This is especially hard upon the Keiths, inasmuch as the Earl Marischal devoted a large part of the abbey lands he acquired to the endowment of Marischal College at Aberdeen; and they may well ask why they alone, amongst the scores of families, whose fall Sir Bernard Burke has commemorated, should have their ruin attributed to the sacrilege of their ancestor. A very slight inquiry is sufficient to show that the extinction of families enriched with church lands has not been more rapid than that of their fellows. The Ulster King's books are devoted to the decay of old stocks, and he selects one or two out of the number, and says these fell because they received the fatal gift of church lands. How then does he account for the continued prosperity of the Russells? But Sir Bernard's credulity knows no bounds; we have scarcely got over the exemplification of Sir Henry Spelman's argument, before we meet with a serious account of an awful prophecy uttered by a Warlock in the seventeenth century, which has been verified, piece by piece, in the nineteenth. The Warlock appears to have been what Sam Weller calls "a red-faced Nixon," a clairvoyant and a medium, "for he united in his person the characteristics of both these branches of mysterious gifts;" instead, however, of using chairs and tables as instruments for the discovery of truth, he used a circular white stone, with a hole in the middle, through which he looked, and saw the events of the world about him and of the future. As the stone still exists at the bottom of a small Scotch loch, we should recommend the Ulster King to take measures for its recovery, and so acquire the power of writing a book of deeper interest than any he has yet produced—"The Forthcoming Vicissitudes of Families."

Sir Bernard Burke's inaccuracy might be corrected, and his credulity might be pardoned. We could excuse, in a king at arms, the simplicity of the suggestion that lands should be inalienably annexed to titles (how the lands are to be obtained we are not informed), to prevent the fearful accident of a landless lord; but the most damning and hopeless characteristic of his work is its utter tastelessness. It is written throughout in what may be best described as a tawdry style. Whether he tells us of the family which boasted many blackguards but no blockhead, or of that other which had many blockheads but no blackguard; whether he is describing a grand stock going to decay through its constant loyalty to the losing side, or is narrating the career of some wretched vulgar spendthrift; whether he is tracing the upward course of steady faithful industry, or exposing the plans of an illiterate forger; whether he quotes a speech of Lord Carlisle, or an article of the *Daily Telegraph*; he works in a spirit of equal and grovelling admiration. "Marvel," "romance," "mystery," "replete," "chivalrous," are the Bristol diamonds which adorn his pages. The "Vicissitudes of Families," in the hands of a master, would form a great subject. There is always something pathetic in the endeavour of man to enlarge the limits of his existence by connecting his life with the past and the future; and in the dark fate which mocks at human hopes, the poets of the old and the new worlds have seen the elements of deepest tragedy. Gibbon has, in a well known digression in his immortal work, shown us how the history of a family can be told with truth and with sympathy by one possessing the treasures of learning and the power of genius. To turn from it to the book before us is, indeed, a declension. There are persons to whom such a volume may give pleasure, but they must be those whose education has disqualified them for knowing good from bad. The antiquary must condemn the work of the Ulster King for its inaccuracy; the statesman must smile at the ineptitude of its political suggestions; and the simple gentleman must recoil from its spurious sentiment and vulgar spirit.

SUCH THINGS ARE.*

"Be bold, be bold," must undoubtedly be the motto of every one who wishes to produce new effects in the well-worn subjects of modern fiction. The natural complications of love and ambition, heroism and crime, have been nearly exhausted, and the place of new materials has to be supplied by bolder variations of treatment. But the authoress of "Such Things Are" is a great deal too bold. She has piled crime on crime, introduced a multitude of characters good and bad, rung the changes of many forms of love-making, and at the close of the three volumes she declines for the present to finish her story. This is certainly courageous treatment, and produces a sensation in the mind of an interested and tantalized reader, but not one of a satisfactory kind. There is absolutely no *dénouement* at all. If "Ivanhoe" had been cut short in the middle of the tournament, or "Guy Mannering" at the moment when Dandie Dinmont and Captain Brown first discover that their prison is on fire, they would hardly have been more incomplete than "Such Things Are" is at its conclusion. As it stands at present, the lady, whose vices the novel is written to reprobate, takes leave of us at the moment when she is triumphantly married: her crimes are hidden by the orange-flowers which she had no right to wear, but which are nevertheless indirectly the result of the crimes. Not only is the moral spoiled, but the reader's faith in the honesty of novelists receives a rude shock. He reads a chapter or two, he becomes interested, he turns to the end, that he may assure himself of the final happiness of Gerald and Olive, and so be supported through the perusal of their trials by a serene fore-knowledge of their future good. But the oracle refuses to satisfy his curiosity; the Pythones s retires into a private and uninspired state, and baulks him with the announcement that "circumstances, as unforeseen as they are impossible to contend against, have interfered with the immediate conclusion of this story." Better to have been silent altogether, and to have let a delusive hope gild the reader's path to an inevitable disappointment. To end as this book ends is nothing less than an immorality. The author trades on our confidence, the result of long experience of the honesty of novel-writers, that there will always be a satisfactory conclusion to every plot. Still, if this were all, an isolated and partly accidental imperfection might be excused. It might be regarded as a lesson to unprincipled readers who will anticipate the good purposes of a literary providence, as a fit punishment for the curious wretch who might have sailed long and prosperously, "youth at the prow, and pleasure at the helm," unconscious that the goal receded before him, and was never to be attained. Viewed in this light, the questionable [illegible] might have been excused for the sake of the worthy object. But it does not appear that in reality either "circumstances" or a moral aim are altogether and alone answerable for the abruptness of the termination. It is not so accidental as we are desired to believe. A certain incoherence is innate in the construction, and if to these three volumes three more were added, the story would still, we are convinced, remain unfinished as a work of art. The whole would be no better than the half; and like the Sibyl's books, though for a different reason, a few volumes more or less would make no difference in the value. Half of what is already done has no bearing on the plot; and, if the amount were doubled, it would still require a plot upon a plot, an entirely new plan, to combine into one unity the various threads. As it now stands, the first five chapters might be cut out without loss, and several of the characters, with all that appertains to them, are nearly, if not entirely superfluous. The Gerald and the Olive who interest us at first, and who alone fill the canvass for eighty pages, disappear for a long time, and when they come to the surface again, are almost nonentities, except in so far as Olive is connected with the remembrance of a certain dark and unexplained crime. A sea of faces drives before us, some distorted and some beautiful; but a great part both of the hideous and of the natural ones have absolutely no *raison d'être*, no bearing on the solution of the plot. There they are, well or ill done, but they have no artistic use. They compose a mere *Liber Studiorum*, often well executed, but hardly well enough to be their own apology and their own end; and the more so because the badness of those which are imperfect is much increased, and the goodness of the others lessened by some want of skill in the conversations.

With all its defects, "Such Things Are" is still extremely readable. The style is vigorous, picturesque, and unpretentious; and some good bits of more ambitious writing are interspersed, sparingly enough to make us grateful for them. There is considerable art in the way in which the description of a dreary scene is thus suddenly and agreeably lighted up at the end:—

"The room thus fixed upon was low-ceilinged and damp-smelling, containing but few books, and those, as it appeared to Gerald, principally on law matters. There was a shelf on one side of the chimney, along which were ranged sundry dust-enamelled bottles, filled with various coloured liquids, the said bottles being glass-stoppered, and secured also by chamois leather that had evidently seen service. The furniture of the room was mean and scanty, whilst on the hearth there smouldered a few half-ignited sods of turf. The one window of this dismal-looking chamber looked out upon the small bay and the mountains whereby it was almost surrounded. The latter were shrouded in the mist that was blown madly on before the gale, only their dim and dusky outlines being visible to the eye; but as Gerald (during the few moments employed by his host in shaking the ashes from his pipe) turned towards the window, the ricksty frame of which was making a rattling accompaniment to the storm, his eyes rested on the glorious spectacle of wind-driven waters thrown up from the swollen mountain torrent, and across which—glittering and gorgeous in a momentary sunbeam—the brilliant arch of a double rainbow threw its yellow and crimson light."

It is the more to be lamented that the authoress has not bestowed more pains on the mere mechanism of the construction, because she has shown, if only in a single instance, that she possesses that power of invention of character which seems to be daily becoming more rare. Susan is a creation of a very high rank, of a kind which cannot be made to order by mere personification of passions and a catalogue of small outward peculiarities, but is the result of a profound and psychologically true constructive analysis. There is great truth to nature in the way in which she combines sensitiveness with cheerfulness, unselfishness with a little natural jealousy upon occasion, simplicity and common sense with some share of moderate romance and illusion. Miss Llewellen and Alick Harley partake of the same excellence, the same healthy naturalness, in a much less degree. The many remaining characters, if they are inferior and comparatively lifeless, are seldom much overdrawn or distorted. Margaret is nothing but a beautiful face, but even that is something. Florence is exceptionally bad, but at least she is not wholly unnatural. The most prominent exception is Fletcher. If the Fletcher of the second and third volumes is the same man as the Redfern of the first, which many circumstances and the whole connection of the plot require him to be, he is a villain of a kind which can only be described as pure brimstone. In the space of less than forty pages he, to all appear-

Digitized by Google

ance, attempts first to murder his daughter, or the girl who passes for his daughter (for the writer's love of mystery throws a doubt even on that point), and secondly, within a few hours after, to murder both her and Gerald Clayton, her preserver. In the second volume, he is seemingly connected with an actual but "undiscovered" murder, of the nature of which we are not informed. Once more we are left in doubt whether he was not the contriver of an infernal machine which obliterated the features of a friend who was with him at a shooting-box, and whom he had not, so far as is explained, the slightest object in injuring. Finally, this ubiquitous demi-devil is got rid of by strychnine, the agent and purpose of its administration being wrapped in the same impenetrable mystery. We have gone on the assumption that Fletcher and Redfern are the same; if they are not, then it is so much the worse; not only would Redfern have no connection with the story, but the crimes attached to either name are enough to make two villains, each exaggerated beyond all probability.

Something must be added about the moral of the book. The "things" which "are," and which ought to be—but, as the story stands, are not—represented by the fast young ladies. The novelist's idea of fast young ladies is something much more terrible than it is to be hoped can be justified in actual life. The "fast" heroine is, in fact, not so much fast as vicious and fallen. She is a bad specimen of the same type as Flora Bellasys, and is as little like her prototypes in society as Guy Livingstone is like any real personage. Beautiful, tasteful, versatile, and possessed of an inflexible will, she is at the same time a little weak and vulgar. The willing victim of a bankrupt nobleman, and then the companion of a literary ruffian in a ramble about the Tyrol, she is still capable of pure and passionate devotion, and marries, chiefly from proper love, a clerical widower. After all, we are not sure, at the end of the book, whether she is not a poisoner. Persons of this meteoric kind, if they exist, cannot be ranked under any common species, but must be held to constitute a fourth sex, clergymen (according to this novel) forming the third. No wonder that, generalizing from such a specimen, the authoress regards a fast young lady as the "baneful type of all that is unnatural and mischievous." The fast young lady of real life is a milder character. Her fastness is more impulsive and less calculating, very much the result merely of animal spirits and impatience of restraint. It relieves itself in such mild excesses as hunting, peculiar dress, a little slang, and perhaps a fraternal cigarette. If she allows herself to listen to conversation "which savours of *double entendre*," her share is passive, and, perhaps, confined to seeming to comprehend what she does not really care about or understand. Florence Harley goes a great deal farther still, into actual vice, and in so far as she does so she ceases to be a type of merely fast women, and spoils the application of the moral. "Such Things" as she is are not likely to exist in any quantity till society has taken many backward steps, till—shall it be said?—the authoress shall be able to bring all the threads of her story to a satisfactory conclusion.

SHORT NOTICES.

If there be any occasion on which the poetical mediocrity, forbidden alike by gods, men, and publishers, might claim to be tried by a more charitable standard, it is such a one as has called Miss Faithfull's little volume* into existence. Modern charity needs a gentle stimulus, and poetry, however unpretentious, is at least as unobjectionable an implement for loosening the purse-strings of mankind as the fancy bazaars, lotteries, dinners, and balls with which immemorial custom has rendered us familiar. The "Offering to Lancashire" is, in fact, a sort of philanthropic pic-nic. Messrs. Herring supplied the paper; Miss Faithfull the printing; and Mr. Monckton Milnes, Miss Rossetti, Miss Bessie Parkes, Mr. George Macdonald, Miss Isa Craig, and several other ladies and gentlemen—less known to fame, but not less benevolently disposed—laid their poetical abilities under contribution for some literary delicacy, and ended by furnishing a repast which, if not distinctly appetizing, may at least be partaken with a sober cheerfulness and content. Mr. George Macdonald's imaginary flight upon three successive steeds is really spirited and melodious, and implies considerable allegorical powers, though marred by occasional affectation and obscurity. Miss Rossetti's "Royal Princess" is a prettily told and appropriately sentimental little story; and Mr. Monckton Milnes, in a few grave and touching stanzas, has epitomized the bearings of the American catastrophe upon English morality, and ultimately, upon English distress.

> "First on the bold upholders of the wrong,
> And last on us, the heavy laden years
> Avenged the cruel triumphs of the strong—
> Trampled affections, and derided tears.
>
> "Labour degraded from her high behest
> Cries, 'Ye shall know I am the living breath,
> And not the curse of Man. Ye shall have Rest—
> The rest of famine and the rest of Death.'
>
> "Oh, happy distant hours! that shall restore
> Honour to work, and pleasure to repose,
> Hasten your steps, just heard above the roar
> Of wildering passions and the crash of foes."

Mr. Kenner Deene† has some notion of designing a plot; he has a good eye for the agreeable incidents of homely popular life; and he writes an easy, colloquial, but not slovenly style. With these merits, "Christmas at the Cross Keys" might, but for one or two serious faults, have passed muster as a spirited and rather pleasing story. The scene being chiefly laid in a decent rural public-house, we are first introduced to the landlord with his wife and children, and two or three of the ordinary guests, whose habits and conversation are very naturally portrayed. But the author is much less happy when attempting to describe the "inner life" of their aristocratic neighbours at Clyde Chase. His realistic studies of the familiar incidents of lower middle-class society in provincial England are tolerably successful; but his conception of the domestic manners of a higher class is coarsely untruthful. Nor do we much admire the stale melodramatic artifice of bringing in a long-lost brother, a returned Australian digger with £300,000, disguised beyond recognition when he meets his own kindred, and coming in to restore the fortunes of their ruined house. The figure, however, of Rose Toppleton, the landlord's good and sensible daughter, who, having been educated for a governess, comes home from her Clapham boarding-school, to lighten the cares of her parents, and to become the innocent object of a rivalry for her affections between two gentlemen staying at the inn, is agreeable enough. There is, moreover, a wholesome, cheerful kindliness about this story, which has its charm. Mr. Kenner Deene may do still better than this, if he will confine himself to the range of his own actual observation of English social life.

"Holiday House"* is an old favourite with all the boys and girls, and with all those who like to watch the ways of the world of young people. Miss Sinclair has much the same manner that Miss Edgeworth had, of teaching a moral lesson by delineating, with gentle satiric touch, contrasts of individual character among juvenile folk. Harry and Laura, the romping, frolicsome, high-spirited pair, whose pardonable heedlessness gives so much trouble to their elders, but whose pranks are so delightful when we have not the duty of correcting them ourselves, will be greeted in this edition as well-remembered acquaintance by many grown-up persons who were themselves children when first they read the book. It is pleasant that the same tales which pleased and instructed us when young should thus be reproduced for the benefit of our children after twenty or thirty years.

The same reflection is suggested by the "Life of Peter Parley,"† whose little books of descriptive geography, astronomy, and natural history, for the perusal of children, were mostly composed between 1827 and 1830. Mr. Samuel Goodrich, the real author of those once very popular works, died at New York in 1860, after a useful and sufficiently adventurous life, which he relates in this modest autobiography, written at the time of his retiring from the office of United States Consul at Paris. His boyhood and early training in a Connecticut village, his first experience in retail trade, and then in periodical literature, his coming to England in 1823, his working for the booksellers, and his acquaintance with many distinguished persons on both sides of the Atlantic, give considerable variety of interest to this unpretentious narrative.

"The Nest Hunters"‡ is a mixture of fact with fiction; the descriptions of scenery, and also, in great measure, the incidents of the narrative, being taken from books of Asiatic travel; while the persons, Martin Blake and Claude, to whom these adventures are attributed, are mere creations of Mr. Dalton's fancy. They are two brothers, who, going out to Batavia, at their uncle's invitation, to enter his house of business, find that he has just died; and that, by the wicked plotting of his widow, their situation is made so uncomfortable that they have nothing better to do than to run away into the forest wilderness of Java; where, dwelling with the natives, or roaming the pathless jungle by themselves, they get their livelihood by hunting, or by other primitive occupations, suited to men in a state of nature, in a tropical clime. There is one practice, which is almost peculiar to the coast of Java, and which gives its name to this little book. It is the perilous employment of getting the edible swallows' nests out of the holes in the perpendicular face of the vast cliffs which overhang the sea at Karong Bolang, in the province of Baglen. These are reached, in the same way as those of the Solan geese on the coasts of Scotland, by lowering men with a rope from the summit three or four hundred feet above. Many other bold exploits, and hairbreadth 'scapes from destruction, including some combats with savages and pirates, as well as with the tiger and the cobra poison-snake, are here displayed in a graphic and lively style. This book is a fit companion for Mr. Ballantyne's "Wild Man of the West," a tale of the American prairies, which we lately noticed amongst other books of that sort, intended at once for the amusement and information of boy-readers.

"Life in the Niger"§ is the journal of an African trader; very much in the rough. Mr. Cole's experience of a twelvemonth spent in contending with the villany of the negro tyrant of Aboh, is matter of enough interest to warrant the publication of his narrative; but it was due to literary decorum that some pains should be taken to shape and trim it for the public eye. We have seldom met with

any book more abundantly defaced with gross improprieties of expression, or showing a more offensive disregard of those rules of taste and good manners which an author should observe in addressing his readers. One sample of his style will suffice; when he has to tell us, for instance, that a native chieftain demanded too high a price for some article, Mr. Cole says, "he wanted the devil and all for it." He seems to revel in allusions to the nasty sights and smells which beset a negro habitation. He speaks of the negroes themselves in a tone of jocular contempt, as "brutes" and "devils;" and their king Ajie is usually referred to by the title of "his Satanic Majesty." Mr. Cole may, indeed, be allowed to feel a strong dislike of the comfortless scenes and the savage neighbours among whom he has suffered so much; but he cannot be excused for venting this displeasure in language so coarsely violent, that it would scarcely be endured in ordinary talk, and is much less tolerable in print. In spite, however, of these impertinences, and of the unintelligible slang which he sometimes uses, Mr. Cole's journal is entertaining; and as we have no doubt of his candour and veracity, this book may be accepted as fresh evidence of difficulties of dealing with a miserably depraved race, and the personal hardships that must be endured by those who, for the traffic of palm oil, nuts, and ivory, choose to reside in such a "beastly place" as the Delta of the Niger. If Mr. Cole had written more soberly and correctly, he might, without any display of literary talent, have produced, by a plain account of his own observations, an interesting and valuable work. As it is, he may be read for the sake of his anecdotes and information; but he must be censured as a wanton offender against the deliberate decencies of print.

MUSIC.

The Musical Society of London, now in its fifth season, has earned honourable distinction, not only by the general excellence and finish of its performances, but also by the varied interest of its programmes. Our concert selections have hitherto been much too conservative and exclusive in their adherence to known and recognized works. There is a large class of musical students and amateurs among the London public, who wish to be informed as to the modern development of the art, and who are glad of the occasional opportunity of hearing a new work, even though it prove unworthy to take a permanent place beside the classical productions of Haydn, Mozart, and Beethoven. To this desire the Musical Society of London has considerately and discreetly administered; and while its programmes chiefly consist of works of acknowledged merit, it has occasionally introduced pieces by composers whose pretensions are the subject of controversy, and therefore of interest. Thus, if it has offended the conservatism of some of its subscribers, it has gratified the curiosity of others by performing symphonies by Schumann and Schubert, respecting whose instrumental music so much difference of opinion exists. The purpose of the Musical Society of London is not limited to concert giving; it includes occasional trials of new works—both chamber music and orchestral pieces—and the formation of a musical library, a very good nucleus for which is already collected. It is gratifying to know that a society so meritorious in purpose and fulfilment has progressed, year by year, in numbers and in means, until it has taken a fixed place in the highest class of our musical institutions. The orchestra, consisting of upwards of eighty of the very best performers, presents a combination of strength without coarseness, and refinement without weakness; while it responds so sympathetically to its excellent conductor, Mr. Alfred Mellon, as to give to its performance that individuality of expression and occasional *abandon* of style which are so rarely attained by numbers. The concert with which the Musical Society of London commenced its fifth season on Wednesday afforded proof of judicious selection and irreproachable performance. The following was the programme:—

PART THE FIRST.

Overture (Der Alchymist) ..... Spohr.
Aria, "Dalla sua pace," Signor Giuglini (Don Giovanni) ..... Mozart.
Concerto in A flat, pianoforte, Madame Arabella Goddard ..... Hummel.
Scena, "At length I am alone!" Mdlle. Parepa (Bertha) ..... Henry Smart.
Overture (The Naiades) ..... Sterndale Bennett.

PART THE SECOND.

Symphony in F, No. 8, Op. 93 ..... Beethoven.
Duetto, "Beltà divina," Mdlle. Parepa and Signor Giuglini (Gli Ugonotti) ..... Meyerbeer.
Overture (The Merry Wives of Windsor) ... Nicolai.

Spohr's overture (the prelude to one of his more recent operas, founded on a tale of Washington Irving's) is in the best manner of the master, and although somewhat sombre, from the nature of the subject, is relieved by some charming melodious phrases; while the conclusion presents one of the grandest climaxes in the whole range of orchestral writing. It was admirably given. One of the most interesting features of the concert was the reappearance of Madame Arabella Goddard, whose performance of Hummel's concerto displayed all that executive perfection and refinement of style for which this lady has long been distinguished. After the inimitable pianoforte concertos of Mozart and Beethoven, there are none which take a higher rank than those of Hummel. Himself a great performer and worthy pupil of Mozart, Hummel's pianoforte music forms the connecting link between that sound classical style, which reached its perfection in the early part of this century, and the more florid and brilliant execution of the present day. Of the half-dozen concertos by Hummel, the best are, perhaps, those in A minor and A flat. In these admirable works the introductory "tutti" is laid out with all the breadth and clearness of design of an orchestral symphony of the school of Mozart. There is the same regular recurrence of episode and symmetrical disposition of detail which distinguish the instrumental music of Haydn and Mozart and the early works of Beethoven. The concerto in A flat, performed by Madame Goddard, may be taken as one of Hummel's representative works, as it contains all his best characteristics—clearness of design, breadth yet refinement of style, exquisite grace, and elegance never approaching feebleness or triviality. To the pianist desirous of forming a "style," we might well counsel the same devotion to Hummel that Johnson recommended the student of English to apply to Addison. Madame Goddard's performance, which was in all respects worthy of the occasion, was received with universal applause. Sterndale Bennett's fanciful overture, rendered with that delicacy of light and shade without which it loses much of its effect, was encored. Beethoven's symphony, in which is combined much of the clear melodiousness of his early style with the abstract grandeur of his later development, exhibited the orchestra in its noblest aspect, as an interpreter of the highest poetical thought. Nicolai's overture is an admirable proof that a German can be lively. Even Auber himself has scarcely produced anything more spirit-stirring than this charming prelude to an opera which it is a matter of surprise has never been produced here. The vocal music was, as the programme shows, of high character; and both singers were in their best voice. Mr. Henry Smart's scena is one of those romantic vocal pieces alternating between accompanied recitative and air, in which an exciting dramatic situation is expressed by musical declamation. Weber, Spohr, and Meyerbeer have furnished the most remarkable examples of this kind; and the two first-named composers are evidently Mr. Smart's chosen models. Not that he is by any means a plagiarist, although he has yet to form a distinct and individual style. His scena displays the mastery of a highly cultivated musician—it is admirably instrumented, and contains much highly-wrought dramatic passion; while its vocal difficulties almost exceed even those with which Weber tortured his singers. The execution by Mademoiselle Parepa was truly magnificent, and created a marked sensation. The concert was altogether, it will be seen, of the highest class; and we trust that instead of four such entertainments in the year, the society will in future seasons extend the number, even should they make a proportionate advance in the present moderate subscription—and there is little doubt that this was not the general feeling among the very large audience which crowded St. James's Hall on Wednesday evening.

At the last Monday Popular Concert, Spohr's "Nonetto" for stringed and wind instruments was the novelty of the evening. This fine composition, produced at a comparatively early period of Spohr's career, contains most of the best characteristics of his style before he made the mistake (as in his later works) of aiming at a tone of metaphysical profundity of which music is rarely capable, excepting at the invocation of a genius like Beethoven's. Most of Spohr's works that were written "with a purpose" will ever be subordinate in interest and value to those in which he gave free rein to his musical fancy, without any didactic object. His symphonies, "The Power of Sound," the "Historical Symphony," that in which he professes to paint, by music, the changes of the "Seasons;" and that very daring, would-be psychological work where the orchestra is the medium by which the conflict of "earthliness and godliness" is to be expressed—all these, in spite of much charming music which they contain, are so many mistakes in purpose. Putting aside, however, these and some other of his later productions, there remains a long catalogue of works in all forms of the art, more than sufficient to place Spohr in the list of modern classical composers. Originally forming his style on that of Mozart, Spohr soon acquired an individuality (ultimately approaching mannerism) by the excessive use of chromatic progressions, and that restless modulation which changes the harmony at every step of the melody. Hence his music sometimes produces an impression of cloying sweetness and minuteness of detail which are incompatible with the expression of grandeur or sublimity. In his oratorios, for instance, where he is always graceful, refined, tender, he seldom rises beyond these qualities; and his religious music, with all the rich glowing colour of Murillo, has little more elevation above earthly sentiment than most of the saints and madonnas of the great Spanish painter. In symmetry of form and proportion, in clearness of outline and consummate mastery over what (to borrow from the painter's art), may be called "drawing," Spohr scarcely yields to Mozart—while his intimate knowledge of orchestral effects, and his skill in combining and contrasting the different instruments, render him one of the greatest of musical colourists. This latter quality is especially apparent in his "Nonetto," where the most perfect balance of sound results from this special knowledge. It was admirably played

Digitized by Google

by Mr. Sainton (violin), Mr. Webb (viola), Signor Piatti (violoncello), Mr. Severn (contrabass), Mr. Pratten (flute), Mr. Barret (oboe), Mr. Lazarus (clarinet), Mr. Hutchins (bassoon), and Mr. C. Harper (horn). The solo sonata of the evening was Mozart's in A, commencing with a theme with variations. The greater part of this work, charming though it be, has scarcely sufficient breadth of style to make much effect on an audience of the present day. The finale, "alla Turca," however, with its stongly contrasted effects, produced a marked sensation, and was encored. Nothing could exceed the delicacy and finish of Mr. Hallé's playing, which is heard to far greater advantage in music of this class than in works where grandeur and breadth of style are requisite. The remaining instrumental pieces were Viotti's "Nocturne" for violoncello, by Signor Piatti; Beethoven's "Sonata" in E flat (from op. 12), for piano and violin, by Messrs. Hallé and Sainton; and a violin quartett of Haydn's. The singers were Miss Banks and Madame Sainton-Dolby; the latter of whom was encored in a wild dirge-like song of Glinka's. Mr. Benedict, as usual, was the accompanyist. At the next concert, Madame Arabella Goddard is to play Mendelssohn's solo sonata in E major, the only work of that kind which its composer produced.

CONTEMPORARY SCIENCE.

A LETTER from Dr. Livingstone, read at a recent meeting of the Royal Geographical Society, has recalled the attention of the public to the prospects of the University Mission and to those of future settlements in Eastern Africa. It is impossible to deny the existence of a wide and well-founded dissatisfaction felt by the supporters of the expedition headed by the late Bishop Mackenzie and encouraged by Livingstone. Glowing assertions by that distinguished traveller of the existence of a mighty river-way into the heart of Africa, of the Makalolo and other tribes ripe for conversion, of healthy highlands inviting European settlers, and of products of industry awaiting the trader, won the heart of a large portion of the public. The religious world, which is so uncertain in its caprices, but so irresistible when moved, threw itself with fervour into the line of action, which these reports suggested. Critical geographers, who doubted the wisdom of a sudden settlement, yielded to the opinion of their especial hero, more especially as they were prominently supported by that excellent administrator, Sir George Grey, then Governor of the Cape. The ordinarily languid and isolated Universities were stung into vigorous and united action. Sermons were preached, committees were formed, volunteers offered themselves, a leader was found, and in a few months the expedition was complete. A body of clergy and artisans, some of them accompanied by their wives, were headed by a bishop, who had some £20,000 of subscription-money placed to his credit, and the mission departed to form a settlement in a savage tropical land, of which nothing was known beyond what had arrested Livingstone's attention in a single rapid journey through it. The most extraordinary part of the undertaking long failed to discourage its supporters; namely, that the missionaries intruded themselves into the territories of a friendly European Power, which would assuredly resist to the utmost the influence they desired to gain. They came to establish a territorial settlement without a tittle of right, to enforce the abolition of the slave-trade in a country that subsisted on the fruits of slavery, and to preach Protestantism where every Christian among those who ruled the land was an ultra-Catholic.

The progress of this expedition is too recent to call for description. It is fresh in our memories how disillusion and disaster followed each other; how the Zambesi and the Shiré prove worthless as navigable rivers, in the ordinary sense of the word; how the Portuguese obstructed the new comers; how the missionaries embroiled themselves with the natives, and how many of them died of fever. Where the missionaries are stationed at present, the Government of Tete can at any moment put a prohibitive tax on their European supplies, or order them out of the land. The impotence of their efforts is, we presume, the only condition of their being treated with tolerance. Nothing can be more hopeless than the mission in its present condition, and the question has at length been mooted, whether it is not advisable to withdraw it altogether?

On this subject we would make a few remarks. Granting, as we do, the absence of discretion shown in the formation of the expedition and the waste of large sums of English money already incurred, we are by no means convinced that a speedy turn of affairs may not be so far favourable as to make a present abandonment of the scheme no less unwise than its original establishment. Livingstone evidently feels keenly his mistake, and has exerted himself with extraordinary effort to learn more of the neighbouring portions of Eastern Africa, with a view of changing his base of operations. He is doing now what he ought to have done before he invited a single missionary. He has lately shown us two great things: first, the existence of a fresh-water lake running parallel to the eastern coast for some unknown distance, not less than 200 miles, which certainly has an important bearing on the possibility of future settlements; and he has also proved that the neighbourhood of this lake may be reached by a neutral river, the Rovuma, with no peculiar difficulty. At the driest season of an unusually dry year (we hear from other sources of remarkable drought all along Eastern Africa), he succeeded in pushing his boat for 156 miles up the river in fifteen days, or at the rate of ten miles a day, including every source of delay. We certainly think this Rovuma, and the remainder of Lake Niassa, call for immediate and thorough investigation. The members of the African mission are now acclimatized, at a great cost of life and money, and they have, we presume, acquired considerable knowledge of the widely-spread dialects and of the habits of the natives. It would therefore be a great waste of resources to break up their establishment until the further explorations of Livingstone, in which he is energetically engaged and which should be encouraged to the utmost, have distinctly proved the non-advisability of *any* station for a settlement. Without sharing the extravagant hopes felt at one time by many enthusiasts, we still think that a small, but a remunerative and growing trade, might be established with Eastern Africa; that a position well suited to influence the natives might very possibly be found; and that the University Mission, begun lavishly and unadvisedly, but continued bravely under discouragement, might rank in its future success as high as the average of missions maintained in other parts of the world.

THE paper on the Bopp School of Philology, by Mr. Key, which was commenced on the 2nd of this month, at the Philological Society, was continued on the 16th. The chief subject in this continuation was the "Vergleichende Grammatik" of Bopp, as it appears in the new edition of 1857-60. It was deemed no slight defect in the writings of Bopp himself and most of his followers, that the physiological side of the question, which alone can constitute the true basis of oral language, is almost wholly ignored. Thus a student in this school is not likely to hear any mention of the "chordæ vocales," without which articulate sound would be pretty well an impossibility; and even the instructive experiments of Professor Willis on vowel sounds made more than thirty years ago seem to be wholly unknown to this German school, although they furnish a physical explanation of all the more important problems connected with the "vocalismus" of language. But the subject on which the most stress was laid in this paper was an innovation by Bopp himself upon the principles maintained in the native school of Indian philologers, the introduction of what he calls "pronominal," and some of his followers "demonstrative" roots. Professor Max Müller, in his recent lectures, has put forth a sort of challenge to philologers, where he says: "If our primitive ancestors wanted to express 'here' and 'there,' they would have found it impossible to find any predicative root that could be applied to this purpose." This challenge Mr. Key accepts, or, rather, accepted by anticipation some fifteen years before it was given. When such words are used, the natural feeling is to utter the verb "see" or "look," as the finger points to the place; and in confirmation of his doctrine, he urges two facts, that pronouns of the third person are very generally, he believes all, ultimately referable to a form *ken*, and the evidence he produces or refers to covers an area extending from the Atlantic to the Pacific, and from the Mediterranean to the Arctic. Again he exhibits a verb *ken*, "see," already familiar in our own tongue, as well as in Chinese; and further, as our *know*, is evidently a derivation from *ken*, precisely as *bellow* is from the obsolete verb *bell*, so he shows that *ken* is implicitly contained in all the analogues which are representatives of our *know*, as the Latin *gnosco*, Greek γιγνωσκω, Sanskrit *jnâ*. Nay, with Bopp's own aid he finds even the simple root in the two Sanskrit verbs, *chit* "know," and *ket* "see;" for Bopp himself identifies this root with the Zend equivalent *chin* "know," and pronounces the initial *k* to be older than the *ch*; nay, with aid from the same quarter, he traces the root even to the Philippine Islands, Madagascar, and New Zealand.

Not only are the so-called demonstrative roots a superfluous innovation, but the uses made of them are thought to have a most damaging influence on the whole work. Finding several, and actually inventing other Sanskrit pronouns for "this" or "that," Bopp interprets every case-ending of nouns in one way as signifying "this" or "that," and no more; so that, on his own showing, they have all one meaning, which seems to be simply nonsense. So again in his prepositions he actually deduces from such alleged roots prepositions of every power. For example, from the Sanskrit *a* "this" he contrives to deduce alike απο "from" and παρα "near." The same pronoun, translated *that* (instead of *this*) he makes out to be *a privative* of Greek, and the augment ε of the Greek aorist, on the ground that what is "there" is *not* "here," and what is "past" is *not* "present."

At the Architects' Society an elaborate paper, illustrated by numerous drawings, "On the Abbey Churches of Caen in Normandy," was read. St. Stephen's, or the "Abbaye aux Hommes;" the Holy Trinity, or "Abbaye aux Dames," founded by William the Conqueror; St. Nicholas, and St. Paix, were described; as also was the fine "Salle des Gardes." The vaulting in St. Stephen's, by comparison with that in the church of Cerisy, near Bayeux, was deemed by the author not original. He inclined to the opinion that the church was first spanned by stone arches carrying a wooden roof, as was almost always the case in England; the early architects being unable to vault so wide a space as the nave.

Two papers were read at the Geographical Society: one "On a proposed Route to Siam, China, &c., across the Isthmus of Kraw;" the other, "A Visit to the Island of Tsusima," by Mr. Oliphant. The object proposed in the first was, by constructing a railway across the neck of land in the Malay peninsula, known as the Isthmus of Kraw, to effect a saving of time, between Calcutta and Hong Kong, of ninety-three hours; and between Ceylon and Hong Kong, of fifty-six hours. Touching at four ports, Akyab, Rangoon, Moulmein, and Kraw, while coasting from Calcutta to Hong Kong, thirty-four hours, it was asserted, would be saved over the present route by Singapore.

The second paper described the Island of Tsusima as lying in the Straits of the Corea, and being 110 miles long, and containing some 30,000 inhabitants. It is almost bisected by a deep sound, from which numerous deep fiords diverge, in which the fleets of the world might lie concealed. Its position between Corea and Japan rendered it important, and it was stated in the discussion that the Russians had for some time made it a sort of naval port for carrying out most extensive repairs to their ships.

The reported death of Consul Petherick and his wife, on the White Nile, was alluded to by the president.

Numerous communications were made to the Zoological Society, the principal of which were descriptions of a new Australian mammal of the genus *Dromicia*, by Mr. G. Krafft; and of a new American marsupial, *Hyracodon fuliginosus*, collected by Mr. Fraser in Ecuador. Dr. Sclater exhibited a box of insects, collected by Mr. Caldwell in Madagascar.

Mr. M. A. Baines has published in pamphlet form his paper contributed to the National Social Science Association,—"Excessive Infant Mortality: How can it be stayed?" In proof of the need of such inquiry, Mr. Baines quotes the Registrar-General's returns to show that in 1857 no less than two in five of the deaths were of children under five years of age, and that above half of these never saw one return of their birthdays. Contending justly that the fragility of infant life is not sufficient to account for the great proportion of premature mortality which takes place, Mr. Baines proceeds chiefly to examine into the important subject of infant-feeding; his opinion being, that however injurious the neglect of other sanitary observances may be to the infant constitution, if a more judicious system of feeding prevailed children would be in a condition to resist the unhealthy influences.

LIST OF MEETINGS OF LEARNED SOCIETIES FOR NEXT WEEK.

Monday, 2nd February.

Entomological—12, Bedford-row.

Geologists' Association—5, Cavendish-square, at 7 p.m.

Medical—32A, George-street, Hanover-square, at 8½ p.m. 1. "On the Conditions of the Aorta simulating Aortic Insufficiency." By Dr. Cockle. 2. "On Diseases of the Brain by Extension from the Ear." By Mr. Streeter. 3. "New Metronome." By Dr. Greenhalgh. 4. "Nitrate of Amyle." By Dr. Richardson.

Tuesday, 3rd February.

Ethnological—4, St. Martin's-place, Trafalgar-square, at 8 p.m. "Some Observations on the Psychological Differences which exist among the typical races of Man." By Mr. Dunn.

Photographic—King's College, at 8 p.m. (Anniversary.)

Civil Engineers—25, Great George-street, Westminster, at 8 p.m. "On the Sleeper Woods of the Madras Railway." By Mr. B. M. Master, C.E.

Pathological—53, Berners-street, Oxford-street, at 8 p.m.

Royal Institution—Albemarle-street, at 3 p.m. "On Animal Mechanics." By Professor Marshall.

Wednesday, 4th February.

Geological—Burlington House, at 8 p.m. 1. "On the Hyæna-den at Wookey Hole." By W. Boyd Dawkins, Esq. 2. "On the Discovery of Paradoxides in Britain." By J. W. Salter, Esq. 3. "On the Fossil Echinidæ of Malta." By Dr. T. Wright. With "Notes on the Miocene Beds." By Dr. A. Leith Adams (22nd Regiment).

London Institution—Finsbury-circus, at 7 p.m. "Warm-blooded Vertebrata." By C. Carter Blake, Esq.

Society of Arts—John-street, Adelphi, at 8 p.m. "On the Cooking Depôts for the Working Classes recently established in Glasgow." By Mr. Alex. Burrell.

Pharmaceutical—17, Bloomsbury-square, at 8 p.m.

Thursday, 5th February.

Royal Society—Burlington House, at 8½ p.m. "On the Embryogeny of Comatula Rosacea." By Professor Wyville Thomson.

Antiquaries—Somerset House, at 8½ p.m.

Linnæan—Burlington House, at 8 p.m. "On the Existence of Two Forms and their Reciprocal Sexual Relation in Several Species of the Genus Linum." By Chas. Darwin, Esq., F.R.S.

Chemical—Burlington House, at 8 p.m.

Royal Institution—Albemarle-street, at 3 p.m. "On Chemical Affinity." By Dr. E. Frankland.

Friday, 6th February.

Archæological Institute—26, Suffolk-street, Pall-mall East, at 4 p.m.

Philological—Somerset House, at 8½ p.m. 1. "On the Origin of the Terminal *m* of *am*;" and 2. "On Some English Etymologies." By Hensleigh Wedgwood, Esq. 3. "Some Points in Sanskrit Grammar." By the Rev. G. Small.

Royal Institution—Albemarle-street, at 8 p.m. "On Aerial Scientific Research." By James Glashier, Esq., F.R.S.

London Institution—Finsbury-circus, at 7 p.m. "Non-Metallic Elements." By Professor Field.

Saturday, 7th February.

Royal Institution—Albemarle-street, at 3 p.m. "On Life and Death." By W. S. Savory, Esq.

LIST OF NEW PUBLICATIONS FOR THE WEEK.

A Daughter of Eve. By Hain Friswell. Two vols. Post 8vo., cloth, 21s.
A Point of Honour. By the author of "Morals of Mayfair." Three vols. Post 8vo. cloth, £1 11s. 6d.
Adams' (H. G.) Our Feathered Families. Game and Water Birds. Fcap., cloth, 3s. 6d.
Adams' (Rev. W.) Sacred Allegories. New edition. Crown 8vo., cloth, 9s.
Aird's (Thomas) Poetical Works. Fourth edition. Post 8vo., cloth, 6s.
Anderson's (W.) Practical Mercantile Correspondence. Twelfth edition. Fcap., cloth, 5s.
Arnold's (Dr. Thomas) Fragment on the Church. Third edition, with Appendices. 8vo., cloth, 6s. 6d.
Badois' (C.) The Method of French Methods: or, Practical Grammar of the French Language. Fcap., cloth, 3s. 6d.
Bacon's Essays, and Colours of Good and Evil; with Notes, by W. A. Wright. Second edition. Fcap., cloth, 4s. 6d.
Beadle's American Library:—Ruth Margerie. By Mrs. Denison. Fcap., sewed, 6d.
Bickersteth's (Rev. E. H.). The Blessed Dead: What does Scripture reveal of their state before Resurrection? Fcap., cloth limp, 9d.
Boutell's (C.) Manual of Heraldry: Historical and Popular. Illustrations. 8vo., cloth, 10s. 6d.
Brightwell's (C. L.) The Byepaths of Biography. Crown 8vo., cloth gilt, 3s. 6d.
Callender's (G. W.) Anatomy of the Parts concerned in Femoral Rupture. 8vo., cloth, 4s.
Cameron's (Paul) The Variation and Deviation of the Compass rectified by Azimuth and Altitude Tables. 8vo., cloth, 7s. 6d.
Charlesworth's (Maria L.) Africa's Mountain Valley. Seventh thousand. Fcap., cloth, 3s. 6d.
———. The Ministry of Life. Twenty-sixth thousand. Fcap., cloth, 5s.
Chaucer's Canterbury Tales. New edition, illustrated. Fcap., cloth, 3s. 6d.
Chavasse's (P. H.) Advice to a Wife on the Management of Her Own Health. Fifth edition. Fcap., sewed, 2s. 6d.
Church of England Temperance Tracts. Fcap., in packet, 1s.
Colenso's (Bp.) The Pentateuch and the Book of Joshua Critically Examined. Part II. 8vo., cloth, 7s. 6d
Commercial Code of Signals, and Mercantile Navy List for 1863. 8vo., cloth, 10s.
Cooper's (J. F.) Novels. Cheap edition. Afloat and Ashore. Fcap., sewed, 1s.
De Quincey's (Thos.) Works. Author's edition. Vol. XIII. The Art of Conversation, &c. Crown 8vo., cloth, 4s. 6d.
D'Israeli's Curiosities of Literature. New edition, with Memoir and Notes by B. D'Israeli. Vol. I. Crown 8vo., cloth, 3s. 6d.
Dod's Parliamentary Companion, 1863. 32mo., cloth, 4s. 6d.
Geldart's (Mrs.) The Second Mother: her Trials and Joys. Second edition. Fcap., cloth, 3s. 6d.
Golden Ladder (The). By the Author of "The Wide, Wide World." New edition. Fcap., cloth, 3s. 6d.
Graham's (Rt. Hon. Sir James) Life and Times. By M'Cullagh Torrens. Two vols. Vol. I. 8vo., cloth, 16s.
Hall's (Newman) The Christian Philosopher Triumphing over Death. A Memoir of Dr. Gordon. Twenty-sixth thousand. Crown 8vo., cloth, 4s.
Heimann's (A.) Introduction to the Study of German. Fcap., cloth, 4s. 6d.
Horton's (Rev. T. G.) Lectures on the Romans. Vol. I. Crown 8vo., cloth, 4s.
Hugo's (Victor) Les Misérables. Translated from the French. Third edition. Three vols. Post 8vo., cloth, £1. 11s. 6d.
Illustrated London News (The). Vol. XLI. (July to December, 1862). Folio, cloth, 18s.
Intellectual Observer (The). Vol. II. 8vo., cloth, 7s. 6d.
Is the Bible True? Part II. Dialogues on Colenso and the Pentateuch. 8vo., cloth limp, 1s.
Journal (The) of Horticulture. Vol. III. 4to., cloth, 12s.
Junod's (P. A. S.) New System for the Declension of German Nouns. Fcap., cloth limp, 1s.
Landels's (W.) Every Day Religion; or, Christian Principles in Daily Practice. Crown 8vo., cloth, 4s. 6d.
Lemprière's Classical Dictionary, abridged by E. H. Barker. New edition, revised by J. Carwin. Crown 8vo., 7s. 6d.
Lewis's (Tayler) The Divine Human in the Scriptures. Crown 8vo., cloth, 3s. 6d.
Lister's (Rev. W.) Physico-Prophetical Essays. Crown 8vo., cloth, 6s. 6d.
Losing and Winning; or, For Richer For Poorer: a Tale, by Elizabeth H. Mitchell. Two vols., post 8vo., cloth, 21s.
Lumley's (W. G.) The Law of Parochial Assessments. Fifth edition. 12mo., cloth, 6s. 6d.
McDun's (Rev. J. R.) The Thoughts of God. New edition. 18mo., cloth, 1s. 6d.
MacDougal's (D.) Complete system of Bookkeeping by Single and Double Entry. 4to., sewed, 5s.
Oyster (The). Where, How, and When to Find and Cook It. 2nd edition. Fcap., boards, 1s.
Perils Among the Heathen: Incidents of Missionary Life. 2nd edition. Fcap., cloth, 5s.
Pfeiffer's (Ida) Last Travels. With Memoir by H. W. Dulcken. New edition. Post 8vo., boards, 2s.
Punch. Re-issue. Vol. XXIV. 4to, boards, 5s.
Railway Library. The Ambassador's Wife, by Mrs. Gore. Fcap., boards, 2s.
Scratchley's (A.) Practical Treatise on Savings' Banks. New edition. 8vo., cloth, 14s.
Standard Novel Library. The Rich Relation. By Miss Pardoe. Fcap., boards, 2s.
Scott's (Sir W.) Waverley Novels. New cheap edition, in 25 vols. Vol. XIV.—The Fortunes of Nigel. Fcap., sewed, 1s.
———— Life. By J. G. Lockhart. New edition (10 vols.). Vols. IX. and X. Fcap., cloth, 3s. each.
Torrens' (Lieutenant-Colonel) Travels in Ladak, Tartary, and Kashmir. Illustrated. Second edition. 8vo., cloth, £1. 8s.
Underdown's (E. M.) The Law of Art Copyright, and the Art Copyright Act, 1862, with Notes, &c. 12mo., cloth, 7s. 6d.
Vanderkiste's (Rev. R.) Lost, But Not For Ever: Personal Adventures in the Australian Mountain Regions. Crown 8vo., cloth, 3s. 6d.
Vaughan's (Dr. C. J.) Rays of Sunlight for Dark Days. Third edition. Fcap., cloth, 3s. 6d.
Verner's Pride. By Mrs. Henry Wood. Three vols. Post 8vo., 31s. 6d.
Wood's (Rev. J. G.) Illustrated Natural History. Vol. III.—Reptiles, Fish, and Insects. Royal 8vo., cloth, 18s.
———— Complete in 3 vols. Royal 8vo., cloth, £2. 14s.
Words for Women. Second edition. 18mo., cloth, 1s. 6d.
Wordsworth's (Canon Christopher) Journal of a Tour in Italy. Two vols. Crown 8vo., cloth, 15s.

J. H. RIDDELL'S AMERICAN STOVE WAREHOUSE,
155, CHEAPSIDE, LONDON.

Illustrated Prospectuses, with Prices and Testimonials, free.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

FOREIGN WINES, LIQUEURS, &c., at MODERATE PRICES.

THE attention of Gentlemen and Families is respectfully invited to our prices:—

Ports, in wood, 20s., 24s.; Matured, 28s., 36s., and 42s. per doz.
Ports, old, in bottle, 36s., 42s., 48s., 54s., 60s. to 96s. per doz.
Sherry, 21s., 24s., 28s., 32s., 36s., 42s., 48s., 54s., and 60s. per doz.
Beaujolais, 20s. to 28s.; Beaune, 36s. to 48s. per doz.
Roussillon, 21s. to 25s. per doz.
Vin ordinaire, 15s.; Medoc, 21s.; St. Julien, &c., 30s. to 36s. per doz.
Larose, Leoville, Margaux, Lafitte, and Latour, at proportionate rates.
Piccardin, Chablis, Grave, Sauterne, Château Yquem.
Champagnes, Sparkling Hermitage, St. Peray, Château Grillet.

Detailed price list of Wines, Liqueurs, Brandies, &c., on application to

ARTHUR, COOPER, & CO.,

THE PERFECT SUBSTITUTE FOR SILVER.

The REAL NICKEL SILVER, introduced more than 30 years ago by WILLIAM S. BURTON, when Plated by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
12 Table Forks	1 13 0	2 4 0	2 10 0	2 15 0
12 Table Spoons	1 13 0	2 4 0	2 10 0	2 15 0
12 Dessert Forks	1 4 0	1 12 0	1 15 0	1 17 0
12 Dessert Spoons	1 4 0	1 12 0	1 15 0	1 17 0
12 Tea Spoons	0 16 0	1 2 0	1 5 0	1 7 0
6 Egg Spoons, gilt bowls	0 10 0	0 13 6	0 15 0	0 15 0
2 Sauce Ladles	0 6 0	0 8 0	0 9 0	0 9 6
1 Gravy Spoon	0 6 6	0 10 0	0 11 0	0 12 0
2 Salt Spoons, gilt bowls	0 3 4	0 4 6	0 5 0	0 5 0
1 Mustard Spoon gilt bowl	0 1 8	0 2 3	0 2 6	0 2 6
1 Pair of Sugar Tongs	0 2 6	0 3 6	0 4 0	0 4 6
1 Pair of Fish Carvers	1 4 0	1 7 6	1 10 0	1 12 0
1 Butter Knife	0 2 6	0 5 6	0 6 0	0 7 0
1 Soup Ladle	0 10 0	0 17 0	0 17 0	1 0 0
1 Sugar Sifter	0 3 3	0 4 6	0 5 0	0 5 6
Total	9 19 9	13 10 3	14 19 6	16 4 0

Any article to be had singly at the same prices. An oak chest to contain the above, and a relative number of knives, &c., £2. 15s. Tea and Coffee Sets, Dish Covers, and Corner Dishes, Cruet and Liqueur Frames, &c., at proportionate prices. All kinds of re-plating done by the patent process.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY CATALOGUE may be had Gratis, and free by post. It contains upwards of 500 Illustrations of his illimited Stock of Sterling Silver and Electro-Plate, Nickel Silver and Britannia Metal Goods, Dish Covers, Hot Water Dishes, Stoves, Fenders, Marble Chimney-pieces, Kitchen Ranges, Lamps, Gasseliers, Tea Trays, Urns, and Kettles, Clocks, Table Cutlery, Baths, Toilet Ware, Turnery, Iron and Brass Bedsteads, Bedding, Bedroom Cabinet Furniture, &c., with Lists of Prices and Plans of the Twenty large Showrooms, at 39, Oxford-street, W.; 1, 1A, 2, 3, and 4, Newman-street; 4, 5, and 6, Perry's-place; and 1, Newman's-mews, London.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

METZLER & CO.,

37, 38, 35, and 16, GREAT MARLBOROUGH-STREET, LONDON, W.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

GEOLOGY and MINERALOGY.—ELEMENTARY COLLECTION, to facilitate the study of this interesting Science, can be had, from Two Guineas to One Hundred, also Single Specimens, of J. TENNANT, 149, Strand, London, W.C. Mr. Tennant gives Practical Instruction in Mineralogy and Geology.

UNRIVALLED PRIZE MEDAL

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

MR. ARNOLD'S MANUAL OF LITERATURE.

Just published, in Post 8vo. price 10s. 6d., cloth.

A MANUAL OF ENGLISH LITERATURE, Historical and Critical; with an Appendix on English Metres. By THOMAS ARNOLD, B.A., formerly Scholar of Trin. Coll., Oxford, and late Professor of Eng. Lit. in the Cath. Univ. of Ireland.

"Mr. Arnold's book is a great improvement on any previous one with which we are acquainted. It is scholarly and accurate, bearing traces of careful thought and reading."—*National Review.*

"As a 'Manual,' to be used in superior middle-class schools, it will probably meet with a cordial reception, which it certainly deserves. There is a clearness and comprehensiveness in the view which Mr. Arnold has taken which are often wanting in works of this kind."—*English Churchman.*

London: LONGMAN, GREEN, & Co., 14, Ludgate-hill.

NEW WORK BY DR. MERLE D'AUBIGNE.

H.R.H.

THE PRINCE CONSORT'S PRINCIPAL SPEECHES AND ADDRESSES; with an Introduction giving some Outlines of his Character.

FROM THE INTRODUCTION.

"It must be obvious to the reader of this Introduction that the writer has received the most valuable and important aid from those who, by their constant intercourse with the Prince Consort, could best appreciate the high qualities in him which shone forth in domestic life—from persons in the Royal Household, who saw him daily—from Members of the Royal Family—and especially from the Queen Herself. To Her Majesty the writer is indebted for a view of the Prince's character, in which a loving and profound appreciation is combined with the most earnest desire for exact truth and faithfulness. There is not any one who could have been cognizant of all the various traits of the Prince enumerated in this Introduction, unless he had been instructed by Her, who alone saw, with the full light of a complete affection, into the whole beauty and merit of the character of this remarkable man."

JOHN MURRAY, Albemarle-street.

UNIFORM WITH "IN MEMORIAM."

Now ready, with Portrait, fcap, 8vo., 7s. 6d.

REMAINS IN VERSE AND PROSE OF ARTHUR HENRY HALLAM. With Preface and Memoir.

"Arthur Henry Hallam had the happiness to possess the friendship of one then as young as himself, whose name has risen to the highest place among our living poets. What this distinguished person felt for one so early torn from him has been displayed in these beautiful poems entitled 'In Memoriam,' which both here and in America have been read with admiration and delight."—*Advertisement.*

JOHN MURRAY, Albemarle Street.

Now ready, One Volume, 8vo., 12s.

SECULARIA; or, Surveys on the Main Stream of History. By SAMUEL LUCAS, M.A., late of Queen's College, Oxford.

CONTENTS.

1. Comparison of Ancient and Modern Revolutions.
2. Revivalists.
3. Mediæval Castle.
4. Mediæval Borough.
5. Coming of the Armada.
6. The Alternative of 1640-41—Old or New England?
7. New England Theocracy.
8. Preparatives of the American Revolt.
9. Revolution of 1688 and its Historian.
10. Hohenzollern Stage of Hero-Worship.
11. Absolutism in Extremis.
12. Revolutions in Progress and Prospect.

"At first one is disposed to regret that the knowledge and industry which have gone to the composition of the reviews before us, were not employed upon some *magnum opus*,—some independent historical work. But such regret disappears upon mature consideration. The functions of the critic demand for their adequate discharge, qualifications as rare, if not as lofty, as those of the independent author. In historical criticism this is especially true, and of this department Mr. Lucas is a perfect master. He is a critic proper; in this respect differing wholly from Macaulay, of whose essays criticism is the least part, as well in importance as in quantity."—*Parthenon.*

JOHN MURRAY, Albemarle Street.

NEW VOLUME OF LECTURES BY PROFESSOR STANLEY.

Now ready, with Plans, 8vo., 16s.

LECTURES ON THE HISTORY OF THE JEWISH CHURCH: Abraham to Samuel. By the Rev. A. P. STANLEY, D.D., Regius Professor of Ecclesiastical History at Oxford, and Canon of Christ Church.

PUBLIC OPINION.

A Weekly EPITOME of FACT and OPINION for all Classes of Readers.

PUBLIC OPINION every SATURDAY, 2d.

VOLS. I. and II. of PUBLIC OPINION now ready. Vol. I. from October, 1861 to March, 1862. Price 6s. 6d. Vol. II. from April to December, 1862. Price 10s. 6d. bound in cloth. To be obtained through any Bookseller or Newsvendor; or at the Office, 11, Southampton-street, Strand.

AN IMPARTIAL HISTORY of the PRINCIPAL EVENTS in GREAT BRITAIN and IRELAND, America, France, Italy, Germany, Spain, Turkey, Greece, Belgium, Denmark, Mexico, Russia, Poland, Portugal, India, China, Japan, Australia, Canada, and the other Colonies for the year 1862, to be found in PUBLIC OPINION, Vols. I. and II., compiled from the English and Foreign Press so as to show the course of all events of interest in all countries, and the views of all parties upon them, by impartially selected extracts from the English papers, and Translations from FRENCH, GERMAN, ITALIAN, SPANISH, PORTUGUESE, MODERN GREEK, TURKISH, and ARABIC Papers.

A CONCISE RECORD of EVENTS connected with LITERATURE, the FINE ARTS, MUSIC, the DRAMA, the CHURCH, the ARMY and NAVY, and the LAW kept in PUBLIC OPINION, so as to give all Facts of Interest connected with each, and to show their General Progress.

ALL NEW STANDARD WORKS found described, together with the conflicting Criticisms of the Press put in juxtaposition in PUBLIC OPINION.

A FAIR HEARING for EVERY ONE.—PUBLIC OPINION, with the object of ascertaining and expressing the thoughts and feelings of the Public in all places, and on all subjects, opens it columns to correspondence from persons of all parties, and inserts the letters alike of Englishmen and Foreigners (furnishing Translations if they are in French, German, Italian, Spanish, Portuguese, Dutch, Turkish, Arabic, or Modern Greek), when such letters are of a nature to throw fresh light on any phase of any question of General Interest.

TO ENGLISH RESIDENTS ABROAD and COLONISTS, PUBLIC OPINION is more valuable, and more adapted to keep them *au courant* of the affairs of Great Britain and the whole World, than any other paper. Persons having Friends on the Continent or in the Colonies, cannot make a more acceptable present than PUBLIC OPINION, which, in most cases, can be sent free by post for a Penny Stamp.

POLITICIANS, STATESMEN, CAPITALISTS, EDITORS, and AUTHORS, have a means of ascertaining, without loss of time, the thoughts and feelings of the Home and Foreign Public on all subjects in PUBLIC OPINION, to be found nowhere else.

PUBLISHERS and BOOKSELLERS can read the taste of the Public, with regard to Literature from the Synopsis of Reviews given in PUBLIC OPINION, and possess one of the best media for advertising such Works in PUBLIC OPINION.

THE WAR IN AMERICA.—All the Great Battles and other Events connected with the Civil War, given in the words of the English and American Press in PUBLIC OPINION, Vols. I. and II.

THE COTTON QUESTION fully discussed in PUBLIC OPINION, Vols. I. and II.

IRON-CLAD SHIPS.—The History of Iron-clad Ships and the Debate upon them, to be found in PUBLIC OPINION, Vols. I. and II.

ARMSTRONG, WHITWORTH, and LANCASTER GUNS. The question of the relative merits of the above Guns discussed in PUBLIC OPINION, Vols. I. and II.

THE BRITISH COLUMBIA EMIGRATION QUESTION. Is British Columbia a Fit Place to Emigrate to? See PUBLIC OPINION, Vols. I. and II.

FEMALE EMIGRATION.—For the *pros* and *cons* of this question, see PUBLIC OPINION, Vols. I. and II.

THE EDUCATION QUESTION, the REVISED CODE, &c. All arguments for and against the New Code to be found in PUBLIC OPINION, Vols. I. and II.

THE INCOME TAX, its Good or Bad Aspects.—See PUBLIC OPINION, Vols. I. and II.

THE ROUPELL FORGERIES, and other CAUSES CELEBRES. For the fullest Accounts see PUBLIC OPINION, Vol. II.

THE QUESTION OF BLOCKADE EXAMINED in PUBLIC OPINION, Vols. I. and II.

THE QUESTION OF INTERVENTION ventilated in PUBLIC OPINION, Vols. I. and II.

THE GREAT EXHIBITION OF 1862.—The Opening, Progress, Incidents, and Close of. See PUBLIC OPINION, Vols. I. and II.

THE THAMES EMBANKMENT.—The Rise and Progress of this Project. See PUBLIC OPINION, Vols. I. and II.

COMPETITIVE EXAMINATIONS.—The Merits of the System Reviewed in PUBLIC OPINION, Vols. I and II.

THE COLENSO CONTROVERSY.—The Opinions of all the Organs of the Press, together with a mass of Interesting Letters on BISHOP COLENSO'S WORK on the PENTATEUCH, in PUBLIC OPINION, Vol. II.

THE TICKET OF LEAVE SYSTEM,—THE GAROTTE ROBBERIES and TRANSPORTATION examined in PUBLIC OPINION, Vols. I. and II.

THE DISTRESS IN LANCASHIRE.—The whole History of the above Calamity and the Efforts made to relieve it, in PUBLIC OPINION, Vol. II.

THE EMPLOYMENT OF WOMEN.—The various Arguments for and against, as brought forward by the different Organs of the Press, in PUBLIC OPINION, Vol. II.

THE ABOLITION of CHURCH-RATES.—For the Agitation in favour of the above, and the Opinions it elicited, see PUBLIC OPINION, Vols. I. and II.

THE VOLUNTEER MOVEMENT.—For the Progress of the above during the Past Year see PUBLIC OPINION, Vols. I. and II.

THE EMANCIPATION OF THE SLAVES.—For American and English Opinions on, see PUBLIC OPINION, Vols. I. and II.

THE YELVERTON CASE.—The whole History of the above Case in PUBLIC OPINION, Vol. II.

DR. LUSHINGTON'S JUDGMENT in "ESSAYS AND REVIEWS"—How looked upon by the Press. See PUBLIC OPINION, Vols. I. and II.

THE TURF SCANDAL thoroughly and impartially sifted in PUBLIC OPINION, Vol. II.

RAILWAY ACCIDENTS and TRAVELLING, and its effect on Health, considered in PUBLIC OPINION, Vols. I. and II.

THE PRINCE of WALES'S MARRIAGE.—All Opinions and Arrangements minutely recorded in PUBLIC OPINION, Vol. II.

THE ENGLISH, FRENCH, and ITALIAN PRESS on the ROMAN QUESTION. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the COMMERCIAL TREATY with FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE ENGLISH and FRENCH PRESS on the PRESS in FRANCE. See PUBLIC OPINION, Vols. I. and II.

THE "ROME OR DEATH" GARIBALDI EXPEDITION, related in the words of the Italian Papers, with the Opinions of the English, French, and Italian Press on the whole affair, in PUBLIC OPINION, Vol. II.

THE GREEK REVOLUTION, the INSURRECTION at NAUPLIA, &c., the Signs of, Cause and Effects of, stated in the Words of the Greek, English, French, and Italian Papers, in PUBLIC OPINION, Vol. II.

THE MEXICAN EXPEDITION.—The Triple Alliance: the Withdrawal of England and Spain; the Campaign of the French; the Debate in the Spanish Parliament upon, and the Views of all Parties concerned, given in their own words, from the English, French, and Spanish Papers, in PUBLIC OPINION, Vols. I. and II.

THE TURKISH LOAN and the PROSPECTS of TURKEY as discussed in the English, French, Italian, and Turkish papers, in PUBLIC OPINION, Vols. I. and II.

THE HISTORY of the STRUGGLE BETWEEN the KING of PRUSSIA and his PEOPLE, from the German, English, and French points of view, in PUBLIC OPINION, Vol. II.

THE RATTAZZI MINISTRY in Italy: its Rise, Progress, and Fall, with Public Opinion in Italy, France, and England upon it, in PUBLIC OPINION, Vols. I. and II.

A COPIOUS CLASSIFIED INDEX to facilitate Reference to the above and all other Subjects of General Interest, given with each Volume.

PUBLIC OPINION, Vol. I., from October, 1861, to March, 1862, price 6s. 6d. Vol. II. from April to December, 1862, price 10s. 6d., bound in Cloth. To be obtained through any Newsvendor or Bookseller, or at the Office, 11, Southampton-street, Strand, W.C.

ANNUAL SUBSCRIPTION to PUBLIC OPINION, post free (payable in advance), 13s.; half-yearly, 6s. 6d. Post-office Orders to be made payable to J. K. SHARPE, 11, Southampton-street, Strand, W.C.

PUBLIC OPINION is sold at all Railway Bookstalls, and by all Booksellers and Newsagents throughout the Kingdom. Price 2d., stamped, 3d.

PUBLIC OPINION every SATURDAY, 2d.

OFFICE: 11, SOUTHAMPTON STREET, STRAND.

LONDON: Printed by CHARLES WYMAN, at the Printing Office of Cox & Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the County of Middlesex; and published, for the Proprietors, by JOHN KELLETT SHARPE, at No. 11, Southampton-street, Strand, in the same County.—SATURDAY, JANUARY 31, 1863.

THE OPENING OF PARLIAMENT.

THE gloom cast for more than an entire year upon the country, by the loss of a pure-hearted and accomplished Prince, is broken this week by Her Majesty's formal announcement to Parliament of the coming marriage of the Heir to the Throne. England, which has mourned so sincerely for the loss of the Father, will rejoice again to sympathize with the happiness of the Son. English attachment to the Queen is composed of true affection rather than of conventional loyalty; and no movement can take place within her family circle that does not interest and concern the public at large. But the marriage of our future King is an event which his mother's subjects cannot watch with purely unselfish feelings. Happy is the country where there are none but happy Royal marriages! The private life and virtues of Her Majesty have been to England a public blessing; and it is a matter of thankfulness and pride to know that the blameless career of the parents will be reflected in the career of their royal children. Though the ceremony itself is to take place at Windsor, care will be taken that the metropolis loses little of the usual splendour of a royal matrimonial *fête*. The Queen's subjects will not grudge her in her widowhood the luxury of additional privacy secured to her a little longer by this arrangement; and the princely progress through London will be as magnificent as loyalty and enthusiasm can make it. When the time comes for her to resume her place in public, there is no fear that the wife of Prince Albert will be found wanting either in unselfishness or in self-control. But the English nation is not slow to comprehend that marriage festivities, with all their gladness, must needs touch a deep chord of inextinguishable grief in the Queen's heart. One figure will be wanting at the marriage board, whose place no stranger can fill; and without whom the first solemn act of the young Prince since he has entered into manhood seems incomplete. It is too much to ask, that the first occasion on which the bereaved sovereign meets her subjects, should be one which must recall to her so vividly the days that are for ever past.

The warfare in Parliament this session will regain some of its pristine vigour, in consequence of the increased sunshine in the Palace. Last year, by common consent, animosities were buried in a common sympathy for the Queen. Towards the close of the session a few passages of arms relieved the Conservative party from any imputation of unnatural magnanimity. The fact is, that even in moments of the profoundest political peace, Mr. Disraeli never goes anywhere without his tomahawk; and the temptation to strike a sudden blow was at last more than he could withstand. But the Tory tribe had buried their weapons early in the session, and could not be brought to dig them up again at a moment's notice, even at the well-known signal of their great medicine man. Mr. Walpole turned pale at the sight of his own war-paint, and his disinclination for the fight proved infectious. The season passed over without a general conflict, and the generous professions made by Lord Derby in the spring were, in the main, fulfilled. The new session, however, will, in all probability, not be so uneventful as the last. The years are slipping from Mr. Disraeli, and little has been done of late. The sun is going down upon him, yet his defiant rival still fronts him, seated, with an air of biting sanctity, upon the Treasury benches. It would be doing injustice to the other chiefs of the Conservative host to suppose that they have not also the passions of their kind. Sir Stafford Northcote doubtless longs to chalk his fingers over a Treasury slate of his own; and a fear of permanently obstructing his party may possibly induce Mr. Walpole, who was the saint of last session, to be the sinner of the next. This year, at all events, there can be no doubt that opportunities of assailing Lord Palmerston will not be flung aside. The clans are gathering and mustering. Already in the dreary and flat marshes of the *Quarterly* the bitter hum of a feminine Tory gadfly has made itself heard. It is the signal for concerted action among the country party, and the "milch cow" of the landed interest gallops in distraction hither and thither, obedient to the call.

Mr. Disraeli intimated pretty clearly on Thursday night that the conflict will not flag for want of energy on his part. Though there was no division on the Address, the debate that occurred upon it gave omens of a stormy session. It will not be necessary during the ensuing year to fall back upon the cry of the Church's danger, to rouse the Conservative blood. The list of Ministerial blunders with which the leader of the Opposition regaled the country was one from which acrid Conservative orators may pick and choose for months to come. By an ingenious artifice, even the national expenditure was made to seem a necessary consequence of a meddlesome foreign policy; and thus Mr. Gladstone's finance came in for a portion of the blows that were ostensibly directed against Lord Palmerston's leathern doublet. Schleswig Holstein, Italy, America, and the Ionian Islands, have all been dealt with by the Cabinet during the interval since last autumn; and it was natural that Mr. Disraeli should be dissatisfied with all that has been done. The Brazilian difficulty was a special windfall on which he can scarcely have reckoned when he laid down the keel of his speech; and before a week has passed, in all probability, it will be a difficulty no longer. In like manner Mr. Gladstone's and Mr. Milner Gibson's indiscretion on the subject of the North and South

Digitized by Google

had probably been forgotten by every one except the member for Buckinghamshire, and the American Minister; both of whom have, perhaps, the same sort of bitter memory for the shortcomings of the English Government. But it is obvious that on the subject of the Ionian Islands, it will be in Mr. Disraeli's power to get up a very pretty debate. The Church was at stake in the winter. The empire will be at stake during the spring. The shades of old Tory statesmen will be invoked, and no effort will be spared to bring odium on the Liberal ministry for a politic act of justice to Greece, for which they have already been rewarded by the *naive* surprise and astonishment of Europe.

Her Majesty has promised retrenchment, and the Tory leader had nothing for it but to fall back upon a tone of well-bred incredulity, and the suggestion that the aggressive temper of Lord Palmerston was a luxury for which the country must be prepared to pay. So far he will have Mr. Bright with him, and perhaps a considerable section of the advanced Radical members. But when it comes to be explained what Mr. Disraeli's own foreign policy would be, we think he will soon lose his hold upon his Manchester allies. For the present it may be assumed that the Opposition are for cutting down the Budget, and on this basis they may succeed in patching up an unholy alliance with Mr. Cobden. But we should like to know how Mr. Cobden would appreciate the American policy of the Tories, should he ever succeed in hoisting them into office. Mr. Disraeli is not likely to commit himself unnecessarily, but a tolerable number of his followers stand already committed to the cause of secession, and some of them even to the hateful cause of slavery; and all the fancied grievances which have been done by the present Ministry to the North would soon fade from memory, when contrasted with the more active antagonism of a Derby Cabinet. The extraordinary blunders which have led Mr. Disraeli all his life long to place himself on the unpopular and impossible side of every question, continue to affect him on the subject of Italy. Mr. Bright might any day take up the Pope's cause, because the Pope's cause is opposed to every healthy English feeling. But Mr. Disraeli takes up the Pope's cause, because he has a vague idea that it is statesmanlike to do so. His known disbelief in Italian unity, and his sympathy with the Italian policy of France, are sufficient to damn any Conservative Government that he might form. So long as on the two important foreign questions of the year he has nothing like a popular line of conduct to suggest, Lord Russell may well make him a present of Schleswig-Holstein. It is all very well to cavil at others; but we are sorry to say Mr. Disraeli has got nothing to offer us himself; and if England were so unfortunate as to be guided by his hand, she would soon find out whether Mr. Disraeli's or Lord Palmerston's foreign policy was most compatible with retrenchment.

NEW PHASE OF THE COTTON SCARCITY.

THE subject of manufacturing distress appears to be entering on a new phase. Hitherto we have been anxious lest the cotton operatives should starve or lose their health in the crisis through which they are compelled to pass. We are now beginning to be uneasy lest we should have them permanently on our hands. At first, the public was generously eager to secure an adequate scale of relief. At present, the public is growing somewhat nervous under the apprehension that the distributors of relief may have been too liberal, and may become encouragers of pauperism and victims of imposture. In August we were afraid that idleness would be too burdensome to the people. In February we are disposed to fancy that idleness is becoming too sweet.

There is some reason for these fears; though, as is always the case when a reactionary movement of any sort sets in, there is a manifest tendency to exaggerate them and to press them too far. The distributors of relief may have erred, but they have erred on the right side. They may have been a trifle over-liberal, but they have effectually attained the object on which the English nation had set its heart, *i. e.*, they have thus far carried the population intrusted to their charge through a long and severe and unprecedented crisis, without starvation, without hunger, without pestilence, and, so far as we can ascertain, without even any departure from the ordinary standard of health. That they could have done so much without, in some instances, doing *too* much, was more than could be expected. Among the hundred thousands whom they had to assist, moreover, it was certain that numbers would be found dishonest and selfish enough to take advantage of the public generosity, to advance claims which had no foundation, and to push well-founded claims to an extreme. The Committees and Boards of Guardians were on their guard against this danger, but it was impossible that they should always succeed in averting it; and many cases of imposture no doubt have occurred, and not a few have been detected. This evil has been increased and facilitated by an arrangement against which we raised a warning voice at the very outset—by the determination, we mean, of the Mansion House Committee to administer aid through other channels than that of the Central Manchester Relief Committee. In consequence of this error, it was made possible for some greedy applicants to receive relief from two or three quarters, each ignorant of the proceedings of the other. Besides this, some well-meaning, but injudicious persons, persisted in sending funds to special parties, to be by them distributed according to their own information and in their own neighbourhood. Some sent clothing, some sent fuel, some sent subscriptions specially to sewing-schools, and some sent money to be expended in redeeming pledged articles. Several families, therefore, naturally enough, were relieved twice over. This evil has, however, been carefully inquired into, and the result has been a decided reduction of the relief lists in several districts. Finally, it is to be feared that many idle and disreputable families have begun to be in love with charity, and actually to prefer a dependent to an industrious life. They are not so well fed as they were, it is true; but, on the other hand, they have enough to eat, they have nothing to do, and they may lie in bed as long as they like. These operatives, therefore, not only make no efforts to obtain employment, but superciliously refuse half-work or work at a moderate reduction from former wages when it is offered them. This is a serious difficulty, and may soon cause fresh embarrassment to the organized distributors of the relief funds; but they are fully alive to the fact, and are on their guard against the mischief we have indicated. There can be no doubt that it will soon be necessary to overhaul the relief lists most severely, both to curtail the standard rate of assistance given, and to withhold assistance resolutely from all who can be proved to have refused work on *any* terms compatible with a decent subsistence. Neither the ratepayers of Lancashire, nor the benevolent public of the kingdom generally, contribute in order to keep up the rate of wages, but only to save from starvation those who can get no wages at all.

But another, and still more important question, remains: How long is this to continue? Is the cotton trade permanently crippled, or only disabled for a time? Has production, as alleged, outrun the wants of the world, or has consumption only been checked for a while by high prices and disorganized circumstances, to revive again shortly and to be soon as brisk, or brisker, than ever? In a word, will the same number of cotton operatives as before be wanted as soon as the raw material can be got together to employ them, and can that raw material be expected soon? Or has the manufacture seen and passed its culminating point, and will, therefore, a considerable proportion of the manufacturing population be permanently redundant? If the former, we may continue to bear the burden of their maintenance for a short time longer; if the latter, ought we not to take measures for aiding and inducing them to *emigrate* at once? This last is the key-note which has been struck by one or two of the leading journals last week, and propounds the question which they seem inclined to answer in the affirmative.

We are satisfied that such affirmative answer would be certainly premature, and probably erroneous. We do not believe that any portion of the manufacturing population is really, in any correct sense of the word, *redundant*. We believe it will be again all wanted at home; that cotton will ere long be poured upon our shores; and that the cotton trade will in time resume its old vitality and its old dimensions. If so, though we should do wrong to discourage or impede any who spontaneously desire to emigrate, yet we should commit an equal mistake were we to urge emigration on the supposed superfluous hands, or assist their removal to other shores by funds subscribed for purposes of relief from a temporary calamity.

In the first place, the removal of our people to other lands is a step that cannot be revoked. Once gone, they do not come back again. It is a great mistake to regard people

Digitized by Google

as redundant who in truth are only misplaced. Now, at best, the present superfluous or rather unemployed population in Lancashire and Cheshire is only a local congestion. We may, perhaps, have too many women in Great Britain, but we assuredly have not too many men. In the last war, it may be remembered that we found great difficulty in recruiting both army and navy. The sailors were all busy in the merchant service, and the peasants and labourers and weavers, who used to furnish so ample a supply to the recruiting sergeant, were all taken up either by factories or railways. It was found almost impossible to obtain good servants of either sex, except on the most extravagant terms. We all remember how very recently the complaint was general that no footmen would stay in their places, and that decent women cooks were not to be had for love or money. These recollections will at once suggest to us how a portion at least of the apparent redundancy in Lancashire and Cheshire may be drafted off. A few of the more active and turbulent men, and many of the more intelligent and enterprising young women will go into service—a change already in process, and for which the sewing schools and cooking schools are most usefully preparing these. But there is another and a still more natural and favourable opening. *All* trades are not depressed because the cotton trade is suffering. On the contrary, the linen and woollen trades are remarkably flourishing, and are flourishing precisely as a consequence. Yorkshire gains by Lancashire distress. The increase of production in those two manufactures during the last year was remarkable and significant. We do not know how much the home demand for these classes of goods has sprung up, but, as the *Economist* showed last week, the export of linens increased 30 per cent., and that of woollens from 50 to 100 per cent. They have already absorbed numbers who were thrown out of work by the stoppage of the cotton factories. Indeed, it is a fact that but for that stoppage, the flax and worsted mills would have been much embarrassed to carry on their works. When people cannot obtain cotton shirts, or cannot get them cheap enough, they buy linen ones, and when cotton quilts grow scarce and dear they are driven to substitute blankets and woollen rugs. We apprehend, therefore, it will soon be found that much of the supposed redundancy in Lancashire will be absorbed in other occupations, even if the cotton trade should not revive as early as we hope. Should it revive at once, or speedily—that is, should America proclaim peace and once more send us cotton,—such would be the demand for cotton fabrics in the now cleared markets of the world, that our operative population, in place of being excessive, would, we are satisfied, be found inadequate.

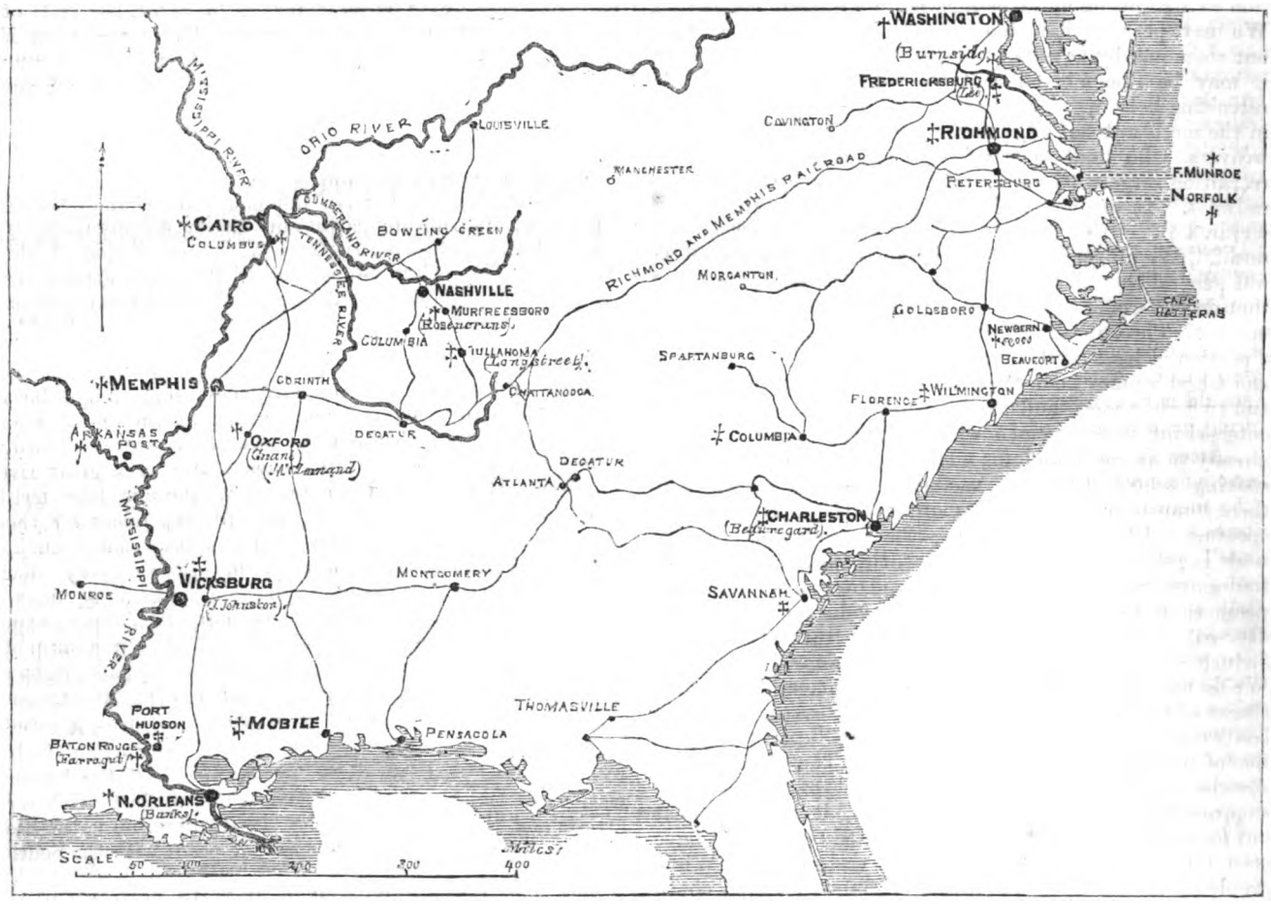
Secondly, emigration, though an effectual and final, is a very expensive means of disposing of a population supposed to be superfluous at home. The cost of a passage and outfit to Canada or the United States is seldom short of £5 a head; that to Australia or New Zealand is £20 at least. Now, as the average sum distributed in relief to our unemployed operatives and their families is 2s. a head, each individual might be maintained *for a year* for the same amount that it would require to send him to America; and for *four years* for the amount that would be required to send him to Australia.

Thirdly, we do not take so gloomy a view as many journals as to the prospects of the cotton trade—probably, because we have more accurate knowledge of its condition. The present prices of cotton will bring supplies from all quarters, and will greatly stimulate production in India, in Egypt, and in Brazil; and with increased supplies, prices will gradually droop, so as to make production again possible, if not at once remunerative. Every month that passes does something to clear the markets of all countries of their accumulated stocks, and to cause a revival of demand, and an improvement in the price paid for manufactured goods. Therefore, though we do not anticipate a sudden or a very speedy revival of the cotton trade, we confidently expect both that cotton has seen its highest point, and that depression of trade has seen its lowest point. We trust that by the slow and steady operation of natural causes, the number of the unemployed will decrease week by week; and that the relief-lists will be considerably reduced by the continuous exercise of vigilance, and by stern determination in refusing aid to all who decline offered work. Nor are we by any means without hope that another year will see American cotton again flowing into Liverpool as it was wont to do, and a general resumption of manufacturing industry, all the more energetic for its temporary and enforced interruption. If these anticipations should be realized, there would be great reason to regret the exile of any considerable numbers of our operatives; and even if they should be disappointed or postponed, we scarcely fear that the year 1864 will find us with a population which can in any fair or permanent sense be called redundant.

THE MILITARY SITUATION IN AMERICA.

THE time is not inopportune for taking a general survey of the military situation on the other side of the Atlantic. The points of contact of the rival armies are sufficiently defined, and the designs of the rival commanders, together with the grounds upon which they rest, are tolerably obvious.

Before proceeding to explain the position of the troops, it is important to observe that at least 200,000 of the men who now compose the Northern armies, are entitled to their discharge in the month of May. It seems that they were only recruited for nine months. Even if they are replaced by others, it is obvious that in this respect the North is at a very serious disadvantage compared with the South; for in the South conscription prevails, and a soldier must serve as long as his services are required. But according to some trustworthy accounts there appears to be great doubt whether the Northern States, especially those in which the newly elected Governors are Democrats, will furnish a sufficient number of men, either by enrolment of new recruits or by re-enlistment for a prolonged period of the old soldiers. But it is obvious that if this difficulty cannot be got over, the war must come to an end. In the meantime, it is to be observed, that however vehement have been the denunciations of the newly elected Democrats against arbitrary arrests and the violation of the Constitution, no voice has yet been successfully raised to conclude peace with the South at all hazards.



The circumstances which distinguish the present contest in America from other contests are, in the first place, the character of the armies; in the second place, the enormous extent of the field of operations, which renders the lines of communications by railway and by river of paramount importance; and, lastly, the fact, that whilst the Southerners have only a few gunboats and no fleet, the Northerners have a very powerful fleet and ample means of using the magnificent water communication in the interior of the country for warlike purposes and for transporting supplies. Without carefully attending to these circumstances, it is impossible to understand the strategy of either side; by allowing them due weight, the plans of both sides become at once intelligible.

By a cursory glance at the map on the following page, and which comprehends the country between Washington in the north-east, the junction of the Ohio with the Mississippi in the north-west, New Orleans in the south-west, and Savannah in the south-east, the military situation is at once apparent. The grand object of the North on the eastern seaboard is to obtain possession of Richmond, Wilmington, Charleston, and Savannah. The possession of these points will give them the control of the whole seaboard, and will drive the Confederates into the interior, destroy their commerce, and, in fact, make their existence as an independent nation practically impossible. At present, however, all these places are in the hands of the Confederates, although access to them is practically barred by blockading ships. If any evidence of this were needed, it would be found in the fact that the despatches which were captured the other day off Charleston almost all bear date the end of last October, so that the ship which conveyed them must have been waiting some three months for an opportunity to escape, nor even then was she successful. On land, however, the Confederates are in great force, and their troops are admirably commanded. The Federals, under Burnside, are still at Falmouth, on the Rappahannock, where they retired after their unsuccessful assault of the heights above Fredericksburg. Burnside is watched by Lee, who still occupies these heights. The Federal army is said to amount to 100,000; and as to the Confederates, it is impossible to form any conjecture. A railway connects Lee with Richmond, some sixty miles to the south-west, whence he draws his supplies.

Of all the cities held by the South, Richmond is the most vital. It is to the South what Washington is to the North.

Digitized by Google

MAP OF THE SOUTHERN STATES, WITH THE POSITIONS OF THE FEDERAL AND SOUTHERN ARMIES.

It is the capital of the "old dominion," hallowed by a thousand recollections. To lose Richmond would be to lose the head and centre of the Confederacy. But, further, it is a strategical point of the utmost value. Towards it converge the lines of railway from every quarter—from the west, from the north, from the south, and from the east coast. Take Richmond, and the difficulty of connecting the west with the east becomes almost insuperable. A glance at the map makes this apparent; and the determined resolution with which General Lee has defended this city needs no justification. For the present, any attack upon General Lee's army seems to be postponed. The efforts of the Federals are confined to cutting off its communication with the South,—with Wilmington, and Charleston. The defence of Wilmington is entrusted to General Gustavus Smith; that of Charleston to the celebrated Beauregard. In order to cut off Wilmington from Richmond, or rather to compel the Confederates to adopt the circuitous route, the Federal General Foster has an army of between 40,000 and 60,000 at Newbern. With these troops he proposes to march towards Wilmington, where he will be aided by a fleet of gun-boats. If he succeeds in this enterprise, he will no doubt proceed to Charleston and Savannah. At present, however, the Federals have not begun their march. The result of this movement, if successful, will be that Richmond will be cut off from the South, and all the supplies which can be drawn from these quarters.

Let us now turn to the west. It will be observed that there are only two lines of railway which connect Richmond or even Charlestown with the west. The object of the Federals is to break up these lines of communication. The Federal Rosecranz is now some miles south of Murfreesboro with between 40,000 or 50,000 men, and has possession of the Memphis and Richmond Railway; and certainly, according to some accounts, parts of that railway have been broken up by the destruction of several of the bridges. But the railways which connect Vicksburg, Mobile, and Charlestown are still in the hands of the Confederates. It is said that the Confederate Longstreet has taken the place of Bragg, and that a battle between the former and Rosecranz is imminent. If the Confederates succeed in this attack they may drive Rosecranz back to Nashville, the capital of Tennessee, and recover that State. If, on the other hand, they fail, Rosecranz may succeed in advancing and establishing himself on the Tennessee river. The importance of this is clear, for it seems to be admitted that there is a considerable Union party in Eastern Tennessee; and as the war is now a war for boundary, the farther the Federals can drive the Confederates to the south, the better will be the position of the Federals when they come to negociate terms of peace. Moreover, such an advance will tend to straiten Richmond toward the west.

The only remaining part of the theatre of operations is the Mississippi. The whole of that river is in the hands of the Federals, except what lies between Port Hudson and Vicksburg. The Federal fleet from the north which has just succeeded in capturing Arkansas Post cannot penetrate below Vicksburg. The Federal fleet from the south cannot ascend above Port Hudson. The Confederate officer who commands at Vicksburg, which is now defended by very formidable entrenchments, is General J. Johnstone. He has already repulsed an attack from the north led by Sherman. It is now said that General Grant has once more set out from Memphis to make a second attack. It seems doubtful whether this is a judicious step. The troops brought with General Banks to New Orleans ought to co-operate. Probably they cannot do so until Port Hudson falls, and as yet the attempts to take that place have failed. But the neglect to follow the sound rule of concentration will not improbably lead to the same unfortunate results which have hitherto marked the Federal arms. Indeed, after surveying the whole field of operation, it is tolerably obvious that the plans of the Federals are essentially vicious. They are attempting too much. They persist in repeating with a fatal consistency the military errors of which they have been guilty from the beginning.

BRITISH TRADE IN CHINA.

THE mercantile body in China have got a grievance. Our diplomatists in that empire, being under the especial charge and patronage of the members of the leading firms, are generally kept pretty well up to their work. When by accident they take a line of their own, they are reported. There are other honourable members in the House of Commons who represent British interests in China besides Mr. White; and when the great firms unite to

Digitized by Google

press their views upon the Government, the Government is very apt to take the mercantile view of the matter; for indeed diplomacy in China is not like diplomacy elsewhere. It is not that ennobling pursuit which consists in acquiring a secret knowledge of a rival Minister's instructions from his Government before he knows them himself, or in reporting after-dinner conversations with crowned heads, pregnant with the fate of empires. The duties of her Majesty's representative at Pekin are of a more sordid and harassing nature. When our diplomatic agent used to live at Canton he was called the "Superintendent of Trade;" now that he is at Pekin he is styled "Her Majesty's Envoy Extraordinary and Minister Plenipotentiary;" but the traditions of the old office cling to him, and the interests of trade are paramount. His ideas should be concentrated upon tea, except when they are absorbed in silk; and representations from the great houses of Jardine & Matheson, or Dent & Co., should have more weight in his eyes than any communications from his colleagues of France or Russia.

After all—it is useless to deny it—the Chinese are right; our whole object is trade, and the Minister is the servant of the mercantile community, put there to forward their interests and to keep the peace. This country has expressed itself pretty freely on the matter at various times. Trade with peace if possible; failing this, then trade with war; but, at all hazards, trade. The Minister has a very clear perception of his course of action under these circumstances. His rule is, keep on good terms, if possible, both with the British merchant and the Chinese Government. If this is impossible, offend the British merchant rather than the Chinese Government, because the British public will prefer snubbing the merchants to fighting the Chinamen. So he has constantly to tread that very delicate line which divides the one class of interests from the other, and the slightest divergence from which will bring him into collision either with those to whom he is accredited, or with those whom he represents. Sometimes a point arises where a decided course is necessary; and then, if his Excellency is a prudent and experienced man, he will throw the responsibility of the decision upon her Majesty's Government. Such a case has just arisen, and the British merchants have sent in a memorial to the Secretary of State, which they wind up with a piece of claptrap, about the necessity of a "firm and decided tone," so very hackneyed, that it smacks of a pigeon-hole in one of her Majesty's consulates. This is what every consul has been in the habit of saying to every mandarin with whom he has "had a difficulty" from time immemorial, and he afterwards reports to his government that he assumed the above tone because he felt that "any surrender of a right is attributed by the Chinese to any cause rather than forbearance," &c. &c. If there is one idea which pervades every blue-book on China more than another, it is this; that concessions lead to wars, that departures from treaties are considered signs of weakness, and that we can trace all our wars to this cause. But, like every dogma which is a mere formula of abstract belief, it may degenerate into a superstition, and the believer, ceasing to exercise his reason, becomes a fanatic. There are exceptions to every rule, and the great test of ability is to know how to give the rule force, by taking occasional advantage of the exception. Any one who is put into a groove can slide down it till he meets an unforeseen obstacle, against which, if he has not readiness to avoid it, he will break his head.

The merchants invoke this stale dogma to support their demands; but without even the excuse of having logically applied it, they start by saying that the Chinese Government is departing from its treaty engagements with reference to the trade on the Yang-tse-kiang. Now the fact is, that the Chinese Government have done a great deal more in opening the Yang-tse than the treaty stipulates. In the treaty of Tientsin, as Mr. Lay has shown in a recent letter to the *Times*, the Chinese Government engage to open the Yang-tse to trade as soon as the banks of the river have been cleared of rebels; and it was not until two years after the treaty, that they made a provisional arrangement, not having the force of a treaty engagement, to permit trade up the Yang-tse, notwithstanding the rebels, and to establish the custom-house at Shanghai. The inconvenience of allowing traders of all nations, unfettered for the most part by nice scruples, to trade for 450 miles along a river, the banks of which are for half that distance in the hands of the rebels, was early recognized by the Chinese Government; and it was only as an experiment that the concession was made in 1861, with the right of modification expressly reserved, and without implying the abandonment of the treaty clause restricting the terms under which trade should be permitted. The Chinese Government do not even now propose to revert to the strict letter of the treaty, by which they could close the Yang-tse-kiang to foreign trade; they wish to confine mercantile operations to the treaty ports, and to establish custom-houses at them as well as at Shanghai.

The reasons which have influenced the Chinese Government in desiring to carry out this modification are not difficult to divine. In the first place, as Shanghai is not on the Yang-tse-kiang properly so called, it would be quite easy for ships to run into the river without going there, and as by the present system they may trade at every village along 450 miles of its shores, smuggling on a gigantic scale might be carried on. Secondly, these ships might be all freighted with arms and ammunition for the rebels, whom they could supply without the risk of discovery. Thirdly, the coasting trade in China pays duties; the great river between Hankow and the sea flows through four fertile provinces, each of which are partially dependent for their revenue on the transit duties; but it is clear that if English steamers are to carry the local traffic between every village on the Yang-tse, without paying any duties at all, the revenue will lose prodigiously. Besides which, the governor of each province, who is bound to contribute a certain quota of revenue to the Imperial chest, considers he has a right to the duties on every foreign cargo landed in his district, and complains that the province of Kiangsu should appropriate the duties of a cargo landed in his province. The Chinese revenue system may be very ridiculous according to our notions, but we are scarcely entitled to expect them to alter it to suit our convenience. We quite agree with the British merchants as to "the benefits of being able to trade at any place in 450 miles of a river running through the richest provinces in China," but we are not aware of any country where such a privilege is accorded to the foreigner under the same conditions. When the trade regulations of the Yang-tse were drawn up, the Chinese had no experience to guide them in the matter; and this is just a point where an unwise pressure might do harm, and where, in our endeavour to grasp too much, we might frighten the Chinaman into that attitude of dogged obstinacy from which he is only to be forced by violence. When, in consequence of the aid rendered by this country, the banks of the Yang-tse are cleared of rebels, we shall be fairly entitled to demand increased commercial facilities. So long as Prince Kung can take a stroll among the ruins of the Summer Palace, he is not likely to attribute any minor concession to weakness.

With reference to the second point, the merchants have a stronger case. The wording of the twelfth clause of the treaty is definite, permitting them to "purchase or rent land or buildings, whether at the ports or '*other places.*'" Whether the Chinese Government contemplated the creation of foreign settlements all over the Empire, with a population claiming the privileges of ex-territoriality, it is not for us to consider. Certainly no nation ever granted such a privilege before, and one way by which the difficulty might be met would be to let foreigners thus settling understand that the privileges of ex-territoriality should not extend beyond the consular ports, and that persons establishing themselves elsewhere would come under the jurisdiction of the nearest Chinese mandarin. Meantime, the mercantile community have taken a very decided and unanimous tone on both points, and we shall be curious to learn the decision of our Government upon them.

THE BRAZILIAN DIFFICULTY.

THE rupture of that friendly intercourse which, since 1846, has happily characterized our relations with the only respectable government on the South American continent, calls for something more than a cursory notice of the immediate events that have led to it. The immense amount of English capital at present employed, and about to be invested in the various provinces of that extensive empire, together with the political consequences that are likely to arise out of this complication, are worthy of our serious consideration. For it is by no means impossible that the crisis, through which the Brazilian Government has just passed, may become the point of departure for still more serious complications in the political history of the

Digitized by Google

Brazilian empire. Such events might strike a serious blow at the national credit, which has hitherto stood so high, and must sooner or later endanger the liabilities which have hitherto been discharged with such creditable exactness.

With regard to the immediate causes which have led to reprisals on the part of her Majesty's Government, they are briefly these :—

1st. About the 8th of June, 1861, the English merchant ship, *Prince of Wales*, was wrecked on the desert and sparsely populated shores of the province of Rio Grande do Sul. Her cargo was plundered by the Gauchos, or rather wreckers, who in that lawless region reign supreme ; and strong presumptive evidence was obtained on the spot by our Consul, Mr. Vereker, that the portion of the crew who managed to save their lives were murdered for the remnant of property which they had managed to save ; whilst the local provincial officials, instead of affording assistance to our countrymen, not only connived at their spoliation and murder, but partook of the plunder, a portion of which was found in the house of Mr. Bento Soares, the magistrate of the district.

Either from inability or unwillingness, the Provincial Government did not bring the offenders to justice, in spite of remonstrances from the Imperial Government, whose tardy and lethargic endeavours but ill responded to the energetic remonstrances of her Majesty's Minister at Rio.

2nd. On the 7th of June, 1862, three officers of Her Majesty's ship *Forte*, when returning from Tijuka, a village in the neighbourhood of Rio, were seized when passing a guard-house, for no other reason than that they were running past it in order to catch an omnibus. One of the officers was struck by the sentry with the butt of his musket ; an altercation and struggle ensued, and they were locked up in the refectory of the guard-house for the night. On the following morning they were ignominiously conducted on foot a distance of seven miles to a criminal prison of the lowest class in the town of Rio, the officer who received them declaring at the time that he knew them to be British officers. Two hours later, at the remonstrance of the English consul, with whom the officers had found a means of communicating, they were removed from the company of the runaway slaves and pickpockets to less degrading quarters, and eventually to the military prison, where they were politely treated. The following day, at noon, they were liberated, but without any reason, either for their arrest or release, being assigned by the authorities.

The Brazilian Government, in both these instances, displayed an apathy and indifference bordering on insult, and a disposition to ignore the existence of her Majesty's Minister at Rio, by neglecting, in some instances, even to reply to his despatches. Her Majesty's Government ordered the following satisfaction to be demanded, viz. :—In the first instance, a compensation of £6,525. 19s. In the second,—1st. That the officers of the Guard be dismissed the service. 2nd. That the sentinel who provoked the conflict should be punished. 3rd. That an apology should be made by the Imperial Government for the insult offered to the officers. 4th. That the chief of the police and the officer who detained the three officers be publicly blamed.

At the same time her Majesty's Minister informed the Brazilian Government that, as regards the case of the *Prince of Wales*, if the Imperial Government would only acknowledge the principle of the claim, the amount of indemnity should be settled by arbitration ; and that in the case of the officers of the *Forte*, the matter might be wholly left to arbitration.

These demands being totally and peremptorily rejected, Admiral Warren was ordered to make reprisals ; and accordingly her Majesty's ships, *Stromboli* and *Curlew*, went out of Rio Harbour on the 31st, and seized five coasters, of an aggregate value of £10,000, taking them to Palmos Bay.

On the arrival of this intelligence at Rio, the popular indignation assumed alarming proportions ; the city was in complete possession of the populace ; and an attempt was made to tear down the consular arms and sack the British Consulate.

The Parliamentary opposition, which is principally composed of the Republican and Separatist members of the northern provinces, were not slow to avail themselves of the opportunity of embarrassing the Conservative party at present holding the reins of power. Mass meetings were nightly convened, inflammatory speeches were delivered, and money freely distributed. This movement of the Revolutionary party was instigated and guided by Ortoni, the quondam chief of the revolution in the province of Minas, in 1842, when he was routed and taken prisoner by the Royalist army at the battle of Santa Lucia, and subsequently pardoned. On the 5th of January, the Imperial Government, becoming alarmed, not only for their own safety, but for that of the Monarchy itself, agreed to pay the stipulated sum under protest, and refer the case of the officers of the *Forte* to arbitration. Her Majesty's Minister, as previously remarked, had already offered to allow both cases to be settled under arbitration. The captured vessels were at once released ; and it now remains to be seen whether her Majesty's Government will accept the arbitration, or purely and simply enforce its demands.

Her Majesty's Minister at Rio and her Majesty's Government having throughout these vexed questions shown a forbearance which would have amounted to weakness with any power less feeble than that of Brazil, will not, it is to be hoped, recede in any degree from those demands, fraught with whatever consequences they may be to the Brazilian empire. For even if, as is quite possible, its disintegration ensue, it will be merely anticipating events which have long since cast their shadows before. Since the year 1834 the provinces of Para Mharanham, Pernambuco, Macaio, Bahia, St. Paul's, Minas, and Rio Grande do Sul, have all risen in arms against the Central Government at Rio. Rio Grande do Sul, especially, maintained its independence for ten years, and at the present moment is only restrained by the presence of a large body of troops and several men-of-war. Whereas, in every town of the north, from Bahia to Para, separation is the common topic of conversation, and is openly discussed and considered a mere question of opportunity. On its necessity and proximity, all are alike agreed. They have even cast about for a candidate to the new crown, and the Prince de Joinville is openly proclaimed to be the most promising candidate.

It is extremely easy to point out the immediate cause of this stormy antagonism on the part of the provincial populations to the centralizing system at Rio. Only twelve per cent. of the taxes collected in the provinces are permitted to be retained in them for provincial purposes, the remainder is sent on to Rio for the imperial treasury ; the only return being the ægis of the Imperial Government to preserve them from foreign aggression. This protection, as they well know, is really of no value ; and the provincials very naturally say, "We can dispense with this army and navy, which are useless for all purposes of external defence, and which can at any moment be turned against ourselves ; and, above all, we wish to spend the money we raise in our provinces in increasing our communications and facilitating our commerce, instead of supporting a semblance of Imperial power, and an army of corrupt officials, who merely treat the outlying provinces of the empire as the sources from which money may be extracted."

Such is a brief outline of the position of Brazil, and the demands made on it by the English Government. But having once opened up the question of British claims on that government, it will surely be as well to include all those long outstanding claims which the mixed Commission of 1859, so abruptly brought to a close by the Imperial Government in the following year, in vain endeavoured to adjust. The recent misunderstandings have been such as to admit easily of amicable and honourable arrangement, and the arbitrament to which the unsettled portion of the quarrel is to be submitted offers a guarantee of impartiality, uprightness, and moderation with which both parties in the quarrel may well be content.

NEW BANKING COMPANIES.

THERE is no readier way of getting a true idea of the lengths to which the rage for new banking companies has lately carried the speculative public, than to compare any ordinary share-list of the present date with a similar list of about a year ago. Let any one cast his eye down the column of the *Times* in which the shares of joint-stock banks are quoted, and he will observe the striking fact, that out of a list of three dozen or so of such companies which appear there daily, very nearly one-half have sprung into existence within little more than a year. This great increase in the number of banking companies does not by any means represent the total result of the speculative energies of the past year. In all periods when interest is

Digitized by Google

low and speculation is rife, there is great variety in the projects that compete for a portion of the capital lying ready for investment. The whole field of commercial enterprise is surveyed, with the view of finding some corner which has not been already occupied. People are not all attracted by the same bubble, and at such periods of excitement there is hardly any scheme so rash or so wild as not to obtain some support. The present year has not been an exception to this rule. But in the midst of this variety it so happened, for one reason or another, that there was a great concentration of effort in one particular branch of enterprise. It seems to have been suddenly discovered that there was a sad deficiency of banking accommodation in many parts of the British empire, and that, not merely in its outlying provinces, but at its very centre. The result has been the formation of nearly a score of new banking companies in a single year.

These banks are in various states of progress. There are two great stages in the early history of every banking company. In the first it appeals to the public to take up its shares and subscribe the capital. In the second it appeals to the public to become its customers, either by trusting it with deposits, or by asking for loans or for the discounting of bills. Several of the new banks have now got a local habitation, and have provided themselves with a chairman—noble, or otherwise—and with a manager, and may be considered as fairly embarked on the second stage of their existence. Some are still struggling with the difficulties of the earlier state. It is very much to be regretted, for the sake of the commercial morality of this country, that the promoters of such companies should, at this stage, sometimes have recourse to somewhat unscrupulous measures for gaining a favourable reception. One very impudent artifice of this sort has lately been deservedly exposed. At the foot of the advertisement of the prospectus of a certain bank, which appeared a few days ago in the daily papers, there was appended a list of well-known mercantile firms who were represented as approving of the scheme. The slender show of names on the direction would, it was supposed, be compensated by the number and weight of the names which appeared below. It turned out that some of those persons whose names were thus unwarrantably used had never heard of the bank before, and that none of them had committed themselves to recommending it. What they had done was, perhaps incautiously, to sign a paper approving of certain general principles of banking, but not of any particular bank supposed to be founded on those principles. The confidence of the public depends more on the character of the directors of a company than on the abstract principles on which it is founded; and such an improper use of names cannot be too strongly condemned. The first company that was formed a few years ago on the principle of limited liability might, with just as good reason, have made a similar use of the names of Mr. Lowe and other persons who supported that principle in Parliament, and represented them as approving of that particular scheme.

Our concern at present, however, is chiefly with those companies that have already commenced operations. A few years will show whether the increase of trade justifies this great increase of banks in the metropolis. In the mean time it is apparent that the older companies have no great fear of the increased competition. The London and Westminster has given the new banks a favourable reception. The chairman at the last meeting went out of his way to give them some good advice. This is very different from the reception accorded to the London and Westminster itself when it came into existence thirty years ago. The private aristocratic banking firms declined to admit it to the clearing-house, and the Bank of England refused to give it the ordinary accommodation of keeping a balance there. The difference of treatment is probably due to the fact that the case of the new banks is not considered very hopeful.

The London and Westminster can afford to bestow a few patronizing words on rivals whose competition they disregard. None of the half-yearly reports of the new banks are yet before us, but we are not altogether without information as to their progress. The London and Middlesex has taken advantage of a special meeting for the appointment of an auditor, to lay its accounts before the public, though it has only been four months in operation. Its report was thus accidentally brought into close juxtaposition with that of the London and Westminster, which was read at their meeting a few days previously; and certainly there could not well be a greater contrast than that presented by the reports of these two banks whose names are so similar,—the one the oldest and the strongest, the other the youngest, and therefore one of the feeblest members of the metropolitan banks. The London and Westminster has deposits amounting to £14,000,000. The London and Middlesex, though it has taken a transfer of the business of the Unity Bank, still counts its deposits only by thousands. The older bank shows a profit on the year of very nearly a quarter of a million; and, after adding a considerable sum to its reserve fund, pays a dividend of 22 per cent. on its paid-up capital. The profits of the younger bank are hardly yet visible to the naked eye, and its directors will probably not feel themselves justified in declaring any dividend at present.

The very large dividends that have for some years been paid by the three leading joint-stock banks of the metropolis have, no doubt, been the main inducement for the present great increase in the number of such companies. These were early in the field, and occupied the ground as soon as the law was repealed which prohibited joint-stock banks within sixty-five miles of the metropolis. These are the fortunate instances which are always selected when promoters of new banking companies are persuading the public to subscribe. None of the later companies have attained more than a very moderate success, while many have failed altogether, carrying ruin and desolation to thousands of families in their fall. These latter instances are carefully kept in the background. There is no difficulty in explaining the great success of the early joint-stock banks. Many persons, observing that the interest which these banks pay on their deposits is only 1 per cent. lower than the Bank rate, are at a loss to account for their enormous profits. The business of a banker is to borrow money at a low rate, and to lend it at a higher one, the difference being his profit. But with so small a margin as 1 per cent., how can a bank pay a dividend of 22 per cent.? The whole explanation lies in the enormous proportion which the deposits bear to the paid-up capital. The paid-up capital of the London and Westminster is £1,000,000, while the deposits amount to £14,000,000. If, therefore, 1 per cent. be gained on the whole of the latter sum, the profits would amount to 14 per cent. of the paid-up capital. The actual dividend, after the payment of all the expenses of management, being 22 per cent., it is evident that the London and Westminster must have employed their deposits at a rate which, on the average, is considerably more than 1½ per cent. above the rate of interest which they paid to their depositors. It is, of course, necessary to keep a certain sum unemployed for the purpose of meeting their liabilities from day to day. This sum is not, however, much more than the amount of the paid-up capital and the reserve fund, so that the whole of the deposits may be considered at the disposal of the managers for loans and discounting of bills. It is evident that a bank in which the deposits were, say, eight times the paid-up capital, even if it could employ them as safely and profitably as the London and Westminster, could not pay a dividend of more than 12 per cent. But the chief difficulty of the new banks will lie in the safe employment of their deposits, supposing they are fortunate enough to get them. Customers do not readily change their bankers. The existing banks have quite money enough to discount all the first-class paper that comes to them. They have not nearly reached the limit of their powers in this respect. Persons in high credit will, no doubt, continue to go to their accustomed banks, and those only who are refused accommodation there will betake themselves to the new establishments. The latter, it is to be feared, will have little power of selection, and, being under the absolute necessity of employing their deposits, must accept any customers that come to them.

THE MARQUIS OF LANSDOWNE.

The death of the Marquis of Lansdowne has removed from the political stage one who played a part on it not the less characteristic of his age and country because it had ceased to be an active one. It would be difficult to mention any one whose career afforded a better specimen of the good points of the class to which he belonged, or threw more light on the causes which have given that class so ample a share, and so long a term of political power. Descended, and that not very remotely, from a man who made a fortune by his unwearied versatility in speculation, Lord

Digitized by Google

Lansdowne found himself at an early age the most conspicuous member of a noble family. After receiving an education elaborately liberal in every sense of the word, he devoted himself to politics as a profession, and passed the whole of a long life in promoting in every possible way the class of measures, of which in most other countries he would have been considered the inherent enemy. There is something very striking in the spectacle of a nobleman of the highest rank and of the most ample fortune, ushered into life under the auspices of Jeremy Bentham, sitting at the feet of Dugald Stewart, in the company of a clique of reforming Scotch advocates, and coming up to London to be a minister of state, and to pass a long life in the advocacy of reforms, within a very few years of the time when the whole French aristocracy had been exterminated, principally because they had not the wisdom and virtue to take the part in their country which Lord Lansdowne and many other members of his class took in our own.

The leading facts of Lord Lansdowne's life have been so fully commented on by the daily papers, that it is needless to dwell upon them here; but they suggest one or two observations of a more general kind, on which it may be worth while to dwell for a few moments. Lord Lansdowne's career affords as good an argument in favour of the existence of an aristocracy as experience can supply, and it is to be hoped that his example may persuade those who have it in their power—the number cannot from the nature of the case be great—to go and do likewise. The amount of good which he did to his country was perhaps as great as could be done by any man who was not endowed by nature with many rare gifts of genius. Throughout two generations he consistently and very efficiently supported all public improvements. He was one of the small body of politicians through whom the genius of Jeremy Bentham produced a practical effect on the national institutions. He helped to improve and humanize the cruel spirit of the old criminal law, though he left it to others to invest its rough outline with some approach to symmetry. He was one of the champions of Catholic Emancipation, a measure which was the first great step towards healing the chronic diseases of Ireland. He was also one of the leaders in the most Conservative political measure of modern times, the Reform Bill of 1832; and during the last third of his life he was at the head of the most Conservative branch of our social legislation,—the promotion of popular education by the Committee of Council. It is hardly possible that any man should hope to take a more effective part in a larger number of measures of great and enduring importance. This, however, was not all that Lord Lansdowne did. He was, as a very rich and conspicuous person ought to be, a sort of public institution—a corporation sole, like the clergyman of a parish. He was through life the warm friend of men capable of improving and instructing their fellow-creatures. Both in London and at Bowood he was the centre of a set of social relations, which exercised great influence over those to whom they extended, and through them to a much wider circle.

It may be said that this is all very true, but that Lord Lansdowne had immense advantages, that his understanding was not more capacious, his judgment sounder, or his moral and social feelings better developed, than those of hundreds of obscure persons in a lower rank of life. It may, perhaps, be asserted that there are in many country towns attorneys, surgeons, shopkeepers, and possibly, here and there, a clergyman, who would have made quite as good Lord Lansdownes as Henry Petty if they had been brought up to the business. This, in all probability, is perfectly true, and the fact that it is true is the very circumstance which justifies the existence of an aristocracy. It may be conceded, for no doubt it is the fact, that intrinsically Lord Lansdowne was not a very remarkable man. No doubt there are within this land ten thousand good as he, if the test of goodness is to be found not in what a man actually is, but in what, under favourable circumstances, he might have been; but then the circumstances are not favourable, the culture has not been supplied, and the experienced statesman, who in his youth was the pupil of Bentham and Dugald Stewart, and the associate of Brougham, Horner, and Jeffrey, and who, in later life, held in their turn all the most important offices of the State, came to be a very different man indeed from many an equally vigorous fellow-student at Edinburgh, who passed his life in providing for a wife and eight children by feeling pulses, and sending out medicines, in some provincial town in Scotland. As far as mere understanding went there might be little difference between the two men. Hundreds of thousands of sensible men in the middle and lower ranks of life read with perfect intelligence and the greatest interest the very same books as Lord Lansdowne, formed their political opinions upon the same grounds, and drew much the same conclusions from nearly the same premises. Yet they could have no more taken his place than he could have taken theirs. They would have been as useless in the House of Lords or at the head of the Privy Council as he would have been in the attorney's office or the surgeon's consulting-room. Few pieces of experience are more curious or more instructive than that which teaches the fact that there is such a thing as specific political tact and knowledge, similar in kind to the tact which is acquired in any other profession. A person, who passes his life in the society of public men and in the midst of public affairs, acquires a kind of knowledge and a way of thinking which is to him what his knowledge of the temper of the law courts and the bar is to a barrister, or his acquaintance with the general state of professional opinion and practice to the physician. To be a grandee, to know how to spend a large income, and to fill a conspicuous position with dignity and courtesy, is a profession like any other; and unless a man is either brought up to it or has a strong natural gift in that direction, he will never be able to excel in it. The position of such a man is on a large scale, and in a different spirit, the same sort of thing as the position of the clergyman of an important parish. A large proportion of the parishioners will be apt to think themselves, and perhaps not unreasonably, both wiser and abler men than the vicar; but if they were put in his place they would find themselves jarring in twenty ways with all the local institutions. The curates would fall out, the schoolmaster would take offence, the district visitors would squabble, the labourers would not touch their hats, and some dissenting Boanerges would establish himself in a barn and make Sunday afternoon hideous with vehement hymns, and prayers interrupted by ejaculations closely analogous to the loud and prolonged cheering of a public meeting.

The truth is, that society wants a certain number of queen-bees to do the honours of the nation, and to carry on particular branches of the public business. Supply a man of reasonable capacity and decently good principle with the proper quality of bee-bread, and he can generally be fattened into the required insect. It is on the whole creditable to human nature in general, and especially to the English section of it, that a very considerable proportion of the persons chosen out for this kind of training take to it kindly, and go through the duties required of them with much interest, and with a considerable degree of ability. The career of Lord Lansdowne was that of a man who made a decidedly good use of immense advantages, and who, being very highly paid for the discharge of very important and most agreeable, though not very arduous duties, discharged them well, and gave money's worth for his money.

Perhaps the most important observation, which such careers suggest, relates rather to the nation which renders them possible than to the individuals who pursue them. The object in view may be, and no doubt is, worth attaining, and the price paid for it may not be extravagant, but it requires great absence of envy on the part of the public to permit the existence of such a state of things. Viewing the matter philosophically, it is certainly impossible to assign any reason why I should be angry because another man is chosen to be made into a queen-bee, instead of myself, when I should have made as good a one. His good fortune certainly does not hurt me, for it forms part of that general state of things into which I have been thrown, as far as I can judge, at random, and certainly without the exercise of any discretion of my own. Such would appear, from the English tolerance of aristocratic institutions, and even from their fondness for them, to be the prevailing sentiment in English minds; but it is almost peculiar to England. In many other parts of the world, especially in France, the sentiment of a system of natural rights, according to which every man is defrauded, if he has not a rateable share of all the advantages which the world has to give, is universal and active in the highest degree. The maxim is, "Start fair, whatever you do. Life being a general scramble, let no man have any advantage over any other which he does not carry about in his own skin." Inasmuch as no human power can deprive people of those advantages, which lie between their hats and their boots, and, indeed, of some others, this notion, notwithstanding its claims to logic, is not in reality philosophical. One result of it is that men cannot be educated as statesmen; they have to begin by pushing their way through a crowd in order to attract attention; and when they have attracted it they have to learn their business, and are dependent on the will of some superior, on whom their advancement depends. They are thus cut off from popular sympathies far more than they would have been had they from their youth upwards looked on public life as their natural and proper sphere.

In France, Lord Lansdowne's fortune would have been employed in paying the salaries of a variety of préfets, sous-préfets, and other official heads of French provincial society. Part of it, perhaps, might have been allotted to the support of museums and libraries; but would the préfets and sous-préfets, the museums and the libraries have been on the whole more beneficial to the country then the unpaid hospitalities, libraries, and picture-galleries of Bowood and Lansdowne House? Would it have been a good exchange for the county of Wilts to have lost Lord Lansdowne, and to have had some one who had distinguished himself as a pamphleteer, or political jobber, appointed by the Home Secretary to be the local grandee of Wiltshire, with a salary of £3,000 or £4,000 a year? The answer to these questions throws much light on the characteristics of English society, and gives much of its importance and significance to the life and death of the Marquis of Lansdowne.

COLENSO ON KINGLAKE.

It is impossible not to regret that the extraordinary animosity which Mr. Kinglake has displayed against the French Emperor and his adherents in the entertaining work which is just now in everybody's hands, necessarily deprives the book of much of its value as an historical authority. Perhaps the most salient instance of Mr. Kinglake's unfairness in this respect is to be discovered in his estimate of the English, French, and Russian losses at the battle of the Alma; it being his avowed object to prove that on that occasion the French shirked their work, and that they were in no instance really engaged in close combat with the Russians. The fight at the Telegraph Tower, so vividly described by Bazancourt, he declares to be an entire myth, and only alludes to it in a sarcastic note, declaring such a fable unworthy of admission into the text of his history.

Mr. Kinglake tells us, on the authority of Lord Raglan, that at the battle of the Alma the French lost but 60 killed, and 500 wounded. He puts the English loss at 362 killed, and 1,640 wounded; and that of the Russians at rather less than 6,000 killed and wounded. It will be seen, therefore, that for every Frenchman slain on that day, there were rather more than eight Frenchmen wounded, whilst for every Englishman slain, there were rather less than five Englishmen wounded. This would show a mean of about five wounded to one killed throughout the allied army. Mr. Kinglake has also stated "that the whole Russian force which sooner or later confronted the French was a force of 13,000 men and 36 guns, and that the force which confronted the English was a force of 26,000 men and 86 guns."

In a work published in 1855, by Lieutenant-Colonel E. B. Hamley, R.A., entitled "The Story of the Campaign of Sebastopol," we find some valuable evidence as to the share which our French allies really did take in the opening action of the war. Colonel Hamley, in his preface, explains that his official position as adjutant to the 3rd division of the Field Batteries under Lieutenant-Colonel Dacres afforded him peculiarly favourable opportunities for observation and knowledge. Applying to Colonel Hamley Mr. Kinglake's own words, when dilating on the peculiar claims to credibility which ought to be awarded to Captain Jesse respecting the events of December 4th, 1851, we venture to urge that, "because of the position in which Colonel Hamley stood at the battle of the Alma, the professional knowledge which guided his observations, the composure with which he was able to see and describe, and the more than common responsibility which attaches upon a military narrator, it is probable that his testimony will be always appealed to by historians who shall seek to give a truthful account" of the conduct of the French at the battle of the Alma. Colonel Hamley writes that, on the day of the battle, "the progress of the French against the heights in their own front was marked by the puffs of musketry as they swarmed up. Their advance was steady and incessant. On the plain at the top a small building, probably intended as a signal station, had been left unfinished, and there was scaffolding still round it, and this was the point most hotly contested by the French" (p. 26).

On the following day, Colonel Hamley repaired to the spot where he supposed—erroneously, according to Mr. Kinglake—the French and Russians had been engaged in fight. This is what he *saw*:—

"It was not till reaching the plain on which stood the unfinished signal-tower, already mentioned as the contested point in the French attack, that there appeared signs of a sanguinary conflict. Many Russians lay dead there, and they lay thicker near the signal-tower, the hillock on which it was built being strewn with them. Three or four had been bayoneted whilst defending the entrance; and in the narrow space within, which was divided into compartments, were three or four small groups slain in the defence. Another spot contained three or four hundred corpses" (p. 26).

Now, if we may venture to treat the brilliant historian of the Crimean war with the arithmetical severity with which Bishop Colenso has treated Moses—a process of which Mr. Kinglake himself has made a rather unscrupulous use, in estimating the victims of the homicidal French colonels on the Parisian Boulevards—we fear that a similar result will be arrived at, as to the decidedly "un-historical" character of his work; and we proceed to do this without remorse, because a note at p. 439, vol. ii., of the "History of the Crimean War," proves that Mr. Kinglake admits Colonel Hamley to be a witness worthy of all credit, and that he had actually read the very passages of the gallant colonel's work which we have here quoted!

Assuming—as we conceive we may fairly do—that Colonel Hamley's description of the signal-tower and its precincts implies that 500 Russians lay dead on the battle-field where Mr. Kinglake maintains, on the negative evidence of the Pole, Chodasiewicz, no battle was fought; and adding to the 500 dead five times their number of wounded, it follows that out of the 13,000 Russians opposed to the French, our allies accounted for 3,000. And as Mr. Kinglake has estimated the total loss of the Russians in killed and wounded to have been rather less than 6,000, it also follows that, if the French disposed of half of that number, only half of it remained to be disposed of by the English. If, therefore, Mr. Kinglake's figures are correct, our allies must have performed rather more than their full share of the bloody work which the allied armies had to do on that occasion; and if Colonel Hamley's senses did not deceive him, there must have been a severe struggle at the Telegraph Tower, where Mr. Kinglake invites us to believe there was no fight at all.

It may of course be said that the terrible slaughter which Colonel Hamley has described was chiefly caused by the French artillery; indeed it is probable that such was really the case, and if it was, the fact is most creditable to the officer who directed that part of the battle. The fencing-master in *Le Bourgeois Gentilhomme* tells M. Jourdain that the whole secret of the art of fencing consists in but two points; viz., "à donner et à ne point recevoir," and we hold that the same may be said of the art of war in general. A competent officer, who, by a dexterous and opportune use of his artillery, can dispose of 3,000 of the enemy with the loss of but 500 of his own men, we hold to be a more satisfactory servant of his country than a valiant bungler who needlessly squanders away the lives of four times that number in arriving at no greater result. We cannot help thinking that Mr. Kinglake over-estimates the value of that admirable character, the high-bred English gentleman, as an engine of war, to such a degree that he positively caricatures the very virtues which everybody has always been willing to concede to the English general who commanded at the Alma. He describes Lord Raglan as deriding, despising, and keeping at arm's length the French generals with whom it was his duty to co-operate cordially; whether in so doing he was influenced by the gossip and slanders of the Faubourg St. Germain, Mr. Kinglake tells us, will never be known. At Constantinople, assisted by "the great Elchi," he is represented as sneering at "French feelings of honour," and resisting every suggestion put forward by St. Arnaud, and as finally subjugating and nullifying that officer by the mere force of his character, and by words "which implied more than they said." On the eve of the battle of the Alma, we are told that when St. Arnaud waited on Lord Raglan to arrange the operations of the following day, the latter, "restraining, or rather postponing his smiles" at the Frenchman's earnestness, studiously concealed from his ally his own plan of operations—if, indeed, he had any, which is more than doubtful,—and intentionally allowed the Marshal to retire "elate" in the erroneous belief that the plan of attack prepared in the French camp had been accepted by the English. And this we are called upon to admire, as a specimen of the dishonest dexterity with which the alliance was preserved! Yet Mr. Kinglake, with strange contradiction, describes Lord Raglan as so truthful as to decline to have recourse to the usual *ruses de guerre*; so tender-hearted as to be utterly unable to resist an improper appointment, supersede an incompetent officer, or even, in the midst of a bloody battle, to risk hurting the feelings of a general of division, by ordering a blunder to be remedied, which, not being remedied, caused much subsequent confusion and loss of life. He tells us how needlessly the gentle old man was distressed, in the midst of the carnage, at seeing a French aide-de-camp deliver a message to him bare-headed, as is the usage in the French army; he dilates on his somewhat theatrical anxiety that the Russians, when looking through their field glasses at the head-quarters staff of the English, should be struck with the calm *insouciance* and leisure of the group. If we have read Mr. Kinglake's account of the battle of the Alma

Digitized by Google

aright, it would seem that Lord Raglan really had formed no plan of the manner in which he proposed to attack the Russian position; that all he had decided upon was not to co-operate cordially with the French; that he had not consulted any general but Sir George Brown, and that the orders he had given to Brown, Brown did not understand. Sir De Lacy Evans found himself at nearly mid-day on the field of battle without any orders at all, and without any idea of what was going to be done; and the Duke of Cambridge was in no better position. At last tardy orders did come from Lord Raglan to "go on;" and, having given those orders, his lordship is represented by Mr. Kinglake as having ridden clean away from his army nearly into the Russian reserves—stimulated by his passion for a good gallop, and trusting to chance to direct the battle. Mr. Kinglake here admits that it was scarcely pardonable in Lord Raglan to have acted thus; that by doing so "he ran the risk of losing the government of his troops for many minutes together in the most critical period of the action," explaining that "the impulses of the chase" and "the recollection of great days in the Gloucestershire country" were too strong for him and his horse "Shadrach;" and that the wilful nature of the true "*gentilhomme Anglais*" is of a kind which spurns the control of duty and is apt, under such exciting circumstances, to leave the lives of an army and the honour of England to take care of themselves. And chance did so far serve Lord Raglan, that he happened accidentally to fall in with a couple of guns; and these guns, Mr. Kinglake tells us, combined with the terror inspired by the unexpected appearance of the white plumes of his lordship's staff in the midst of the Russian position, decided the battle of the Alma. Such is Mr. Kinglake's strange story. We neither accept it nor reject it. We prefer waiting to see what professional military writers will say to it. Indeed, Mr. Kinglake is such an adept at sarcasm, and so fond of using and misusing that dangerous weapon, that we are half inclined to suspect that a book which professes to be a defence of Lord Raglan, may in reality be intended as a bitter censure upon him. In assailing the French, Mr. Kinglake has been as merciless to the dead as to the living; we have no reason, therefore, for supposing that any motives of generosity or delicacy would have induced him to spare the memory of Lord Raglan if he had thought that it was his mission to assail it; and he has unquestionably depicted his lordship in words that burn, as an eager sportsman, an insincere brother in arms, and an utterly incompetent general.

We have entered into these details because we are certain that no nation ever enhanced its own military reputation by unfairly decrying the reputation either of its allies or its antagonists; and because we feel that if Mr. Kinglake has any reply to make to what we have here written, and to what everybody is saying, the sooner for his own credit, for the credit of Lord Raglan's memory, and for the credit of the English nation, he makes it, the better. The important sources from which he professes to derive his information invest his work with a semi-official character, whilst the unexampled virulence and transparent weakness of his attacks upon the French, go far to neutralize the value which would otherwise have been attached to his statements on other points.

A HORSE-STEALER IN SEARCH OF THE BEAUTIFUL.

Sir Lytton Bulwer has convinced mankind long ago that under the felon's homely waistcoat beats very often a heart with glowing impulses and cultivated and refined tastes; and the great novelist's profound knowledge of philosophy and human nature has too often been vindicated to require further proof. The lonely Eugene Aram is no solitary specimen. He has many followers, from George de Barnewell, the lover of the Beautiful in his cell, down to Mr. Roupell, the living paradox, whose hair was cut the other day in Pentonville prison. His last admirer is an individual who has recently been sent to gaol at Glasgow for stealing a horse, and who had been led to this deed of guilelessness by a passion for Scotch scenery, brought on by reading Burns's poems. The Glasgow magistrates probably had a difficulty in committing so refined and superior a culprit, and experienced a glow of pride as Scotchmen when they learned that the beloved name of Burns had done it all. The compliment to Scotland is increased by the fact that the generous horse-stealer was no Scotchman, who might have been supposed bound to admire Scotch poetry on principle. On the contrary, he was an Englishman, and this is an additional proof that the genius of Scotland's bard is recognized even in those distant English districts, where the beautiful Scotch tongue is only imperfectly known. On the whole, the Glasgow magistrates must have felt that, while they could not altogether approve of the violation of conventionality that had occurred, there was a great deal about the horse-stealer that appealed to every Scottish bosom. The way in which the Burns fever set in upon him was very different from the manner in which the Byron fever (which is a lower and more depraved species of infection), used to set in in England. When a person admired Byron, he immediately turned down his collars and took to hating everybody. This was what made the Byron fever so much of a social plague. The Byronic hater of mankind, in the next place, was always desirous of looking like a fallen angel. He raved against the decrees of Heaven, and his language about the female sex was horrible to listen to. Nothing of the kind is to be seen in the individual whose soul is full of Burns. He loves his fellow men, and has a kindly feeling towards Providence. He loves the heather and the babbling stream, and breathes silent prayers to nature wherever he goes. Both, it is true in one respect, are at variance with their age. The Byronite tramples on the laws of marriage, and with regard even to the other commandments, has a decided liking for startling effects. The Burnsite's inner nature is at peace, and if he offends against social order it is with a childlike and winning simplicity. The Glasgow prisoner who read Burns, was accused of stealing his master's horse. If he had been a Byronite he would have run away with his master's wife. The Byronite would by this time have been far away—leading the insurrectionists in Poland, or perhaps gazing from the top of some lonely rock upon the stormy Atlantic, which, however—his friends would have told us—would not have been stormier than his soul. How much truer and more chastened is the conduct of the Burnsite! He only cared to see Scotch scenery, and he went quietly and saw it. It is true that he had to take his master's horse; but, if he transgressed, he did so because this world's regulations were apt to fall lightly on the ear of one who communed with Burns, and who pined for the "banks and braes." After he had seen Burns's cottage, and the other parts of Scotland that he wished to visit, it occurred to him that perhaps he had done wrong. Possibly he had been hasty in overlooking the real, while in quest of the ideal. Accordingly, he gave himself up to the Glasgow police, and tendered to the officer who took him a document, which states the nature of the offence he had committed.

"The horse I sold to a farmer at Stowe, in Gloucestershire, for the sum of £7. 10s., and the said money I have expended to see many places of interest in Scotland which I so longed to see ere I departed this life, and which have gratified my feelings to a very great extent; and at the pleasure of a gracious Providence I await my just reward for the crime of which I stand convicted, and my fortitude and submission to His decree assists me to bear it. Ere this reaches the press I shall be in the hands of the police authorities."

If any young person has had thoughts in his moments of self-harrowing despair of turning his collars down and being a Byronite, the above passage should induce him to pause. It is better to be a Burnsite in a cell, submitting cheerfully to the decrees of a gracious Providence, than a Byronite amidst the tempest on some mountain-top, scowling at the universe. The pious horse-stealer, who has seen so many places of interest in Scotland and has so thoroughly gratified his feelings thereby—unlike Byron—is acquainted with the Christian virtues of resignation. It appears that he looks forward—we know not with what reason—to his approaching departure from this life. Whether this is a literary expression, or whether the horse-stealer having seen Burns's cottage now feels that his earthly work is over here below, one thing is evident, that when he rises from life's banquet, he will rise cheerfully—*conviva satur*. This spirit is much more enviable than the temper which leaps madly at the precipice, and ends a joyless existence by plunging into endless abysses of gloom. The Byronite has no hope here, and cares but little, we may believe, for posterity. The Burnsite quits his streams and fields, and, like Regulus, goes back to prison, casting glances of proud expectation behind him on his country's press. "Ere this reaches the press," he tells us, "I shall be in the hands of the police authorities." Let no man write my epitaph, said the Irish patriot, who was of a Byronic tendency. I appeal to a patriotic press to do justice to my motives, says the horse-stealer who has been in the heather wi' Burns. For the rest, may fortitude and submission assist him to bear Heaven's will. But he is unnecessarily hard upon himself in calling his imprudent act a crime. It is not a crime to be poor, and to love Burns not wisely but too well. It will be for the chaplain of the jail to undeceive him on this point. If De Barnewell had committed no crime—and we are far from saying under the circumstances that he committed any—surely the horse-stealer's conscience may be at rest, and he need not call himself hard names.

"In the matter for which he suffered George could never be brought to acknowledge that he was at all in the wrong. 'It may be an

Digitized by Google

error of judgment,' he said to the venerable chaplain of the gaol; 'but it is no crime. Were it crime I should feel remorse. Where there is no remorse, crime cannot exist. I am not sorry, therefore I am innocent. Is the proposition a fair one?'

"The excellent doctor admitted that it was not to be contested."

Even after he was taken into custody the good horse-stealer—if accounts are true—did not at all give way. He does not pretend to be a martyr, nor is he immoderately depressed. His prevalent feeling still is, that he has enjoyed his Scotch tour, and that he wishes he could make the goaler and the police feel how completely he has done so. Besides this, he has all the pleasures of literature to soothe him. The world forsakes him, but his resources and his tastes are with him to the last. He keeps on issuing testimonials to the beauty of Scotch scenery. He draws up documents about himself and Burns, expressive of his attachment to the name of the Scottish Shakespeare, and of his satisfaction at having been able, by means of the horse, to go and see his cottage. There is no reticence about his language when he talks of himself. "A. K. H. B." could not be more communicative. Only a person thoroughly imbued with the spirit of poetry could so sincerely think that other people would care to know—and that the press would care to know—whether he had enjoyed himself in the Highlands or not. It is one of the great beauties of poetry that it conquers all *mauvaise honte*, and makes its votary feel quite confident that all the world take an interest in his emotions. We can imagine the good horse-stealer's pleasure after he had sent in his letter to the governor of the gaol, at being able to lie down in his bed and think what a relief it would be to the public to know that his trip in Ayrshire had passed off pleasantly. This is quite the manner of great authors. Great authors are like great generals, and never move without trailing behind them a sort of telegraphic wire, by means of which—the moment they arrive anywhere—they are able to sit down and telegraph to the rest of the world their first impressions. This kind of high literary cultivation the good horse-stealer possessed, though his grammar and his power of arranging sentences were not equal to his general culture. On leaving Glasgow for the prison of his native county, he at once handed in a farewell document. It is a good-bye to Scotland and the land of Burns. Of George de Barnewell it is related, that "even Snoggin, the turnkey appointed to sit with the prisoner, was affected by his noble and appropriate language, and burst into tears." It would have done Snoggin's heart good to have received the following paper from the warm-hearted horse-stealer. If the portrait transmitted to us of Snoggin is not too highly coloured, he would have pardoned the inextricable confusion of the letter, for the sake of the sentiment and the spirit:—

"In commemoration of my visit to Scotland, in which I had the pleasure of seeing at a single glance, and trod the fairy ground of the immortal Shakespeare of Scotland, and as an Englishman I am but too proud of having that liberty; yet at the same time I have left it this day; yet in love for the Ayrshire bard I leave my 'heart in the Highlands,' where the bard has had the honour of existing, and where he drew his first breath will adhere to my heart like the blooming heather to the mountain; and 'where Doon rins wimpling by sae clear,' I have breathed to nature a prayer for his repose. I leave it with a heavy heart; and so long as an English heart beats in my breast I will honour and revere his name and country."

If we contrast with this pathetic outpouring of this bruised poetic spirit, the wild scepticism of George de Barnewell, who was but a Byron at heart, we get a clear conception of the vast superiority of the tone of Scottish pastoral genius over the English melo-drama. On the one side is the blooming heather and the wimpling Doon; on the other is mad scorn and Titanic defiance of the gods. The gentle horse-dealer drops a tear at the idea of leaving even Scotland. George de Barnwell laughs a hollow laugh even as he is leaving life. We have listened to Burns; Byron must have his turn:—

"'You weep, my Snoggin,' the boy said, 'and why? Hath life been so charming to me that I should wish to retain it? Hath Pleasure no after weariness? Ambition no deception; Wealth no care; and Glory no mockery? Psha! I am sick of Success, galled of Pleasure, weary of Wine and Wit, and—nay, start not, my Adelaide—and Women. I fling away all these things as the Toys of Boyhood. Life is the Soul's Nursery. I am a Man and pine for the Illimitable. Has the Morrow any Terrors for me, think you? Did Socrates falter at his poison? Did Seneca blench in his bath? My great Hazard has been played, and I pay my forfeit. Lie sheathed in my heart thou flashing Blade. Welcome to my Bosom, thou faithful Serpent. I hug thee, peacebearing Image of the Eternal! Ha! the Hemlock Cup! Fill high, boy, for my Soul is thirsty for the Infinite! Get ready the Bath, friends; prepare me for the feast To-morrow—bathe my limbs in odours, and put ointment in my hair.'"

We think there cannot be a doubt in the mind of any sensible person, certainly not of any Scotchman, which of the two farewell addresses is to be preferred. If convicts are to be sentimental we had rather have the convict who leaves his heart in the Highlands, than the convict who, like Seneca, prepares his bath. We had rather have a convict also who spells heart in an ordinary manner, than one who has a Soul with a capital letter. This, however, is a matter of simple feeling, and, we have no doubt, Sir Bulwer Lytton would think differently. In conclusion we leave the horse-stealer to the laws of his country, and trust that he may be enabled to bear the decree of Heaven which is likely to fall on him in the ensuing assizes. His tale is a touching one. His only fault has been that he loved the Beautiful too well. After perusing his story we cannot but believe with Sir Bulwer, "that the Truthful and the Beautiful bloom sometimes in the Dock and the convict's tawny Gaberdine."

FIRE AND FASHION.

The arbitrary and capricious rule of fashion is a marvel of long standing to which the lords of the creation, for the most part, submit with wondering resignation. It blows where it listeth. Whence it comes, and whither it goes, men do not know, nor do they very much care. There is, to be sure, a section of the male sex which pays homage to a fashion of its own with a love and obedience passing the love and obedience of women; but this section is a small minority everywhere, and somehow it never atones for lack of numbers by pre-eminent energy or ability. Whether a Dundreary wears a coat an inch longer or shorter, and whether he carries an umbrella an ounce heavier or lighter, not a grain is added to the joy or sorrow of any human being but himself and the like of himself. Fashion, however, among women is a very different thing. Among them it extends its sway over all ranks, conditions, and ages; for a woman without the love of dress and ornament is one in more than a million. And no one can have failed to observe the rapidity with which a change of fashion in women's dress is filtered down through all grades of society. In some mysterious boudoir, probably in Paris, it is ordained that bonnets shall have high peaks; the fiat comes across the water to us, and forthwith in the most squalid of London courts will be found greasy and ragged, but still high-peaked bonnets, asserting that one touch of nature which makes all womankind akin. To take up arms in the hope of overthrowing a power of such magnitude is an enterprise far beyond the strength of men. Cautious men, children of this world, keep their thoughts to themselves, and scarcely ever dream of any serious opposition to fashion. Pusillanimous, perhaps, but wise in their generation, they content themselves with feeble efforts to temper the despotism by jokes and caricatures, under cover of anonymous journalism.

From time to time, however, such dire calamities are distinctly traceable to the requirements of a passing fashion, that men can endure in silence no longer. Anything short of imminent danger to health, and even life itself, they will put up with, but their patient acquiescence finds its limit at this point. Then at last "Paterfamilias" snatches up his pen in a frenzy of despair, and, under the disguise of some hideous name such as "Misopyrist," writes a wild letter to the *Times*, imploring the press to write down and the clergy to preach down the "Moloch" of the hour, and exhorting all husbands and fathers to do many things which he probably has not the resolution to give an example of in his own house and family. For a while the press takes up the subject, and a considerable clamour is made; but for all that the fashion hold its ground, lives for its allotted time, and then quietly gives place to a successor, which may, in its turn, attack life or health from another quarter, gather its victims undisturbed, and then retire. Not many years ago a great outcry was made against the small size of ladies' bonnets, which left half the head exposed; for, according to the testimony of medical men, illnesses were largely multiplied by this absurd covering for the head in a wintry climate. Still more recent is the outbreak against "arsenic green," when impassioned writers drew terrible pictures of the queen of the ball-room inhaling death at every step, and scattering the seeds of disease among all around her. And now a succession of awful disasters, the result of dresses catching fire, has created something like a panic in society. "The systematic incremation," exclaims the affrighted *Standard*, "of a given number of young and pretty women may now be looked upon as an institution of modern Europe;" and a correspondent of the *Times* thinks the time has come for every clergyman to take for the text of a sermon,—"That no man might make his son or his daughter pass through the fire to Moloch." And a more prosaic idea of the extent of the evil has been given by the statement of a metropolitan coroner, that out of twenty-three inquests held by him in cases of death by burning, no less than eighteen were caused by clothes catching fire.

The last, as yet, in the grim series of tragedies took place at a

Digitized by Google

theatre, and from the evidence given at the inquest, there seems to be no doubt that a calamity which has hurried one poor girl from the world, and disfigured another for life, might have been averted by the exercise of ordinary prudence. Seeing how things are managed at some theatres, it becomes almost a matter of wonder that audiences are not horrified, night after night, by the spectacle of an actress enveloped in flames. The dangers of the foot-lights are a very old story, but they are by no means the only source of danger. At the sides of the stage blaze naked jets of gas, and to these are sometimes added for scenic effects, as everybody knows, red and other coloured lights. In what are called the "transformation scenes," the danger reaches its culminating point; and it was during one of these scenes that the recent accident at the Princess's Theatre took place. The wings of the stage were crowded with the members of the *corps de ballet* all of course dressed in the lightest and most inflammable materials. On every side of them, close to their heads, and at their feet, were burning unprotected lights; and it was by a spark, it seems, from a naked red light that Miss Hunt's dress was set on fire. Her companion, Miss Smith, obeying the impulse of nature, ran to the rescue, and in a moment her dress too was in flames. Happily for Miss Hunt she was seized by a man who had a cloak to wrap round her, and thus she escaped with her life, though not without severe injuries. Her less fortunate comrade was caught by men who had nothing but their hands, and hence their efforts to extinguish the flames proved ineffectual till after she had received injuries from which there was no hope of recovery. And then it came out upon the coroner's inquest that wet blankets and other means of putting out fire, which careful managers have always in readiness, were nowhere at hand. We cannot but think, then, that it is high time for the Legislature to interfere for the prevention of similar disasters in theatres. It has interfered to secure the safety of workers in factories, by compelling the masters to fence machinery in motion, under the penalty of a heavy fine. Why, then, should it not compel the managers of theatres to take analogous precautions against accidents by fire? It is easy enough to protect lights by shades, and the burning of naked lights, in any place where there is danger, should be visited with fines. All dresses of light materials, supplied by the managers, should be rendered incombustible; and, to make assurance doubly sure, no performance should be allowed to take place without the means of extinguishing fire being kept close at hand and immediately accessible.

The danger of accident by fire in private houses is more difficult to deal with; for legislative interference with respect to them is out of the question. Whatsoever precautions are necessary must be left to the good sense and prudence of the public; and that constant precautions are needful will not be denied by any one who stops to consider that in these days women run a far greater risk of being burnt to death than ever they did before. Their perils have been increased in various ways. It is not only that ladies now surround themselves with a fence that makes them comparatively insensible to contact from the outer world, and that they, moreover, cover this fence with the flimsiest and most inflammable fabrics; but the danger which they thus go to meet at the same time comes, as it were, half-way to meet them. For the old-fashioned high grates and fenders are gradually disappearing, and to them succeed fenders which are no protection at all, and very low grates to the top of which the extremity of a crinoline is easily raised by a turn of the body. Such being the sources of all the perils that now surround ladies as they move in any room where there is a fire burning, it is easy to say, and some do say, Let us go back to the old silks and stuffs, the old grates and the old fenders; but there is not the smallest likelihood of any such retrograde step in civilization. The new-fashioned grates and fenders are too ornamental, and the muslin dresses of the present day are much too becoming, to be abandoned out of mere regard for the better preservation of feminine life. We must accept them—for the present, at least—as though they were necessaries, and diligently seek to make them harmless by increased precautions. To "Paterfamilias," to husbands and fathers beyond all others, this duty belongs,—they alone can effectually grapple with the evil. Let them forthwith furnish every fire-place in their houses with an ordinary fire-guard, and let them expend all their fussiness in the assertion of a strict rule that the guard shall be constantly on when a fire is in the grate. The fire-guard, however, is far from being a complete security against accidents; for it must of necessity be taken off sometimes. Poor Miss Burchell removed the guard to stir the fire, and as she stirred it a spark fell upon her light evening dress, and her doom was sealed in that moment. The one effectual means of warding off these fearful calamities has been pointed out again and again, and it only remains for the public to behave like reasonable beings, and stretch out their hands for the good thing that is within their reach. There is no doubt that the flimsiest fabrics can be made comparatively incombustible, both in the manufacture of them and by the use of a particular starch when they are washed. By such simple chemicals as tungstate of soda, sulphate of ammonia, and common borax, even tarlatan muslin can be made to burn with the slowness of tinder. The only possible objections to the use of such preparations are expense and injury to the look of dresses; but neither the one or the other has as yet been suggested. When, therefore, the lightest materials can be made secure from fire without expense and without any sacrifice of appearance, the preference of these to all others not so prepared would seem to be a matter of course to any man in his senses; but somehow there is no indication as yet of a general move in the right direction. How long shall this be so? From the public, and the public alone, must come the answer.

THE THRONE OF GREECE.

The dethronement of Otho proved an easy task; the very ease and completeness with which it was accomplished, coupled with previous accidents to Greek rulers, has in no small degree added to the difficulties experienced in finding a fitting candidate for the Greek throne. The Greeks, it now appears, will not be so fortunate as to secure for their future king the brother of our ever-to-be-lamented Prince Consort, the Prince Ernest of Saxe-Coburg Gotha. His mature age, his political experience, his ability, his royal connection, all seemed likely to fit him eminently for the arduous task. A mission of high importance awaits the future King of Greece, a mission essentially of peace, progress, and civilization. The elevation of so good a man as Prince Ernest to such a position, might have afforded matter of rejoicing, not to the Greek people alone, nor yet to Eastern Christians only, but to Christendom at large. It was as conquerors that the Turks entered Europe, and by force of arms they have maintained their conquest. That they are still vigorous as a nation, Russia has learnt to her cost, at Oltenitza, Silistria, and elsewhere, both on the banks of the Danube and in Asia Minor. If Turkey has failed to accept the invitation tendered to her to enter into the European family, it has been because the invitation was not sincere; there was bigotry at the bottom of it.

It is in her social system more than in religion, that we trace the real impediments to an intimate amalgamation between Turks and Christians. Those impediments, whatever may be their nature, the Christian Powers have endeavoured to remove, some by an appeal to arms, others by diplomatic pressure, none by measures of conciliation, divested of religious bigotry. Hence we find the Turks, not unnaturally, suspicious of their best friends, and always standing on the defensive, no matter how sound, useful, or disinterested may be the advice tendered to them, or by whom tendered. It is true that the Ottoman Sultan can no longer boast that he is "the ruler of three continents, the lord of two seas;" but Abdul Aziz seems now determined to hold his own against all comers. Our duty should be to endeavour to direct his energy into a peaceful channel, to give to it a progressive, not a retrograde tendency, and by example as well as by precept, to uphold religious liberty and discountenance bigotry.

Turkey is now weakened and partially paralysed, because she is continually and most ungenerously irritated and attacked by great Powers, through the instrumentality of smaller, and even of dependent states. Thus a constant drain is kept upon her finances, and the time is denied her in which to repair her exhaustion or to ameliorate the condition of her populations by internal reforms. But Turkey has more than once bravely turned on her tormentors, and has inflicted on them severe and well deserved punishment. At this moment the Sultan in person, standing as it were at bay, is preparing for a desperate struggle, which he fears may be forced upon him by the treachery of Christian states, nominally friendly, but really hostile to him.

Terrible indeed would be the result, if three millions of armed Turks, headed by their Sultan, were let loose on the ten millions of unarmed Christians in European Turkey. Such a catastrophe is far from being impossible, yet it may be easily averted, and the circumstances which originated the existing alarm may be turned to good account.

The Sultan finds a difficulty in repressing and protecting his Christian subjects. He may effect both these objects and obtain increased security for his empire, if he will permit the Christians, Sclaves, and Mussulmans to settle down in distinct political com-

Digitized by Google

munities and organise their own Governments, as the Roumans, Servians, and Egyptians have already done. Under a good government Greece may become the nucleus of Christianity, perhaps an influential State, equally powerful for good in the civilization of the East, and by affording to persecuted Eastern Christians a secure refuge on a fertile and abundant soil. Under the influence of moral pressure on the part of the Christian Powers, much may be done to forward the accomplishment of these great ends. Meanwhile, ere Greece can attain the position which it would appear she is destined by Providence to occupy, much remains to be done. Many and great difficulties have to be overcome; success depends chiefly on the ability of the new Hellenic King, and on the conduct of his people. The task is no light one: despite, however, the actual condition of Greece, it will be far easier of accomplishment than is very generally asserted. To appreciate the real difficulties of this task, it is necessary to understand well the character of the Greek people and the modern history of their country. Except to very few, both are insufficiently known. Statesmen and politicians were mostly ignorant of the internal system of government under which the Greeks lived when, in 1820, they raised the standard of revolt against their oppressor. Even the authority of Sir Stratford Canning was questioned, when, in the year 1828, he reported favourably on the municipal institutions under which the Greeks had been permitted almost to govern themselves, and on which they afterwards based their Constitution. The Conference of London was incredulous. Russia, better informed than England, obtained a dominant influence in Greece, placed her own creature, Capo d'Istria, in supreme power, and through him destroyed the municipal, representative, financial, and judicial independence of Greece. Capo d'Istria established a centralized despotism in lieu of constitutional liberty. We know his end. Otho, regardless of the wishes of the people whom he was called upon to govern, and in open violation of his oath of 30th March, 1844, was as despotic as his predecessor. He has justly suffered for his dishonesty. The Greeks now seek no more than they endeavoured to secure to themselves at the Assemblies of Epidaurus in 1821, at Astros in 1823, at Troezene in 1827, and at Athens in 1843, viz., a constitutional form of government. This they still desire with unabated ardour, although by Russian and other foreign machinations all that could be done has been done to crush in the Greek people every feeling of constitutional freedom, and to establish in Greece an Eastern despotism more oppressive than had ever been imposed upon them by Turkish masters. It is a great mistake to suppose that the Greeks are unfitted for, or incompetent to appreciate, a constitutional government. Their ideas of it are identical with our own; they are based on their municipal institutions. If they were fitted for one, they are equally fitted for the other. The cardinal principles of both are,—that taxes should only be levied on the people by its representatives; that the Ministers of State should be responsible to the people. Otho became intolerable—not on account of his dishonesty, his corrupt practices, or his flagrant acts of injustice, but because he was an unconstitutional monarch, and because, after twenty years of trial, he had proved himself irredeemably despotic.

The vices of Otho will make success the more easily attainable by his successor. There is nothing in the state of the country to excite alarm. The Greeks are as impressionable as they are clever. They will eagerly rally round a real constitutional monarch; and, as in 1827, there is every reason to hope that the issue of the first proclamation will restore order throughout the kingdom.

The national energies of the Greeks are now awakened, and without doubt they will cheerfully aid their future king to consolidate his power upon the throne, to carry out all necessary reforms, and to re-establish the national credit. By these means Greece may acquire substantial power in Europe, and be enabled, with profit to herself, to confer incalculable benefits on both Christians and Mussulmans in all bordering States. To the future King of Greece may yet belong the glory of staying the current which has for centuries in European Turkey set in so fatally against Christians, under the agency of the Mahommedan conqueror; to reverse the conversions of the sword, to encourage the emigration of nations and peoples, with a view to their uniting together according to nationalities, and concentrating the elements of Christianity throughout the East.

THE COMIC PRESS IN PRUSSIA.

The Saviour of Society in France is at present enjoying the flattering spectacle of the weak government of a neighbouring State aping his iron rule. M. von Bismarck, fresh from the categorical lessons of the Tuileries, has determined that in no point will he leave his Imperial tutor unimitated. His foreign policy proceeds on the comparatively simple system of making a noise in men's ears; and his home policy consists in taking the Prussian lieges by those ears in order to direct their attention to his spirited escapades abroad. For this purpose, however, it becomes imperatively necessary that no other Sirens should gain an audience by their singing; and accordingly warnings and stoppages are administered right and left among those Liberal papers which cannot learn by instinct how to hold their tongues. One journal had hitherto escaped the stocks; and it was supposed that however the daring *Volks Zeitung* and the insidious *National Zeitung* might suffer beneath a paternal government, *Kladderadatsch* would be allowed to cut his jokes in peace. But he reckoned without his Premier; and his number of January 18th (the contents of which will ever remain a secret except to an appreciative police), fell a victim to the Minister's busy arm. *En revanche*, he informs his learned men (with which title he is wont to honour his contributors) in a happier number, that they have at last teazed and tickled and drawn blood in an unsafe quarter; at the same time taking the liberty to add, *sub rosâ*, that though they were not living in Spain, and blessed with Marquis Posa's freedom of speech, yet right remained right!

The career of *Kladderadatsch* is a literary as well as a political curiosity. He was born in the revolution of '48, when men's tongues were set free at Berlin as elsewhere, and has managed to maintain ever since his liberty of speech and comment, annoyed by only one or two seizures at home, though excluded for a long time from circulation in Austria. The pettifogging rule of Manteuffel, and the shilly-shallying government of Van der Heydt have both been tempered by his epigrams. It was currently reported at Berlin that this toleration during the years of reaction was mainly to be attributed to the personal favour of the late King of Prussia, whose known fondness for *calembours* even earned him the reputation of being himself one of *Kladderadatsch's* learned men. However that may be, since the reins of government passed into the hands of the Prince-Regent, the present king, the witty journal grew less fond of exhibiting loyalty as one of its favourite qualities, though it has never ventured to attack the sovereign personally by word or by picture. But M. von Bismarck, as we know from his speech to the Chambers on the Address the other day, will not consent to any distinctions being drawn between the monarch's person and his cabinet; and *Kladderadatsch* having of late waxed furious in his onslaughts on the warlike premier, whose skull he is fond of depicting as tapering into a helmet, and Roon, the terrible Minister of War, and the pious Mühler, the author of the popular ditty of "Straight from the tavern I'm issuing forth," it has been decreed by the present interpreters of Constitutional Government at Berlin that their reckless satirist shall have a warning.

Humorous periodicals were not apt to flourish in Germany. The *Fliegende Blätter*, of Munich, were established long before their Berlin rival, and have never lost their extensive circulation; but this is to be ascribed to the excellence and humour of their woodcuts, which chiefly occupy themselves with safe topics, such as the imbecility of the rustic mind, and the misfortunes of the Sunday sportsman. Otherwise the *Fliegende Blätter* are, like most things Bavarian, beery and slow. The Vienna *Figaro* is a wretched quarter-sheet, with just enough fun in it to raise a laugh in an Austrian, that most easily-amused of human beings, and with the fear before its mind of another prosecution like that which last summer overtook its hapless editor. The Leipzig *Dorfbarbier* is a mere imitation of *Kladderadatsch* in its more prominent features, but rejoices in an ineffable vulgarity all its own.

The Berlin *Charivari* (for the term *Kladderadatsch* signifies the same as the title of the unhappy French paper whose feeble light still flickers as a memorial of happier times for journalists and jesters) possesses a wit indigenous of the soil whence it sprung. The Berliners are perhaps the wittiest among the inhabitants of the capitals of Europe. But their wit is of a cheerless and heartless description, differing as much from the sparkling *esprit* of the Parisians as from the infantile gaiety of the Viennese. Enthusiasm is a thing unknown at Berlin; and the very last enterprise the late king should have undertaken was to ride about as he did waving a German *tricolor* among his "dear Berliners," of whom every baker's boy is a satirist and every cobbler a critic. Their wit, moreover, spares nobody and nothing. Religion, its ministers, and institutions, are victims especially marked. The Germans of the North in general have not the faintest glimmering of that feeling which all English public writers respect, that there are subjects which wit and ridicule should never approach. They talk and jest as familiarly about names and subjects of which we are only accustomed to hear in church, as Mephistopheles, in Goethe's "Prologue," talks and jests with the Deity Himself. Moreover, it

Digitized by Google

is to be remembered that a great number among the Berlin humourists—as indeed among the entire school of writers at one time denominated *Young Germany*—belong to those nondescript people, whom their enemies accuse of being Jews, and who themselves make the Jews the subject of their bitterest and most telling taunts. If the reader wishes for a specimen of the highest kind of this sort of wit—a wit which has sworn enmity to the things that be, without giving much thought to the things that should be—throughout negative and destructive, "a queer compound of dirt and fire," let him turn to the brilliant prose of Heine; if he desires to watch its shafts flying at the passing occurrences of the day, let him refer to any number of *Kladderadatsch*.

"This paper appears every day with the exception of the week-days." It opens with a prophetical calendar for the week; and its leading article is generally an address in sonorous verse by *Kladderadatsch* to his readers. On this often follows a short burlesque of some popular novel, or drama, or poem of the day; the last number, *e. g.*, contains a farrago entitled "Stepmother Lizzy, a fellow to Gounod's *Margaret*." This is a new dramatic version of the loves of Don Carlos and his stepmother Elizabeth, written to ridicule an opera which has lately had a wonderful run in Germany, and the text of which is adapted from Goethe's tragedy with the usual exquisite modesty and appreciativeness of French librettists. The parody is signed *Charles Miessnigues*, who adds that he has "Frenchified his name, in order to escape the fate of Richard Wagner, in case of a performance at Paris." Carlchen, or Charley Miessnick, is a favourite hero of *Kladderadatsch*, and is supposed to be an aspiring youth in the fourth class of a *gymnasium*, who writes in a marvellous style, combining the grandeur of a journalist with the defective grammar of a schoolboy.

The *Feuilleton* is made up of small jokes and quips, after the manner of *Charivari* and *Punch*. But there is an utter absence of the harmlessness which at present attends all the utterances of the former, and of the intolerable didactic style which the writers in the latter often consider themselves justified in adopting. A favourite device of the Berlin wags is to clothe their jests in the shape of advertisements, or notices from some supposed or real personage, alive or departed, and in the last number, "Borussia," "The Inhabitants of the Zoological Gardens," "Ελλας," and "F. Schiller, author of *Fiesco*, and proprietor of a monument *in spe*," do duty in this manner. At the top of the third page invariably appear those two figures who have become the *Pasquin* and *Marforio* of Berlin, Müller and Schultze, the German equivalents for Brown and Jones, who discourse in brief dialogues on the prevailing questions of the day. In the last number, of course, the confiscation of the journal itself moves them to talk. "Why, what's this, Schultze?" asks Müller, "you didn't turn up last Saturday." "Ah," says Schultze, "I didn't feel quite well." "Show us your tongue," says the other; "you've been suffering." "From a sudden seizure." "Oh, indeed! Well, if that's all, *that'll soon pass away*." "So *I* think," says Schultze. Of course it is next to impossible to translate these jokes, which are always in the Berlin dialect. Another far-famed character of *Kladderadatsch's* creation, Zwickauer, who, we suppose, is a Saxon Jew, uses a dialect purely his own. His "Idées Zwickoiriennes," written on a well-known model, created great amusement some time ago. In fact, Louis Napoleon is the *bête noire* of the Berlin humorists, who, of late, never mention him by name, but always talk of him vaguely as HIM, and the other day began to gratify their spleen against the supposed influence of the French Empress by according her the same demoniacal pre-eminence, as SHE.

Of the illustrations which fill the fourth and last page it is impossible to speak without contempt, when we compare them with the finished political and social sketches which every week grace the columns of *Punch*. Neither have they the vigorous dash of the pencil of Cham; but are simply coarse, and often not wholly decent, woodcuts with very little art either of design or execution. The standing caricature of HIM, for instance, would surely scare even Mr. Kinglake in his wholesome hatred of the brethren of the Elysée. The loyal addresses to the king have lately been the most fruitful theme for the caricaturist; and in one of the recent numbers there is an amusing representation of *Kladderadatsch*, whose type is a rather dilapidated and very tipsy-looking individual standing in a forest of addresses, and laying to rest the old tail-coat which is supposed to have done duty on the backs of many loyal emissaries, while he chants a parody of Goethe's "Wanderer's Song at Night:"—

"Under all addresses is peace.
* * *
Wait yet awhile! yet awhile!
And thou too shalt sleep!"

It is to be hoped that this bold and witty journal will improve in time with respect to its illustrations and its occasional sins against decorum; and may, some day, like Mr. Bowdler's "Family Shakespeare" among ourselves, be able to boast of its fitness to be read aloud in every family circle. To the family circle of the present Prussian ministry it will probably ever remain an unpalatable dish; but "that," as Schultze says, "will soon pass away." Long may *Kladderadatsch* survive his seizure, and long may he flourish to remind M. von Bismarck and other too courtly administrators of the healthy current of popular ridicule, and of the contemptuous dislike which will, in a sincerely constitutional nation, attend every despotic interference and all undue extensions of the Royal prerogative!

THE TRIAL OF EFFIE DEANS.

Mr. Boucicault has apparently grown weary of that newer school of the Sensation Drama, of which he has been himself the chief representative. Terrific "headers" and miraculous escapes have lost their charm for him. In his new play there is but one sensation scene, and that is modelled, with the utmost exactness, on the oldest and most approved type. The attack on the prison, which brings the drama to a close, is good of its kind, and none the less agreeable because its character is one with which we are perfectly familiar. There is a flavour of legitimacy about red fire, and a brisk discharge of pistols in the wings; and, if we must have melodrama at all, we like it legitimate. Flames and explosions are the fitting accompaniments, on the stage, of any crisis, whether public or private; and as soon as they are introduced we fall instinctively into a suitable frame of mind, and watch the fall of the curtain with the soothing conviction that all the proprieties have been complied with. The only improvement that we can suggest in Mr. Boucicault's last production is in the way of curtailment. We wish to end where he ends, but then we should like to begin there too. The last scene is quite able to stand alone. It is true that it comes after Effie's trial, but it is in no sense an ending to it. The story would be incomplete, perhaps, without it, but then it is not complete with it; and the concluding catastrophe would be all the more impressive if the audience were not jaded, as at present, by three tedious preliminary acts. English playgoers have, no doubt, been trained into an inordinate fondness for "sensation," in the coarsest sense of the word; and where a whole play is a series of disjointed "situations," each one is to a degree complete in itself, and may quite afford to stand alone. Mr. Boucicault, at any rate, seems resolved to go all lengths in ministering to the prevailing taste. Many dreadful things have been enacted on the stage over which he at present reigns supreme; but we doubt whether, in Mr. Batty's palmiest days, anything more terrifically melodramatic than the siege of Lucknow was ever submitted to the gaze of a shuddering transpontine audience. The "Trial of Effie Deans" is one step nearer to the prosaic region of possibility, but is hardly less dependent on its "sensational" element for the interest which it excites in the beholders. The trial scene, which gives a name to the play, is brought on the stage, so far as the accessories are concerned, with considerable effect, and Mr. Boucicault delivers a speech which we can readily imagine may be a very happy reproduction of the leader at some Irish sessions. If this does not seem very appropriate praise to give to a supposed Scotch advocate, the fault was inherent in the circumstances of the case. Still, as this is almost the only bit of acting in the play, we should have been glad to see it lengthened, and the scene would have gained in effectiveness if probability had been a little more consulted. Confessions, if they are to secure a conviction, are generally read to the jury, and the counsel for the defence is rarely allowed to have all the talk to himself. Mrs. Boucicault's Jeanie Deans seems to us the least happy character she has yet sustained, and Miss Edith Stuart unfortunately quite fails to excite any special interest as Effie. Both the sisters are conventional Scotch peasants, and nothing more. Mr. Ryder does not rise even to this mark. His intermittent attempts at speaking with a Scotch accent may not make him a worse "heavy father" than usual, but they are wholly inadequate to make him a fitting representative of David Deans. Could Sir Walter Scott have foreseen the degradation in store for his hero, he would never have described him as speaking "with a voice that made the roof ring." Upon this Mr. Ryder seems to have founded his conception of the character, though he has added thereto some heavy falls and several sentimental speeches. When not employed in either of these ways, he is generally being led about by Reuben Butler, much after the fashion of a blind man and his dog. Mr. Boucicault, indeed,

Digitized by Google

seems to cherish a special spite against the part, for he carefully cuts out from the dialogue all the characteristic speeches which are to be found in the novel, and replaces them with some of his own composition. We are bound to say that these substituted remarks invariably draw down the applause of the gallery, but we think it would have been worth while to try whether the words which Sir Walter Scott puts into David's mouth might not have been as effective as praises of cold water, and comparisons of his heart to a cold hearthstone. A Duke, at least as rendered on the stage, is rarely an imposing object, and even a more brilliant performer than Mr. H. Vandenhoff might fail to enliven the part of the Duke of Argyle. Archibald, his groom of the chambers, contrives to be rather amusing, chiefly by dint of repeating the last word of every speech which is made before him—a habit which, though it would infallibly have secured his dismissal in real life, may well be tolerated in a play in which it constitutes the sole element of amusement. The character, however, is of such minor importance, that we should hardly have thought it worth mentioning, had it not been the one part to which we can conscientiously accord a single word of praise.

If Mr. Boucicault had contented himself with giving us an ordinarily dull play, the event would hardly have been important enough to demand a notice. We dare say that to those persons who make acquaintance with the "Heart of Mid-Lothian," for the first time, on the boards of the Theatre Royal Westminster, the dramatized version of it may seem no worse than other productions of the same stamp. But it seems a sort of literary sacrilege thus wantonly to travesty one of the greatest creations of Sir Walter Scott's genius. Mr. Boucicault, of all men, is bound to do better. He professes a great anxiety for the interests of the British stage; he has announced his intentions, his method, and the success which he looks upon as already within his reach, in terms of confident and unblushing self-applause. At present he stands pledged to great things. He is bound to clear his £20,000 a year—so his advertisements informed us—and to revolutionize the theatrical world. *Quid feret*—naturally exclaims the inquisitive sight-seer—*quid feret hic tanto dignum promissor hiatu?*—when are the fair results of the first instalment of the £20,000 to make themselves apparent? When is the revolution to begin? Mr. Boucicault's achievements are likely, we think, to be of a humbler kind: he possesses several qualifications for his task of manager; he is himself a thoroughly competent actor; his racy Irish brogue is natural and amusing, and will carry off all but the dullest parts with decent success; his wife, if provided with an appropriate *rôle*, can act, as she proved in the "Colleen Bawn," with true pathos, grace, and refinement; he has constructed, out of rather unkindly materials, a fairly pretty and fairly comfortable theatre, and fixed the prices of admission at a sensibly moderate rate. The situation, too, is in his favour, for, though Astley's is on the unfashionable side of the Thames, yet it is so close to Westminster Bridge that it is really as near to the West-end of London as most of its rivals. It appears to be well filled, and therefore we will hope that it answers. There, however, Mr. Boucicault's triumphs, for the present, stop. If he wishes to achieve a permanent success, or to be of real service to his profession, he must aim at attracting a higher class of spectators than such as would be equally gratified at a music-hall or a singing tavern. To do this he must look out for actors, and to obtain actors he must give them something better to perform than the "Trial of Effie Deans."

THE PAST WEEK.

PARLIAMENT was opened by Royal Commission on Thursday. The Prince of Wales took his seat amongst the peers. The Queen's Speech begins with the announcement of his marriage; a treaty for it with the King of Denmark is laid before both Houses; and they are asked to make provision for a household suitable to the rank and dignity of the heir apparent of these realms, as well as to sympathize with her Majesty upon an event so interesting to her, which will, she trusts, by the blessing of God, prove conducive to the happiness of her family, and to the welfare of her people. The next subject referred to is the revolution in Greece, by which the throne of that kingdom has become vacant; "and the Greek nation have expressed the strongest desire that her Majesty's son, Prince Alfred, should accept the Greek Crown. This unsolicited and spontaneous manifestation of good-will towards her Majesty and her family, and of a due appreciation of the benefits conferred by the principles and practice of the British constitution, could not fail to be highly gratifying, and has been deeply felt by her Majesty. But the diplomatic engagements of her Majesty's Crown, together with other weighty considerations, have prevented her Majesty from yielding to this general wish of the Greek nation. Her Majesty trusts, however, that the same principles of choice which led the Greek nation to direct their thoughts, in the first instance, towards his Royal Highness Prince Alfred, may guide them to the selection of a Sovereign under whose sway the kingdom of Greece may enjoy the blessings of internal prosperity, and of peaceful relations with other States; and if in such a state of things the Republic of the Seven Islands should declare a deliberate wish to be united to the kingdom of Greece, her Majesty would be prepared to take such steps as may be necessary for a revision of the treaty of November, 1815, by which that republic was reconstituted and was placed under the protection of the British Crown." After the customary remark, that her Majesty's relations with Foreign Powers continue to be friendly and satisfactory, the Speech observes that, while she has viewed with the deepest concern the desolating warfare which still rages in America, she has abstained from taking any step with a view to induce a cessation of the conflict, because it has not yet seemed that any such overtures could have a probability of success. She has meantime witnessed with heartfelt grief the severe distress and suffering which that war has inflicted upon a large class of her subjects, but which has been borne by them with noble fortitude and with exemplary resignation. It is some consolation to hope that this distress is rather diminishing, and that some revival of employment is beginning to take place in the manufacturing districts. It has been gratifying to witness the abundant generosity with which all classes of her Majesty's subjects, in all parts of the empire, have contributed to relieve their suffering fellow-countrymen; the remotest colonists having proved, on this occasion, that, although they dwell far away, their hearts are still warm with unabated affection for the land of their fathers. The constant and laborious attention with which the distribution of these funds has been superintended by the Relief Committees is also noticed. The commercial treaty with Belgium, and a convention respecting joint-stock companies, are to be laid before the Houses, with papers relating to the affairs of Italy, Greece, Denmark, and Japan. The estimates, of course, have been prepared with a due regard to economy, and some reductions of expenditure are promised. Notwithstanding the American war, the general commerce of the country has not sensibly diminished in the past year; the French commercial treaty has already yielded the most advantageous results to both these nations; the productive resources of this country are unimpaired; the state of the revenue, in spite of many unfavourable circumstances, has not been unsatisfactory. It is, in conclusion, highly gratifying to her Majesty to observe the spirit of order which happily prevails throughout her dominions, and which is so essential an element in the well-being and prosperity of nations. This, omitting the merely conventional phrases, is the substance of the Queen's speech.

The marriage of the Prince of Wales with Princess Alexandra of Denmark will take place upon Tuesday, March 10, in St. George's Chapel, Windsor Castle, in which the Prince of Wales was christened; and by this arrangement the Queen will be enabled to be present in private, which could not, under existing circumstances, have been the case at the Chapel Royal in London. The Prince is to hold a levée at St. James's Palace on the 25th, and the Princess Royal of Prussia will hold a drawing-room on the 28th of February, when all presentations will be considered as made to her Majesty.

It is stated that, without awaiting the report of the Convict Prisons Commission, Sir George Grey has resolved upon a change in the ticket-of-leave system. In all future cases, a prisoner under a second sentence of penal servitude is to be denied any remission of the full term of incarceration.

We refer to an article of ours, in another page, on the circumstances of a dispute between the Brazilian Government and the British Minister at Rio de Janeiro, which has partly been settled, and partly referred to the arbitration of the King of the Belgians.

The meeting in Exeter Hall which was got up by the "Emancipation Society," as a demonstration in favour of the Northern side in the American civil war, has been followed by several other meetings in provincial towns and in the suburbs of London; Mr. George Thompson being the principal orator at Bath one evening and the next at Newington Butts. Mr. E. Baines, M.P., has presided over a similar meeting at Leeds. Mr. Bright has spoken at Rochdale on the occasion of voting the thanks of the cotton-spinners to the New York merchants, who have sent us a ship laden with provisions for the relief of Lancashire distress. He said that the cause of the gigantic strife in America was an infamous conspiracy against the rights of human nature; that the Southern principles of negro slavery, worse than had been ever practised by savages or professed by the heathen of former times, were a very doctrine of devils, and all mankind ought to shudder at their guilt. As the secession of the South was a rebellion against the majority, every friend of freedom should sympathize with the North. It was not the fact that the distress in Lancashire was caused by the Federal blockade; the South might send us their cotton if they chose, but they purposely withheld it, and even burnt it, that, by injuring us, they might compel us to join their side. He regretted that England was the only country in Europe where men were to be found willing to make their Government take part against the North, and ready to supply the South with munitions of war. He complained of the false representations put forth by our press on this American question; and he denounced Sir Robert Peel for daring to say that he hoped the Southern States would establish their independence. Why, Sir Robert Peel was Chief Secretary to the Government of Ireland, and if Ireland were to attempt to secede, his Government would sack its cities and drench its

Digitized by Google

soil with blood. Thus spoke Mr. Bright at Rochdale; whilst at Bury, Mr. Frederick Peel, Secretary to the Treasury, said that if the war in America should continue, it would be our duty to interfere for restoring peace; he commended the French Government for its attempt to bring about a reconciliation, and said our Government would have to justify itself in the House of Commons for refusing to join in those good offices; which could only be done by showing that there was reason to fear lest our advice should be misconstrued, so as to injure our dignity and our chances of future usefulness. Though we must all abhor slavery, and desire the emancipation of the negroes, we could not approve such acts as those of President Lincoln, which were likely to produce great mischief, and which had for their motive, not so much the welfare of the slave, as hatred of his white master. He did not see any immediate prospect of the termination of the war; and we should encourage the growth of Indian cotton, to prevent a recurrence of our present distress.

The United States Minister has received a deputation from the British Anti-Slavery Society, to congratulate him on President Lincoln's decree of emancipation. In reply to their address, Mr. Adams said that, as the policy of the Southern rebellion was to perpetuate slavery by first dissolving the Union, that of the Union was, on the contrary, to uproot slavery, as its only safeguard against all future attacks upon the principles of freedom. Hence the absolute necessity for the first appeal of the President in support of the Union, and, secondly, for the proclamation. Had the resistance to the Union been less vigorously conducted, the adoption of such a measure just yet might have been more questionable. It might have been still possible to graduate the treatment of the evil by adopting expedients to soften the severity of its operation with time. As it was, few people could even now doubt that the course of things had set against the permanence of slavery in America. The sentiment of the civilized world had pronounced its doom.

Mr. Farnall's report, at the last weekly meeting of the Central Executive Committee in Manchester, where Lord Derby again presided, shows a continued decrease in the number of persons receiving parochial relief in the distressed districts; but the leading members of the committee declared that, in the towns of Ashton, Bolton, Bury, Blackburn, and Burnley, matters seemed likely to be worse than ever in the next month or two. Mr. Maclure's monthly return has just been published, showing that, of the 534,593 operatives, there are 228,129 wholly unemployed, 159,537 on short time, and but 146,927 on full time. Comparing this return with that for the past month, there are 25,796 more hands in full work than at the end of the year. The present weekly loss of wages is £172,000. The poor-law guardians are giving out-door relief to 221,000 persons, while the charitable fund committees have 374,630 pensioners on their list, of whom 235,741 get nothing from the rates. The total weekly expenditure, from both sources, is at the rate of £55,000.

The news from America is to January 24th. The positions of the several corps of the belligerent armies are precisely described by us in an article upon that subject. It appears that the second advance of the army of the Potomac across the Rappahannock has been put off, partly from the state of the weather and partly from alleged inefficiency in the quartermaster's department. The reprisals are put in force; the Confederate authorities have ordered that Federal officers captured after January 12th should be delivered to the Governors of the States where captured; on the other hand, General Halleck has ordered that no more Confederate officers shall be released on parole. President Lincoln has signed the bill for a further issue of $100,000,000 Treasury notes for the payment of the army, and has sent a message to Congress urging it to restrict the issue of irredeemable paper currency, and to tax the circulation of the banks. A bill has been reported to the United States' Senate to authorize letters of marque. A bill has been introduced in the House of Representatives appropriating 10,000,000 dollars for the emancipation of the slaves in Maryland. General Fitz John Porter has been found guilty of the charges brought against him, and dismissed from the service. It is expected that General Butler, who has been received with a popular ovation in the northern cities, will be restored to his command at New Orleans. Mr. Wendell Phillips, the Abolitionist orator, loudly applauds him; while the Rev. Henry Ward Beecher declares, that the Union is to be saved by raising an army of negroes. The Democratic party, however, are speaking out more boldly than ever against President Lincoln's administration; and the Governor of the State of New Jersey, in his message to the Legislature, denounces the emancipation proclamation and the illegal arrests, and recommends peace upon the basis of the union of the States with their equality and rights unimpaired. In the New York State Legislature at Albany, scenes of great violence and disorder between the Democratic and Republican parties have taken place. From the Southern capital, Richmond, we hear that a new financial scheme has been introduced in the Confederate Congress, proposing an amendment to the constitution, and legalising the issue of notes to be legal tender during the war, and five years after its termination. The scheme also includes a proposal for purchasing the whole of the Southern cotton crop; the present crop to be purchased at 10 to 15 cents per pound. A steamer laden with 400 bales of cotton was burnt whilst endeavouring to escape out of Charleston. The French offer of mediation seems not to have been very well received by the North. Count Mercier, in his interviews with Mr. Lincoln and Mr. Seward, has repeated anew his assurances of the friendly regards of the Emperor Napoleon. He said that the intentions of France, in her proposal of mediation, and in her expedition to Mexico, are in consonance with the most friendly feelings to the American Union and American interests; that, in regard to Mexico particularly, the Emperor had no purpose to interfere with American rights, or the rights of nations, but only to maintain the honour of France. Notwithstanding this, resolutions have been introduced in the Senate at Washington, declaring that the attempt by France to subjugate Mexico is hostile to the United States and to free institutions, and that it is a violation of international law, and of the faith of France, pledged by the London treaty of October, 1861, between France, Spain, and England, and repeatedly assured to the Federal Government through the American Minister in Paris. The resolutions further declare, that it is the duty of the Federal Government to require the withdrawal of the French forces, and now and always to lend such aid to Mexico as is required to prevent armed European intervention in her political affairs. President Lincoln is requested to communicate to the Mexican Government the views expressed by Congress, and to negotiate a treaty with Mexico.

The intelligence from Mexico is to the 20th December; the French troops were at Palmar, thirty miles from La Puebla, and the Mexicans were preparing to fight them. One of the Mexican generals, however, had committed suicide; and it was also reported that there was a serious misunderstanding between Generals Ortega and Comonfort, and that numerous desertions from the Mexican garrison at La Puebla were taking place. A conspiracy had been discovered in the brigade of General O'Horan, and five Mexican officers were shot. 35,000 Mexican troops were at La Puebla, and 10,000 more between there and the capital. There were 12,000 troops at the capital, 8,000 in Queretaro, and 12,000 in Guerrero, mostly badly armed. The fortifications of La Puebla are mounted with 200 guns, and those of the city of Mexico with a like number. The latest rumour is that the French were encamped at La Puebla, and were disposing their forces for an attack on the city. 3,500 French soldiers are leaving Cherbourg for Mexico; 1,600 are embarking at Algiers for the same destination, besides 300 Arabs for the baggage service. Some disappointment is felt at the little progress yet made by General Forey.

The most conflicting reports continue to be received of the progress of the revolt in Poland, and of the measures adopted by the Russian Government to suppress and scatter the bands of men in arms throughout the kingdom. On the one hand the Government reports assert that but little opposition to the troops is now met with, while independent sources of information allege that large bodies of insurgents are still assembled, and that the revolt is spreading. It appears that the most numerous and best organized bands, and those which give the Russian troops most trouble, are in the vicinity of the town of Wouchotzk. They amount to about 3,000 persons, and are described as resolute and well armed. This force has been furnished by the inhabitants of the two towns of Schildolowicz and Bodzentyn, and by the workmen of the mines. It is commanded by an officer of artillery, M. Langiewitch. Another band, equally well organized and armed, is on the Vistula, in the neighbourhood of the town of Casimir. It consists of about 2,000 men. Besides these there are twenty other bands, less numerous, but composed of energetic men, resolved to risk everything, in the direction of Ostrolenka and of Brzeslitewski, and in the mountain of St. Croix. These bands are encamped in the forests, ready to offer a desperate resistance to any attack. The Russian troops are concentrated in the largest towns, and watch the great roads of communication. It is alleged that a considerable corps of insurgents of the Government of Augustow has passed the frontier of the empire and penetrated into Lithuania, where it is swollen by all the refractory spirits of the country. If this movement should extend to the provinces of Lithuania, Podolia, and Volhynia, the state of affairs will be serious. The citadel of Warsaw is said to contain 14,000 prisoners taken in open insurrection. We have descriptions from various parts of obstinate encounters between the Russian troops and the insurgents, with varying results. It is reported that at the village of Surage a battalion of nearly 2,000 Russian troops was put to flight by an armed band of Poles. At Bodzentyn the soldiers were also defeated, men and women attacking them with poignards, revolvers, and carbines. The garrisons at several other places have been disarmed. It is, however, to be observed, that no large town is in the hands of the insurgents, and that, in most instances, they would not stand the fire of the troops, but dispersed after the first volley, and fled to hide themselves in the forests. They stopped the railway trains for some days, on the line from Petersburg to Warsaw; but the regular communication is re-established. Many of the insurgents, who have been taken prisoners, state that they were compelled to take part in the revolt. All those who were brought before courts-martial declared the Roman Catholic clergy to have been the principal instigators of the insurrection. The "National Polish Committee" now issue printed orders and appeals. They summon all inhabitants of the land capable of bearing arms to take part in the revolt, and threaten those who oppose their orders with the severest punishment. They proclaim equality for all, promise the peasants land without rent, and state that they will pay the present owners out of the national funds. They also promise all who fight for freedom 100 acres of crown land, and they repeal all ukases and orders of the "foreign rulers." A clerical member of the Provisional Government has preached a sermon from the text, Joel ii. 20—"I will remove far from you the northern

army." Yet the Russian army in Poland amounts to 80,000 or 90,000 men, in addition to which the Grand Duke Constantine has asked the Emperor for 50,000 or 60,000 more.

The debate on the address in the French Senate was marked by a speech from M. Thouvenel, late Minister of Foreign Affairs, on the Roman question, in which he plainly declared that this was "the black spot in the horizon" of the Imperial policy, and that the French military occupation of Rome could not, by the law of nations, be allowed to continue. Though he did not admit that the Italians had a right to claim Rome as their capital, he would maintain that the Romans had a right to be governed in conformity with their own wishes, and they were unanimously for the transformation of the Pope's temporal power. There was no appearance of the concessions indispensable for reconciling the Pope with his subjects; and the time had now come when it was urgent for the Emperor's government to escape from this embarrassment, and to put an end to the disorder in the public mind. Prince Napoleon alone in the Senate voted against the address, the majority being 121 in its favour. Still more important is the debate in the Corps Législatif, which has begun upon a series of bold amendments moved by the few Liberal members of the Opposition. One of them demands the liberty of the press, and complains, in most out-spoken language, of the arbitrary practices of the Government, contradicting all its professions since the decree of November 24th, 1861. Another amendment disapproves of the Mexican expedition, as a rash and wanton adventure, since neither the interests of France nor any sound principles oblige her to "go and see what form of government the Mexicans desire." A third amendment declares that the French occupation of Rome must not continue, and that, on the principles of non-intervention and national sovereignty, the Romans should be left to settle their own affairs. Other amendments complain of the mode in which the electoral districts and the registration of voters are tampered with by Government; as well as the denial of an elective municipal council to Paris and Lyons, and the penal laws with respect to the trades-unions of working men.

We stated, last week, that the Prussian Chamber of Deputies had, by a majority of four or five to one, passed an address to the Crown, protesting against the late encroachments of royal prerogative. The King has refused to grant an audience to the parliamentary deputation which was to present this address. The Finance Minister has, in the mean time, laid before the Chamber an account of the extraordinary expenditure which Government has illegally incurred in excess of the estimates of the last budget which Parliament voted. An attempt is being made by fifty members of the Upper House, belonging to different political parties, to mediate between the Crown and the Chamber of Deputies, by means of a conciliatory address.

The new King of Greece is not, it seems, yet found; the Duke Ernest of Saxe-Coburg Gotha, whose name has been hailed with much approval by the Greeks residing in London, as expressed in an address they have sent to the Provisional Government at Athens, has now made up his mind to decline the proffered royalty; the Greek National Assembly has, meanwhile, decreed that the throne is forfeited by Otho's dynasty, and that Prince Alfred is the elected king.

The debate on the Address in both Houses of Parliament turned chiefly on our foreign policy. Lord Derby had no fault to find with the conduct of Government in respect to the American war, and he did not agree with some of his friends that the time had come to recognize the South. He ridiculed Lord Russell's advice to Denmark on the Schleswig-Holstein question, and, still more, his offering an asylum to the Pope at Malta; he seriously disapproved of ceding the Ionian Islands to Greece as a most imprudent and suicidal act. The Earl of Malmesbury thought it was wrong not to join in the French mediation in America, and he had been much astonished by the behaviour of our Ministers with regard to Denmark, the Pope, the throne of Greece, and the Ionian Isles. Earl Russell defended his own acts. He would be glad to see the American Union restored, if possible, but not through the subjugation of the South by the North; whether as one great Republic, or two great Republics, he wished the Americans to enjoy peace and freedom. The proposal he had made to Denmark was to put an end to a vexatious quarrel which might bring on a European war. It was not so very unnatural that a simple offer of English hospitality should be made to the Pope, who had taken it in friendly part. The Ionian Isles were, by the treaty of 1815, not a British possession, but a protected State, and if the Ionians wished for union with Greece, we should not keep them in subjection. Our policy was to favour the establishment of free and independent nations.

In the House of Commons, Mr. Disraeli, approving of our non-interference in America, censured, individually, two or three of the Cabinet,—Mr. Gladstone and Mr. Milner Gibson, for having, in their conflicting speeches up and down the country, departed from a wise reserve on that question. He wanted to know what Mr. Gladstone meant by approving, at a meeting of the Royal Geographical Society, the employment of British officers to fight for the Tartar dynasty in China. The reduction of our naval and military expenditure was inconsistent with "a sensation policy." Touching very lightly on Schleswig-Holstein, the Roman question, and the incredible news from Brazil, he passed to the inconsistency of our ostentatious patronage of the Turkish empire, in the Montenegro despatches, with our coquetry about the throne of Greece, followed by the cession of the Ionian Islands, encouraging future aggressions on Turkey. Nothing could be a greater absurdity, and he hoped that our Mediterranean possessions were not to be sacrificed to the whim of "prigs and pedants" like Mr. Goldwin Smith. After several of the Irish Papal and ultra-Tory members had had their say, Lord Palmerston rose to repel the blame cast upon him for "his mellow harvest of autumnal indiscretions." As for China, the interests of our trade required the suppression of those murderous robbers the Taepings, and Englishmen had, therefore, been allowed to enlist in the Chinese Government's service. Our friendly suggestions to settle the dispute between Denmark and Germany, though unsuccessful, had done no harm. There had been no delay in setting aside the offer of the Greek throne to Prince Alfred. To give up the Ionian Isles, which were not British territory, would be a wise measure, a just and generous example. It was the Pope himself who had asked Mr. Odo Russell whether, if he were driven from Rome, he would be received in England; what could we answer but that he was welcome to reside at Malta? He believed the recent dispute with Brazil would be arranged by a satisfactory understanding. He hoped that Greece would prosper, and that the Turkish empire would not be disturbed. Sir George Bowyer then having then spoken for the Pope, and Mr. Seymour Fitzgerald for Lord Malmesbury, the address was agreed to, without any division.

The Reigate election has returned Mr. W. L. Gower, a large landowner in Surrey, by a majority of 344 against 335 over Mr. Wilkinson, the late Member for Lambeth; Mr. Gower is a moderate Liberal.

Reviews of Books.

DANIEL MANIN.*

"I AM asked," said Cavour, "by what means we are to settle the Venetian question? In a very simple way; by bringing about a change in the opinion of Europe. And when that is done, we shall be on the eve of the deliverance of Venice; but whether that deliverance be wrought by arms or by negotiations, Providence alone will decide." When Europe should see a powerful and united Italy, having both the will and the might to strike a terrible blow for the deliverance of her captive children, and when the last hope of reconciling the Austrian dominion with national aspirations had been extinguished, Austria would, as Cavour predicted, be left with none to support her occupation of Venice. So long, then, as men are found who only half believe that the love of independence burns with an inextinguishable fire in the breasts of the Venetians, or that they are a people worthy of freedom, it is well to keep alive the memory of their deeds in 1848; and therefore we welcome an English translation of Henri Martin's "Daniel Manin and Venice in 1848-49." Constant have been the changes of scenes and actors in these stirring times, and the events of 1848-49 already seem remote and dim; but of all the things done in the two memorable years, none were worthier of a deathless fame than the struggle of the Venetians to retain their short-lived independence.

Never since the world began has there been seen such another city and state as Venice. In her history, no less than in her site and architecture, she has been unique. For eleven hundred years the ivory sceptre passed from doge to doge, and thirteen centuries of freedom were abruptly closed by the infamous treaty of Campo-Formio, which laid the Austrian yoke upon her neck. That iron yoke she long had borne groaning, but for the most part passive, when the accession of Pius IX. awoke all Italy from a troubled sleep. This, however, is not the place to tell of the chequered course of the great national movement—its mingled glory and shame—its hopeful faith and shattered idols; but of that both sweet and bitter cup Venice drank deep. "The story,"—we quote from Mr. Butt's introduction,—"in its main features is a short one. On the 22nd March, 1848, the population of Venice expelled the Austrian garrison, and Venice was again free. On the 22nd August, 1849, the beleaguered city was compelled to yield to the overwhelming force that invested her, and the Austrian power was once more throughout Italy supreme." Thus, after more than half a century of servitude, Venice was free for seventeen months; and for the last five of those months—when Piedmont had been crushed at Novara, and the Pope and the King of Naples had become renegades to the national cause—she bore alone the undivided attack of Radetzky's forces. Her lagoons were the last sanctuary of Italian liberty, and there it was defended with a desperate heroism that won the reluctant admiration of her sternest foes. On the sea-side lay a blockading fleet, and along the land extended the encircling lines of the besiegers' batteries. Shut out from all the world, thinned by the ravages of cholera, and bombarded night and day with a ceaseless shower of projectiles which spared no age or sex,—a people accounted among the most effeminate in Europe still fought on when all hope of succour from without was gone, and were hardly induced to capitulate when the last store of provisions was exhausted. Rarer even than their courage were the self-restraint and moderation of the Venetians throughout this hard ordeal. They had passed at one bound from under a foreign yoke into absolute independence, and their Government—improvised for the hour—was itself the creature of a revolution; yet never for a moment was there anarchy among them, nor were they

hurried into a single excess that requires the condonation which is conceded to the stormy hours of revolution and warfare. The Venetian Republic of 1848-49 lived and died without a stain upon its escutcheon; and this it owed to the wisdom and the virtues of its leader, Daniel Manin. It is but a little more than five years since the exiled patriot died in a wretched lodging in Paris, poor, desolate, and broken-hearted; and even now his name has faded out of remembrance in England. And yet, in truth, it would not be easy to find in history the record of a nobler or a sadder life.

This man, who upon a memorable scene "nothing common did or mean," was a Venetian lawyer of Jewish extraction; and though every avenue to fame in his profession was closed by the jealousy and fears of the Austrians, he had distinguished himself even in early youth by his studies of jurisprudence and philology. From the cradle to the grave, life was to him one long disease. "The act of living," as he once wrote, "has been to me from childhood an effort and a pain. I always feel weary;" and to his own sufferings fresh poignancy was added by the misfortunes of his country. Yet born and bred as he had been in an atmosphere of implacable animosity both against the Austrians and the French, and eaten up by the fire of outraged patriotism, his feelings never misled his sagacious judgment. Both from reason and from instinct he abhorred assassination, and with the clear eye of a statesman born, he saw the folly of *émeutes* and partial insurrections. His only hope of deliverance lay in a great uprising of the whole nation, and for this he trained the Lombards and the Venetians by teaching them to act together in *legal* opposition to the Austrian Government. For boldly demanding reforms, and the fulfilment of the promises which Austria had given in 1815, he was thrown into prison; and from that prison he was freed by a revolution at Vienna, to become the chief of the Venetian Republic. And such was the ascendancy that he exercised upon the hearts of his countrymen from the first to the last hour of their independence, that a few words from him sufficed to allay the rising passions of agitated crowds, to kindle hope and inflexible resolution; and (what was the hardest of all) to effect a capitulation when further resistance to the enemy would have been suicidal madness. On the night preceding the entrance of the Austrians into the city, the people passed and repassed under the windows of his humble dwelling saying to each other, in forgetfulness of their own sorrows,—"Here lives our poor father! How much he has suffered for us!" And now that he lies in a foreign grave, he still is known to his countrymen as "Il Padre," and his spotless name is a charm through the length and breadth of Northern Italy.

"The principles," says M. Martin, "from which he regarded himself as bound never to depart, were these—justice and order within, inflexible firmness without. No negotiations with Austria to be entertained—the attempts at peaceful reform had proved useful in preparing the revolution—but the revolution once come, all negotiation would be but a snare—every promise made by Austria would be infallibly violated. Any arrangement which would recognize the least right whatever in Austria over Italy would bring back foreign tyranny. Strict union with the various Italian States, whatever their form of government, provided they co-operated in the war of independence, and until an Italian Representative Assembly had decided the organization of the Peninsula. A particularly intimate union with Lombardy—sister to Venice both in their bondage and in their deliverance. An appeal to the French alliance, which followed of necessity from the resolve never to make terms with Austria."

Had Manin not been fettered in his policy by the union of the Lombardo-Venetian provinces to Piedmont, he would have made an early appeal to the French Republic for an armed intervention in Italy. From the very beginning he had foreseen the magnitude and the dangers of the effort to expel the Austrians from Italy, and he never echoed the fatal "Farà da se" of Charles Albert and Mazzini. It would seem that if Charles Albert had called on M. Lamartine's government, in the name of Italy, for the aid of French arms, the call would not have been made in vain; but to this measure Charles Albert had a strong repugnance. He loved his country and he hated the Austrians, but he shrank from the thought of seeing the soldiers of another French Republic pass the Alps and descend into the plains of Italy. Once before they had come under the guise of friends and deliverers, and had left some bitter recollections behind them. Moreover, the French Republic made no secret of its intention to claim the annexation of Savoy as the price of its assistance. As soon, however, as Venice had been deserted by Piedmont, and Manin was free to follow his own counsels, he appealed to Cavaignac for an armed intervention; but then it was too late. A change had come over the spirit of the French revolution, and Cavaignac told the Venetian envoy that France was not in a condition to go to war, though Venice had her warmest sympathies. All the influence, too, of the English Government was employed to avert an armed French intervention. England was, of course, bound to uphold the treaties of 1815; and though Lord Palmerston, who was then Foreign Minister, would probably have rejoiced to see the Austrians driven out of Italy by the unaided efforts of the Italians, no English statesman could encourage a proposal which would let loose a French Republic in arms, possibly to propagate socialist opinions and kindle the conflagration of a great European war. So it came to pass that Venice was abandoned by all. "I had reckoned," wrote Manin in 1853, "upon the support of France. Events cheated my hope; I may then have been deceived; and yet, in spite of the long history of our misfortunes, in spite of the events of 1848 and 1849, and in spite of subsequent events, I have not renounced—I cannot renounce—this illusion! We have shown ourselves worthy of the independence for which we have proved, and still prove, that we can fight and die; we have proved, and still prove, that we can govern ourselves; we have enjoyed liberty without falling into anarchy. Well then, sir, I reckon always on France as one brother reckons on the brotherly aid of another." This hope he did not live to see fulfilled.

On the 27th of August, 1849, while the Austrians were deploying through the silent and deserted streets, a French man-of-war bore away Manin and his family, and the civil and military leaders of Venice. All that Manin possessed he had thrown into the Revolution. "I sacrificed everything to it," he said, "considering it impossible for me to survive its failure. I never thought of reserving for myself or my family, in the event of misfortune overtaking us, a chance of safety, an asylum, or even the means of subsistence. I did not even think of supplying myself with notes or documents to defend my name against the accusations I might have to endure." Throughout his dictatorship he had supported himself and his family on the proceeds of a work on jurisprudence, and a small legacy bequeathed by a sister; and he would have quitted Venice a penniless exile, if the impoverished municipality of the city had not forced him to accept £800 as a little token of their gratitude for his priceless services. Misfortune dogged him hard. On the very day of his departure from Venice died his most intimate friend, counsellor, and secretary; and the exiled family had no sooner landed at Marseilles than Madame Manin, a wife worthy of Manin, was attacked with cholera, to which her exhausted frame rapidly succumbed. Manin, with his son and daughter, went on to Paris, where they took up their abode in a mean and gloomy lodging. Determined to accept no pecuniary aid from private friends, he found a slender source of subsistence in teaching Italian; and then was seen the spectacle of a man, born to govern and to lead, toiling through the streets of Paris in all weathers, and when almost suffocated with the attacks of a heart complaint, to teach some child the rudiments of a foreign tongue. The disease of the heart was not the most painful malady from which he suffered, but the cause of this, says M. Martin, "was the same as that which excited its development. It was the domestic grief which embittered his life, the frightful condition of his beloved daughter." This daughter had been through life tortured by a disease which defied all medical skill. The father's whole being was bound up in hers. "From the time she was five years old," he said, "I perceived that we understood each other." Sharing all his hopes and fears, and loving Italy with a love as ardent as his own, she had become to him the living image of his afflicted country; and for her judgment he had almost a superstitious reverence. In January, 1854, died Emilia Manin, entreating her father's forgiveness for the pain that the sight of her sufferings caused him, and murmuring for a last adieu, "Dear Venice! I shall see thee no more." His daughter gone, Manin's whole heart and mind were devoted to the Italian cause for the brief remnant of his unhappy life. His keen and practised eye fathomed at a glance the bold and far-seeing policy which induced Piedmont to join the Allies in the Crimean war, and to that act he gave the heartiest support. "In serving under the tricoloured flag of Italian redemption," he wrote, "the soldiers who fight in the Crimea are not the soldiers of the Piedmontese province, but the soldiers of Italy." From that hour he accepted Piedmont as the leader of the national regeneration. Till then he had been a consistent Republican and Federalist, but he possessed, like his great compatriot, Cavour, the faculty of abandoning personal preferences for what was practically possible; and thus it was that, after the Crimean war, he exerted all his influence in advocating an united Italy with a constitutional monarch in the person of the King of Sardinia. "As a thinker and *à priori*," he declared, "I believe that a Republic is the best of governments; and that the exercise of liberty is greater and surer under a Federal form. As a politician, I seek to discover what is practically possible. . . . . I accept the monarchy, provided it be unitarian. I accept the House of Savoy, provided it concurs loyally and effectually to make Italy; that is to say, to render her *one and independent*. *If not, no!*" "When the great battle of national freedom begins, she (Piedmont) must resolutely take part, and not lay down the sword before Italy is made; risking without hesitation the loss of the throne of Piedmont, to conquer the throne of Italy." The beginning of the end Manin did not live to see, for he died in September, 1857, at the early age of fifty-three. And now husband, wife, and daughter, sleep side by side in the vault of Ary Scheffer, awaiting the hour when Venice shall no longer be forbidden to utter a prayer for the soul of Daniel Manin, and shall take to herself the mortal remains of her noblest citizen and martyr.

LES MATINÉES ROYALES.*

THE most complete exposition of the ethics of absolutism is to be found in the "Matinées Royales, ou l'Art de Régner," said to be from the hand of Frederick the Great, which has recently been re-published, and supported by new proofs of genuineness. Copies of it have long been in circulation, and several editions more or less imperfect have from time to time appeared and been met by indignant refutations or contemptuous disregard. Germany has never failed to rise as one man to condemn it as a malicious fabrication, probably directed by the *parti prêtre* against "the bulwark of Protestantism." The editors of the Berlin edition of Frederick's

* Les Matinées Royales, ou l'Art de Régner. Opuscule inédit de Frédéric II., dit le Grand, Roi de Prusse. London and Edinburgh: Williams & Norgate. 1863.

Digitized by Google

works refused to admit it. Mr. Carlyle, in the first volume of his history, emphatically warned all readers against it, as a rock on which they were not unlikely to make shipwreck, and expressed the utmost contempt for the performance itself, and for all who believed it to be genuine. The controversy has generally been confined to little more than an appeal to preconceived opinions. If you accept this absurd satire, say the worshippers, you show either malignity or a superficial knowledge of Frederick's character. Your judgment is bribed, says the other side, and you argue in a patriotic but vicious circle. But some new facts have lately come to light, which more forcibly bring the authorship of the "Matinées" home to the King. The arguments for their genuineness, as they now stand, may be briefly stated. They are, first, common fame and the purport of the book; secondly, a note of M. Nadault de Buffon, editor of the great Buffon's correspondence, who states that Buffon received a copy of the work in question through his son from the King himself, and quotes from unpublished papers of Buffon's secretary, M. Humbert-Bazile, a passage in which Buffon is represented as mentioning this *manuscript of the King of Prussia;* and thirdly, an assertion that the present edition is taken from a copy made by the Baron de Méneval, Napoleon's secretary, who "must have been acquainted" with Frederick's hand, from an autograph found by him at Sans-Souci, in 1806. On this last point there are differences between the believers in the pamphlet, to which we shall recur. On the other side, the King's indignant disclaimer in the *Hamburg and Altona Gazette* is first alleged as conclusive. An attempt is made to fix the authorship on a M. Bonneville or other persons. Dr. Preuss asserts that no copy in the King's autograph does, did, or ever could have existed. Professor Ranke points out a blunder in the fifth *Matinée*, where Frederick is made to speak as if he had first doubled the army which he found, and spent years in drill, and only then turned his attention to Silesia, whereas, in reality, he attacked Silesia about seven months after his accession. Lastly, Mr. Carlyle, Ranke, and Preuss, declare that the style and the thoughts of the *Matinées* are utterly unlike those of Frederick's known works and letters. To these replies the *Home and Foreign Reviewer* answers, that it was a matter of course that the King should disclaim the work, whether or not it was really his; that Thiébault, who is the authority for the story of Bonneville, is utterly untrustworthy, whilst the Germanisms of the *Matinées* prove that they could not have been written by a Frenchman; that there is evidence of a positive kind from the Baron de Méneval and Buffon, and negative from the preface to the Berlin edition, that there were copies in the King's autograph; that the inaccuracies, of which Professor Ranke has given only one specimen, disprove the supposition of an able forger, but are consistent with careless writing after a long interval of years; and that the last reply begs the question, and is, besides, upset by Thiébault's admission that Frederick probably said in conversation some of the things contained in the *Matinées*. The reviewer further remarks, that Dr. Preuss cannot be trusted, since he garbled Frederick's correspondence with Catherine, so as to place him in a favourable light; and that Professor Ranke has in other cases rejected works which are genuine.

The question cannot be settled without a stricter investigation of the history of the manuscripts. It is of course difficult to admit the genuineness of so damaging a work in the face of the verdict of such authorities as Carlyle and Ranke, and of Frederick's affectionate and generous letters to Suhm. But both Carlyle and Ranke have treated the work so slightingly and contemptuously, that we cannot feel full confidence in their judgment. On the other hand, two *Matinées* mentioned in the Berlin collection are not accounted for, and not only is there no account given of how the existing ones have been handed down from Méneval, and no sufficient proof of the whole story of his connection with them, but a totally different statement has appeared of the way in which they came to light. It is said that it was Savary, Duke of Rovigo, who stole the manuscript from Sans Souci, that the manuscript itself was probably destroyed at Savary's death, and that the present edition is apparently a very imperfect transcript of a copy taken from it. But even this account strengthens the general argument, for it declares that the manuscript was satisfactorily proved to be an autograph of the King. On the whole the evidence is in favour of the view that the *Matinées* are the work of Frederick. No other claim can be supported, and the positive testimony of M. Nadault de Buffon must outweigh the far less direct arguments on the other side.

If this pamphlet is from the hand of Frederick, it sets him on a solitary eminence far above all the professors and learners of kingcraft, and materially modifies the received notions of his character. He can no longer be regarded either as a Mithridates-Trissotin, or as a solid Veracity. Many of the foibles by which we seemed to understand him best, and most of the few traits which seemed to redeem him, lose their colour and reality, and appear as parts of a deliberate policy which recognised no end except absolute power, and advanced towards that without any consideration of religion, morality, or mercy. The ordinary conception of him is made up of the central fact of his military greatness, overlaid and obscured by a multitude of undignified caprices. His toleration and his scepticism, his shabby coat and starved envoys, his habits of interference with law, of snubbing lawyers, and coquetting with literary men; his low tastes and poetical ambition, lie about without connection or relation to his heroism, capable of being twisted either way. But this publication affects them as a magnet affects particles of steel-dust lying about on a sheet of paper. At its approach they fly at once into an ordered system. Before, his crimes might have seemed the vagaries of madness; now, his weaknesses are the crimes of a great political genius. His intellectual character gains immeasurably, whilst his moral character loses all that it had to lose. But for these confessions of dissimulation, he would have counterfeited only too well, and would have been remembered as a heroic fool. Now he is not only abundantly redeemed from folly and inconsistency, but proved to have possessed the deepest insight and the most practical judgment. His theories are not the theories of a *doctrinaire*. They are not, like the Napoleonic Ideas, an unverified moral drawn from another man's practice, but the principles of a king who first solved the problem in practice, and then formularised it into a theorem. This gives an air of practical reality to the most astounding revelation of the ideas of absolutism, "naked yet not ashamed," which the world has ever seen.

The "Matinées Royales," or Art of Reigning, is in five parts. The first describes the origin and condition of the kingdom of Prussia; the two next consider the policy of a ruler who wishes to be absolute, towards religion and law; and the two last give rules for his policy in reference to his subjects and to other states. They were composed by Frederick for the instruction of his nephew. He first points out that the morality of a king is to get what he can, and to keep it. It was not to any virtues which they may have had the advantage of possessing that the princes of the house of Brandenburg owed their rise. Within the State, he proceeds, religion and law are the most dangerous elements of resistance. Religion is useful amongst the people, and even absolutely necessary, as a moral restraint. But nothing must be allowed, which might weaken their allegiance or cause divisions. Therefore it would be well to do away with all mysteries and priestcraft, and to compel all religious denominations to surrender their most distinctive tenets, each giving up whatever is offensive to any other. The one absolute necessity is that men shall live and die at peace. For the sake of this tranquillity all must be made to lie straight, but with this limitation, each must be allowed to worship in his own way. Frederick William had formed a project for fusing all sects into one, and engaged a writer to ridicule all the saints and all the mysteries, and Frederick himself adopted and developed the plan. "Comme il faut un culte je ferai paraître, si je vis, quelque homme qui en prêchera un. D'abord j'aurais l'air de vouloir le persécuter; mais peu à peu je me déclarerai son défenseur, et j'embrasserai avec chaleur son système." This eclectic religion, we are told, was actually framed. Voltaire wrote the preamble, which disproved all existing religious doctrines, and drew a portrait of each sect, "avec une liberté qui ressemble à la pure vérité." D'Alembert and Maupertuis composed the positive part, with such precision that it seemed that they must have begun by believing it themselves. Rousseau had been for four years engaged in answering all possible objections, and at least thirty reflections had been prepared on every important point in the Bible. Lastly, D'Argens and Voltaire had planned a council, of which Frederick was to be president, and which was to be composed of a representative of each religion and four deputies from each province, two noble and two of the *tiers état*. As for the king himself, "il faut peaser selon le rang que l'on occupe." Religion interferes both with passions and with great political ideas and the exigences of war. The true religion of kings is the interests of man and their own glory. Law, again, is necessary between subjects, who become attached to the king by having justice secured to them. But between him and them there is no law. Nothing is so dangerous as the existence of a system of laws independent of the king, and lawyers who take their stand on equity, while they profess for him a profound legal respect. The remedy is to make a new code under colour of straightening and simplifying the tortuous and slow ways of justice. Frederick had often reflected on the comparative advantages of a constitutional and an absolute government. The first is more secure for a good man, who can afford to let his actions be daily weighed; the second is the only one for a great and ambitious man. In the last two sections he discourses on politics. "La politique" is a euphemism for duping others. A king's object in alliances is to get for himself the whole advantage, and it is the grossest folly not to break them off when that is advantageous. Next follow the rules which Frederick had observed in his attitude towards his people. He declares that every action and every apparently whimsical eccentricity was dictated by policy, and had two sides. There was a noble simplicity in his ordering his own dinner; but there was also the practical advantage that he knew the best products of each district. A perpetual air of fatigue and an uncombed wig showed a mind absorbed in the welfare of the subject. He had a German cook and plain food for public occasions, and a French cook, whose office was no sinecure, for his private chambers, with a bed close to the table, to which he could reel unseen when tipsy. If he wore a shabby overcoat, he had good clothes beneath, and laughed in his sleeve at those who commiserated his frugality. The part which is most curious is that in which he analyzes his conduct towards literary men. "I have done everything I could," he says, "to gain a literary reputation. . . . . But, between ourselves, they are a cursed race, these *beaux esprits*. They are a tribe insufferably vain, proud, despisers of the great, and covetous of greatness; tyrannical in opposition, implacable enemies, inconstant friends, hard dealers, often flattering and satirical the same day. . . . . But they distribute honour, and are indispensable for fame." Drill was another means which he used to fix the eyes of Europe. He drilled, and glorified drilling, till "tout le monde se crut perdu, si l'on ne savait pas remuer les bras, les pieds, et la tête à la Prussienne." At the end of the fourth *Matinée* he sums up the

Digitized by Google

principles of the whole in a few pithy words:—"Croyez, mon cher neveu, que l'homme est toujours livré à ses passions, que l'amour-propre fait toute sa gloire, et que toutes ses vertus ne sont appuyées que sur son intéret et sur son ambition. Voulez-vous passer pour un héros? Approchez hardiment du crime. Voulez-vous passer pour un sage? Contre-faites vous avec art." "A veracious man," says Mr. Carlyle, "he was, at all points; not even conscious of his veracity; but had it in the blood of him; and never looked upon 'mendacity' but from a very great height indeed. . . . . You will never find him expressing what is not his meaning. Reticence, not dissimulation. And as to '*finesse*,' do not believe in that either."

Such, if we accept the "Matinées Royales" as genuine, was Frederick's ideal of that philosophic royalty, of which it was his fancy to be called the representative. It goes beyond Machiavellism. There is in Machiavelli an element of casuistry which is a tacit recognition of possible virtue, and we are often told that this or that is praiseworthy, though it is not expedient. But the "Matinées Royales" expressly deny all obligation or conceivability of obligation except political expediency. It must be remembered, also, that whilst Machiavelli is in part a theorist, the king is describing what he actually practised. One deduction must be made from this. It is necessary to allow for the exaggeration which is incident to all confessions of motives and policy. Systems which are the result of a life's experience, are easily reflected backwards and represented as having had a larger share than they have really had, in consciously prompting action. Frederick learnt dissimulation in his youth, but it was probably only in middle life that he was baited into the cynicism of the confessions, and he may easily have had less clear ideas of policy at his accession than he afterwards believed. There is also another exaggeration of a different kind into which he falls, that, namely, of overrating the amount of security and power which is attainable by his expedients. For the time many things, the continuance of which could not be counted on, combined to assure his seat. Prussia was a country without any public opinion, and its very existence had become identified with military force, whilst invasions and the necessities of defence had weakened the natural authority of law and the right of personal freedom, and substituted for them a habit of acquiescence in order. All this might not have lasted. Besides, absolutism may be easily overstrained. It is the one ground of hope for enslaved nations, that tyrants sometimes forget the boundaries of possibility and venture too far. There cannot be a better instance than Frederick's almost humorously impossible idea of a bureau or a parliament of theology. Supposing the Lutherans had refused to give up their "disputes," the Calvinists their "titres," the Romanists their priests, and the priests their celibacy, how would that "unique happiness" of peace have been secured? Would he have still said, *die Religionen müssen alle Tollheit werden*, in his barbarous German? Would he have married the priests by force? He must be regarded as ignorant, from contempt, of the strength of the strongest motives which pull the limbs of "subjects." On the other hand, it is equally open to his admirers to take these palpable defects and exaggerations as proofs that "The Art of Reigning" is a malicious and transparent fabrication.

MR. STORY'S "ROME."*

To have seen Rome is the crown of a liberal education; but he who sees it must bring an instructed mind, as well as eager eyes. This spectacle, for its true contemplation, requires some faculties beyond the mere taste for picturesque confusion of scenery, or for the marvels of plastic and pictorial art. It requires an imagination prepared by historical studies to comprehend "the Eternal city," as the monument of two completed phases of the world's civilization,—a breadth of intelligence, as well as a warmth of sympathy, capable of embracing those vast human interests which were once centred in the Empire and the Papacy of ages past. It requires, finally, in the daylight of the present time, a clear perception that the former things, of which Roman majesty was the symbol, have virtually passed away; that by the new political and religious conditions of Europe, the city of the Tiber is designated for the seat of a modern kingdom, and not of a universal dominion. It requires, in short, that we should look to her possible future as the capital of Italy, undazzled by the mystic splendour of her Imperial or her Papal reign. When thus viewed by the heirs of European culture, scholars of classical literature, disciples of Western Christianity, Rome will be to them still radiant with bright and glowing recollections; while, to the believers in social progress, to those who have faith in their own age, Rome displays plain tokens of the decay and approaching downfall of an obsolete temporal and spiritual despotism, which must soon give place to national unity and to civil and religious freedom. Such are the considerations most likely now to occur to a thoughtful English visitor in Rome.

But it is difficult for the ordinary tourist to spare time for reflection amidst all the bustle of inspecting the churches, the palaces, the galleries, the studios, the ruins, and the catacombs, besides attending the afternoon carriage parade on Monte Pincio, and the evening parties in the English quarter, which chiefly occupy the precious days of his sojourn in Rome. With all these distractions, and the imperative duty of hastily gazing at all the famous shows of the place, he is a resolute man who can pause to gather up his thoughts of Rome, combining what he sees with that which he has read before. Let him do this, in an hour of pregnant meditation such as Gibbon enjoyed when "sitting among the ruins of the Capitol;" and then, if he possess a well stored and vigorous mind, he may see the majestic procession, as it were, of the successive powers, "which each the likeness of a kingly crown had on," setting forth in past centuries from Rome, to sway the destinies of mankind; and he may view this as a symbol of the substantial unity, beneath its various aspects, of that common life of Europe over whose development—first in its classical, and secondly in its mediæval stage—Rome has twice presided. These ideas freely enter the mind that is open to the intellectual influences which beset it at Rome; and no experience is more suggestive than this. But to how many of the thousands who yearly winter in Rome, is this moment of fruitful contemplation granted? *Non cuivis homini contigit adire Corinthum*; and of those who do go to lodge for a month in the Piazza di Spagna, and to lounge between the Colosseum and the Vatican, few perhaps are allowed by their leisure and by their habits of mind to indulge in historical reflections.

But if a single visit to Rome may be fraught with such opportunities of instruction, it is certainly worth our while to share the observations of an accomplished Englishman or American who has resided there for many years. Why is it, by the way, that several American writers have entered with singular fidelity into descriptions of Rome? In the vividness and fidelity of their local colouring, they have excelled whatever has lately been written by our own countrymen on this subject. Though no transatlantic poet has yet equalled the Roman stanzas of "Childe Harold," on the other hand, neither Sir E. Bulwer Lytton, nor any other of our novelists, has succeeded like Mr. Hawthorne in rendering our impressions, whether felt in an evening visit to the Colosseum, or, as a contrast, beneath the fair dome of St. Peter's, or in any of those other well-known scenes, where the sentiment which it is customary to experience nevertheless affects us as a surprise. Above all, no writer has succeeded like Mr. Hawthorne in diffusing through the whole atmosphere of his romance that peculiar breath of Modern Rome—that strange, sweet, perilous air, heavily laden, as it were, with the fragrance of living Italy mingled with the dank vapours of Rome's secular decay—the scent of flowers, the smoke of incense, the taint of pestilence, the hallowed dust of innumerable graves—an intoxicating air, to be inhaled with precaution, since for the mind, as for the body, there is a Roman fever infesting that clime.

Americans, therefore, of the educated and literary class, though probably less addicted than the English to Latin scholarship, yet usually taking an eager interest in the historical antiquities of the Old World, have done ample homage to the *genius loci* at Rome. Mr. Story, the artist whose fortunate creations of the Egyptian Queen and the Libyan Sibyl were esteemed among the noblest pieces of sculpture in our Great Exhibition last year, gives us, in these two volumes, the results of his long personal acquaintance with Rome. He tells us that in December, 1856, he returned for the third time to that "dear old city," and fixed his abode there. "No one lives long in Rome without loving it," is his confession; though it is probable that the same may be said of every other place by those most happily gifted in their constitution and circumstances who have long resided there. Yet it is undeniable that the charms of a Roman life, unfelt at first, do grow upon the mind after months, and even years, of sojourn at Rome, when curiosity has long ago been satiated, and when every object of artistic or antiquarian interest has been thoroughly explored. In a city which, by its ecclesiastic and despotic government, is jealously secluded from the general movement of the world, like the "still salt pool" of Tennyson's poem that but dimly overhears the plunging waves outside marking the onward tide-flow of human affairs, the oversensitive or the over-refined, having lost the illusions, if not the faith and courage of their youth, may repose in the passive enjoyment of those pleasures which Rome can best afford,—the pleasures of memory, of fancy, and of taste. For the intellectual lotos-eater, unless he will go to finish his dream in Damascus, there is no spot like Rome, so long as, the Pope still reigning, and being impotent to change, Rome remains "a land where all things always seemed the same." We hasten to declare that Mr. Story is by no means one of those foreign residents in Rome who would selfishly, for the quieter and more exclusive gratification of their æsthetic tastes, prefer the continued suppression of her civil and national life. On the contrary, though he has forborne from set political dissertations, he freely expresses his opinion of the rottenness and inevitable ruin of the Pope's temporal government, as well as his contempt for the gross frauds and superstitions by which the Romish Church, at least in Italy and in France, is deformed. The whole tenor of his book about Rome, which in this respect we may compare to Mr. Adolphus Trollope's about Florence, is characterized by a cheerful, kindly sympathy with the popular life of the Italians. "Roba di Roma," which may be translated "Roman Matters," is a title not sufficiently precise for the contents of these two volumes, which might have been styled "Manners and Customs of the People at Rome." Mr. Story is indeed fully impressed with the considerations to which we have alluded, respecting the historical and monumental character of Rome. In his chapter on the Colosseum, and many incidental digressions, he opens that vein of meditative conjecture and inquiry about the Rome of past ages, which other and more learned investigators have perhaps nearly worked out; but his knowledge of Roman antiquities does not claim to be very accurate or profound. He blunders strangely, for instance, when he speaks of the site of the Ara Cœli as having

* Roba di Roma. By W. W. Story. In two volumes. Chapman & Hall.

Digitized by Google

been once occupied by the Temple of Venus and Rome. But these are not the points on which he invites us chiefly to consult him, and we must not, therefore, bear too hardly on the manifest defects of his erudition, though his etymology of *primavera* as "the first true thing," *i.e.*, the spring of the year, does strike us as supremely ridiculous. It is much pleasanter to thank him for the really valuable additions he has made to our acquaintance with the social life and domestic habits of the actual Roman population. The scenes which have grown so familiar to him, and of which he has grown so fond, in his thoughtful and observant rambles through the bye-streets and market-places of the city, or along the high-ways of the Campagna, are depicted in these pleasant volumes with a graphic power, and a hearty human sympathy, not surpassed by any author of those local sketches in Italy which have been abundantly produced of late. The cheap theatres, one of which, in the open air, is held in the Mausoleum of Divus Augustus, where clowns and harlequins now tumble in a pantomime, or brisk comedians recite a laughable farce,—the puppet-shows, the street musicians, the wandering mummers, the eternal beggars, including that renowned old cripple Beppo, who claims a personal friendship with every visitor to Rome,—the coffee-houses and wine-shops, with their habitual guests, and all the apparatus for eating and drinking in places of vulgar resort,—the whole physiognomy of retail trade in such crowded markets as those of the Piazza Navona and the Pantheon,—the romantic attire and simple habits of the peasantry, whose waggons, drawn by superb white oxen, encumber the neighbourhood of the Forum,—the popular festivals, half-Catholic, half-Pagan in their origin, which afford tumultuous recreation to an ignorant, though not a morose or vicious race,—the ceremonies of birth, baptism, betrothal, marriage, and burial, which attend on the individual existence of the Romans,—these are Mr. Story's favourite themes. One of his best and fullest chapters is devoted to a minute account of all the games commonly played at Rome, from which it is evident that in sports with a ball, requiring much athletic strength and hardihood, the vaunted prowess of our English cricket-players is fairly matched. Another chapter is occupied with the Ghetto, or Jewish quarter, which has, however, been frequently described by previous writers. In general, he has refrained from dwelling upon those features of Rome and Roman life which others have already depicted, and especially from descanting on topics which belong to the domain of the fine arts. Those hackneyed praises of the Laocoon, the Apollo Belvedere, the Dying Gladiator, and the pictures of Raffaelle, which greet us in every book of Italian travel, are excluded here. With the church ceremonials and observances he meddles no more than to discuss their influence on the morality and intelligence of the people, leaving it to the annual flock of Protestant connoisseurs to admire or to deride, as they will, the ecclesiastical pomps and shows of an alien creed. Mr. Story, however, as an enlightened looker-on, a Liberal and Protestant of English race and culture, has small reverence for the Papal system, either in Church or State, and does not fear to expose its corruptions, though writing without any polemical intent. His concluding chapters, on saint-worship and the prevailing superstitions, are not the least instructive part of his book. "Roba di Roma" supplies, upon the whole, together with an immense variety of entertaining anecdotes, just that information which is wanted about the modern Romans themselves, and their ways of every-day life.

BELLEW'S "AFGHANISTAN."*

Mr. Bellew was medical officer to a mission under the charge of Major (now Colonel) Lumsden, which visited Afghanistan in the year 1857 under very trying circumstances. The work before us is founded upon a journal kept by him during the expedition. It fulfils to a great extent the conditions of a good book of travels. Mr. Bellew has a really interesting story to tell; he tells it simply and straightforwardly, without any attempts at fine writing or facetiousness; and the scene of the story is laid in a country seldom visited by Europeans, and a singular one in itself.

The great fault of the commonplace book of travels is its disjointed and unconnected nature; there is no reason as a rule why you should not begin at the middle of the book, or at the end, or at the last chapter but one, or anywhere else, just as well as at the beginning. A man who should describe his travels on the Great Western would probably give us accounts of Slough, Reading, and Bristol in succession; but there is no reason in the nature of things why Reading should be described before Bristol and after Slough, or vice versâ. Now a book in which the order of the chapters is perfectly immaterial is extremely apt to become tiresome. It is therefore a great advantage to a writer of travels when the scenery and manners and customs of the natives come in not avowedly as the raw material of his book, but by way of accessories and ornament to some story interesting in itself. Mr. Bellew has certainly secured this advantage.

The mission was originally sent to Afghanistan by way of encouraging Dost Mahomed to keep the treaty which he had formed with us against the Persians. Soon after they had arrived at Kandahar, the town in which they were to reside, the Persian war ceased, and the Indian mutiny broke out. The officers of the mission were naturally placed in a most trying position, and seem to have behaved with admirable courage. They were cut off from all news except at long intervals. Every now and then a post came in bringing terrible reports of the fearful losses of the English in India. The population and army of Kandahar were of course of opinion, as a general principle, that it would be as good a deed as drink to cut the throats of the infidels; and on the first news of the revolt a deputation from the clergy of the town waited upon the governor of the province to lay this view of the case strongly before him. One of the chief men of the place made a plot to attack them whether the governor liked it or not, and the plot was accidentally discovered owing to the large purchases of lead which he was making in the city with a view to casting bullets. Moreover, the Afghans generally showed a strong desire to pour down through the Khyber Pass upon Peshawur, at the moment when our hands were full of other work, and our *prestige* at its lowest point. The consequences might, for the time, have been fatal to our hold on India. Major Lumsden's coolness and tact, however, succeeded in inducing Dost Mahomed to stick to his treaty, and after sixteen months the mission returned in safety to Peshawur. Its officers had had the disappointment of only hearing of the achievements of the guide-corps from a distance, instead of actually sharing in them; but the duty which they had performed, though less conspicuous, was, perhaps, equally important at a time when the fate of our Indian empire might have been determined by one more grain thrown into the balance against us.

The first part of Mr. Bellew's journal describes the passage of the Paiwar. In travelling towards this pass through the Afreedee country, he already finds that the villages of the natives bristle in all directions with round towers. These, he says, are constantly occupied by men at enmity with their neighbours in the same or the surrounding villages, waiting for an opportunity of putting a bullet into their enemies' bodies. In default of their enemy himself, they are quite ready to put a bullet into his horse, or his ox, or his ass, or even his fowl. The village children, not unnaturally, acquire a habit of never keeping in the middle of the street, but skulking along under the cover of the wall, and even the cattle become sagacious enough to adopt the same practice. Higher up in the mountains, amongst certain Jajis, he finds an improvement on the same practice. By every hut was erected a square platform, upon solid pillars of pine-wood; upon the platform was a hut of stone and mud, loopholed in every direction; the only entrance was through a trap-door underneath, which was reached by a rope-ladder. When two neighbours fell out, each mounted into his shooting-box, pulled up his rope-ladder, and waited sometimes for weeks to get a shot at his friend. The principal inconvenience of the plan was the frequent necessity of coming to terms before either party had had a shot, to avoid being starved out. These Jajis endeavoured to stop the passage of the mission, and, under the guidance of an aged and revered priest, turned out in large numbers to prevent their country being defiled by the footsteps of infidels. At the camp where the party halted for a day, they collected in small columns, three or four abreast, and marched round and round the camp, chanting an impressive and passionate war-song, with a chorus of "Wo-ho, Ah-hah." At the conclusion of each song, they leapt simultaneously into the air, yelling and screaming like fiends, brandishing knives and rifles, and beating drums. When these agreeable performances had ceased to provoke a row, they gradually dispersed, under a judicious mixture of threats and oratory. The most distinguished professional pursuit amongst these interesting natives appears to be thieving. One tribe owes the possession of an unusually fine breed of horses to their pre-eminence in this accomplishment. Mr. Bellew repeats a story told by a certain Khan Gul, who belonged to a family of distinction, and, as he says himself, "whose fathers and brothers, uncles and cousins, were leagued together as a band of burglars and highwaymen." Rather inconsistently, it seems to us, they made it a point of honour never to be found out. The family party being one day employed in burglary, Khan Gul's eldest brother was just coming back to his friends outside, through a hole in the wall of a house. As he got his head out, one of the inhabitants seized his leg. "Cut off my head," said the heroic burglar, "and fly with mine and my family's honour undefiled." His relations immediately complied with his request, and bolted with nothing but his trunkless head, and the consciousness that they had done their duty.

Having put these agreeable highlanders between themselves and India, the mission advanced to Kandahar, where they were to reside, Kabul being considered too dangerous a place to live in. They had apartments given to them in the palace, which seems to have been a kind of place of refuge in the midst of a labyrinth of inexpressible filth. Their life was monotonous and wearisome enough. More than once, during their stay at Kandahar, the people were decimated by fearful attacks of pestilence. For six weeks after their first arrival small-pox was raging, and the streets were full of dead and dying people. The dead bodies were, in fact, exposed in the streets, in order to attract contributions for their burial; and, according to Mr. Bellew, were carried about through the crowded thoroughfares on beds, till their advanced stage of putrefaction was more than the showmen could bear. The chief recreation of the mission was to ride out, through these fearful streets, into the country to shoot quail, which were abundant, or the snipe and wild duck, which came in countless multitudes during the rainy season. Indoors, they had to while away the time by practising with revolvers at a mark on the wall opposite to their rooms. We do not wonder that, in course of time, they acquired incredible skill in decapitating every sparrow that was rash enough to put its head out of a hole. As for more serious employments during this semi-

* Journal of a Mission to Afghanistan in 1857. By H. W. Bellew. Smith, Elder, & Co., London. 1863.

Digitized by Google

captivity, Mr. Bellew seems to have found a good deal of professional employment. Every few days the heir-apparent, who was governor at Kandahar, used to overeat or overdrink himself; and Mr. Bellew gives full details of the various bleedings, cuppings, applications of leeches, and doses of jalap (to which last the heir-apparent took such a fancy as almost to exhaust the store), which he was constantly called upon to administer. His patient was afflicted with carbuncles, gout, threatenings of apoplexy, and various other ailments. Mr. Bellew was surrounded by sundry native physicians, who quoted Galen, Hippocrates, and Avicenna, to him, declared that the vibrations of the voice were produced by the pulsations of the heart, argued that the stars were not in a conjunction favourable to leeches, and called upon him to say whether gout was in the class of hot or cold, dry or moist diseases. As they also privately persuaded the patient not to drink medicine or be bled by the lancets made by infidels; and at the same time considered Mr. Bellew as responsible for anything that might happen, and suspected him of possessing the power of the evil eye, his position was far from pleasant. In addition, however, to his practice in the palace, he set up a dispensary for the public in the town, and seems to have acquired some curious medical information. One ingenious piece of Afghan practice is resorted to for reducing a dislocation of the thigh. The patient is first kept in a dark room for three days, heated by fires incessantly burning, and fed with copious draughts of thin gruel. A fat bullock is at the same time fed with chopped straw, flavoured with salt, and denied a drop of water. At the end of the third day, the patient is made to ride on the back of the bullock, his legs being fastened tightly under its belly by cords round the ancles. The beast is then led out to drink. He is naturally intensely thirsty, drinks copiously, and swells out visibly to twice his former size. The force exerted on the dislocated limb is sufficient to bring it back to the socket. The dislocated shoulder is treated in a similar way; the hand is tied close to the opposite shoulder; an empty water-bag is placed in the bend of the arm, and gradually filled; its weight overcomes the resistance of the muscle, and before long the bone flies back into the socket with the usual sound.

During the wearisome period of their detention at Kandahar, the mission only once saw a European. He was introduced to them by the heir-apparent, who suspected him of being an English spy. He turned out to be a German shoemaker, a native of Berlin. For some unexplained reason, he gave up making shoes at Berlin and took to practising as an itinerant herbalist at Constantinople, Cairo, Jerusalem, Bagdad, and sundry other places, the last of which was at Teheran. Here, it seems, he again took to making shoes, and set out to travel to Bombay, *viâ* Herat and Kandahar. At Herat he was imprisoned, threatened with having his throat cut as an infidel, and forced to become a Mohammedan. On being released, he travelled on to Kandahar, losing his toes by frost-bite on the road. Here he at first proposed to start for Bombay, hoping to return to his native land. He was, however, persuaded to stay and make shoes at Kandahar; but a few weeks after his interview with the mission, he was sent for to Cabul by the Amir, and nothing more was heard of him. The natives contented themselves by stroking their beards and saying, "God protect him." When a native Khan was suspected of plotting against the heir-apparent, he was generally sent on a visit to the Amir at Cabul. After being there for a short time he was asked to dinner, taken suddenly ill, physiced by the court physicians, and dead before the morning.

The mission stayed in this dismal exile for about a year; waiting anxiously for the reports, which came at slow intervals, of the various outbreaks of mutiny, the massacres at Cawnpore, and of the storming of Delhi. Even after this an unfortunate native, who predicted the ultimate success of the British arms, was stoned to death as a heretic. It is not quite clear what particular form of heresy he was guilty of adopting; but it seems that in these barbarous regions it is heretical to say anything civil about an infidel. It was, however, some months before the mission was recalled, and had the satisfaction, which they seem to have highly appreciated, of again coming amongst the comparative cleanliness and civilization of natives under British rule.

We should not leave Mr. Bellew's very interesting journal without remarking that it is preceded by a chapter giving an account of the manners and customs of the inhabitants, and also of their origin. The former part is interesting; the latter, we must confess, sounds slightly improbable. The Afghans maintain that they are descended from King Saul, and a certain grandson of his, called Afghana. Mr. Bellew appears to believe that they are, in fact, of Jewish origin, though we confess we should have thought it about as probable as that the English are descended from the Trojans, through King Brute. Mr. Bellew, however, adds that they are of Jewish physiognomy, that they offer sacrifices something like the Passover, divide their lands by lot, and actually stone people to death outside their villages. If these are not enough to convince an unbeliever, he may console himself by reflecting that they only occupy a few pages, and that the rest of Mr. Bellew's work is really very full of remarkable and interesting facts, resting, not on his historical deductions, but on his personal observation.

FRENCH LITERATURE.

THE publishing of New Year's-day books, of the ornamental species, fit for New Year's gifts, has rather checked, as usual, the issue of those which compose the ordinary staple of French literary production. It would be unseasonable for these to make their appearance beside the richly bound and finely illustrated volumes which crowd the windows of every bookseller's shop. Purchasers in the first week or two of the year look rather to the outside splendour of a volume than to its substantial contents. Yet, among the sumptuous editions of standard works, are some which merit special praise. The first to be noticed* is the "Atala" of Chateaubriand, with engravings after the designs of Gustave Doré. It is got up in the same form and with the same magnificence as the edition of Dante's "Inferno," translated into French by M. Fiorentino, and illustrated by the same rising artist, which came out last year. M. Gustave Doré shows no less vigour of invention and handling in his wild and romantic scenes of the American forest than in portraying the tortures of that place of eternal doom, which was created by the stern genius of the great Italian poet. Another illustrated book,† though of a class widely removed from these, is the "Popular History of France," compiled under the superintendence of M. Durny. The text is borrowed from the most approved books of French history for young readers; and almost every page is furnished with a pictorial representation of the most striking and dramatic incidents in the narrative. The swarm of these new illustrated publications has, since the 15th of January, abated, so as to permit of the appearance of a few original works. These are mainly of the historical kind. There is one‡ by M. Zeller, tutor of the historical class at the Higher Normal School, on the characters of the Roman emperors. It requires some courage to deal with such a subject in France just now. Since the French empire was restored, the history of the ancient Roman empire has become a ground upon which the passions of conflicting political parties have fought with the utmost fury. M. Ampère, of the French Academy, from his study of the sculptured monuments of Roman antiquity, took occasion for a sharp and hostile criticism of the most famous imperial personages. On the other hand, those learned antiquaries who have lately employed themselves in copying and collating, in various parts of Europe, inscriptions of the imperial age of Rome, have rather been disposed to favour that government which, during four centuries, gave shelter to the world's civilization. M. Zeller, without neglecting either of these sources of information, has gone more directly to the testimony of Latin authors in his attempt to describe the true character of each of the Roman emperors, and his special influence on the political condition of the empire, from the reign of Augustus, by whom that empire was founded, down to that of Theodosius, who is justly called the last of the Roman line. In this series of portraits, rapidly sketched, but from a thorough study of the subject, he shows how the different qualities of their despotism, varying with their personal dispositions, transformed the whole state of society in the Roman world. It is not to be expected that M. Zeller will wholly escape the censure of critics, but his fidelity as a student and his talent as a writer must be fairly acknowledged. Another historical work of this month is that§ of M. Charles de Mouy, on Don Carlos and Philip II. of Spain. The fate of that unhappy prince, Don Carlos, has been nobly celebrated by the tragic genius of Schiller; but it appears, from the latest researches in the Spanish archives, that, except his ill-fortune, there was nothing interesting about him. He was neither young, nor handsome, nor intelligent, nor yet in love. A sickly, deformed creature, feeble in mind and body, a prey to maniacal delusions, which broke out in frantic attempts upon the lives of his father's ministers and of the king himself, Don Carlos was at length placed in confinement, to restrain him from further mischief, and there, his health being already undermined, the wretched prince died. There is no ground for charging Philip, in this instance, with the crime of unnatural cruelty which has been imputed to him. He endeavoured, as long as possible, to endure, and even to conceal, the consequences of his son's mental infirmities, if not for the sake of parental affection, yet as a matter affecting his family pride. This is the conclusion to which M. Charles de Mouy is led by a careful investigation, the proofs and documents being here set forth. This task he has performed with scrupulous diligence, and the result is placed before us in an effective style.

We have to notice, however, some historical works more particularly concerning France. The critical essay of M. Caboche, on "French Memoirs and French History," discusses the mode in which those innumerable pieces of biography and personal narratives, which particularly abound in French literature, are used as materials for regular historical composition. M. Caboche, who is an associate of the Faculty of Letters of Paris, and has several times, in the absence of M. St. Marc Girardin, filled the chair of French poetry at the Sorbonne, is quite competent to treat this subject, which he does with judgment and good taste. Not only the memoirs of Montluc and Marguerite de Valois in the sixteenth century, and those of Richelieu, Cardinal de Retz, M. de Motteville, La Rochejacquelin, and St. Simon in the seventeenth, but also those of Napoleon, Chateaubriand, and even M. Guizot in our own age, have contributed to the structure of French history; and it is the aim of M. Caboche in this treatise to point out the rules which should be observed for their use in such compositions. There is, however, one class of writings from which we may gain a still more intimate acquaintance with historical personages than

from their memoirs, and that is from their private letters. It has been remarked, that the present age is too indiscreet in its curiosity about the private life and habits of distinguished people. In France, it must be confessed, this indiscretion is very frequent. Daily more urgent in their unconscionable demand to know all the minutest personalities, not only of the present, but of past ages, the literary resurrectionists, digging up dead men from their graves, show us in broad daylight the smallest blemish or speck in their persons, in their characters, and in everything that belonged to them, not even sparing the most sacred mysteries of their domestic life. On this occasion, however, M. Honoré Bonhomme, the editor, three years ago, of Piron's correspondence with Mdlles. Quinault and De Bar, gratifies the prevailing passion for personal disclosures with a volume entitled "Madame de Maintenon and her family."* He is an ardent and unwearied searcher for out-of-the-way information on subjects of this kind; nor does he, when he has got such information, lock it up selfishly in his own desk, but freely communicates it to the public, and promises to find us a good deal more. The letters which he has here got hold of, including those of Agrippa d'Aubigné; Renée Burlamacchi, his second wife; Madame de Maintenon herself; Charles d'Aubigné, her brother; the Marchioness La Villette, Ninon de l'Enclos, the young Marquis La Villette, and the Comte de Caylus, form a series of family correspondence extending over more than a hundred years, and embracing the most diverse topics of private as well as of public interest. They throw much fresh light on the situation and conduct of Madame de Maintenon, in many of the circumstances of her life, on which previous authors, such as the Duc de Noailles and M. Theophile Lavallée, had bestowed much pains. Among the most curious papers in this collection we may notice the *vade mecum*, or manual of spiritual guidance, which was prepared for Madame de Maintenon's use by the priestly directors of her conscience. Not even the secrets of the confessional are exempt from literary intrusion; and we are thus admitted into the most confidential religious counsels of this remarkable woman, who has been lauded as a mother of the Church. It is with some real interest, however, that we examine the bearings of this new publication on the two most disputed points in Madame de Maintenon's history; that is to say, the part which she took in revoking the edict of Nantes; and the delicate question, whether her behaviour as a woman was irreproachable, from the time of the death of her first husband, the poet Scarron, to that of her marriage with Louis XIV. As to the second point, M. Bonhomme, relying on the new evidence which he has procured, is unable to pronounce in her favour; but he shows an equal amount of incredulity on the other question referred to, and he finishes with a remark, the grossness of which forbids its translation here, on the difficulty of painting any portrait of her character as a whole. If, as we have observed, French writers are too often guilty of extreme indiscretion in their treatment of personal topics, they are especially apt to fall into this fault when discussing the lives of women. The last book of this sort which we need mention here is, "Woman in the Eighteenth Century,"† by Messrs. Edmond and Jules de Goncourt. It may perhaps be remembered that, in a late number of this review, we noticed a book on the most distinguished women in the French society of the seventeenth century. The present volume is a continuation of that one; and with its half-serious, half-playful tone, it has some merits that deserve to be commended. We are introduced by its authors to the domestic life and social intercourse of some of the most celebrated women of that age; and we perceive that—unlike the age preceding, when the women seemed to have no other occupation than the pursuit of pleasure and ascetic devotion—it seems already to feel the breath of the approaching Revolution; and female life, partaking of this new moral influence, assumes a less childish aspect.

A further contribution to the history of the nineteenth century is promised us by M. Guizot, who has another volume of "Memoirs" nearly ready for the press. M. de Broglie's writings, too, are being published in a collected form, and will of course be welcomed eagerly by the section of the political world in which that gentleman has played so conspicuous a part. We may conclude with a volume, to which the events now taking place on the other side of the Atlantic, and the distress prevalent alike in Lancashire and Normandy, have attracted more attention than its subject would naturally command. M. Louis Reybaud has published a dissertation upon "Cotton: its History, its Management, and its Influence in Europe." M. Reybaud is a political economist of some repute, and the author of a valuable treatise upon the history of the silk manufacture. His present work will not disappoint his admirers, nor can any addition to our knowledge of the cotton trade be considered inopportune. The experience of the last twelve months has convinced us scarcely less of the importance of this failure to the world, than of the gross ignorance which prevailed with reference to its culture, and to the effects which any interruption of the trade was likely to entail upon European society. The Southern States, no doubt, in the first instance, resolved upon hostilities, in the arrogant belief that "Le coton est roi," and that the monopolists of so essential a production might dictate their own terms to mankind. That illusion is dispelled, and the cotton trade, as it existed before the war, will probably never be replaced. England is busy with the discovery that very tolerable substitutes for the lacking fabric may be found in any quantity in more than one of her dependencies; and the question which speculators have to decide is as to the direction in which the trade, called into existence by the present crisis, may most safely be stimulated. M. Reybaud is sensible and well informed, and his book will, no doubt, be read with interest on both sides of the Channel.

In the department of novels and dramatic literature, the month of January has not yielded much. M. Octave Feuillet's tale of "Sibylle," which has already appeared in the *Revue des Deux Mondes*, has come out in a permanent form. Its heroine is a young girl, who, being a fervent Catholic with romantic notions of religious duty, refuses to marry a young man whom she loves, until he shall have been converted from his scepticism; and the conflict in her mind, between her human affection for him, and her passionate devotion to the faith, constitutes the chief interest of the story, which, in spite of some affectations and a false tone of sentiment, is worked out in a fascinating style. The greatest success in the theatres, not only at Paris, but at every large town in France, is still *Le Fils de Giboyer*, by which, however, M. Emile Angier has incurred a great deal of censure. In the last number of the *Revue des Deux Mondes*, the lucky dramatist is appealed to by M. Prevost Paradol to desist from this unfair attack, by means of the stage, upon his political opponents who are hindered, as he must know, from meeting him in equal lists. He is exhorted therefore to consult his own dignity, and that of literature, by returning to the portraiture of ordinary social life and manners. Everyone joins in saying, "Let us have no more political comedies;" the advent of a new Aristophanes is by no means desired. There is nothing political, however, in a pretty piece in verse, by M. Edouard Fournier, which is being played at the second Théâtre Français, by the name of "Molière's Daughter." Its plot is not, indeed, very original; but anything which relates to Molière is interesting in France; and though the great poet himself does not come upon the stage, there are pleasant recollections of him in the conversation of an old servant who loves to talk of her deceased master, as well as in his daughter, who, inheriting some portion of his talent, makes use of it to save a young lady, her friend, from the consequences of a juvenile imprudence. There is a charming mixture of gaiety and sensibility in this little drama.

SHORT NOTICES.

Miss Craik has some originality of conception; for she sets out in her little story* with a difference of opinion between the young lady and her aunt, which is the very reverse of that commonly ascribed by our domestic novelists to a heroine and her elderly female guardian, in their respective views of love and marriage. Winifred, the banker's daughter, is quite willing to please her papa, by accepting the baronet with whom she "is not in love," whilst her aunt Catharine, unlike the coldly prudent adviser of Cousin Amy in "Locksley Hall," tries in vain to dissuade her from a match, commendable in a worldly point of view, but lacking the assurance of eternal affection. Yet Sir Charles is a respectable young gentleman, with no positive vices, and with the positive virtue of an enormous rent-roll; and though she finds him dull, Miss Hastings has made up her mind that she will try to love him, and so be as happy as she can. Her aunt Catherine, Mrs. Murray, being at length bullied into silence by the obstinate father, the heroine seems doomed to an unsentimental union; but she is rescued by her father's bankruptcy, which breaks off the engagement. Her second suitor is a jovial, manly, frank, young iron-founder, Robert Bertram, who eats raw carrots in the kitchen-garden, gives her an apple out of his pocket, and is not ashamed to show her his ungloved hands, soiled with honest toil. These are matters of taste, and whether, after mature reflection, she will like better to be Mrs. Bertram, or to be Lady Sinclair, ordinary morality has little to say to it. It is not poor Sir Charles's fault that he is rich and dull; but when, by her father's ruin and his death, Winifred is left in danger of being poor, and dull, and lonely, Mr. Bertram, whom she has before despised, is an excellent good fellow, to pick her up, and mend the faults of the pretty spoiled child. It all comes round at last, through certain family arrangements, whereby Miss Hastings becomes the legal ward of Mr. Bertram, and governess to a little cousin of his; so that he may use his just authority to rebuke her vanity and conceit, and to superintend her mental culture, until, after two or three years' anticipation of marital discipline, he thinks her fit for his wife. "Winifred's Wooing" is neither so foolishly designed, nor so feebly told, as many others of the same kind that come under our notice.

"England and its People"† ought to have been noticed by us some time ago, for an allusion in the preface to Prince Albert's recent death reminds us that it is one of the publications of last season. It belongs to a class of little books, which, presenting much really important knowledge in a form attractive to children, deserve to be favourably looked upon, when clear of any fundamental error. Miss Taylor's general views of English history appear sound and sufficiently distinct; she relates the faults and the fates of Mary Stuart and Charles Stuart without that undue spirit of partizanship which some other lady writers have betrayed; she draws a wholesome moral lesson, wherever she can, from the personal misconduct or misfortunes of our ancient princes and their peers; she praises all the good, from King Alfred to Queen Vic-

toria; and, on the whole, she has compiled a very proper summary of this subject for the use of readers under twelve years of age.

Mr. Stevenson's volume,* one of that beautifully printed series of new books of religious edification, which we owe to the enterprising publishers of *Good Words*, is not a collection of sermons, as might be expected from its title, but contains biographical sketches of five admirable men, all Germans, the founders, within this century, of some of the most successful institutions of Christian philanthropy. These are Johann Falk, a self-taught man of letters, who attached himself to Goethe for a time, but quitted the brilliant circle at Weimar, to promote evangelical home-mission schools; Dr. Immanuel Wichern, of Hamburg, who established that juvenile reformatory, which, by the name of "The Rough House," is the most celebrated model for all our institutions of its kind; Theodore Fliedner, the village pastor of Kaiserswerth, on the Rhine, whose training college for nurses, both sick-nurses and babe-nurses, and for Protestant sisters of charity called "deaconesses," is also widely known; Gossner, who, from a Roman Catholic priest in Bavaria, became the author of German Protestant missions to the heathen; and Louis Harms, the minister of a rustic church on the Lunebürger Heath in Hanover, who has sent out, chiefly from his own parish, a Christian colony now settled and thriving in the most savage districts of Southern Africa. The lives of these devout and diligent men are full of personal interest, and Mr. Stevenson, who is a vigorous and graceful writer, has managed the narrative well. He shows, too, a fair acquaintance with the social and intellectual history of Germany for a hundred years past, and there is not the slightest taint of bigotry in his allusions to the scarcely Christian literary influences of the last age.

Miss Barlee, whose labours of charity are well known to the poor of London and to those who care about them, lays before us another little book,† beside those she has already published, one of which dealt more particularly with the existing distress in Lancashire, and the other showed the benefits of establishing "Refuges" for destitute persons in this huge city, as well as providing an industrial maintenance for a miserable class of women. The title of this volume, "Friendless and Helpless," at once appeals to our compassionate sympathies, and might even disarm the criticism which its contents will bear. We can, indeed, take no serious exception to them, so far as Miss Barlee has been content with her own plain and truthful statements of what she has herself observed; and if, in one or two instances, we detect a tone of rather questionable declamation, this is usually in a passage borrowed from some less careful writer. It is unhappily a fact, that, amidst our London population of three millions, including so many hundreds of strangers daily arriving without an employer or a friend, a few cases of extreme wretchedness, sometimes resulting in death from exposure and starvation, do occasionally happen. But we are not hastily to be convinced that the blame of these accidental failures in the administration of public charity is to be ascribed to the "guardians and Poor Law authorities," or to the general system of our Poor Law. The evils of distributing out-door relief, as a regular practice, have been found, in their permanent effect upon social morality, greatly to outweigh the temporary benefit which might in individual cases have been got from it. This is a question which higher authorities than Miss Barlee have already decided. We entirely agree with her, however, in commending the establishment of refuges or reception-houses, where poor travellers, or "tramps," as they are called, who may reach town at any hour of the night, could be sure of a bare shelter, and a bit of necessary food. The casual wards of the London workhouses are quite inadequate for their accommodation. Everybody who walks at night has seen, at the workhouse doors, a shuddering group of these poor creatures, shut out by the lateness of their arrival, or by the want of room within; and we deeply regret to learn that the Dudley-street Refuge, in Edgeware-road, is so much distressed by the want of funds that the "Girls' Home," a branch of it, has lately been closed. The best part of Miss Barlee's book consists of her account of these institutions, and the personal narratives of some of the women whom she has met there; "short and simple annals of the poor." Without here entering into the questions of female education, workhouse school discipline, and the organization of needlework, to which her later chapters are devoted, we refer this small volume to the mature consideration of those practically experienced in the difficult business of systematic beneficence.

The transition from charitable institutions to postage-stamps‡ seems violent. Yet we remember that a nomination of candidates for admission into certain metropolitan asylums has more than once been made, by the caprice of subscribers, to depend on the accumulation of a certain number of old stamps, as a test of the amount of interest which the friends of any orphan or idiot may take on his behalf. The collecting, classifying, or arranging of the great variety of stamps adopted by the postal regulations of so many different countries in the world, has latterly become a fashionable pastime, and may even be pursued as a serious study. Dr. Gray, better known as the learned and skilful curator of the natural history department in the British Museum, undertakes to be the professor of this new and curious science. We observe that the publication of his little volume has been followed up by starting a periodical specially devoted to this subject.

Everyone who is accustomed to take part in any kind of public meetings, or to witness their proceedings, must have frequently observed how great is the waste of time, and still worse, how great the waste of temper, occasioned by not properly understanding the rules of debate, the reception of motions and amendments, and all that formal "order" which it is requisite to observe. Dr. Smith has prepared a very useful little manual* of these matters, which every chairman ought to study before he ventures to preside over a deliberative assembly. It would be convenient if a set of precepts for the conduct of such business were so universally known and approved, that it might be quoted as of some authority in cases of dispute.

MUSIC.

At the last Monday Popular Concert, Madame Arabella Goddard reappeared, after a long interval, playing Mendelssohn's solo sonata in E, and, with Monsieur Sainton, Dussek's sonata for piano and violin. Mendelssohn's sonata might have been appropriately entitled "Sonata quasi Fantasia," since it is far more free in construction than the sonata proper, the form of which, like the quartet and symphony, was fixed by Haydn and Mozart. The sonata of Mendelssohn is an early work, with all the inequalities of young and vehement genius. The first allegro is graceful and flowing, but not marked by any special power. The middle, or slow movement, is a kind of rhapsody, in which he makes much use of the recitative form—or rather want of form—previously used by both Bach and Beethoven in their pianoforte music. There is here a dreamy vagueness, reminding one of Beethoven's later abstruse style, but wanting in that depth and vastness which underlie even the most erratic of his wild imaginings. As the work of a boy composer, however, Mendelssohn's sonata is (like many other of his early works) unexampled in the history of precocious musical genius. The scherzo is a foreshadowing of those fanciful and capricious movements in which he afterwards almost rivalled Beethoven. But it is in the *finale* that Mendelssohn gives the greatest indication of his dawning powers; it is, indeed, a burst of impetuous joyousness which only himself or Weber could have produced. The charming effect of a sustained melody, accompanied by a sprinkling of arpeggio chords (a feature first developed by Weber), is one of which Mendelssohn largely availed himself in his subsequent pianoforte music. Indeed, his use of the arpeggio is a marked characteristic of his style. The vehement animation and excitement which pervade this concluding movement demand a rapid mechanism, with a power of self-control which few players possess so eminently as Madame Arabella Goddard, whose performance was a triumph of manipulative skill, which called forth the loudest demonstrations of applause. Mozart's quintet for clarinet and stringed instruments was a perfect piece of *ensemble*; Mr. Lazarus, who led it, of course coming in for the chief honours, and thoroughly earning them by his most refined and expressive performance, which had an equal share with the beauty of the music itself in procuring an *encore* for the slow movement. A quaint and antiquated sonata of Boccherini, for the violoncello, admirably played by Signor Piatti; and Haydn's quartet, with the variations on "God preserve the Emperor," completed the instrumental selection. The singers were Mdlle. Florence Lancia and Madame Sainton-Dolby, the latter of whom repeated Glinka's characteristic song, "The Orphan," which was so enthusiastically received at the previous concert.

The National Choral Society's announcement of Haydn's "Creation," with Mr. Sims Reeves as the tenor, attracted a large audience to Exeter Hall on Wednesday evening. Haydn, as an oratorio writer, stands in about the same relation to Handel as Goldsmith compared to Milton. The style of Haydn is almost always reflective of the graceful geniality and calm contentment of his happy temperament. The beautiful he frequently attains—the sublime never. Now, although it may be conceded that a work, even of a sacred character, intended for performance in the concert-room, may admit of greater freedom of style and a lighter vein of sentiment than the music of religious worship, still a subject so vast and awful as that of the "Creation" demands, for its adequate expression, a tone of elevated majesty and unfamiliar dignity, which, it must be admitted, Haydn seldom, if ever, reaches. Bach, Handel, or Beethoven, only could have firmly grappled with a theme so lofty —one, indeed, requiring for its illustration a genius analogous to that of Milton or of Michael Angelo. Therefore it is that all who are accustomed to criticise music on high principles of art must ever give the preference to Haydn's "Seasons" over his "Creation," as being, in tone and treatment, more true to the character and nature of its subject. The "Creation," however, viewed simply as music, and without reference to the high standard just adverted to, is a work which will always charm by the combined genius and science which distinguish it throughout. Marvellous, indeed, in its fresh and genial beauty, is this production of a man of sixty-five; only less marvellous than the "Seasons," produced two years later. The performance of the "Creation" on Wednesday was generally creditable to the National Choral Society and Mr. Martin, its conductor.

* A Handy Book on the Law and Practice of Public Meetings. By James Walter Smith, Esq., LL.D., of the Inner Temple. Weldon & Co.

Digitized by Google

Some improvement would be gained by increasing the orchestral power, especially the stringed instruments, which are quite inadequate in numbers to the immense body of vocalists. The principal singers were Miss Banks, Mr. Sims Reeves, and Mr. Lawler. Of course the chief effect was created by Mr. Reeves, who was as successful as usual in the recitative "In splendour bright," and the air "In native worth." Miss Banks sang with much refinement and expression, especially in "With verdure clad;" but her voice is scarcely strong enough for passages requiring brilliancy and declamation, in so large a space as that of Exeter Hall. Mr. Lawler gained much applause by his careful singing of the air, "Now Heaven in fullest glory shone," with its preliminary recitative, in which Haydn descends to some attempts at imitative music which are not only beneath the dignity of the subject, but quite beyond the province of the art. The great hall was densely crowded. "Elijah" is announced by the same society for its next performance, in March. If Mr. Martin wishes to gain a special reputation, he would do well to produce something out of the beaten track—such, for instance, as some of Bach's motetts or cantatas, of which there is ample choice. In this way he may enter into a competition with the Sacred Harmonic Society that will do him more honour, and the art more service, than by repeating, exclusively, works so frequently given by that institution.

Towards the end of our last week's notice of the Musical Society of London, the reverse of the intended meaning was expressed by the erroneous insertion of the word "not."

CONTEMPORARY SCIENCE.

THE series of Friday evening lectures of the Royal Institution for the present season was opened by Professor Tyndall on the 23rd ultimo. The subject—"Radiation through the Atmosphere"—was a further instalment of those important researches on radiant heat which have already made his fame world-wide. It will be remembered that on former occasions during the past year he enunciated the fact that of the radiant heat from the earth seventy-five times as much was arrested or "struck down," as he aptly terms it, by the aqueous vapour suspended in the air, as by the air itself, and that these results were afterwards questioned by Magnus and others on the ground that in his apparatus he had employed rock-salt. It was suggested by those *savants*, that as a solution of salt was even more impervious to radiant heat than aqueous vapour, the moisture of the air admitted into the apparatus, or derived from the atmosphere itself, might cause a film of brine to be deposited on the surface of the rock-salt, and thus cause the phenomena Dr. Tyndall attributed to the aqueous vapour suspended in the air. Another objection was, that the London air with which the experiment was made contained a great deal of carbon, and that the stated results might be due to this source.

In his lecture at the Cambridge meeting of the British Association, and in a recent paper before the Royal Society, as well as in several periodical publications, Dr. Tyndall has more or less refuted these objections; but on the present occasion he exhibited publicly the very means he had adopted to substantiate the veracity of the deductions from his former experiments. No man has naturally a clear idea of a line, but, by a species of mental purification he attains at last to the comprehension of Euclid's definition. In the same way no one has, at first, a clear idea of the atmosphere. By the same kind of mental purification we perceive the oxygen and nitrogen thickly strewn as minute spheres freely swimming as it were in space, and kept asunder by a peculiar repulsive force. But interspersed with these are others of a totally different character—carbonic acid, the molecules of which are a compound group of atoms, ammonia, and aqueous vapour. When we see steam issuing from a kettle or the funnel of a locomotive, we familiarly call it vapour, but it is not truly such; it is water in a fine state of division. Vapour proper is completely invisible, as may be seen experimentally by heating with a spirit lamp a jet of steam issuing from a pipe. When air is expanded it loses heat, and Dr. Tyndall availed himself of this fact to produce a *cloud* from the vapour contained in the air; filling the bell-glass of an air-pump, and which illuminated by the bright beams of the electric light, was not only visible to the whole audience but cast a beautiful coloured halo on the wall.

We have not yet, however, spread out the entire image of our atmosphere. Its atoms are as separate as individual fishes in a shoal, they are linked together and with the molecules commingled with them by a common medium. The space between these invisible atoms is not empty, but filled with a still finer atmosphere, which links them together—which links, indeed, the universe together. The rolling planets round our sun are bathed in this fine sea, and so the stars are united with other stars throughout the wide expanse of space. The atoms of this universal sea, thrown into vibration, propagate waves that awaken the sensation of light; other motions produce heat. So that if we could see these waves we should see the region round us ruled like the engine-turning of a watch-case, with their innumerable crossings and passages. The radiation of heat and the radiation of light are nothing but the pulsations of these waves of motion through this luminiferous ether. These motions, in the case of radiant heat, are "broken down," or stopped by aqueous vapour. In every 200 atoms of oxygen and hydrogen there is but one of aqueous vapour; and between one of these atoms and one of these molecules there is but little difference, the weights of one 16, the the other 18; and yet the latter strikes down 80 times as much as the portion of atmosphere surrounding it; or, in other words, the single atom of aqueous vapour exerts an influence 16,000 times greater than that of the single atom of oxygen or nitrogen. Dr. Tyndall then exhibited, in great detail, the manipulation and arrangement of his apparatus. By a simple experiment he showed why he had used rock-salt. Taking a perforated plate, he placed before it a sheet of ordinary glass; all the radiation of heat from an obscure source was cut off; substituting a mass 4 or 5 inches thick of rock-salt, nearly all the rays of heat passed through, as shown by the deflection of the needle of the galvanometer to 90 degrees, and which to the glass had been perfectly stationary. His next experiments were performed with apparatus so delicate that the heat of his body was sufficient to derange the results, and the apparatus was consequently observed from a distance by a telescope. He next tested the rock-salt used in his experiments, and showed how, by merely breathing on its surface, an iridescent film was produced; but no trace of such could be found on taking the salt from the instrument—its surface was as polished then as when it was first put in. He showed, too, how the convergent radiation from all parts of the interior was brought down on the rock-salt to keep it dry, and how the space around it was moreover specially protected. He then did away with the rock-salt altogether, and by displacing the air on one side of the thermo-electric pile by dry air issuing from a reservoir charged with chloride of calcium, produced all the effects without any apparatus whatever; thus establishing the truth of his former deductions in a manner which it seems impossible to overturn. Any absorption due to carbon from the pressure in the air of London smoke was also shown to be incomparably inferior to the power in that respect of aqueous vapour. The bearings of his researches practically on the science of meteorology was the next theme of his remarks, in elucidation of some points in which he displayed one of those charming experiments so peculiarly his own. Sending a beam of light from his electric lamp through a lump of ice, he showed that, like the beam of sunshine, it had invisible rays of heat commingled with its rays of light; the beam of light had a higher temperature before it entered the ice than it had after it had passed through it, and this lost heat was used up during the passage through the lump in melting the ice into most beautiful star-shaped flowers, which were depicted in numbers, most elegantly grouped, on the screen beyond. This water so melted would give out on freezing again exactly the same amount of heat as it had absorbed in liquifying.

Similar was the action of the sunlight upon the carbonic acid; it leaves the carbon in the leaves of plants and tears away the oxygen, and so much of the sun's power is thus extinguished. Thus the carbon that we burn burns with the heat and light that came from the sun. There is no heat nor light upon the earth that did not come from that source: and the force we see in vitality is precisely the same as we see in inorganic nature. All the energy displayed on our planet is due to the sun,—to that portion of his rays which are arrested between their entrance in and their emergence from our air—a fraction of the 230-millionth part of his power caught in their passage into infinity.

During the past week Cardinal Wiseman has lectured at the Royal Institution "On the Connection between Science and Art," on which topics he entertained a densely crowded audience for nearly two hours. He began by showing how in the first instance science was associated with painting by the determination of the rules of perspective in the fifteenth century; for although before that time great painters might have often intuitively caught the manner of truly representing objects on a flat surface, no regular rules had been eliminated. The science of music was little understood a century ago, and while in 1733 the term "fiddler," was one of the most moderate epithets applied to Handel, we now saw the evidence of the progress made in the national taste when the Oratorios that were ridiculed by Walpole, were now performed by some thousands of instrumentalists at the Crystal Palace, many of whom had been taken from the "cotton mules" of Lancashire, or the factories of the metropolis. Theatrical scenery ancient and modern was also referred to; and comparison made between ancient and modern sculpture. The value of the connection of science with architecture was also forcibly pointed out in the case of the late reparations of the dome of St. Peter's. Throughout his lecture the Cardinal dwelt on the slow steps by which advance was made in science. Sixteen years ago Fraunhöfer detected the fine lines in the solar spectum, and now we see to what extent science has used that simple fact, and to what end she is likely to carry it. Science was food of the highest material for man's mind, and possessed a poetry of the most sublime significance.

The first meeting of the Anthropological Society will take place at the Society's rooms, 4, St. Martin's-place, on the 24th of this month, when the President, Dr. James Hunt, will read an inaugural address "On the Study of Anthropology," the science of mankind. It is but a few weeks since, in a short paragraph, we announced the foundation of this new institution by a few gentlemen, some of familiar repute as ethnologists, and already we find that its fellows amount to upwards of one hundred, and that the list is daily and rapidly increasing. But what is of equal importance is, that active proceedings of the society are to commence forthwith. Its meetings will be, no doubt, important battle-fields for contesting opinions; but its chief feature is expected to be in its publications. Abstracts, and notices of the papers read, and the discussions which take place at its meetings, will be regularly given in a new "Quarterly Journal of Anthropology," while the society will publish yearly a volume of translations of important foreign treatises, and a volume of its own transactions, containing original and important papers, which, from the character of the men who are likely to take a prominent part of its doings, may be expected to be of more than ordinary merit. We believe that the work of Dr. Theodor Waitz, "Anthropologie der Naturvölker," has been selected by the publishing committee, and that the manuscript translation is already in a sufficiently advanced state to commence printing; so there is little doubt but the society will issue its publications long before the close of the present year.

Strong brown paper is now being manufactured in America, from the wild flags growing in profusion in the low grounds of the Northern States.

BROKERS—Sir Robert Carden & Son, 2, Royal Exchange-buildings, London, E.C.
Offices—58, Threadneedle-street, London, E.C.; 58, Rue de Provence, Paris.

NOTICE.

The great addition to the traffic between England and France, consequent on the commercial treaty, renders some better mode of conducting it an absolute necessity.

To meet this want, and to do for Paris what the Parcels Delivery Company has done for London, and Pickfords and other great carriers have done for England, this Company has been established.

At present Paris is without a Parcels Delivery Company, and the international traffic so imperfectly organized, that no reliable through rates can be ascertained between English and French provincial towns.

This Company possesses exclusive and peculiar privileges, granted by a decree under date of 10th January, 1862, by the Préfet and the municipality of Paris—privileges indispensable for the local trade, and invaluable for the international traffic.

Negotiations have been successfully opened with some of the leading French and English railways, who not only offer to make arrangements with the Factage Parisien to act as their agents and carriers, but to render to it every support in their power, as will be seen (in the prospectus) from letters received from the London, Chatham, and Dover, the Great Western, and the Great Northern Railways of England.

At the 90 offices of the Company authorized by the above-mentioned concession to be established in Paris, railway and other tickets will be issued, and every information given to merchants and travellers.

At these offices, parcels and goods will be received for delivery in every part of the world at rates periodically published, which will be profitable to the Company, though the charge will be no higher than the cost which would have to be incurred by the sender, were he to undertake the excessive trouble of superintending the transfer of the goods to the different railway and navigation companies, and the payment of the duties thereon.

The Company will thus perform the business of railway carriers, general carriers, agents for railways, steamboats, and other conveyances.

The articles of association may be seen on application at the offices of the Company, where, as well as at the brokers', prospectuses and every information, together with detailed estimates, letters from the railway companies, and forms of application for shares, may be obtained.

Form of Application for Shares.

To the Directors of the Factage Parisien (Limited).

Gentlemen,—Having paid the deposit of £1 per share on.....shares in the Factage Parisien (Limited), I request that you will allot me that number of shares, and I agree to accept the same, or any less number you may allot to me, subject to the memorandum and articles of association, and I authorize you to add my name to the register of shareholders of the Company.

Usual Signature.....
Name in full, plainly written .....
Description or addition .....
Address .....

Note.—If more convenient, applicants may send a crossed cheque to the offices of the Company, and the bankers' receipt will be forwarded by post.

BEN RHYDDING, ILKLEY, YORKSHIRE
A WINTER AND SPRING RESIDENCE.
PHYSICIAN.—Dr. MACLEOD, F.R.C.P.E., F.A.S. Scot.
SURGEON.—THOMAS SCOTT, M.D., Edin., M.R.C.S.E.

Ben Rhydding is one of the most complete and most comfortable establishments in England for the reception of patients and visitors. While the method of treatment pursued at Ben Rhydding proceeds on Hydrotherapeutics as to its main principle, it is by no means confined to that, but includes the systematic application of the Art of Cure in its whole range, and with all its resources.

SEVEN PER CENT. PERPETUAL PREFERENCE STOCK of the
DEMERARA RAILWAY COMPANY,
Incorporated by Act of the Colonial Legislature, and confirmed by Her Majesty in Council.

Applications for the remaining portion of this Stock may be sent to CHARLES CAVE, Esq., Colonial Commissioner, at the Banking-house of Messrs. PRESCOTT, GROTE, CAVE, & CAVE, 62, Threadneedle-street, London.

IMPORTANT ANNOUNCEMENT.

JOSEPH GILLOTT,

METALLIC PEN MAKER TO THE QUEEN,

BEGS to inform the Commercial World, Scholastic Institutions, and the Public generally, that, by a novel application of his unrivalled Machinery for making Steel Pens, he has introduced a NEW SERIES of his useful productions which, for EXCELLENCE of TEMPER, QUALITY of MATERIAL, and above all, CHEAPNESS in PRICE, must insure universal approbation, and defy competition.

Each Pen bears the impress of his name as a guarantee of quality; they are put up in Boxes containing one gross each, with label outside, and a fac-simile of his signature.

At the request of numerous persons engaged in tuition, J. G. has introduced his WARRANTED SCHOOL and PUBLIC PENS, which are especially adapted to their use, being of different degrees of flexibility, and with fine, medium, and broad points, suitable for the various kinds of Writing taught in Schools.

Sold Retail by all Stationers and Booksellers. Merchants and Wholesale Dealers can be supplied at the Works, Graham-street, Birmingham; at 91, John-street, New York; and at 37, Gracechurch-street, London.

THE PATENT AMERICAN KITCHENER, with recently Patented Improvements,

IS THE CHEAPEST AND MOST ECONOMICAL COOKING RANGE EVER OFFERED TO THE PUBLIC.

It saves half the fuel usually consumed, cures smoky chimneys, requires no brickwork setting, is fully equipped with cooking utensils, and MAY BE SEEN IN OPERATION DAILY at

J. H. RIDDELL'S AMERICAN STOVE WAREHOUSE,
155, CHEAPSIDE, LONDON.

Illustrated Prospectuses, with Prices and Testimonials, free.

DR. DE JONGH'S

(Knight of the Order of Leopold of Belgium)

LIGHT-BROWN COD LIVER OIL, prescribed by the most eminent Medical Men as the safest, speediest, and most effectual remedy for

CONSUMPTION, CHRONIC BRONCHITIS, ASTHMA, COUGHS, RHEUMATISM, GENERAL DEBILITY, DISEASES OF THE SKIN, RICKETS, INFANTILE WASTING, AND ALL SCROFULOUS AFFECTIONS,

Is incomparably superior to every other kind.

SELECT MEDICAL OPINIONS.

Sir HENRY MARSH, Bart, M.D., Physician in Ordinary to the Queen in Ireland.

"I consider Dr. De Jongh's Light-Brown Cod Liver Oil to be a very pure Oil, not likely to create disgust, and a therapeutic agent of great value."

Dr. LANKESTER, F.R.S., Scientific Superintendent, South Kensington Museum.

"I consider the Cod Liver Oil sold under Dr. De Jongh's guarantee to be preferable to any other kind as regards genuineness and medicinal efficacy."

Dr. GRANVILLE, F.R.S., Author of the "Spas of Germany."

"Dr. Granville has found that Dr. De Jongh's Light-Brown Cod Liver Oil produces the desired effect in a shorter time than other kinds, and that it does not cause the nausea and indigestion too often consequent on the administration of the Pale Oil."

Dr. LAWRANCE, Physician to H.R.H. the Duke of Saxe-Coburg and Gotha.

"I invariably prescribe Dr. De Jongh's Cod Liver Oil in preference to any other, feeling assured that I am recommending a genuine article, AND NOT A MANUFACTURED COMPOUND IN WHICH THE EFFICACY OF THIS INVALUABLE MEDICINE IS DESTROYED."

DR. DE JONGH'S LIGHT-BROWN COD LIVER OIL is sold only in IMPERIAL Half-pints, 2s. 6d.; Pints, 4s. 9d.; Quarts, 9s.; capsuled, and labelled with his stamp and signature, WITHOUT WHICH NONE CAN POSSIBLY BE GENUINE, by respectable Chemists and Druggists.

SOLE CONSIGNEES:

ANSAR, HARFORD, & Co., 77, Strand, London, W.C.

CAUTION.—Beware of Proposed Substitutions.

KEATING'S NEWFOUNDLAND COD LIVER OIL is distinguished by Testimonials from eminent Physicians, among whom are the following:—Professor TAYLOR, M.D., &c. &c.; Dr. SCOTT, M.D., L.R.C.P., F.L.S., &c.; Dr. EDWIN PAYNE, M.D., L.R.C.P., M.R.C.S. This Oil, being purely of *hepatic* origin, is pronounced to be of the greatest *therapeutic* value, in which the prescriber and patient may have the utmost confidence.

Sold in half-pint bottles, 1s. 6d., pints, 2s. 6d., quarts, 4s. 6d., and five-pint bottles, 10s. 6d., imperial measure, by THOMAS KEATING, Pharmaceutical Chemist, 79, St. Paul's Churchyard.

DINNEFORD'S PURE FLUID MAGNESIA has been during twenty-five years emphatically sanctioned by the Medical Profession, and universally accepted by the Public as the best remedy for Acidity of the Stomach, Heartburn, Headache, Gout, and Indigestion, and as a mild Aperient for delicate constitutions, more especially for Ladies and Children. It is prepared, in a state of perfect purity and of uniform strength, by DINNEFORD and CO., 172 New Bond street, London; and sold by all respectable Chemists throughout the world.

THE PERFECT SUBSTITUTE FOR SILVER.

The REAL NICKEL SILVER, introduced more than 30 years ago by WILLIAM S. BURTON, when Plated by the patent process of Messrs. Elkington & Co., is beyond all comparison the very best article next to sterling silver that can be employed as such, either usefully or ornamentally, as by no possible test can it be distinguished from real silver.

A small useful set, guaranteed of first quality for finish and durability, as follows:—

	Fiddle or Old Silver Pattern.	Thread or Brunswick Pattern.	Lily Pattern.	King's or Military, &c.
	£. s. d.	£. s. d.	£. s. d.	£. s. d.
12 Table Forks	1 13 0	2 4 0	2 10 0	2 15 0
12 Table Spoons	1 13 0	2 4 0	2 10 0	2 15 0
12 Dessert Forks	1 4 0	1 12 0	1 15 0	1 17 0
12 Dessert Spoons	1 4 0	1 12 0	1 15 0	1 17 0
12 Tea Spoons	0 16 0	1 2 0	1 5 0	1 7 0
6 Egg Spoons, gilt bowls	0 10 0	0 13 6	0 15 0	0 15 0
2 Sauce Ladles	0 6 0	0 8 0	0 9 0	0 9 6
1 Gravy Spoon	0 6 0	0 10 0	0 11 0	0 12 0
2 Salt Spoons, gilt bowls	0 3 4	0 4 6	0 5 0	0 5 0
1 Mustard Spoon gilt bowl	0 1 8	0 2 3	0 2 6	0 2 6
1 Pair of Sugar Tongs	0 2 6	0 3 6	0 4 0	0 4 6
1 Pair of Fish Carvers	1 4 0	1 7 6	1 10 0	1 12 0
1 Butter Knife	0 2 6	0 5 6	0 6 0	0 7 0

METZLER & CO.,

37, 38, 35, and 16, GREAT MARLBOROUGH-STREET, LONDON, W.

SHEFFIELD SCHOOL of PRACTICAL SCIENCE and METALLURGY.

PRESIDENT.

His Grace the Duke of Devonshire, K.G., F.R.S., D.C.L., Chancellor of the University of Cambridge.

VICE-PRESIDENTS.

The Mayor of Sheffield, John Brown, Esq.
The Master Cutler.
The Right Hon. Lord Wharncliffe.
Sir David Brewster, K.H., D.C.L., F.R.S.L. & E., M.R.I.A.
Sir Roderic Murchison, F.R.S., Director of the Royal School of Mines.
John Percy, Esq., M.D., F.R.S., Professor of Metallurgy in the Royal School of Mines.
William Fairbairn, Esq., C.E., F.R.S.
Robert Hunt, Esq., F.R.S., F.S.S., Keeper of Mining Records.
Warrington W. Smyth, Esq., M.A., F.R.S., Professor of Mining and Mineralogy in the Royal School of Mines.

DIRECTOR.

The Rev. G. B. Atkinson, M.A., Principal of the Collegiate School, late Fellow and Assistant Tutor of Trinity Hall, Cambridge.

PROFESSORS.

Chemistry, Metallurgy, and Geology.—James Allen, Ph.D. F.C.S., of the Universities of Giessen and Berlin.
Engineering and Mining.—J. Thompson, C.E.
Mathematics, Natural Philosophy, and Applied Mechanics.—Rev. G. B. Atkinson, M.A.

The Sheffield School of Practical Science and Metallurgy will afford a complete scientific and practical education to students who are destined to become civil, mechanical, or mining engineers, or manufacturers of any kind. Its object is thoroughly to discipline the students in the principles of those Sciences upon which the operations of the Engineer, Metallurgist, or Manufacturer depend.

The education will be given by means of systematic Courses of Lectures, by Catechetical Class Instruction, by Practical Teaching in the Laboratory and Drawing-room, and occasionally by Field excursions.

The School of Practical Science and Metallurgy will be conducted in the buildings of the Sheffield Collegiate School. The two Institutions, although both under the superintendence of the Rev. G. B. Atkinson, Principal of the Collegiate School, are, however, entirely distinct.

A detailed Prospectus, containing Syllabuses of all the Courses of Lectures, and all other information, arrangements for boarding, &c., may be obtained by application to the Director.

THE SCHOOL WILL OPEN IN THE FIRST WEEK IN FEBRUARY, 1863.

GEOLOGY and MINERALOGY.—ELEMENTARY COLLECTION, to facilitate the study of this interesting Science, can be had, from Two Guineas to One Hundred, also Single Specimens, of J. TENNANT, 149, Strand, London, W.C. Mr. Tennant gives Practical Instruction in Mineralogy and Geology.

A Large and Valuable COLLECTION of ANCIENT and MODERN ENGRAVINGS of the different Schools.

MESSRS. S. LEIGH SOTHEBY & WILKINSON, Auctioneers of Literary Property and Works illustrative of the Fine Arts, will SELL by AUCTION at their house, No. 13 (late 3), Wellington-street, Strand, W.C., on MONDAY, 16th February, 1863, and two following days, at ONE o'clock precisely, a large and valuable collection of Ancient and Modern Engravings, including many proofs and fine impressions, from the portfolio of a collector, formed to illustrate the history of Painting and Engraving, comprising numerous examples of every period and school; fine portraits by the English, French, and Dutch engravers; a large and valuable series of portraits of the houses of Orange, Nassau, and Austria, by Delphius, Suyderhoef, Soutman, Visscher, Tanje, Houbraken, &c.; choice mezzotint portraits after Vandyck, Lely, Kneller, Sir J. Reynolds, Gainsborough, Romney, and the chief masters of the English school; fine French portraits by Drevet, Nanteuil, Edelinck, Beauvarlet, Dalechou, &c.; Early States of Hogarth, including a brilliant impression of the "Sunday" print; numerous Fine Theatrical Portraits and Illustrations; a large and choice series of Mezzotints, chiefly in proof states, by Earlom, Pether, McArdell, Ward, &c.; many fine examples of the school of Goltzius, and of the works of the Visschers and Suyderhoef, after Ostade; a very large collection of the productions of Reubens and his scholars, including the best engravings of Bolswert, Vorsterman, Pontius, &c.; early Italian engravings of Marc Antonio and his scholars, and many fine prints after the chief productions of the great Italian and French painters; an illustrated Granger; a large scrap-book of the caricatures of Gillray and Rowlandson, &c. &c.

May be viewed Two Days prior, and Catalogues had on receipt of four stamps.

GOD BLESS the PRINCE of WALES.—National Song, by BRINLEY RICHARDS. Sung with enthusiastic applause by Mr. Sims Reeves, at St. James's Hall. Price 3s.

"It is indeed seldom that we have to record a success so complete. This happy inspiration of Mr. Brinley Richards is to be repeated on the 5th of February at the National Concert, at St. James's Hall, when Mr. Reeves will again sing it."—*Morning Post*, Jan. 26th.

BRINLEY RICHARDS'S WARBLINGS AT DAWN, Romance for Piano, 3s.; Warblings at Eve, 3s.; Piano Duet, 3s.; The Swiss Boy, for Piano, 3s.; Welsh Fantasias: No. 1, North Wales, 4s.; No. 2, South Wales, 4s.; and his Recollections of Wales, 12 Books, 2s. each, or in one vol. 21s.

Just issued.

ROBERT COCKS & CO.'S QUARTERLY CIRCULAR OF NEW MUSIC. May be had gratis and post free on application.

A SUPERB MUSICAL PRESENT.—The BURLINGTON ALBUM for 1863, of Pianoforte, Vocal, and Dance Music; containing New Compositions by Vincent Wallace, Brinley Richards, S. Glover, G. F. West, A. Wright, Faust, Leduc, Miss M. Lindsay, Abt, Kücken, Anne Fricker, Johnson. Beautifully illustrated, handsomely bound, gilt edges, 15s.; post free, 16s. 2d. A superb musical gift.

London: ROBERT COCKS & CO., New Burlington-street.

PIANOFORTES.—"A good Instrument is a valuable desideratum, and Messrs. COCKS & CO., of New Burlington-street, have conferred a boon on the Public in the production of the UNIVERSAL PIANO. The price is only £35, and is quite a marvel of cheapness, combined with excellency of quality. It may be had in rosewood or walnut case, with ogee fall, silk front, and full fret, at the above moderate price. This is worthy of consideration by all who are contemplating making a purchase."—Vide *Christian Herald*, Oct. 10.

(Originally established A.D. 1667.)

WHITWORTH RIFLES.—The MANCHESTER ORDNANCE and RIFLE COMPANY beg to give notice that Whitworth Ordnance Rifles and Ammunition are manufactured by Mr. Whitworth's Patent Machinery only at their Works in Sackville-street, Manchester.

Application may be made either at the above works, or at the Company's Office, 28, Pall Mall, London, S.W.

The Rifles and Ammunition may be also obtained through the agency of any respectable gunmaker.

CAUTION.—The extraordinary success attending the use of Dr. J. COLLIS BROWNE'S CHLORODYNE has induced certain unprincipled persons to vend spurious compounds under this name. This wonderful remedy allays pain, soothes the system, and invigorates nervous debility. It effectually cures, as will be seen by medical testimony, CONSUMPTION, COUGHS, ASTHMA, BRONCHITIS, NEURALGIA, RHEUMATISM, &c. Never be tempted to buy Chlorodyne except in sealed bottles, having the Government Stamp, with the words "Dr. J. Collis Browne's Chlorodyne" engraved thereon. A sheet full of medical testimonials accompanies each bottle. Sole Manufacturer, J. T. DAVENPORT, 33, Great Russell-street, Bloomsbury, London. Sold in Bottles, 2s. 9d. and 4s. 6d.; sent carriage free on receipt of Stamps or Post-office Order.

THE ISRAEL OF THE ALPS: a History of the Waldenses from their Origin to the Present Time. With numerous beautiful Illustrations. A new and enlarged Edition.

"Of all modern races there is none which offers more analogy with the ancient Jewish people than the Vaudois of Piedmontese Alps. There is no history full of greater prodigies than theirs; no church which has more martyrs."—L'ABBÉ BOYER.

London: CHARLES GRIFFIN & CO. Sold by all Booksellers.

MUDIE'S LIBRARY.
A MILLION VOLUMES.

The whole Collection of modern Books in Circulation and on Sale at Mudie's Library is now by Many Thousand Volumes the Largest in the World; and, as the New Works added from time to time continue to exceed in value the whole amount of the Current Subscriptions, it is probable that the stock available for the use of Subscribers, deducting the number of copies sold or worn out while in circulation, will shortly exceed One Million Volumes.

The purpose for which the Library was originally established—to create a more general taste for the higher literature, and to meet the increased demand which has thus arisen—is still kept steadily in view, and great care continues to be taken that every Work of merit and general interest shall be introduced as soon as published.

A Revised List of the principal Works in Circulation is now ready, and will be forwarded postage-free on application.

"Mr. Hunt has transferred these diseases from the incurable class to the curable."—*Lancet.*

London: T. RICHARDS, 37, Great Queen-street.

PUBLIC OPINION. A First-class Weekly Family Newspaper.
Published every Saturday, 32 pages, price 2d.

PUBLIC OPINION is indispensable to Politicians, Editors, and Authors, the Nobility, Clergy, and Gentry, Merchants and Manufacturers, and all who take an interest in Political, Social, and commercial Progress throughout the World. It gives the Opinions of the Press at Home and Abroad, on all the Important Topics of the Week; together with a Complete Summary of Current Events, and a Selection of Articles of a literary and popular character: it is, in short, what its title implies—The Mirror of Public Opinion on Politics, Society, Commerce, Literature, and Art.

To English Residents abroad "Public Opinion" is invaluable.

SIR CHARLES LYELL'S NEW WORK on the ANTIQUITY OF MAN will be published NEXT MONDAY.
JOHN MURRAY, Albemarle-street.

Now ready at all the Libraries, 2 vols., 8vo., 36s.

Memoirs of Lady Morgan:

AUTOBIOGRAPHY, CORRESPONDENCE, AND LETTERS.

"The book that tells the story of Lady Morgan's life will always be of value for its pictures of a state of society which, with much of its good, and with more of its evil, has passed away for ever."—*Daily Telegraph*, Jan. 23, 1863.

"Two amusing volumes."—*Cornhill Magazine*, Jan., 1863.

"The rich store of material which she has left for our intellectual gratification in these rich and racy volumes. . . . . The most effectual mode of giving our own readers an idea of the work will be by giving them some few of the passages redolent of humour and full of character, in which the work is so extremely rich. . . . These volumes are full of pleasant memories, and piquant reading, and form a record of the life of one of the most gifted women which the century has produced." *Observer*, Dec. 14, 1862.

"Surveying as they do considerably more than half the last hundred years, and touching upon the most instructive events of that period, these volumes—it need hardly be said—are most interesting. Princes, dukes and nobles, authors, artists, and literati of every profession, crowd the pages of the work."—*Daily News*, Dec. 26, 1862.

"One of the most pleasant books of its class with which we are acquainted."—*Manchester Examiner*.

"The interest the book creates never wanes, much less dies out."—*Bell's Messenger*, Jan. 10, 1863.

"One of the most interesting of books—the description of a genial, genuine, and generous woman."—*Galloway Advertiser*.

London: WM. H. ALLEN & Co., 13, Waterloo-place, S.W.

Etruscan Chimney-piece; Mediæval Metal Work; Ornamental Cast-iron Fountain; Ornamental Bookbinding, Jewellery, and Silver Work; Porcelain; Cabinet Work, &c. The literary contributions include—"Chelsea China: a History of the China Works at Chelsea," by Llewellynn Jewitt; "Renovated Theatres;" "George Cruikshank," by F. W. Fairholt; "Munich Porcelain Paintings;" "Modern Architecture," illustrated; "Notabilia of the Exhibition;" "History of Caricature and of Grotesque in Art," by T. Wright, illustrated; "Flaxman's Sketches;" "Laodicea," by J. C. M. Bellew; "Notes on the Raw Materials used by Artists," by Professor Archer, &c., &c. The Line Engravings are—"Felice Ballarin reciting Tasso to the People of Chioggia," by E. Goodall, after F. Goodall, A.R.A.; "Boats off Calais," by J. Cousen, after J. M. W. Turner, R.A.; "Laodicea," by E. Brandard, after Thomas Allom.
*** Now ready, the Volume of the ART-JOURNAL for 1862, cloth gilt, price 31s. 6d., in which are comprised upwards of One Thousand Engravings on Wood, and Twenty-four Line Engravings, which latter include twelve of the late J. M. W. Turner's principal works, &c.
London: JAMES S. VIRTUE, 26, Ivy-lane.

LORD MACAULAY'S "LAYS OF ANCIENT ROME."

A New Edition, in 16mo., with Vignette on Wood, price 4s. 6d. cloth, or 10s. 6d. bound in Morocco by Rivière,

LORD MACAULAY'S LAYS OF ANCIENT ROME; with IVRY and THE ARMADA.

An Edition of Lord Macaulay's "Lays of Ancient Rome," with Illustrations, original and from the antique, by G. Scharf, engraved on Wood by S. Williams, in cap. 4to., price 21s. boards; tree-calf, 31s. 6d.; morocco, 42s.
London: LONGMAN, GREEN, & CO., 14, Ludgate-hill.

MISS ACTON'S COOKERY-BOOK THOROUGHLY REVISED.

Newly revised and much enlarged Edition, with additional Plates and Woodcuts, in Fcap. 8vo., price 7s. 6d.

MODERN COOKERY FOR PRIVATE FAMILIES reduced to a system of Easy Practice in a Series of carefully-tested Receipts, in which the Principles of Baron Liebig and other eminent writers have been as much as possible applied and explained. By ELIZA ACTON.

In this Cookery-book the Quantity of every article necessary for the preparation of each receipt, and the Time required for its preparation, are minutely stated. "A good book in every way; there is right-mindedness in every page of it, as well as thorough knowledge and experience."—*Medical Gazette*.

"A much enlarged edition of this useful collection of receipts has lately been published. The preface seems particularly worth attention: it deprecates the waste so common in kitchens, yet shows good cookery to be desirable for persons of limited income as well as for the wealthy."—*Gardener's Chronicle*.

London: LONGMAN, GREEN, & CO., 14, Ludgate-hill.

Illustrated with 27 exquisite Engravings. Imperial 4to., in illustrated cover, 5s.
Plain cloth, 7s. 6d. Cloth extra, 10s. 6d.,

MOTHER'S PICTURE ALPHABET.

Dedicated, by the Queen's special permission, to the Princess Beatrice.

"Notable for its permitted dedication to the Queen, its rich paper and noble type, and for the excellent engravings with which it is embellished, this picture alphabet is the handsomest book of its kind offered to the general public. Its system of instruction is also good. To each letter there is a set of verses, into which are introduced as many words as possible beginning with the particular letter of the lesson."—*Athenæum*.

With 160 Engravings, cloth, 5s. Coloured Plates and cloth extra, 7s. 6d.

ILLUSTRATED SONGS AND HYMNS
FOR THE LITTLE ONES. Compiled by UNCLE JOHN.

"These 'Songs and Hymns' are about to be reissued in Sixpenny numbers, each containing about twenty engravings, with coloured illustrations in several of the parts. Ten numbers form the volume, and are sold for five shillings, bound in cloth. We hardly know a present likely to be more acceptable to an intelligent child, and which the parent or teacher could give with greater confidence in its utility."—*Ladies' Newspaper*.

Bound in cloth, Illustrated, price 1s.

THE LATE PRINCE CONSORT: his Life and Character. By the Rev. J. H. WILSON. Tenth Thousand.

"We cordially recommend this simple, touching, and eloquent biographical sketch of the best and most beloved of princes and of men. It is written in a manly, Christian spirit. . . . . We will only say that to all who love our widowed Queen, and all who mourn her best friend and guide, this memoir will be a treasure."—*Weekly Times*.

London: S. W. PARTRIDGE, 9, Paternoster-row.

On Saturday, February 28, will be Published, Part I., in 8vo., price 5s. sewed,

A DICTIONARY OF CHEMISTRY, founded on that of the late Dr. Ure. By HENRY WATTS, B.A., F.C.S. To be continued Monthly, and completed in 16 Parts, forming Three Volumes, uniform with the new edition of Dr. Ure's "Dictionary of Arts, Manufactures, and Mines," recently completed.
London: LONGMAN, GREEN, & CO., 14, Ludgate-hill.

12mo., cloth, price 2s. 6d.,

CHERVILLE'S FIRST STEPS TO FRENCH. Indispensable to, and in harmony with, all French Grammars, being a collection of Progressive Familiar Conversations in French and English, showing a parallel between the Pronunciation, Etymology, Accidence, and Idioms of the parts of speech in both Languages, with Grammatical Observations.
*** Heads of Schools, &c., forwarding their cards to Mr. W. Tegg, a copy will be sent *gratis*, in the hope they will adopt the work if approved.
London: WILLIAM TEGG, Pancras-lane, Cheapside.

Just Published, Post 8vo., price 7s. 6d.,

THE JAVELIN OF PHINEHAS; or, Christ's Own Judgment upon Christendom; and more particularly upon the Union of Church and State. Being a Full Examination and Comparison in their Prophetic Aspect, of the Seven Epistles of Rev. II. and III., and of the Seven Parables in Matt. XIII. By Rev. WILLIAM LINCOLN, Minister of Beresford Chapel, Walworth, S.E.
London: SIMPKIN, MARSHALL, & CO., Stationers'-Hall-court.
